So, I owe it to you to speak to you about China and to speak up for China before you. I have a missionary's love for China. I have never been there but I can say without undue pride that I have had a lot to do with others going there and with much of the good done there. Over many Chinese altars chalices are raised which you helped me pay for, as you also helped pay for the altars themselves and the churches in which they are found and the education of the priests who pray at them. I have a missionary's love for China. Every now and again this season you hear over the radio or hear the youngsters singing a popular song which is called Far Away Places. It's a simple little ballad about the romance and the fascination of distant places; about the appeal of China or maybe Siam to the imaginations of dreamers and of all whose fancy turns to far-away places. Well, you and I have had a missionary love for far-away places for as long as we have known one another and we have sacrificed for years to make our dreams for the far-away places come true.

China has always had a top place in our missionary dreams and in the love of our missionary hearts. When we were youngsters in school our first little sacrifices for the propagation of the faith were placed in mite boxes by means of which we hoped to save up our pennies to ransom Chinese babies. That was the earliest form of our love for China. Then as we grew older we learned a little bit about the Christian history of China and that made us aspire even more for her conversion to Catholicism and for her entrance into the world order of Christendom. Some of us perhaps became fascinated by examples of Chinese Christian art that came to the States in the last decade or two. Others thought they saw a kind of kinship of character between the Chinese people and the Irish temperaments which we share. I remember that when Cardinal Tien officiated in the cathedral a number of people were struck with resemblances of temperamental and other kinds which brought back Irish and Irish-American associations.

In any case, with a missionary's love for China as somehow the most promising of far away places for the propagation of the faith, we all rejoiced when the church in China reached its maturity by producing its own hierarchy, its own cardinal, its own universities, its own hospitals. Now that it is producing its own martyrs, I think we should speak up for them. Now that the seeds we helped plant, the tender vines we helped nourish, are threatened with being uprooted and violently destroyed by Red fascism, I think that, both as Catholics and as Americans, we should lift our voices and cry out in protest—demanding clear commitments, honest reports, and realistic action with regard to faith and freedom in China.

Our people are constantly being asked to suffer privations and pour forth their best blood for threats to other people's freedom. I have never known them to refuse a just cause. Our people are entitled to know whether it is really true that nothing can be done for faith and freedom in a land which means so much to them. They are entitled to know why everyone is so silent about the spread of despotism in China. Christian missions will be among the worst casualties of the collapse of China under Red Fascist aggression. If the Red Fascists presume to violate conscience and run roughshod over Christian values as they do in old Catholic nations like Croatia, Poland, Hungary, Lithuania, and the Ukraine, what control on their cruelty or brake on their brutality can you expect in China where Christianity is young and relatively defenseless?

If I had come here this morning to provoke your wrath or to upset your emotions, I could stand here all day and enrage you with accounts of what they have already done to our nuns, our priests, and our brothers and sisters in the faith wherever the Red Fascists have taken over China. I could tell you of a priest, personally known to close friends of mine, one of the most beloved teachers in a Chinese school. I could relate to you how the Red Fascists made him kneel in the mud between two of their soldiers in front of the school which he had served for years, and caused all his pupils, children who venerate him as their father in Christ, to file behind him requiring each, under threat of torture, to beat him with rods. I could tell you of the cynical way that the Red Fascist designs on religion work out in China elsewhere. I could report to you the recently revealed secret instructions for the total elimination of religion from Chinese life and I could document the things that have already been done toward the fulfillment of those instructions.

But such is not my purpose. My purpose is simply to lift my voice here this morning for China, not for any particular political party or for any particular political leader, but for an honest policy on the part of free nations toward free China, an honest policy which will encourage China in her resistance against any Communist encroachments on the independence of her Government. An honest policy will be based on a realistic recognition that any compromise with Communists amounts to actual defeat by communism; any coalition with Communists, the world now has learned the hard way, is a compact with death. Wherever you find a Communist in a free nation you find a spy and wherever you have a spy you have a traitor. We cannot ask with straight faces that any nation invite known traitors and avowed spies into their government as the price of retaining the loyalty and the support of their friends.

An honest policy toward China should be the more easy in view of the fact that there are still no final reasons why our policy should be devious, defeatist, or half-hearted. Only the friends of the Red Fascists want us to believe that a free China is no longer possible. Three-fourths of China, outside of Manchuria, is still in the hands of free China. Badgered and embarrassed as the present Chinese Government may be, it is the same government that our leaders were told would collapse first in 1937, then in 1942, and again in 1944. The prophets of disaster proved mistaken or malicious then. What better reason have we to believe them now?

Before we accept the prophecies concerning China uttered by those who befriend or who fear Red fascism, we had best understand what America stands to lose the day that China loses her freedom. The simple fact is that we shall lose the friendship of the heartland of Asia if we let Chinese freedom go by default. The further fact is that it would be much cheaper to prevent the enslavement of China than it will ever be to liberate China enslaved. A final fact is that western democracies, both Anglo-Saxon and American, have not so many friends left in Asia that we can afford to walk out on the Chinese and give them and their children and their children's children any reason to attach to our Nation that name of "perfidious" which has made it so difficult for other nations to make and to keep friends in their hour of need. So long as Red fascism is a fact in the sixth of the globe directly subject to the Soviet, America cannot afford to throw away friends in Asia by leaving the Chinese naked to their enemies and abandoned to ours.

So pray for China and pray for our own leaders that God may enlighten and strengthen them. Our leaders are good men. Like all of us they sometimes make mistakes. Like all of us they are sometimes betrayed by people whom they trust—but it is becoming more easy now to spot the traitors and to remove trust from them. Like all of us our leaders need prayer. Pray for them every day, and, during this present crisis, when you pray for them include a prayer that they may devise a means of helping China. Pray for the venerable church brutally persecuted in Hungary and eastern Europe. But don't forget to pray for the infant church whose life is threatened in China and elsewhere in

Asia. That is my first recommendation: Pray.

Next, don't believe the lies about China of certain liberals and other friends of Red fascism. When you are told propaganda stories about the political or other leaders of free China, remember that these stories may be true but that for the moment free China should be given the benefit of every possible doubt. It is by creating confusion and spreading doubts by half-truth and whole lies that the Red Fascists justify their excesses. They have justified for years their total enslavement of religion in Russia by repeating regularly to the unthinking a specious argument that the orthodox church under the Czars was corrupt. They have justified the total destruction of national cultures in eastern Europe by exploiting for the sake of uninformed distorted stories of class conflicts within those cultures. You are all familiar with the technique by which they are bewildering the world as they bludgeon religion in Hungary. Don't let them fool you about China.

Finally, take a lesson for America from the things that are happening in China. That lesson is not difficult to learn. I have already mentioned it this morning. Never allow any argument about civil liberties or freedom of speech to make you an accomplice in the destruction of all liberty and of every freedom. Never allow alleged reasons of democracy to make you accept in silence the appointment of Communists or Communist sympathizers to posts where they will be protected by democracy in their unrelenting war against democracy. Every Communist is a spy and every spy a traitor. Applaud the efforts of men in public and private life to spot spies or sympathizers with systems alien to ours. In that way you will be doing a great service to both faith and freedom. These two ideas are bound up one with another. These two ideas are very close to your hearts both as Catholics and as Americans. Pray that they will survive their test in China. Work so that they will never have to meet a bloody test here in America.

How Much Is $42,000,000,000?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an article written by Wheeler McMillen, which appeared in a recent issue of the Pathfinder:

Have Americans completely lost the capacity to be shocked by billions? Even by the forty-two billions which President Truman asks Congress to spend this next year?

Divide $42,000,000,000 by your own 1948 income. How many years would you have to work to pay for 1 year of Government?

That sounds like a foolish question. You don't support the Government by yourself, nor will you live eight or ten million years.

Every week, however, nearly every working American will spend all day every Monday working for the Government. Uncle Sam takes the first 20 percent—one day out of five. A great many citizens work some or all of Tuesday, too, and even into Wednesday before they can keep a penny of their earnings for themselves.

That's what spending big billions has done to people. To the extent that one-fifth or more of earnings cannot be spent as they choose, people are slaves to government now and for the rest of their lives. They can choose where to work, and at what they will work. They have no choice about what to do with Monday's pay.

Not new, but worth repeating, is the best description of a billion dollars anyone has so far offered.

If one had been born in the year A. D. 1, and from birth had been paid one dollar a minute, had never spent a cent, and was now living, he would about now, 1949 years later, have accumulated $1,000,000,000.

This is not to argue the good or the ill in the President's program. The $252,000,000,000 national debt stands, too, as a grim, unchangeable fact, a claim equal to more than $6,200 of future earnings from every American household. Every billion, every million, every dollar of new appropriations increase the amount of that claim. And the claim will be collected, one way or another, at some time or other.

Why do so many millions of people appear not to be concerned? Why do so few men in public life appeal for economy? How many men are elected to office these days by promising to spend more, and how many are elected by promising economy?

Maybe we all have become completely benumbed by the staggering blows of taxes and public debt. The figures and facts may just have passed beyond comprehension. Certainly too many have been deceived into believing that it is all right because other people or future generations will pay. If that is so, a moral sense has been blunted.

On another occasion this column may discuss the newly offered spending program. Here I am merely trying to work off some long-accumulated amazement. A citizen expects to pay enough taxes to support his government, local, State, and National. For most of America's life he could accomplish that easily and early on Monday morning. He might work a day or so a year on the road to pay his road tax. It was never foreseen that all employed citizens would have to give up all they earned for the early part of every week.

How come resentment has faded to such faintness? Why aren't the people mad about seeing others spend their money?

And, can the United States stand to have the Federal and State governments continue year after year to spend more and more? Shall we spend on to destruction?

America's Glorious Heritage

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. BRYSON. Mr. Speaker, of all the fine ministers of the various faiths and creeds in and about the city of Washington there is none closer to and more highly regarded by Members of Congress than Evangelist Dale Crowley. This uncompromising Christian minister has endeared himself to Representatives from all parts of our great country. Through the facilities of the radio, press, and personal appearances, he is always doing good and helping someone.

As a part of my remarks, I insert herewith a copy of a radio address delivered by Mr. Crowley on Inauguration Day, January 20, which is most timely. It follows:

AMERICA'S GLORIOUS HERITAGE

"Blessed is that nation whose God is the Lord" (Psalms 33: 12).

On this momentous day—January 20, 1949—when Harry S. Truman lays his hand upon the Holy Bible, taking the solemn oath as administered by the Chief Justice of the Supreme Court, he will that very minute be declared President of the greatest Nation the world has ever known—the United States of America.

In the minds of millions around the world the question will be asked, "Wherein lies the greatness of America?" And the answer is both simple and eloquent: The secret of America's greatness lies in the influence of that very Book on which our President takes his oath of office. For America, unique in all the world, is a Nation founded on the teachings of the Bible, and made powerful through the influence of Christianity.

Officially, the highest court in our land has ruled that we are a Christian Nation. In 1893, in the famous Holy Trinity Church case, the Supreme Court declared "This is a Christian Nation." Much earlier still, in an equally famous case which was pleaded by Daniel Webster, the Supreme Court decreed that, "Christianity is the common law of the land."

And this was the design and pattern of our Pilgrim Fathers. It was with a singular purpose of heart that our early American forebears were prompted to leave their native soil of Europe, their homes, and their citizenships. They determined, by the help of God, to establish a Christian community, where every citizen of the new commonwealth would be free to worship God, and to obey the holy Scriptures without molestation. To accomplish this, they were compelled to suffer unspeakable hardships.

In that celebrated document, the Mayflower Compact, the Pilgrim Fathers acknowledged and proclaimed the sovereignty of God, in the opening pronouncement of the preamble, in these historic words, "In the name of God. Amen."

In the year 1644 the colony of Rhode Island became the first community in the history of the world to guarantee absolute religious freedom to all faiths. This they did under the courageous leadership of Roger Williams, one of the stalwarts of the Christian faith.

So firmly rooted in the Christian faith was the colony of Maryland that, in the year 1649, the great Toleration Act was passed, which act provided the death penalty for those who should blaspheme against the Trinity. That historic political document also provided that, "no person professing to believe in Jesus Christ shall from henceforth be troubled or molested for, or in respect to his, or her religion."

During all those golden pioneer days of our beloved country, the Lord's Day was a hallowed institution, religiously observed by all citizens. Thanksgiving Day, as an American institution, was conceived and designated by the Pilgrim Fathers as a day to give thanks to Almighty God for His beneficent provisions and unfailing protection.

Before the Liberty Bell was hung in Independence Hall in Philadelphia, in the year 1753, our Christian statesmen of that pre-Revolutionary day directed that this Scripture, from Leviticus 25: 10, should be inscribed thereon: "Proclaim liberty throughout all the land unto all the inhabitants thereof." Those inspired words have served not only to impress millions of Americans, but have also challenged all the nations of the world.

In framing the Declaration of Independence, the faith in God of our infant Nation was proclaimed, in these words: "With a

firm reliance on the protection of divine providence, we mutually pledge our lives, our fortunes, and our sacred honor."

The sturdy quality of our early American leadership was born of prayer and fellowship with God. The strong faith of George Washington, at a time when the American cause was in great jeopardy, inspired him to kneel in the snows at Valley Forge, and pray earnestly for divine intervention against the enemy.

American history books are replete with the testimonials of our famous statesmen concerning their faith in God and the Bible. It was Benjamin Franklin who said, "God governs the affairs of men and nations." It was Patrick Henry who said, "There is a just God who presides over the destiny of nations." It was William Penn who said, "We will either be governed by God, or ruled by tyrants."

It was the intrepid Daniel Webster who warned the people of youthful America to faithfully stick to the Bible. He said: "If we abide by the principles taught in the Bible, our country will go on prospering, and to prosper; but if we and our posterity neglect its instructions and authority, no man can tell how sudden a catastrophe may overwhelm us, and bury our glory in profound obscurity."

On that historic occasion when the Constitutional Convention was grappling with almost insurmountable obstacles, at the suggestion of that peerless Christian statesman, Benjamin Franklin, those great men knelt and prayed for God's guidance and blessing. Quoting the Scripture, "Except the Lord build the house, they labor in vain that build it," the founders of our Republic went forward in that Convention under the guidance of God.

In sundry ways our Nation bears witness to the sovereignty of God and the authority of the Bible. Every President-elect takes his oath of office with hand reverently resting on the Word of God, and he does not become President until he does.

The Supreme Court of the United States witnesses to our Nation's faith in God, as every appointee must take his oath on the Bible before he becomes a Justice in our highest tribunal.

Both Houses of Congress bear witness to our Nation's faith in God in that no session of our National Legislature can convene without the prayer of the congressional Chaplains.

Every legal document of America testifies concerning our Christian faith in that every such document is dated by our Christian calendar: "Anno Domini"—"In the year of our Lord."

Our national currency carries the witness of our Nation's faith in God in the words "In God we trust."

Our National Anthem bears witness to our faith in God by the lines "In this be our motto, 'In God is our trust'."

The faith of our country in God is borne in the famous patriotic song, America, the first to be learned by the school children of our land, by the prayer in the closing lines: "Protect us by Thy might, Great God our King."

The faith of our Nation is echoed in the Battle Hymn of the Republic in the militant words, "His truth is marching on."

In a thousand ways, every day, we are impressed with the indisputable fact that the truly great men and women of our Nation's history laid the foundations of our Republic on the teachings of the Bible, and nurtured them by their prayers. Even as President Woodrow Wilson has so eloquently said, "There lies at the foundation of all our schooling and all our thought the incomparable and unimpeachable Word of God." The illustrious John Adams, second President of the United States said, "The destiny of America is to carry the Gospel of Jesus Christ to all men, everywhere."

But, alas, we have not fulfilled such a royal destiny. We have slipped from our moorings, forgetting the God who gave us our liberty, and have gone adrift on the sea of materialism, and are shrouded by the fog of unbelief and infidelity.

Today we rejoice in our glorious heritage, but unless we take seriously the matter of our stewardship we shall prove ourselves unworthy of the glory that our fathers have known.

Today we say, with David, "Blessed is that nation whose God is the Lord," but we must never forget that he also said, "The wicked shall be turned into hell, and all the nations that forget God."

Today let us remember that "Righteousness exalteth a nation," but let us not forget that "Sin is a reproach to any people."

Let us, as a nation, heed the counsel of the Lord, in 2 Chronicles 7: 14: "If my people which are called by my name, shall humble themselves, and pray, and seek my face, and turn from their wicked ways; then will I hear from heaven, and will forgive their sin, and will heal their land."

William A. Jump

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. HAYS of Arkansas. Mr. Speaker, the death of William A. Jump on January 15, 1949, brings deep personal sorrow to those of us who had the high privilege of knowing him and being associated with him in the Government service. His was a remarkable career. He entered the Federal service 42 years ago as a messenger and at the time of his retirement occasioned a few weeks ago by ill health, he was the Director of Budget and Finance for the Department of Agriculture. In this position, he had demonstrated extraordinary ability and devotion to the public service. Hon. Charles Brannan, the Secretary of Agriculture, said of him, "He was one of the finest men I have ever known and one of the finest public servants I have ever worked with." Jerry Kluttz of the Washington Post is authority for the statement that Mr. Jump once turned down an offer to be the Under Secretary of Agriculture, preferring to continue in his civil-service position. Mr. Kluttz reproduced excerpts from Mr. Jump's inspiring message of farewell, issued at the time of his retirement:

There is no finer place in America than the Department of Agriculture in which to grow up and spend a lifetime, as I have done. I feel that I have been most fortunate in having had that privilege.

Not a week passes that I am not stimulated by some fresh evidence of the spirit of true public service that is the strong foundation of the Department. Somehow and in some way the fact that from the beginning the Department has existed for the sole purpose of making life in America a better, richer, and fuller experience has resulted in an honest, vigorous, and intensely realistic public-service concept on the part of the staff of the Department, high and low, that is truly remarkable.

This makes the Department a most stimulating and inspiring place to work. A member of the Department does not have the feeling that he is just helping to turn the wheels that make a large organization work; he feels he is a partner in a great enterprise.

This institutional appreciation is a priceless asset. It could not be created by the use of money or by any of the modern methods of building a so-called esprit de corps, as important and desirable as that may be.

I would be the first one to admit or even assert that the Department is not perfect. There is no danger of this; but if it ever gets to be perfect, it will become so self-centered as to be of little use as a public-service institution.

Heads of the department, bureau heads, and the personnel-at-large come and go. Even bureaus come and go as the cycle of organization and reorganization keeps in motion. It is noteworthy that regardless of the scope and degree of such changes and the strain they sometimes impose, the traditions and ideals of the department are kept alive by recognition by the officers and personnel generally of these great intangibles among our institutional assets and determination and eternal vigilance to keep it so from generation to generation.

That is why I feel compelled to mention the traditions and public service ideals of the department as one of the outstanding impressions I have at the close of a lifetime of sharing in this good and wholesome atmosphere.

Mr. Speaker, Mr. Jump's example should be an inspiration to every employee of the United States Government. His standards of public service were of the highest type. His personal qualities of courtesy and friendliness and his spirit of self-effacement endeared him to a multitude of Federal workers. As a former member of the Department of Agriculture staff, I join in the tributes to him. The great traditions of our agricultural service have been made stronger by his contribution and I am confident that the significant results of his remarkable career brought to him and his family the most satisfying human rewards.

UNESCO in Los Angeles

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. DOYLE. Mr. Speaker, I am pleased to introduce for the reading of all the Members of Congress the following editorial which appeared in the Los Angeles Daily News, January 20, 1949.

While a Member of this House during the Seventy-ninth Congress, I thought it my privilege and duty to, in every manner submitted to the House, support the United Nations and UNESCO; and, as I return to this House membership again from the Eighteenth Congressional District of California, I desire to again be as helpful as possible in strengthening the sinews of "peace building." Between the period of the Seventy-ninth Congress

and the convening of this, the Eighty-first Congress, it was my pleasure to clearly speak out on many occasions in support of the United Nations and not least of all of the UNESCO portion of that splendid and necessary world peace building program.

As this splendid editorial emphasizes, the local responsibilities of peace building, I am especially pleased to call it to the attention of the Members of Congress as well as all the readers of the CONGRESSIONAL RECORD.

Not only do I urge the reading thereof, but I urge the application of its timely admonishment to those who sincerely and understandingly are engaged in peace building. Likewise, I urge that increasingly the forces of peace building shall be conscious of encouragement at the local levels. It being manifestly true that peace in the world will be what peace is to each individual in the world, it, therefore, results in being true that the attitude of the individual in the civilized world is determinative of world peace. To the extent to which peace building is consciously a part of the individuals in America, is the extent to which peace building through the United Nations will be an actual achievement in the lifetime of the individuals in America now alive. Therefore, it behooves the individuals who make up communities to activate in every manner possible an individual consciousness of responsibility for the peace building of the world. Individuals, as well as committees and groups, either make or neglect to make a definite contribution to UNESCO; and as UNESCO is an important part and parcel of the United Nations Charter—those of us who refuse or neglect to accept our local responsibilities in this field of peace-building endeavor refuse to accept responsibility for peace building in the world.

UNESCO IN LOS ANGELES

The new realism of peace-building stipulates that international discord can't be eliminated by vague do-gooder appeals. Peace is pursued by objectives defined in terms of reality.

Where UNESCO—the United Nations Educational, Scientific and Cultural Organization—fits these objectives the local community is beginning to understand. Starting today and continuing through Saturday the southern California council for UNESCO is holding a series of meetings to determine how community resources may be mobilized to advance UNESCO's aims.

UNESCO has both short-term and long-term aims. But they all boil down to the one encompassing aim of pursuing peace through understanding.

Since its constitution was drafted in London in 1946 UNESCO has been working to implement a world-wide program designed to bring about an eventual intellectual and moral solidarity of mankind.

This is a grandiose project. It involves, above all else, the continuous development of ourselves, our neighbors, and our institutions. It is a vast undertaking in the relations of peoples. UNESCO's hope is that by mobilizing the educational, scientific, and cultural resources of each of its 45 member states we may some day create an international republic of letters in which, as has been said, "knowledge and the arts are the expression and the sign of a flourishing world community."

In southern California UNESCO would do well to spread the word that today's cold war can only be won and a hot war averted if the people of great western communities such as the Los Angeles area work hard at the job of inspiring the confidence of other peoples of far-off communities—communities which have not as yet swung into the Soviet orbit.

In southern Korea, for example, university students and educated leaders look to America for help in educational reconstruction. All over the world, destroyed facilities in education, science, and culture await rebuilding either in the image of freedom or totalitarianism. The image in which these facilities are rebuilt will in large measure determine whether we shall have a world capable of peace.

Because it is a peoples' agency—because it is a means of peoples speaking to peoples—UNESCO is one of the strongest arms of the United Nations. UNESCO can well be the principal instrument through which we can secure the progressive elimination of political and cultural barriers now blocking international understanding.

But a word of friendly criticism is in order. The lofty ideals of UNESCO should not cause it to lift its feet too far off the ground.

Because it is also a verbalizing organization, this tendency to walk on clouds and spout the jargon of the intellectual is endemic to UNESCO. If it is to become a dynamic force for peace it must formulate principles and carry out concrete accomplishments not only mutually understandable but mutually acceptable among the many-tongued millions it hopes to reach.

Some of these principles were outlined at UNESCO's recent international conference in Beirut. And already UNESCO has been remarkably successful in bringing together experts, the Government, and the rank-and-file of citizens in working relations.

This should be UNESCO's principal aim for southern California. There is no end of projects to build the peace which UNESCO can further locally. These projects include teaching about the United Nations in our schools, mobilizing the community to assist in educational reconstruction in other lands, and most of all, restoring the faith of the people themselves in their ability to make the future bring what all of us wish it to bring.

This faith springs from and is given sustenance by the responses we give to the daily demands of our own communities and neighborhoods—the demands of today's living world for tolerance and understanding and friendship reaching beyond racial, cultural or religious barriers.

American Policy Toward Spain

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. John B. Doran, graduate student in the school of public law and government at Columbia University. He holds, in substance, that the United Nations resolution of 1946 about withdrawing chiefs of diplomatic mission from Madrid was invalid because it violated article 2, paragraph 7, of the UN Charter. This should be considered in connection with the analysis of Dr. Joseph F. Thorning, associate editor of the Americas, and World Affairs, who pointed out in the New York Times on June 21, 1948, that the UN 1946 resolution was canceled out by the 1947 vote in the United Nations, refusing to pass the identical resolution of 1946, when the latter was presented, "according to the rules" of the United Nations. In a Nation-wide radio program of the Columbia Broadcasting Co.'s Peoples Platform, Dr. Thorning reiterated his position and reinforced it with the opinion of Dr. Edwin Borchard, professor of international law in Yale University. It is the view of Mr. Doran, Dr. Thorning, and Professor Borchard that the 1946 resolution, adopted only under Soviet pressure, is now obsolete and invalid and therefore, nugatory.

The article Bypassing UN on Spain was published in the Catholic World in February 1949, and is as follows:

BYPASSING THE UN ON SPAIN

(By John Doran)

There is a tendency among the less-informed to rest upon the judgment of the UN in international affairs. For instance, you will hear it said that the American policy toward Spain must be right because it coincides with that of the UN. Yet, on close study it can be seen that the condemnation of the Spanish Government by the international body was based on very false assumptions.

On February 9, 1946, an agreement was adopted at the UN Assembly meeting upon M. Spaak's proposal. One of the pertinent sentences was this: "During the long struggle of the United Nations against Hitler and Mussolini, Franco, despite continued Allied protests, gave very substantial aid to the enemy powers." This is utterly false and absolutely contrary to fact. In Dr. Carlton Hayes' Wartime Mission in Spain you will find references to 16 patently "unneutral acts" that gave the lie to the UN allegations. I might mention the permission given to volunteer soldiers, mostly French, to pass through Spain for service with our forces in north Africa: the blacklisting of firms doing business with the Axis; toleration, even to the point of helping, our espionage services; internment of Italian warships. For these contributions to the allied cause we should be grateful to Spain, as Churchill was, but the State Department and the UN did not have the courtesy to follow his example.

Spain's attitude toward us constituted at the very least, a benevolent neutrality. Most of the acts cited by Dr. Hayes were violations of the neutrality law in our favor. Had Spain been as rigid with us as he was with the Axis Powers, he would have certainly refused these concessions. His reward from America was a miserable white paper on Spain, a masterpiece of understatement and suppression of the truth published by our State Department.

Another sentence in the erroneous UN agreement was this: "The Franco Fascist Government of Spain was imposed by force upon the Spanish people and by its continued control is making impossible participation by the Spanish people in international affairs." I have no intention of fighting the Civil War all over again to prove to the UN that the Spanish Government, be it good or bad for the Spanish people, came to power in the manner of most existing governments of the world. Suffice it to say that the United States, together with 43 responsible governments of the world considered it legitimate and accorded it official recognition for 8 years before the UN came on the scene. It is less dictatorial now than it was then, and it has done nothing since to merit nonrecognition by the same powers.

The recent vote which was so overwhelmingly in favor of the regime belies the UN charges of tyranny. The same results were turned in at the time of the elections on July 6, 1947. At that time the Soviet observers were dumfounded and committed all sorts of blunders in their attempts to explain away Spain's success. American papers admitted that the balloting was done without fraud or duress. The Associated Press in a dispatch to the New York Post (July 7, 1947) said: "So far as could be observed, the voting itself was secret and free. Many of those who voted against the succession had no hesitancy in saying so." The New York Times grudgingly admitted that the referendum was a reasonable indication of the Spanish Cabinet's popularizing the country, but then it backtracked and disparaged the accuracy of the returns. The Liberal correspondent of Diario de la Marina, Senor F. Larcegui, took the Times to task on August 16, 1947. He writes: "What the New York Times correspondent has written is entirely false about the rights of citizenship being denied anyone for not voting. As proof of his lack of veracity about the Referendum, it is sufficient to say that he believes 'that nonvoters would be denied marriage licenses.' In Spain these licenses have never existed, nor do they exist today."

The astute observer, Alice Moats, while holding that most Spaniards are not satisfied with the Franco regime beyond prospect of change writes: "The most egregious piece of thinking I find current in America is the belief that all Spaniards except the Falange and a clique around Franco ardently desire a return of the Republic. The opposition is many-sided, contradictory, and by no means all Republican. It is safe to predict that whatever changes are made will be brought about by the Spaniards themselves. What is more, it is unlikely that refugee Spaniards will play any decisive role. The Republicans are * * * bitter toward the leaders who escaped, not only with their freedom, but also with several millions in money."

Ross Hoffman sums up the matter very well when he says, "All whom I met in Spain were at once loyal to the regime and at the same time critical of it." The magazine Time (December 20, 1948) admits that the criticism is not directed at the dictatorship but at corruption among the lesser officials of the bureaucracy. The UN is definitely in error in saying that Franco rules in spite of the opposition of the people.

How could the UN ever arrive at such a conclusion contrary to fact? The simple answer is: Soviet pressure. The Russians worked not only directly to influence the thought of the UN, but indirectly insofar as other nations capitulated on the Spanish affair, hoping to win Soviet cooperation in other matters. This is evident from the nature of the debates that characterized the passing of the Spanish resolution in the UN.

It is the sentiment of the UN that the Spanish Government constitutes a "threat to the peace of the world." Rather, I should say, "potential threat." The absolute charge of the earlier sessions has been softened by the addition of the word "potential." This charge scarcely merits refutation, for every country in the world is a potential threat to peace. The Soviet Union charges that America threatens the peace of the world because of her possession of the atom bomb. That is a less absurd claim than the one against Spain with its pitiful navy and antiquated equipment. Dr. Carlton Hayes has affirmed that the Spaniards, left to themselves, "are no menace to their neighbor or to the peace of the world."

William Bullitt in the Great Globe Itself asserts that the Soviet Union is the only totalitarianism that threatens war today. It is interesting to compare the record of "war-like" Spain with that of Russia. What territories has Franco grabbed since the end of the civil war? Is there the slightest indication of Spanish military aggression in Europe or elsewhere? As the editorial in the China Monthly says: "As far as Dictator Franco is concerned, our advice is: Let him alone in Spain as long as he does not interfere in other people's business. So far he has not, and the UN could well take a page out of his book" (December 1947).

If the State Department continues its present policy of conforming to the UN resolution, it will continue to violate article 2, paragraph 7 of the United Nations Charter. This article, by the way, is a restatement of article 3 of the Atlantic Charter. The pertinent sentence is this: "Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state." According to international law, states are juridically equal among themselves and no state should intervene directly or indirectly in the internal affairs of another state.

The demand for a new and acceptable government as recommended in the UN certainly constitutes intervention in the internal affairs of Spain, contrary to article 2 of the Charter. When Senator CONNALLY, during the debate on the resolution, asked that "the agreement of the UN should be limited to an appeal to the Spanish people to modify the political organization of the national regime," more than half the delegates rose and protested against what they termed "dangerous interventionism." The Communist-inspired proposal for an economic blockade of Spain was defeated for that reason.

The vote on the formula demanding a new and acceptable government was significant. Only 23 nations out of the 54 voted for the demand; 31 refused to vote. Thus it was passed. It is quite evident, therefore, that the majority of nations present considered it intervention. The New York Times editorial (Nov. 11, 1946) reflected the prevailing opinion on the extraordinary action of the UN. It pointed out that the UN must not interfere with Spain's domestic affairs and also must accord to Spain the same treatment it metes to other nations.

Dr. Carlton Hayes, in expressing himself on this matter of intervention in his wartime mission in Spain says, "Noninterference in the internal affairs of foreign countries is not merely a personal opinion of mine. It is a long-standing American public policy. * * * This was the policy that President Roosevelt reaffirmed in specific pledges to Spain, and the policy in accordance with which our wartime mission in Spain was discharged. I do not believe it should be lightly changed. Frankly, I would leave Spain to the Spaniards. * * * Spain and the Spanish people can be, regardless of their form of government, very serviceable to American interests now and in the future."

The UN is interfering also insofar as it gives moral support to the Spanish Government in exile. The latter was allowed to plead its case, at least unofficially, at the San Francisco Conference and at the UN Asemblies, while the Spanish Government has been refused all opportunity to reply. A memorandum from the Spanish Government in exile was admitted at the San Francisco Conference, debated upon and a resolution was drawn up excluding Spain from the UN. Is that justice and fair play as practiced in the UN?

Perhaps it might be alleged that our State Department's white paper on Spain fully justified the exclusion of Spain and the condemnation of the Spanish Government. This document, published in 1946, should be called a yellow paper rather than a white paper. It is a contemptible compilation unworthy of our State Department. Weak, flimsy, insincere, it consists of 15 documents supposed to justify our Spanish foreign policy. The first 13 documents deal with incidents happening before America entered the war. They cannot, therefore, be quoted to justify our policy at a time we considered friendly relations with Spain the correct procedure. To make them the basis of an attack on Spain is to play a crooked game.

The fourteenth document, elaborately labeled "Secret Protocol between the German and Spanish Governments," proves to be nothing more than a guarantee that Spain would not allow the arms she was buying from Germany to be diverted to the use of Germany's enemies. The fifteenth document records bitter German complaints against Spanish concessions to the Allies. This "White Paper" deliberately omitted all documents proving Spain's benevolent neutrality.

A white paper is not supposed to suppress the truth. Why were not all the facts made known to the American people? Clearly because the State Department did not wish to admit the presence of Communist influence within its own sanctuary. Those responsible for this paper have since departed. The policy toward Spain still remains however. Let the UN shelve the Spanish question as it pleases: it is up to us Americans to disregard Soviet opinion and to change our Spanish policy in conformity with the facts. For the sake of justice and our own self-preservation, we must be friendly with the first great European nation to stand up against the march of the Reds.

Relief for the Persons Suffering by Reason of the January 1949 Blizzards in the Midwest and West

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. O'SULLIVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to make the following observations and thereafter to include certain storm news as reported by the newspaper Custer County Chief, published at Broken Bow, Nebr., on Monday, January 24, 1949:

Almost everyone in America who reads the newspapers has been advised about the weather conditions which have been prevailing over the Middle West and West since early in January of this year, but no newspaper item or magazine article could really portray the ravaging extent and effect of this terrible series of storms.

I have been informed by people of Nebraska that the effects of the blizzard of 1888 was as nothing compared to the almost unbelievable destruction caused by the past six successive storms during this month of January.

I was advised by telephone today that a seventh snowstorm is now spreading over the Nebraska area. Undoubtedly, the damage done by this series of storms will be the greatest in Midwest and Western recollection, and the losses to those owning livestock and to business

and people of the Nation generally will reach a gigantic total.

Human life also has been greatly imperiled, and perhaps many already have been maimed or have lost their lives by reason of these storms.

I received the following in a letter from Attorney Arthur A. Weber, of Bassett, Rock County, Nebr.:

As you know, recent blizzard conditions have paralyzed transportation in this county, not only on the highways, but also on the lesser roads and on the farms and ranches.

We live in a territory where the farms and ranches are a great distance apart, and in some instances people live from 5 to 10 miles from their nearest neighbor or from a telephone. Many of our citizens have been isolated for weeks and it is impossible to know or to estimate the extent of suffering to humans and to livestock. That information can only be ascertained when the roads are opened.

I am told that railroad companies in the storm-swept areas and other public utilities are willing to exert their best efforts to give prompt help during this emergency to relieve the people who find themselves and their livestock imperiled.

However, the lack of proper equipment with which to open up badly blocked roads so as to aid people in the storm-stricken area does not seem to be readily available.

I have been told that prompt action must be taken to get the necessary equipment and manpower and know-how working, and it is the hope and wish of many people in the storm-stricken area that this emergency relief matter be placed by Maj. Gen. Philip Fleming under the control of Gen. Lewis Pick of the Army engineers, who is stationed in Omaha, Nebr., because General Pick, by reason of his operation in carrying out the Pick-Sloan plan, has a better knowledge of the territory to be relieved, and furthermore, has knowledge of the equipment which is now in the Midwest, which could be used for opening up feeder roads and digging this vast area out of the snow. He could probably get together more proper equipment in a shorter time than anyone in the area, and in view of the fact that these contemplated operations are in the Pick-Sloan plan area he would be the most logical and best equipped man to be in charge of this relief work, which must be done now by someone who has the real know-how.

The news articles follow:

FEAR HEAVY LIVESTOCK LOSSES IN WESTERN NEBRASKA UNLESS RELIEF PLEAS ANSWERED SOON—GOVERNOR VAL PETERSON CALLS BLIZZARD AND COLD SPELL THE STATE'S GREATEST CATASTROPHE, ATTENTION TO APPEALS FOR HELP PROMISED—QUICK RELIEF MUST BE GIVEN RANCHERS IN SANDHILLS—RANCHERS PLIGHT SERIOUS AT PURDUM, ELSMERE—SUPPLIES RUNNING LOW AND VERY DIFFICULT TO FEED CATTLE

High winds and some additional snow Saturday night and Sunday brought complete distress to the sandhills ranch country. Fortunately, telephone lines were still operating from here to Brewster, Purdum, and Elsmere.

Howard Fink, of Broken Bow, was in touch with his brother at Elsmere and a number of other ranchers in that area yesterday and this morning.

Jack Moody, of Purdum, reported that Sunday's blow had left the area in the worst shape it has been in during the entire winter. Cattle were suffering, roads were impassable, and hay was inaccessible.

The Keys ranch reported it had only a 2-day coal supply and only enough tractor fuel on hand for cattle feeding work for 2 days.

The Giles ranch, equipped with liquid gas for heating and cooking, was completely out of fuel and great difficulties were experienced in keeping the house warm and preparing food.

Efforts were being made at Broken Bow to get snow-plow equipment to Halsey to open a road for trucks to take supplies at least as far as Purdum and if possible on to Elsmere Tuesday or Wednesday.

Dr. Don Walker and Claire Coffman, who made an aerial survey of the country a few days ago, reported that calls were coming in from friends telling of the difficulties in feeding cattle and obtaining supplies. The little stores at Purdum and Elsmere were reported to be running out of many food necessities for ranch patrons.

The Knoell Bros. took their caterpillar bulldozers to Dunning this morning to open a trail for supplies to the Rowan and Erickson ranches up the Dismal River. The Knoell outfit was to continue on to the Walter Gibbons ranch land to the southwest. Gibbons has a large herd of cattle there that is running low on supplement cake feed. Gibbons had to abandon his pick-up in a snowdrift several days ago while hauling feed from the Hoagland rail siding to his ranch.

GOVERNOR WARNS LEGISLATURE OF SERIOUS CONDITIONS—APPEALS FOR HELP GET EARLIEST POSSIBLE ATTENTION, GOVERNOR SAYS

LINCOLN, January 24.—Describing the 1949 blizzard and cold spell as the greatest catastrophe ever to hit Nebraska, Gov. Val Peterson told members of the Nebraska unicameral at Lincoln this morning that the legislature might be called upon to appropriate a half million dollars for blizzard-relief work.

The Governor prefaced his annual budget message with a description of the seriousness of the situation in the State. "We've already lost several human lives, and we may lose 40 to 50 percent of all the cattle in one of the greatest producing regions in the world," the Governor warned.

"The serious thing is that we not only have 40 to 60 inches of snow on the ground," the Governor said, "we may get more than that. This may go on for 30 to 60 days. What we need is a 10-day January thaw."

The Governor said appeals for help were coming into his office from many sections of the State. I can only promise the "earliest possible" attention, Peterson said. Appeals for help in opening roads so that feed supplies can be uncovered and moved to starving livestock have come from Broken Bow, Hyannis, O'Neill, Randolph, and Ragan. "They are still coming in from the Chadron and Alliance areas," he said.

Most requests are for bulldozers and other heavy equipment to open roads to feed supplies.

SNOW STALLS BURLINGTON TRAINS AGAIN SUNDAY —NO PASSENGER TRAINS HERE FOR PAST TWO DAYS

The Burlington line through Broken Bow was snow clogged again Sunday and no passenger service has moved over the line since Saturday evening.

COMMITTEE MEETS TO PLAN RELIEF

A special committee of the Broken Bow Chamber of Commerce was called by Mark Young, president, this morning to take action to bring relief to livestock ranches west and northwest of here.

The committee instructed Don Porter, secretary, to contact Governor Val Peterson in an effort to get equipment of any kind into the ranch territory to open roads and assist ranchers in getting their cattle fed.

The committee's discussions continued at the chamber luncheon. Dr. Don Walker volunteered to take his plane this afternoon to make a reconnaissance of the ranch country around Dunning, Brewster, Purdum, and Elsmere. He was to report to the group this evening after which a definite plan of aid will be formulated.

The committee was at work at noon today to secure transportation for one caterpillar snow plow. The plow owned by the Wing Construction Co., of Litchfield, was available. It had to be transported to Halsey, however, before it could go into action on the drifted roads.

It is probable that the committee will be able to secure other equipment in the next day or so to go into the Brewster and Purdum area.

RANCHERS APPEAL FOR STATE AND FEDERAL HELP

Appeals for immediate help for the ranch country of Nebraska were made Sunday in telegrams to Gov. Val Peterson, Senators WHERRY and BUTLER and Congressman MILLER, by a number of ranchers connected with the Broken Bow Production Credit Association. Dick Whitman, secretary of the association, stated that a number of these men viewed the situation as extremely grave and felt that any available Army or other Government equipment should be sent into the sandhills area to open roads and avert a major catastrophe for the State.

Army cargo planes have been pressed into service at Denver to carry and drop hay to herds of cattle and sheep in Colorado, Wyoming, Utah, and Nevada.

While it was not contemplated that an airlift would be put into operation in this territory, ranchers feel that unused Army equipment could be rushed here to fight the battle with the snow and enable ranchers to get feed to their cattle herds.

ICE PLAGUES EASTERN NEBRASKA LINES AND HIGHWAYS—SUNDAY ICY CONDITIONS KNOCK OUT TELEPHONES, STOP BUSSES

While high winds, added snow and bitter cold pounded away at the sandhills country and western Nebraska, southern and eastern Nebraska had their tribulations Sunday with icy highways and disrupted communication and service.

Six towns in the area north of Lincoln were without electric service when icy wires broke circuits. The break near Brainard left the towns without electricity for several hours.

Dozens of towns in the eastern area were without telephone service as a result of line breaks.

Ice conditions were so bad in Omaha that the schools did not open today.

Ice on highways in some sections of the State had reached a thickness of over 2 inches and radio warnings advised motorists to stay at home. Bus lines ceased all traffic out of Omaha and Lincoln Sunday.

Bus traffic was being resumed slowly this morning with many schedules canceled for the day.

EIGHT-DAY COLD WAVE CONTINUES, INCREASES HARDSHIP—REPORT 35 INCHES OF SNOW AT BROKEN BOW THIS SEASON

Severely cold weather has been added to the hardships of snow-blocked transportation to make this one of the worst winters in many years for a large part of Nebraska.

A. A. Spradling, Government weather observer at the Burlington depot here, has recorded 17 daily readings below zero thus far this winter. The record:

December 23: −8°.
December 27: −3°.
December 30: −10°.
January 4: −3°.
January 5: −2°.
January 9: −3°.
January 10: −1°.
January 11: −3°.
January 12: −1°.
January 17: −11°.
January 18: −13°.
January 19: −13°.
January 20: −15°.
January 21: −21°.
January 22: −24°.
January 23: −2°.
January 24: −8°.

Lower temperatures have been recorded in the northern and western part of the State.

Thus far this winter snowfall has been recorded at 34.77 inches at Broken Bow. The record shows 7.85 inches in November, 14.87 in December, 12.05 in January to date.

January moisture in terms of snow reduced to water is 0.74 inch to date as compared to 0.30 for the full month last January.

Address by Hon. Edwin C. Johnson, of Colorado, to Independent Broadcasters

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. JOHNSON of Colorado. Mr. President, on January 28 last it was my privilege to speak to a group of independent broadcasters at a luncheon in the Palmer House in Chicago. Since I dealt with some very pertinent controversial problems which might be of interest to the Congress and the country, I ask unanimous consent to insert this address in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE THREAT OF MONOPOLY

It is a pleasure to meet with you independent broadcasters to discuss briefly a particular phase of radio which should be of great interest to you and which is of vital concern to the country. It is gratifying to know that many radio station owners and managers, unable for one reason or another, to be here are so completely sold on collective action that they have signified their intention to join you and to support actively and to the fullest a strong, cohesive organization which will truly represent the middleman and the little man in radio in order to fight effectively for the interests of the listening audience whom they serve. It is well that this spirit prevails when one contemplates the disasters which threaten the very existence of that major part of this great industry which you operate. The state of the Union in radio is not good. Intelligent hard-hitting action obviously is imperative now.

Today we live in an organized world. Every group is organized to the hilt. That is, every group except the independent radio operators. Farmers, lawyers, doctors, athletes, laborers, musicians, merchants, manufacturers, chambers of commerce and the clear channel group have well-greased organizations to fight collectively for their interests. The independent radio operators are the orphans of the storm.

To me, superpower and clear channels is the most important issue in AM radio today. It is important to broadcasters from an economic standpoint. If and when 24 stations in this country are authorized to operate with 750,000 watts of power, 2,000 stations are going to wither on the vine. Twenty-four stations times 750,000 watts is 18,000,000 watts, while 2,000 stations times 5,000 watts is but 10,000,000 watts. I regard this glaring situation as alarming not only because the radio tail will wag the radio dog but because superpower means domination of the air waves—domination of programing—domination by a few powerful corporations of what the citizens of America must hear. There will be no middle class of broadcasters. Either radio will be big and powerful or small and strictly local. Superpower plus clear channels plus four networks plus a slower momentum in business spells disaster to your group.

You should be exercised about this vital phase of broadcasting, because as a licensee to influence public opinion you have the legal responsibility of representing the Federal Government and a duty to be concerned about monopoly, and a right to be disturbed about absentee control of radio.

It is hardly necessary to review here the background of this superpower-clear channel battle. All of you should be familiar with the repeated efforts that have been made over the past 15 years to secure FCC authority for superpower operation of the 24 clear-channel stations. Superpower and clear-channel operation and monopolistic control by the networks are closely linked together; its proponents realize that once they are granted superpower, they have established the permanency of nonduplication of clear channels and a convenient and blanket coverage for a handful of networks at minimum cost to them.

Back in 1934 the Commission granted what it called an experimental license for 500,000-watt operation of Station WLW. We know what this superpower station was doing to many smaller broadcasters, until Burton K. Wheeler, a former chairman of the committee which I now have the honor to head, secured passage of a Senate resolution expressing disapproval of superpower. The Commission then rescinded WLW's license, but the clear-channel broadcasters continued their fight—a shrewd, carefully calculated, well financed fight—to worm out of the Commission a favorable decision. You know of their testimony before the Commission—testimony which I am bound to suggest was not effectively countered and met by the independent broadcasters as it might have been. The clear channels are still pressing with all their might for a favorable decision from the Commission. They might win unless you block them.

Last year on the eve of an anticipated decision by the Commission, after a plea from Gene O'Fallon of Denver, I introduced a bill (S. 2231) to restrict power of AM stations to 50,000 watts and to permit duplication of clear channels. Extensive hearings followed, hearings which attracted a great deal of attention. They served to give you time to mobilize your forces.

There is an important lesson for all of you independent broadcasters in that hearing. While 70 witnesses appeared in person, a large percentage were representatives of those who favored clear channel operation and superpower. Remember, please, that only 24 stations in this country are on that side of the fence with 2,000 stations on your side, and yet they had most of the witnesses and put on most of the testimony. They had engineers and lawyers and elaborate and expensive charts and tables and maps. Congressmen and Senators who have not followed this conflict carefully would think from their well-oiled demonstration that the great majority of the radio industry in this country was on the side of the clear channel group. Mr. Caldwell summoned a bare-footed girl from Tennessee, a goat farmer from Texas and an employee from the Weather Bureau in California to prove his fantastic arguments. Do not misunderstand me; I am not minimizing the wonderful job that was done by many of you. You gave liberally of your time and resources to fight this issue. More than 700 independent broadcasters wrote the members of the Senate committee supporting the Johnson bill; many of you contacted your own Senators and Congressmen or sent them copies of the letter you sent the committee. That was an important and effective thing to do. It was constructive. In the very nature of things most Senators and Congressmen are opposed to monopoly. They are opposed to oppression by the high and mighty. They respond favorably to appeals from the underdog.

But I say in all kindness that you have not yet gotten over to Congress the fact that the overwhelming majority of the radio stations in this country oppose superpower and clear-channel operation. The majority of radio stations regard clear channels as an economic and political threat; even more important, the majority definitely believe it to be contrary to the clear intent of the Communications Act; that it would defeat the purposes of the law; that it would lead to monopoly control of radio and definitely restrict freedom of speech and expression in this great democracy. You obviously have not brought the issue home to the people in your own communities and States; you have failed to make them understand what absentee ownership of a radio station means; what the situation would be for them if they had to depend on a station 1,000 miles away for programs which could not and would not serve local interest and need; and you have failed to make them realize that this is important enough for all of them to get into this fight with you for the good of the country and for their own self-interest.

The introduction of my bill last February and the letter that the Senate committee sent to the Commission requesting it to hold up a decision until we were able to consider action had the effect of suspending and delaying a final decision by the Commission. A few weeks ago, informed that a decision was about to be announced, I again discussed with Chairman Coy this whole problem and I made clear to him that I would regard it as unfortunate if the Commission were to render a decision prior to the North American Regional Broadcast Conference, scheduled for next fall.

It is my considered view that this question of superpower operation of clear channel stations is a basic, fundamental policy question of paramount importance not only to the United States broadcasting industry but actually to all of the people of the United States. I hold that it transcends and is far above a mere engineering determination of what degree of power should be used to operate a few radio stations. I hold that any such fundamental policy question can legally and properly be settled only by the Congress and not by the quasi judicial arm, the FCC, which Congress created to administer radio policies and radio law. I hold, in fact, that when the three vital sections of the law are considered together—the public interest section, the section which requires competition in radio broadcasting,

and the equitable allocation of frequencies section—the Commission does not have the legal right under the law to make a decision granting power above 50,000 watts. I make this statement fully realizing that the Commission is given authority to determine power under section 303. I insist the Commission was correct, and that it was functioning in accordance with the law when for years it followed the principle of duplicating clear channels. I assert that the Commission has reversed itself on the policy of duplicating clear channels and that should it grant any power in excess of 50,000 watts it would act without due regard for the welfare of the listening public. To the contrary it would be acting in the interests of special privilege and monopoly and in violation of the clear intent of the law.

I hold that a regulatory arm of the Congress has no legal right to render a decision in a private case which would determine broad policy designed to bind this country in dealing with the other North American countries concerning mutual problems on the very eve of a radio conference. I insist that the Commission cannot and must not commit the United States to a policy affecting all of North America a few months previous to the next NARBA conference where it is hoped we may work out an agreement among all of the signatory countries with respect to the operation of the domestic radio stations in each. I believe that this country's position at the approaching NARBA conference should be that no AM radio station in any North American country be operated with more than 50,000 watts of power to the end that we do not interfere with them and they do not interfere with us as is the case today with Mexican and Cuban stations. I believe that after the NARBA agreement has been reached and if basic legislation is then required to implement the principles agreed upon there, the Commission should recommend to the Congress whatever legislation is indicated.

Once upon a time, and not so long ago, the Commission apparently agreed with my position. As proof I quote from a Commission press release, dated January 24, 1938. Just listen to this:

"The factor involved in the use of superpower is that a small group of licensees operating on frequencies which have been assigned to them by the Federal Government would have control of radio facilities capable of reaching the entire Nation. Unless care were exercised in the regulation of these licensees, the possibility exists of having granted to a few people, from natural resources of the Federal Government, the control of a system of mass communications having untold potentialities of being utilized to influence public opinion. * * * We firmly believe that any enlargement of the differential between the highest power station class and the lowest power station class should not be encouraged unless, after full consideration of the effects on the lower power class of stations, it can be shown conclusively that a super-high-power station is necessary and that beyond doubt it will be in the public interest. We also feel that considerable caution is required in granting such powerful media."

That is a quotation from a press release, entitled "The Social and Economic Aspects of Radio Broadcasting," a study of facts presented at the informal engineering hearing on the subject of Possible Allocation Improvements in the Standard Broadcast Band.

That was a policy expressed within the Commission when the Congress had more cause to have confidence in the manner in which the Commission was administering the law. Unfortunately, we haven't heard that kind of viewpoint expressed by Commissioners in recent years. Today they seem terribly impressed by a few theoretic white spots where radio service is reported to be inadequate. They do not seem concerned at all with the threatened monopoly and oppression by a few big stations on the air waves—the air waves which belong to the people and over which Congress has given the FCC limited jurisdiction.

I have reintroduced my bill to make it crystal clear that in this Congress, as in the last, I stand firmly for the principle of limiting power to 50,000 watts and duplicating clear channels. Many in Congress agree with me but we cannot win this battle alone. I believe you have a duty, not alone to yourselves as radio-station operators, but a duty and responsibility as American citizens and licensees of the Federal Government operating under a specific law, to get out and fight for what is right and fair and in accord with the American system of free enterprise and better radio service for everyone.

It is not my province to tell you how to make that fight, but I must warn you that you are fighting a well-entrenched, well-financed, well-staffed group who are determined to have radio control in the United States. Apparently you cannot depend upon existing radio trade organizations to fight your battle. I remember all too well that the National Association of Broadcasters did not desire to testify for you in the hearings on the Johnson bill. You must depend on yourselves alone, and remember that you do comprise the overwhelming majority of the radio stations in this country. This is a country where the majority is supposed to rule; certainly from every standard of measurement you are the majority. Is there no way that you can convince every small independent operator that this is not the time to sit back and let "George do it;" cannot he be made to understand that his silence and his inaction is the certain way of putting himself out of business?

I have been told that some independent broadcasters would be willing to see a limited number of superpower stations authorized under certain conditions. As I understand it, those limitations would include:

1. A reallocation of clear channels so that they would be located only in the so-called unserved white areas;
2. A complete duplication of all other clear channels;
3. Limit the number of high-power clear channels to possibly three or four;
4. Limit the power of such clear channels to not more than 100,000 watts;
5. Deny ownership of any superpower clear-channel station to every network and deny such stations the right to broadcast network programs;
6. Require such a station to do its own programing.

But let me say for the record that I am firmly and unequivocally opposed to this or any other compromise on this question. I maintain there is no sound legal basis upon which the Commission may authorize superpower operation of standard broadcast stations. If and when the Commission does so, it is violating the basic law which requires in clear and unmistakable terms that the public interest must be served first; that there must be competition in radio broadcasting; and there must be equitable allocation of frequencies.

I warn you that if you presume that the Commission has the authority to make such authorizations of power, even ringed around with the conditions I have outlined, you must also presume that the Commission next month, or next year, or 2 years from now, can again reverse itself. One by one, the FCC can drop the restrictions and finally you will face exactly what you face today—the domination of standard AM broadcasting by a few powerful interior stations. I don't want to see that happen and you and the American people should not let it happen. If you do not want to get burned, do not play with fire. Place your faith in the law, not in the whims of men.

In that view I am strongly fortified by a report of a subcommittee of the Senate Committee on Interstate and Foreign Commerce, submitted only this week. Some of you, I believe, already have read that report. I have brought some copies with me. Let me emphasize first that this report was prepared by two eminent Members of the Senate, Senators TOBEY and MCFARLAND, the latter an extremely able lawyer. Note what they say. I quote:

"We believe that the clear channel-superpower question is a fundamental policy issue of tremendous national import to be determined by the lawmaking body and not a technical engineering problem to be decided by a regulatory agency."

Let me quote further from their recommendation on this point:

"(a) That since the question of increasing power for operation of AM radio stations above the present limit of 50,000 watts involves a basic, fundamental policy of the highest national importance concerned with the economic and political health of the United States, it is a question which can legally be determined only by the Congress through the enactment of legislation."

I also understand that some of the independent broadcasters believe that this fight doesn't make much difference since television is going to destroy all of you, anyway. Don't you believe it. None of the clear channels is planning on suspending because of television. If there is a place for them, there is a place for you. Television is a great development; people like it, and it is bound to grow. But it will be many, many years before a television program will be available in every town and hamlet and farm and ranch house in this country. For years there will be room for radio, as we know it today. But conceding that television is the coming thing, isn't it clear that if you quit now you will have taken a big step toward barring yourselves from television as it improves and expands? The defeatist viewpoint echoed by some of the independent broadcasters is exactly the viewpoint that the big stations and networks want you to have. They want you to quietly fold up your AM and FM operations so that when they are ready they, and only they, will be in position to take over television.

There is no need to worry today about the fact that it costs large sums to get into television; that it is not an operation for the little fellow. That will change, too, as improvements take place and costs drop. Just look back 20 years at radio. Stay in this business, remain abreast of technological advances, keep it alive, keep it competitive, keep serving the people you live with, and you'll find that you'll remain a part of the industry, regardless of the scientific changes and progress that it makes. Today video channels are not available for all radio stations which desire to get into television. The most equitable and stabilizing thing that could be done for the radio industry in this period of conversion from aural radio to a combination of aural and video is to assure AM and FM licensees that they will not be denied the opportunity to get in on the ground floor when additional video channels are made available by new scientific developments already well past the initial stage.

The main thing to do now is to get together, stick together, have clear-cut objectives, develop some good strategy, plan an intelligent campaign, get it going fast, keep fighting hard, and you won't lose out, and neither will the American people lose out.

Forestry Assistance

EXTENSION OF REMARKS
OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a letter from Paul H. Gerrard, forest supervisor of the Ozark National Forest.

The Ozark National Forest lies partly in the district which I represent as does the Sylamore National Forest.

We are beginning a forestry program in north Arkansas more or less along the lines of training for forestry to encourage individual owners of land outside the national forest to care for their own timber by setting the proper examples in the national forests themselves. Mr. Gerrard is doing a great work in Arkansas in cooperation with the State forestry service in this development.

I would like also to insert his statement covering some of the most important forestry activities for the benefit of the membership of the House.

The letter and statement follow:

UNITED STATES DEPARTMENT
OF AGRICULTURE,
FOREST SERVICE, OZARK NATIONAL FOREST,
Russellville, Ark., January 28, 1949.

Hon. JIM TRIMBLE,
House of Representatives,
Washington, D. C.

DEAR JIM: In accordance with your request in December when we were discussing general forestry matters, I am herewith outlining some of the more important needs as I see them. It is, however, realized that, due to the size of the Federal budget, consideration cannot be given to every deserving item, but some of them are very important to Arkansas and to the South.

Very sincerely yours,

PAUL H. GERRARD,
Forest Supervisor.

STATEMENT COVERING SOME OF THE MOST IMPORTANT FORESTRY ACTIVITIES

PRIVATE FORESTRY ASSISTANCE

Perhaps the most important item of all, as well as the weakest, is the lack of technical assistance to small owners of forest land in order to build back and prevent further depletion of forest resources in the South. The proposed bill to amend and supplement the act of June 7, 1924 (43 Stat. 653), is especially important to the entire South. This bill, in brief, will:

(a) Increase the authorization for cooperative fire control in the various States.

(b) Increase the authorization and permit the furnishing of forest tree seeds or plants to any timberland owner instead of being limited only to farmers, as at present.

(c) Increase the authorization for education and demonstrational activities of the land-grant colleges or universities (Extension Service).

(d) Broaden the authority of the Secretary of Agriculture to establish and maintain service and facilities for furnishing technical guidance and assistance in regard to the proper management of privately owned forest land. It contemplates such service would be handled largely through State forest agencies and raises the authorization for this purpose.

The amending and broadening of this act would eventually assure the protection of all forest lands from fire, and provide technical advisory assistance where it is most needed among the small landowners. Seventy-five percent of the Nation's timberland is owned by 4,500,000 of the small landowners and only 4 percent of them are following good, or better, cutting practices. Here in the South we find only 2 percent of them following good or better practices and only 1 percent in Arkansas. The Nation cannot meet its forest needs unless a major portion of these small owners adopt good cutting practices. There are only about 50 farm foresters employed in the South to provide the forest advisory services needed on over 100,000,000 acres of forest land. It is estimated that 200 farm foresters can be used to advantage in the South alone. The foregoing is of especially vital importance to the State of Arkansas and to its 206,000 small landowners who own some 68 percent of the State's forest land. Unless forest practices are improved, the large hardwood areas in north Arkansas will produce little more than their annual tax, while in south Arkansas, management practices among small owners have improved somewhat. However, they are still far from satisfactory.

RECREATION USE

There has been a large increase in the number of recreation visitors in spite of the fact that considerable rehabilitation work is needed on most of the recreation areas. As a result of requests by several communities that these facilities be maintained to a higher standard, a statement was prepared regarding the status of the recreation facilities for the entire forest, a copy of which is attached. The total is not quite comparable with the national debt but it does indicate a need for additional maintenance funds whenever conditions become such that they can be provided.

WILDLIFE

The Bureau of the Budget did not set up any funds under this item but it will soon be necessary to begin to handle this activity on a plan-wise and managed basis in order to take care of the hunters and protect the forest from damage through an increasing number of deer. This matter was covered in a letter last year. The situation is about the same, namely, that the number of game and hunters is increasing each year and funds are needed to carry on the work necessary to provide management plans to serve as a basis for cooperation with the State game department.

ACQUISITION

There still remains over 300,000 acres of purchased land within the forest. It is impossible to take care of all of the offers for the sale of land. Acquisition for consolidation of the forest is one of the urgent needs from an administrative viewpoint.

TIMBER SALES

Timber sales on the forest are going along at a high rate of about 29,000,000 board feet per year. Receipts will be in the neighborhood of $330,000. This is a little bigger cut than actually planned. A 30,000,000 foot sale of white oak to extend over a 5- or 6-year period is planned for the near future. This will provide employment for about 350 men, 150 of whom would be employed in a stave finishing plant. Lack of adequate timber sale funds this fiscal year as a result of having to meet a portion of the pay act increase will probably delay the starting of this operation for 3 or 4 months unless additional funds can be provided to get the job started. Present sales require the full services of all available personnel.

GENERAL

Budget estimates for the Forest Service show a reduction in all items except timber and range use. Fire control, forest and range research, forest survey, research in products, etc., are also important but farm and private forestry assistance is considered the most urgent need from a national welfare standpoint.

STATUS OF RECREATIONAL FACILITIES

Ozark National Forest

The Ozark National Forest has 12 recreation areas which vary from a picnic spot with a few tables and fireplaces to a 160-acre lake with adjacent developments and, also, to a 26-room lodge with 18 cabins. During the war years, practically no money at all was spent on maintenance. Since the war, insufficient funds have been received to rehabilitate them to their original state; also there were a few projects which were only partially completed at the start of the war and which have not as yet been completed.

Recreational use is increasing on the forest. For instance, we had 183,700 recreation visitors in 1947 and about 345,000 in 1948. About one-half of this increase is due to more carefully prepared estimates and the remaining 50 percent is the actual increase which has occurred in spite of the fact that our recreation areas have not been maintained to the extent that we should honestly publicize them to encourage additional usage. Last year there was a general increase in recreation visitors throughout northwest Arkansas. This tourist business can be tremendously increased when recreational facilities are once placed in condition to attract and hold visitors. These areas have as potential customers the population of the States south, east, and west to draw from. For instance, there are approximately 20,000,000 people within a radius of 200 miles from the State of Arkansas. Extending this to a little larger area, say, 500 miles, we find 56,000,000 people living within this radius.

The national forest, with its conservation program, its development of game, recreation and scenic areas, timber, and the numerous forest roads, offers an unusual combination of attractions not ordinarily found elsewhere. It offers a quiet retreat in natural forest conditions in an area of exceptional scenic values. Its high elevations provide the first opportunity for relief from the heat of the lowlands to the South such as Louisiana, Texas, and parts of Oklahoma as well as most of the State of Arkansas.

Mount Magazine (Logan County)

The area set aside to provide recreation covers an area of nearly 2,000 acres. Facilities consist of a 26-room lodge, 18 cottages, and a small concession building, all of which are a part of the resort area. In addition, there are picnic areas at Brown Springs, Dripping Springs, West End, East End, Cameron Bluff, and the Green Field place. Cameron Bluff has been developed somewhat more intensively and includes an amphitheater, a number of picnic tables, toilets, etc. A summer home site area has also been designated as a part of the development.

The original investment for this mountain area totaled $108,323 of which $85,822 was the cost of the resort area and $22,501 the cost of the picnic areas. It is estimated that $40,000 would be required to rehabilitate the facilities in first-class condition.

The resort area has never attracted many people in spite of its high elevations and unusual scenic attractions due to the lack of a paved road. The cost of such a road on the 21 miles within the forest from Havana to Paris would be in the neighborhood of $180,000 to $200,000, including road bank stabilization. With a paved road it would be possible to increase the tourist business perhaps as much as 10 to 15 times over that of the present. It would also extend the season from the present 2 to 3 months to 6 to 8 months of the year.

Cove Lake (Logan County)

Cove Lake recreational area covers an area of about 600 acres. It includes a 160-acre lake, bathhouse, picnic facilities, etc. Of the original investment of $184,735, the dam cost $156,729 and the other facilities $28,006. The biggest job at this area is the completion of the spillway of the dam, which is estimated to cost in the neighborhood of $80,000. This is urgently needed in order that the lake level may be maintained at the planned elevation and permit full usage of the lake. The cost of maintaining and replacing picnic facilities, additional water, shelters, as well as some very simple overnight cabins and an eating place would amount to about $51,100, or a total of $131,100 for this area.

The contemplated 20 overnight cabins, eating place, bathhouse, and latrines are to provide inexpensive recreational facilities for local people as well as tourists. It is contemplated that a sleeping cabin with a picnic table and fireplace outside could be rented in the neighborhood of $12 to $15 per week and retire the investment over a period of time. Improvement and development of fishing by making a small charge and using the money to improve the lake is another contemplated self-maintained proposed development.

Spring Lake (Yell County)

Spring Lake recreational area covers approximately 420 acres including an 80-acre lake, bathhouse, picnic facilities, and a caretaker's residence. The total investment is $253,540, of which $183,565 is the cost of the dam, and $69,975 represents other facilities. A cabin development similar to that of Cove Lake is planned here which, together with the necessary maintenance work to rehabilitate the area and facilities, would cost in the neighborhood of $45,600.

Lee's Creek (Crawford County)

A small picnic area with swimming facilities at Lee's Creek with an original investment cost of $2,500 requires almost complete rehabilitation which would cost in the neighborhood of $2,500.

Cherry Bend (Franklin County)

This is a small roadside area on Highway 23 in need of complete rehabilitation for picnic tables, toilets, and water at a cost in the neighborhood of about $1,200.

Gray's Forest Camp (Franklin County)

Gray's Forest camp is a small picnic area containing a number of fireplaces, tables, shelters, and toilets, and will require about $1,100 to place it in first-class condition.

White Rock recreational area (Franklin County)

This area covers about 600 acres, including a number of picnic tables, fireplaces, toilets, three shelters, a concession building, three cabins, as well as a water supply, all of which originally cost $76,585. To put this place in good condition would require about $6,100.

Shores Lake (Franklin County)

This covers an area of approximately 700 acres. It was designed to provide an 80-acre lake, organization camp, picnicking, camping, and a summer home site area. The dam is about one-half completed and the organization camp is practically completed except for water and some additional construction. Investment to date on the dam is listed on our books as $448,882 and investment in the organization camp and grounds as $35,085. It is estimated that it will require about $200,000 to complete the dam; $15,000 to complete the organization camp, which has a capacity of 125–150 people; about $25,000 to provide diving docks, toilets, picnic areas, shelters, etc.; $6,000 for landscaping; and about $19,500 to provide water and sewage facilities for the entire area. Entrance road signs and miscellaneous would amount to another $5,000, or a total of about $270,500. The organization camp will be operated on a somewhat make-shift basis by a local group this coming season.

This area when developed and completed will be one of the most attractive and popular areas within the Ozark National Forest. Its development will increase the usage of the concession building and cabins on White Rock Mountain and make them a going concern.

Bayou Bluff recreational area (Pope County)

This contains an area of about 200 acres with toilet facilities, bathhouse, picnicking, and three small overnight cabins and an undeveloped swimming pool on Illinois Bayou Creek. The investment in this area to date is $13,611. To rehabilitate this area, provide drinking water, and construct a low dam, it is estimated it would cost in the neighborhood of $6,500.

Barkshed Forest Camp (Stone County)

This is a small picnic spot on Barkshed Creek with facilities for swimming, picnic tables, shelters, and toilets. The investment to date on this is $6,196. To rehabilitate this area, it would cost in the neighborhood of $4,900.

Blanchard Springs recreational area (Stone County)

This unusually attractive area consists of a shelter, picnicking facilities, toilets, etc. The parking area was never completed. To rehabilitate the area and provide a parking area, it would amount to $8,700.

Blanchard Springs organization camp (Stone County)

This organization camp with a capacity of 125–150 people is completed except for water supply, completion of bathhouse and latrines, and miscellaneous work on the grounds such as signs, fences, etc. It is estimated that $32,000 will be required to complete this camp to where it could be put into use.

SUMMARY

The estimated cost to rehabilitate all the area on the forest is summarized below:

Mount Magazine:	
Rehabilitation of recreational facilities	$40,000
Road to Mount Magazine within the forest from Paris to Havana	180,000
	220,000
Cove Lake:	
Completion of spillway	80,000
Completion of rehabilitation and additional facilities	51,000
	131,000
Spring Lake:	
Rehabilitation and additional facilities	45,600
Lee's Creek:	
Rehabilitation of area	2,500
Cherry Bend:	
Rehabilitation of area	1,200
Gray's Forest Camp:	
Rehabilitation	1,100
White Rock:	
Rehabilitation	6,100
Shores Lake Dam:	
Completion	200,000
Completion organization camp, swimming and picnicking facilities	70,500
	270,500
Bayou Bluff:	
Rehabilitation	$6,500
Barkshed:	
Rehabilitation	4,900
Blanchard Springs recreational area:	
Rehabilitation and parking lot	8,700
Blanchard Springs organization camp:	
Additional construction and rehabilitation	32,000
Total	730,100

The above outline has been prepared to give an idea as to the amount of investment in recreational facilities and the amount needed to rehabilitate and complete them in accordance with original plans. It is not expected that any such sum could be made available at the present time or even for a considerable time in the future, considering the national debt and the present necessary expenditures. However, if the areas are to be made attractive to visitors and capitalize on these developments, an addition to the present amount of maintenance money will be needed over a period of years to permit their rehabilitation.

Procedures have now been worked out whereby the operator of a concession is required to do a certain amount of maintenance work. This will help us to some extent in the future, but still will not be sufficient to rehabilitate the areas.

The proposed cabin developments at Spring and Cove Lakes would not only provide a highly needed recreational facility, but would provide an operation which would attract and justify a concessionaire on a business basis, at the same time reducing the necessity of providing a recreation guard for policing, cleaning up, etc., as this would be made a part of the concessionaire's job.

Consideration is also being given to setting a small charge, say 25–50 cents per car for the use of picnic tables and facilities on the areas. While such charges will of necessity be limited to the larger areas where the amount of usage and the facilities for collecting the charge would justify the expenditure such as Spring Lake, Cove Lake, White Rock, and perhaps Blanchard Springs areas, this would be the introduction of a new practice and its adoption will have to be handled very carefully until local people became accustomed to it. This is mentioned primarily as a means which we plan to adopt in order to place the areas a little more on a self-sustaining basis.

In regard to priority, each area serves a specific locality and all deserve consideration. The most immediate returns perhaps would result from completion of Cove Lake spillway followed by Mount Magazine Road. Then those areas having possibilities of heavy usage and being handled and largely maintained by concessionaires such as Cove Lake recreational area should receive consideration.

Government Research in Heart and Rheumatic Diseases

REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. JUDD. Mr. Speaker, in connection with the remarks that have been made by several Members, Mr. PRIEST,

Mr. SMATHERS, and Mr. KEEFE, on the resolution introduced by them to establish an institute to assist in research on arthritis and rheumatic diseases, I would like to call attention to a resolution—House Joint Resolution 105—which I introduced last year and which the gentleman from Tennessee [Mr. PRIEST] and I introduced again this year asking that the President designate each year the week of February 14, Valentine Day, as National Heart Week. That week is being sponsored for that purpose by the American Heart Association and it should be made official. It has been demonstrated repeatedly that a combination of Government and private agencies working together is the best way to make most progress in research in the cause and management of obscure and widespread diseases.

If, during that week, we can focus attention throughout the country on the fact that heart disease, which is the serious end product of rheumatic fever, is the single greatest killer we have today, causes more unemployment and affects more persons than any other disease, we will be able to develop public sentiment and support for maximum effort, in cooperation with Government, against this great menace to all.

One American's Opinion

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter received from a citizen of the congressional district in Michigan which I have the honor to represent.

In rather pointed language, this taxpayer sets forth his ideas of cutting down public spending and waste.

The letter follows:

PLYMOUTH, MICH., *January 15, 1949.*

Hon. GEORGE A. DONDERO,
House of Representatives,
Washington, D. C.

DEAR SIR: Having read through the fantastic figures offered by the President of the United States, the President of all (?) the people, even the poor little devil who has to foot the bill for the 1949 budget, I would like to submit my own figures on the matter. You can save nearly 50 percent for the taxpayer by adopting them.

The national defense figure is too damn much. Who are we fighting anyway, except the high cost of living?

The veterans' service could help some on the budget cut, though not nearly so proportionate as the rest of the items.

The international affairs are in a muddle now. Why make 'em worse?

Social welfare is some more of this paternalistic grafting in the guise of good doers.

Community facilities are nuts. Let the rugged individualists stand on their own feet instead of running all the time to Uncle Sammy for money.

Education now is way ahead of the country's spiritual welfare. Less brains for a while and more fearing of the Omnipotent.

Agriculture and more agriculture deserve a 75-percent cut, both of them. They are the guys who wanted to plow under the little pigs. And see what we pay now for pork.

Let Government bigwigs spend more time at home and not so much running over the earth minding other people's business. They won't need so much transportation money.

Labor believes nothing else is right but striking. So why pay them to do it besides?

General Government deserves only half of what it's asking for. When they deserve it, let's pay them for it.

Interest on the debt that 15 years of misrule made, unfortunately, has to be paid.

But why pay a nickel for contingencies? What are the legislatures getting their salaries for but to avoid them?

That then sums up the taxpayer's idea of cutting down on all the pork-barrel craziness down in Washington. I can hardly get my own bills paid as it is.

Sincerely,

E. FLETCHER CAMPBELL.

Cloture in the Senate

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Republicans in Senate Seen Making Mistake in Favoring Cloture," written by David Lawrence and published in the Washington Evening Star of January 29, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPUBLICANS IN SENATE SEEN MAKING MISTAKE IN FAVORING CLOTURE—ACTION TO LIMIT DEBATE WOULD DEPRIVE MINORITY OF RIGHT TO BE HEARD

(By David Lawrence)

The Republicans in the Senate are about to make a mistake which will rise to plague them for years to come and may make such a fundamental change in congressional government as to bring forth a demand for a single instead of a two-house system.

The Republicans have lined up behind a move which will permit a majority to shut off debate. Some Republicans favor a simple majority and others favor two-thirds to apply cloture on those procedural points not covered by the present rule whereby debate is limited in part. But in either event, it would be possible for the minority to be deprived of its right to be heard.

For decades the United States Senate has been the one place in the world of free governments where the minority could not be shouted down and its chance taken away to be heard fully and comprehensively.

Now it is asserted that even the present rule which applies cloture in certain instances but does not really prevent extended debate if Members choose to make use of the procedures available to them has been rarely invoked. But if all motions and procedures are to be covered by a two-thirds cloture, it would be a simple matter later on to change it to a majority of those present. The Senate then would become almost identical in its procedure with the House of Representatives, thus making it logical to call for a unicameral or single-House system. Such a plan would place the Western States and others with a small population at a serious disadvantage and would abolish the sovereignty of the States for all practical purposes.

ENCOURAGES TYRANNY

The real objection to the adoption of any absolute rule to cut off debate is that it encourages the formation of arbitrary and intolerate majorities which can become tyrannical.

The argument that recourse can be had at the polls against such a majority falls to the ground, because two-thirds of the Senate Members do not come up for election each congressional year and it is possible for a majority of two-thirds to invoke cloture and not be held accountable for as many as 4 years.

If cloture is adopted, then logically the people must have some quicker means of redress than they have today. In the democracy of Canada and other English-speaking governments, the people can overrule their national legislative body at any time. An election can be held to determine whether a majority misinterpreted or correctly interpreted the will of the people.

In the sense that the adoption of cloture may hasten the day when a constitutional amendment is adopted calling for the removal of a President when he fails by a two-thirds vote to retain the confidence of both Houses of Congress and calling for replacement of Members when they have lost the confidence of the people, the step can be welcomed. But to adopt cloture without at the same time giving the people an instantaneous check on an arbitrary majority is illogical and inconsistent.

The Republicans are playing bad politics when they join with the northern Democrats to change the rules governing debate. Already this week they have an example of how an intolerant majority functions when it wishes to cut off hearings in an important committee considering labor-management legislation of far-reaching importance to the people.

HYPOCRITICAL MANEUVER

To find the Republicans anxious to make political capital out of the discomfiture of the Democrats who are divided on the civil-rights issue is regrettable, because on its face the maneuver is hypocritical. The sponsors of civil rights for Negroes presumably are not yet ready to support a measure to protect the civil rights of the white man.

There are more instances each year of violence on the picket line in labor disputes, more instances of cars overturned as workers seek to get into factory parking lots and more instances of intimidation in the homes of workers by strong-arm men than there have been lynchings in the last 10 years. The proposal to put the police power of the Federal Government behind the civil rights of Negroes would be widely acclaimed if it were broadened to include all manner of violence in which citizens have not been given protection by the local authorities. If any Republican or any southern Democrat sought the passage of any such all-inclusive law, the northern Democrats would never support it and would back away from the issue.

The antifilibuster movement is really tied up with a movement by the Republicans to win the Negro vote in the North, though, to be sure, a large part of it has gone Democratic for several years notwithstanding the fact that the late President Roosevelt never attempted to force the members of his own party from the South to give up their right to unlimited debate and to jam through Congress any civil-rights legislation.

The Republicans are the minority party in Congress and filibustering is a weapon of the minority. That's why it seems strange that the Republican leaders are willing to give up the one method left in congressional procedure by which the arbitrariness of any majority in either party can be held in check.

Four Million Homes Added

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article taken from a recent issue of the Wall Street Journal.

Every man, woman, and child in the United States has a stake in this public-housing problem, and, before it is too late, let us take inventory and see what the building industry has already done to rehouse America. There are too many necessary demands on the taxpayer's dollar to launch on an $18,000,000,000 subsidized housing program, which is the first step on the road to complete state socialism.

The article follows:

HIDDEN HOUSES—UNITED STATES EXPERTS RECOUNT; DECIDE THEY MISSED 4,000,000 ADDED HOMES—RENOVATION WAS ONE FACTOR FORGOTTEN; ITS DISCOVERY COULD CUT PUBLIC HOUSING—STATISTICAL DEBATE CONTINUES

(By Alan L. Otten)

WASHINGTON.—America has some 4,000,000 hidden dwellings. They are helping to take the sharp edge off housing demand. And their discovery may well have an important effect on future Government housing policy.

Evidence of these forgotten houses has been dug out of statistics by some of President Truman's top economic advisers. These economists were searching for an explanation of why demand for housing this fall and winter has softened somewhat at a time when nearly everyone, in Washington, at least, expected continued high pressure.

They think one answer lies in their findings that since the census of April 1940, there have been close to 4,000,000 more habitable dwellings added to the available nonfarm housing supply than official Government figures have led people to believe. These aren't new units, they're quick to point out, but they are serving to house many families who were believed to be out looking for some place to live.

The count and conclusions of these experts are not universally accepted by all other administration housing specialists. But the findings are being studied seriously and much weight is being given to them. Some lawmakers who will pass on housing legislation in the Eighty-first Congress are tempering their enthusiasm for public housing in the light of these studies. Thus, the theories of Mr. Truman's own economists may actually be used to pare down the President's demand for a 7-year program to build 1,000,000 federally subsidized, low-rent housing uints.

REFIGURE FUTURE NEED

If the recount of the housing supply is accepted, it will mean trimming by three to five million the previous estimates of how many new homes should be built in 1960. These figures on "need" have ranged from 12,000,000 to 14,000,000 new dwellings between now and 1960.

The basic premise of the "hidden houses" counters is this: Practically all judgments of the Nation's housing needs have been based on Bureau of Labor Statistics figures on new nonfarm dwellings started. These figures are quite accurate as far as they go, the theory runs, but they ignore these big factors:

Between April 1940 and April 1947 about 2,240,000 housing units were taken out of the substandard category and put into the habitable class. This was done, for example, by families with war-earned money to spend, putting in plumbing and toilets, fixing walls and roofs, and making other needed repairs. This fixing up has continued at a fast pace since 1947, although probably not as fast as in the war years.

All of this means that better than two-and-a-quarter million dwellings, which public-housing advocates had counted out because they were substandard and needed replacement, have by now been brought back into the housing supply.

Another net gain of 1,117,00 to 1,367,000 dwellings, likewise not counted by BLS, came in these ways: Switching nonresidential property into housing, breaking large homes into several smaller apartments, and using former farm dwellings as shelter for folk who aren't farmers.

During this 1940–47 period, BLS reported only 3,293,000 new houses started to augment the Nation's housing supply. But now the housing economists, taking their hidden sources into account, claim the gain for the period was really somewhere between 6,650,000 and 6,900,000 dwellings—roughly, 3,350,000 to 3,600,00 more than the BLS reports show. Bringing these calculations up to date by estimates, these specialists maintain the discrepancy is now nearly 4,000,000.

HALF RIGHT

In some war years, these economists believe, the BLS figures showed only half the habitable dwellings added.

Their conclusion: First, the backlog of demand isn't as great as was thought; second, estimates of future need should be revised so home building won't go ahead too fast and build up the vacancy rate. They fear prices would then be forced sharply down, scaring builders out of the housing field.

Finally, to slow the pace, Government aids to home building for the middle-income groups should be held steady—certainly not increased. This assistance is chiefly in financing. Veterans' labor, and other groups advocate proposals for direct Government loans to ex-GI's for houses, for more liberal terms on loans to cooperatives, and for increasing the amount and type of mortgages that can be sold to the Government's secondary mortgage market, thus making more cash available for lending.

These statistics also will be used in Congress to oppose the ambitious public-housing program outlined by President Truman in his state of the Union message. The President's advisers don't think their findings really argue against the need for some federally subsidized housing, but they fear Mr. Truman may have asked for too much.

They contend a public housing program is needed to provide dwellings at rents which can be afforded by low-income groups. They say it will take 3 or 4 years of filling the backlog and building up vacancies before enough higher-income families will move out of older, cheaper dwellings, making these available for people earning less. Until cheap private housing does trickle down, these administration experts contend, the Nation needs a short—perhaps 4- or 5-year—public low-rent housing program.

STATISTICAL SOURCE

The President's advisers arrived at their new arithmetical beliefs by checking the comprehensive April 1940 census of population, which included a housing count, against a sampling census report on housing made in April 1947. The figures showed a far greater increase in available units than the BLS statistics could account for and indicated where the extra units came from.

The calculators admit that the April 1947 census sampling might contain some errors—that's why they allow a range of estimates. They also checked sampling home counts made in April 1948 against the 1947 figures.

They are certain that since April 1947, there've been at least 300,000 dwellings added to the supply that weren't counted by BLS—bringing the total of hidden houses since 1940 up close to the 4,000,000 mark.

For example they calculate that during the calendar year 1947, when BLS reported 849,000 new dwellings, there were actually about 1,250,000 units added to the "habitable" housing supply.

During 1948, BLS estimates about 925,000 new dwellings; the economists think net additions will be well over a million. For 1949 BLS expects around 875,000 new houses; the new theory puts the count at slightly over a million added dwellings.

MATTER OF DISPUTE

Some other housing experts dispute the size of these projections. They claim the conversion possibility is nearly at an end; that more dwelling units are going into commercial use than the other way 'round and that the farm-to-factory trend is reversing. But they concede some validity to the new housing count.

The President's advisers add one more thought: Not only is there more housing than believed, but it's better housing. In 1940, they point out, 18.7 percent of the dwellings had four rooms or more. By 1947, 20.2 percent were of this size. In 1940, 19.8 perceent had five rooms against 21.6 percent in 1947. "Habitable" units are in better condition, too; there are more sanitary facilities, better paint jobs, and more insulation.

Government estimates have up to now counted on completely replacing about 5.2 million, "substandard" units before 1960. Now the experts think many of these will be fixed up.

Furthermore, "doubled-up" families can't all be counted as adding to the housing demand, they figure. Of some 2,500,000 families living together, only about 1,000,000 are involuntary—the others want to live that way and will continue to do so, even if housing is available.

Some key officials now say that adding about a million units a year—from all sources, not just new homes—will catch up with demand quickly enough without overbuilding the market. This increase yearly for 10 years would do this:

Take care of 500,000 families coming into the housing market each year.

Replace about 3,000,000 substandard units. Give homes for the million involuntarily doubled-up families.

Create a Nation-wide vacancy of about 1,000,000 units, which would give a "healthy" vacancy ratio of about 3 to 4 percent. A "good" vacancy rate encourages people to tear down obsolete units, but if the rate got too high it might discourage new building.

Postal Workers Should Have Same Annual and Sick Leave Privileges as Other Federal Employees

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. KEATING. Mr. Speaker, for some time a discrepancy has existed between the annual and sick leave to which a

postal employee is entitled and that applicable to other Federal employees. The latter are entitled to 26 days annual leave and 15 days sick leave, whereas, a postal employee receives 15 days annual and 10 days sick leave.

There seems to be no reason for this discrimination against a group of Federal workers who certainly in diligence, faithfulness, and devotion to duty are second to none in the Federal service.

In order to remedy this inequity, I have today introduced a bill to equalize the provisions relating to all Federal employees. If it is enacted into law, postal employees will hereafter be granted 26 days leave of absence with pay (exclusive of Saturday, Sunday, and holidays) and sick leave with pay at the rate of 15 days a year. This leave is cumulative.

Also classified substitute employees under such regulations as the Postmaster General may subscribe are given the same right and benefits with respect to annual and sick leave which accrue to regular employees.

Since this measure represents only simple justice to the postal workers, it is hoped that it may have early and favorable consideration both in the Committee on Post Office and Civil Service and in the House.

High Prices

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of January 10, 1949:

HOW HIGH ARE THOSE PRICES?

We've enjoyed complaining, as loudly as anybody, about prices which we've had to pay for food and other necessities, the past few years. Many of these high price tags, we have noted, were brought about deliberately by our New Deal masters, in accordance with their standing policy of fattening up the voting-age farmer, at the expense of the average American consumer and taxpayer.

Our good housewives have had considerable to say also in recent years about politicians who plow under good food and kerosene grade-A potatoes, and we've applauded every indignant girlish yelp.

Nevertheless, we're now wondering about prices in general. Many of them were needlessly high, of course. But were they, even in record-smashing 1948, so high as to be completely out line with our American economy?

As it happens, some of the country's leading economists have been busying themselves with just that question.

One of the best recent round-ups on prices has just been completed by the economists and statisticians of the National Industrial Conference Board, and we'll try to boil down a few of their points to fit this space.

YARDSTICK FOR PRICES

First of all, these experts say, we shouldn't think of prices in terms of mere dollars. Dollars have a tricky habit of changing their own value in times of inflation and depression. In the United States today, for instance, $5 would be much too high a price for a one-passenger steak. But in China, using inflated Chinese money, the same grub would be a bargain, maybe, at $5,000,000.

The only scientific way to measure prices, the economists say, is by comparing whatever you want to buy with the hours you'd have to work to earn it.

Using that yardstick, you'd probably consider an egg cheap if you could get it by working for say, just one minute. But if you were to be charged a whole hour's labor for that one egg you'd probably switch to spinach.

Employing this system of comparison, NICB statisticians have gone back for a third of a century, checking scores of United States food prices against the average wages per hour of that particular year. And most of their answers seem to prove that today's groceries, despite the high dollar price tags, are even cheaper than they were in the good old days of, say, 1914.

Back in 1914, they found, if you were an average wage earner with an average-sized and average-hungry family, you had to spend 30 hours on the job to buy a week's supply of food for your household.

In 1948, you were doing considerably better by comparison. That same family-sized basket of food costs you quite a few more dollars than it would have in 1914. But you earn it by only 12 hours' work, instead of 30.

CHICKEN ON THE TABLE

Take the 5-pound roasting chicken. In 1914, a factory worker would have had to labor for more than 4 hours to get the bird. The same weight roaster costs a 1949 worker just a bit more than 1½ hours on the job.

It's the same story with other modern consumer commodities, especially foods. The price of round steak, as any housewife knows, is away up there in dollars and cents. In fact, round steak in 1948 was a whopping 370 percent higher than it was in 1914. But hourly wages have gone up even more. In terms of work-hours, that piece of round is now down approximately 40 percent.

So that's the economists' story about some prices today, and we think their way of reckoning is not only cheerful but sound. By improving his efficiency, and letting machinery do as much of his work as possible, the average American has achieved the world's highest real living standard—no matter what the price tags say.

In other lands that's not the story. In Pal Joe's workers' utopia, for instance, Ivan still sweats 70 minutes to get the loaf of bread an American earns in 7½. And Ivan works 10½ hours for a pound of butter, which is worth half an hour's labor here.

Maybe, before we let out our next yelps about those outrageous pork-chop prices or whatever, we'd better try figuring out the bill by the price-wage system.

Don't Cheer Yet

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, we should have learned in the thirties that there is no prosperity unless the farmers prosper, too. The rapid decline in farm commodities prices will cause our entire national economy to suffer. The following editorial is from the January 22 issue of the Marshfield News-Herald, Marshfield, Wis., which is also known as the cheese center of the United States:

DON'T CHEER YET

The downward trend in the price of cheese is bad news to Wisconsin farmers and to those who trade with them, for it means a decrease in the number of improvements farmers can make in their living conditions and a consequent reduction in trade for those who serve them.

Dairymen are not alone in this respect—prices of meat animals are falling too, and that affects western beef growers and the pork producers of the Corn Belt. Just how serious the downward trend is, no one can say with real assurance at this time. Many farmers agree that prices have been too high for stability, but if they decline too rapidly the entire national economy will suffer.

Consumers who hail declining prices with joy will do well to remember that the downward trend may not be an unmixed blessing. Curtailment of farm purchasing power is quickly felt in merchandising and industrial circles, so it may be wise to ask not for whom the bell tolls. Labor leaders, preparing to seek another round of wage increases, had better keep an eye on farm conditions before becoming too insistent upon their demands. We should have learned well in the thirties that there is no permanent prosperity unless farmers prosper too.

Limitation of Debate

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by me on January 28, 1949, on the subject of limitation of debate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, twice within a generation this Nation has been forced to the use of armed might in order to protect its democratic freedoms. It seems incongruous to me that in view of two such mortal struggles within our lifetime we should now be forced to come here to protect those same freedoms in this body. Doesn't it seem out of keeping, Mr. Chairman, that while we seek to assure the various freedoms to all the world, we should have to pause in our deliberations of pressing legislation to protect freedom of speech in the Senate.

The Chamber of the United States Senate is the only remaining legislative body in the entire world where unrestricted debate may be held freely and openly. I am deeply concerned over this move which is designed to restrict this freedom of speech.

It may appear at times that this freedom of speech is being abused. On such occasions the common name for this device is called filibustering. Call it what you will, Sir, the name is unimportant. It remains the right of a representative of the people of this country to make their wishes and desires known in this center of Government through his voice. It is true, Mr. Chairman, that under the rules of the Senate filibuster is possible. It is also true that filibustering will recur again and again in the future, just

as it has throughout the long history of the United States Senate.

Filibusters are possible in this body because we enjoy the privilege of unlimited debate. This privilege is one which I consider one of the most sacred rights guaranteed to every Member of this body. Without this right any minority would be helpless and defenseless. They would be always, and under all circumstances, subject to the will of the majority. They would be left with not even a single weapon with which to fight in the defense of the sovereign States represented here in the Senate.

It is often said, Mr. Chairman, that the majority should always have its way. I think there is ample reason for denying the steadfastness of such a rule. I think we would point out a number of instances in which the majority was not always right. As a matter of fact, I suspect some of our Republican friends might point out a very recent instance on which they would refute the old rule. The throttling of debate is something which must never be allowed to come about in the Senate of the United States. For all practicable purposes it would be the bitter end to this, not only the greatest but the only remaining open, legislative forum in the world—the only sounding board for the voice of free people where free and unlimited speech is an inherent right. The Members of this body have the right to outvote and defeat a Senator in his contentions, but they cannot and must not be allowed to do it as long as the Senator can and will speak. That is the basic doctrine of the filibuster.

It is my contention that sudden and frequent changes in the policy of the Government are harmful to all the interests in this country. I believe that hasty and imperfectly considered legislation is dangerous to the rights of the States and the people. What we do here in this body is of intense personal interest, not only to more than 150,000,000 people in this country, but to a large segment of the entire population of the world. Our actions here should reflect mature, deliberate, and sober second thought. Our deliberations should reflect the well-considered will of the people.

Absolute freedom of debate may be and undoubtedly is sometimes abused. But, Mr. Chairman, are there any privileges enjoyed by human beings that are not subject to abuse at one time or another? It is like the workings of democracy. For all of our great democratic policies and practices, there are still certain privileges for which we pay dearly. Mr. Chairman, I say we can better afford to submit to some abuse to the right of free speech than we can afford to allow the passage of legislation without full, mature, and deliberate consideration. When we act here, we are creating laws which reach into the homes and business of the people who sent us here. Their welfare must never be taken lightly.

One of the greatest evils that can possibly result from the abuse of the right of unlimited debate is the postponement of legislation to another Congress. However, I am confident that when such legislation is demanded by popular interest the people of our States may be relied upon to send men to Congress who will enact it into law. It would be far better if we made haste slowly than it would be if we disposed of great questions quickly but without the fullest, most mature and deliberate consideration.

I cannot speak for other Senators, Mr. Chairman, I can only speak for myself and reflect to you the wishes of the people of my State. It would be a betrayal of their confidence in me if I were ever to lend my approval or support to any rule that would limit the right of free speech in the Senate of the United States. I would not jeopardize, in their eyes, the dignity of the Senate and civil liberty. In this body the right to free speech must necessarily be the rule. Every measure must be open to full discussion without restraint.

It is entirely unnecessary that I intrude on your graciousness by reviewing the long history of filibustering in the Senate. I do feel, however, that a brief reminder of the success and failure of this record is pertinent at this point.

Rule 22 was amended in 1917. An analysis of the 19 cloture votes since that amendment indicates that only four petitions have received the required two-thirds majority. On only seven instances did a majority of the entire membership of the Senate vote in the affirmative for cloture. On 12 occasions a majority was obtained on the part of those present and voting. Six cloture petitions obtained a minority of those present and voting, and one resulted in a tie.

The conference committee, composed of five Democrats and five Republicans, which drafted the cloture rule of 1917 stated that its purpose was to formulate a rule that would terminate successful filibuster. As to the degree of success with which this cloture rule has terminated successful filibuster, I again invite your attention to the record. It has failed to achieve its purpose in 15 out of 19 times. The record also shows that a majority cloture rule would have failed on 12 out of the 19 times. The record further shows that even a simple majority cloture would have failed to stop succesful filibuster in almost one-third of the cases in which cloture has been invoked since 1917.

At various times in the past many remedies have been proposed for so-called obstruction to legislation in the Senate. I cannot help but note the repetition of the same basic suggestions for more than a century. They boil down to four proposals: (1) Majority cloture; (2) the previous question; (3) a rule of relevancy; and (4) more effective enforcement of existing rules.

If changes would be made in the present rules, Mr. Chairman, let me suggest that we first review some rules of the Senate already in effect. We have a rule requiring a speaker to remain standing and not sit or walk about.

We have a rule which would take a Senator off his feet for using unparliamentary language.

We have another rule which states that "No Senator shall speak more than twice upon any one question in debate on the same date without leave of the Senate, which shall be determined without debate."

We have a provision in Jefferson's manual that "No one is to speak impertinently or beside the question, superfluously or tediously."

Those are some of the rules which are already in effect, Mr. Chairman. Undoubtedly there are others.

It does seem out of order that the Senate could limit duration of debate on bills by special orders as the House does. It is done frequently by unanimous consent even now. There have been many instances where debate has been limited by setting a specific time for a vote on a given measure. But I would remind you, Mr. Chairman, that this device is always achieved by unanimous consent.

It has been rightly stated that filibusters have killed more bad bills than good ones. I do not know of any important measure which has been defeated by filibuster and then enacted at a later date. Practically every proposal defeated by filibuster has been regretted by the country and only rarely readvocated by its supporters. The only recurring bills which come to my mind are the antilynch bill and the anti-poll-tax bill. Antilynch bills were filibustered in 1922, 1935, and the Congress of 1937-38. Anti-poll-tax bills were filibustered in 1942, 1944, 1946, and in the special session of 1948. It is still my hope that the anti-poll-tax bill will be left to the several States in the form of a constitutional amendment. That is the way it should be handled.

In speaking of the freedom of speech and unlimited debate, we cannot afford to overlook our governmental system of separate powers. It is the unique function of the Senate to act as a check upon the Executive. This responsibility alone could not be performed without full freedom of debate. Unrestricted debate in the Senate is the only check against bitter autocracy.

It would seem to me that any of our rules in the Senate are intentionally designed to guarantee this freedom. The Constitution's requirement for recording the yeas and nays is a protection of dilatory tactics. The provision of the Constitution which requires the yeas and nays to be recorded in the journal at the desire of only one-fifth of the Members present is an intentional safeguard. Here is an example of constitutional protection of a minority in allowing a delay in proceedings. The House of Representatives allows 5 minutes for a Congressman to address himself to a particular measure. Majority cloture in the Senate would simply destroy its deliberative function and make it an annex of the House.

The term filbuster may be considered somewhat modern, Mr. Chairman. But the use of filibustering tactics is by no means a new legislative practice. The method was used in the Roman Senate and it was long known to the British Parliament. It was even practiced in some of the legislatures of the Thirteen Original Colonies. As a matter of fact the very ratification of the Federal Constitution resulted in a famous but unsuccessful filibuster in the Pensylvania one-house legislature. Under our Constitution the filibuster found a place in the First Congress. Congress was meeting in New York when a wrangle occurred which would certainly be termed a filibuster.

To hear some people talk, Mr. Chairman, Senators have done nothing but waste time since the very beginning of our Government. It seems to me that what they consider to be a waste of time is more often a service and to the best interest of the country in the long run. It is not inconceivable that at some future time some southern Senator may introduce a bill which would be considered most obnoxious to the residents of some other section of our country. I am sure that the people of that section would be glad to know that their own Senators would have the legal right to fight with every conceivable parliamentary device in order to delay and ultimately kill such a bill. It may not seem so now but the time may come when Senators from other States may delight in using the various devices of unlimited debate which some of us are now accused of abusing.

During the early days of Congress the procedure known as "previous question" was a method by which debate could be limited in the Senate. That rule was abolished in 1807 and there were no other rules adopted by which debate could be limited until the so-called cloture rule was adopted in 1917. In other words, from 1789 until 1807 there was the "previous question" device which cut off all debate. That procedure was so disastrous and so ineffective in effecting legislation that in 1807 it was done away with. Until 1917, for 110 years, there was no rule, no method or regulation by which the discussion of a subject on the floor of the Senate could be stopped.

Mr. Chairman, I believe in free and unlimited debate. We do not know what is going to happen in this country in the future. The right of open debate has long been cherished in this body. The right of unlimited speech is a powerful weapon but it is a safeguard necessary to the preservation of the liberty upon which this Nation was founded.

Members of the Senate, to my mind, are ambassadors. We are ambassadors representing the sovereign States from which we are elected. We are sent here to uphold the sovereignty of our States. The privilege of unlimited debate gives us a method by which those rights may be protected from destruction. So long as this right remains no majority may force its views upon a minority when the minority is on guard.

Mr. Chairman, there is no place where the absolute freedom of speech is more essential to the best interests of the people and to civil liberty itself than right here in the United States Senate. This is especially true when we remember that the Senate is the only legislative body where freedom of debate is permitted.

Look at the propositions, Mr. Chairman, and consider their implication. Suppose we allow the iron claw of the Federal Government to take control of the elections in the States. Suppose we cut off the freedom of debate in the Senate. Mr. Chairman, as I think of the consequence of such moves I shudder at the very thought of the monster we would have created. Why, we would have created a despotism under which self-government would be but a name. The four freedoms would be nothing more than a faint memory of earlier days when we lived under the concept of government of, by, and for the people.

Let us not forget, Mr. Chairman, that the rules of this Senate are founded deep in human experience. They are the result of centuries of tireless effort to preserve the rights and liberties for which our forefathers, our fathers, our sons, and our brothers have bled and died. Is it not true that, by its own rules, the Senate fixes the limits of its own powers? By these very rules, throughout its history, the Senate has sought to preserve without restraint two essentials of wise legislation and of good government—the right of amendment and of debate. In my judgment, it would seem that far greater evils would result from hasty legislation than from a delay which follows full discussion and deliberation.

The freedom of debate is something which I have always thought to be a cherished possession of the Members of the Senate. The record on cloture votes which I mentioned earlier seem to bear this out. Senators, by the record, have always been reluctant to invoke the rule which has been on the books since 1917. Cloture is a gag rule. It shuts off debate. It forces all free and open discussion to come to an end.

The intent of the framers of the Constitution certainly seems clear on this point. There was a pointed and realistic attempt made to create an upper Chamber of the Congress which would represent a different point of view than that of the House. Senators were given a longer term. They are required to be of more advanced age. Their body is smaller in number and each State is given equal representation.

Mr. Chairman, I could go on at great length and point out objections to any rule which would limit or cut off debate in the United States Senate. However, I realize that you have heard a number of Senators already and will still hear more after I have finished. Some of them will call for the preservation of unlimited debate in far more eloquent terms than I am able to use. But, Mr. Chairman, none of them will be more sincere in their plea that we maintain this bulwark against any future despots who would impose an unjust will on any minority. When this happens in the United States Senate, a fatal blow will have been dealt to our liberties. You will have broken down the greatest weapon against wrong and oppression within the reach of the Members of this body. As long as I remain a Member of this body—an ambassador sent by the people of the State of South Carolina to the upper Chamber of the Federal Government—I shall stand against any rule which denies free and unlimited debate to each and every Member.

Natural Resources

EXTENSION OF REMARKS
OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. O'MAHONEY. Mr. President, I ask unanimous consent that a statement upon natural resources, which I made this morning at the opening of a hearing before the Committee on Interior and Insular Affairs, may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It is appropriate in opening this hearing to say that the Senate Committee on Interior and Insular Affairs is in search of an improved policy for the conservation, development, and administration of the natural resources of the United States.

It was these resources, utilized by the skill and industry of millions of our people, that made this country the industrial leader of the world, and enabled us in two world wars to turn the scale against arbitrary military power. These same resources, if intelligently utilized now to raise and stabilize the living standards of all the people, can be the means of winning a permanent basis for world peace.

Modern warfare is an appallingly wasteful and destructive method of applying industrial and scientific skills to the gifts of nature. A fraction of the energy and ability which we exercised under the spur of war would, if intelligently applied to the constructive aims of peace, make wars impossible. Our Nation is launched now on an effort to put an end to war for all time by promoting economic rehabilitation of free peoples everywhere. To succeed in this, however, as President Truman said in his inaugural address, it is necessary to keep America strong:

"If we are to succeed in carrying out these policies," the President said, "it is clear that we must have continued prosperity in this country, and we must keep ourselves strong."

It is to keep ourselves strong that Government policy must first be directed, for unless we remain strong, our peace effort is bound to fail. Unless we are sound, the world movement for peace which depends upon us cannot succeed. The noncooperation of the dictators of the Kremlin in the rehabilitation of Europe has been inspired by their conviction that we would weaken, that the system of individual economic and political freedom would be unequal to the strain, and that by withdrawing from the struggle to maintain the economic basis of the peace, we would create the world vacuum into which dictatorial communism with its denial of basic human freedom would inevitably pour.

So we have invited Secretary J. A. Krug, Under Secretary Chapman, Assistant Secretaries Davidson and Warne, and the various bureau chiefs, to appear at this public hearing to describe the responsibilities which have been imposed by law upon the Department of the Interior, to explain administrative problems and difficulties, and to make such suggestions for legislation as may be prompted by their experience and outlook.

Before calling upon the Secretary, however, I should like to point out that we are dealing here with national and not merely sectional or regional problems. The proper handling of our natural resources is of concern to every citizen of the entire country. Our water resources, our resources of timber, the resources of the continental shelf beneath the sea bordering the United States, jurisdiction over which was promulgated for the National Government by Presidential proclamation and sustained by the recent Supreme Court decisions, and our mineral resources, belong to all the people of the whole country.

Our mineral heritage, for example, is not for the West alone—it is for the whole country. The Bureau of Mines serves all 48 States and the Territories as well. So does the Geological Survey, and in any catalog of possible sources of new mineral supply it is important for the whole country to know that, to date, scarcely 10 percent of our land area has been topographically and geographically mapped. The National Treasury expended considerably more than $2,000,000,000 during the war for the importation of important minerals. Complete geographical mapping of the whole Nation might easily reveal new sources of previously unsuspected deposits. We have been accustomed to think that foreign deposits of bauxite were the only sources from which to draw the raw material for the manufacture of aluminum. We know now that in several States of the Union, not all of them in the West, there are valuable deposits of alumina clay.

Mineral production to date has come from large accessible deposits uncovered by natural erosion. Explorers for petroleum within the past 2 years have found new productive horizons by the use of new techniques of exploration and drilling. What has been done in one field may be accomplished in another. The work of the Bureau of Mines has already demonstrated that we have vast sources for the manufacture of unmeasured quantities of liquid fuel in our deposits of coal and of oil shale.

Every discovery of a new mineral deposit, of a new use for an old mineral, of a new technique to refine or process a known deposit, every discovery of a substitute material that can take the place of one that is perhaps near exhaustion, is a national and international benefit, for it will aid us to raise and stabilize the standard of living of our own people, and by example show the people of the world what they can do by their own efforts with their own mineral resources. We can demonstrate that freedom produces a higher level of prosperity and a greater degree of individual and national security than any other status in which man can live.

In the simple economy of a century ago, it was not necessary for the people to call upon government to the extent to which they are now obliged to do. Most of the early water projects, the furnishing of community supplies, the reclamation of land, were easily and inexpensively constructed, and until comparatively recently the size and scope of such projects were well within the revenue of private capital or of local governments. It takes the financial resources of the Federal Government to harness a river like the Colorado, to build a Hoover Dam, or a Grand Coulee project. The great hydroelectric power resources on the large rivers of the United States encompassing most of the potential water resources of the Nation have been left undeveloped until recently, because only recently has Government undertaken the task. Yet it is clear now that the full development of the hydroelectric potential of our rivers would provide the country with electrical generating capacities double

that of all existing steam generating plants, thereby creating new opportunities for business, new profits for industry, new revenue for government at every level.

In the course of 300 years, chiefly during the last century, we have used or destroyed most of our original timber heritage, plus much of what has grown in the meantime. We now have only 1,600,000,000,000 board feet, or one-fifth of our original virgin stand of 8,000,000,000,000 board feet.

Current saw-timber harvest far exceeds new growth. More than one-third of the approximately 500,000,000 acres of commercial forest land is denuded or poorly stocked. Only a portion of the rest is under sustained-yield management. The quality of timber is declining, the impact of continued high-level demand on a diminishing supply has induced a stratospheric rise in stumpage prices, thus naturally increasing the cost of housing for all our people.

In Alaska and in the continental United States on the unreserved public domain, the Department of the Interior has jurisdiction of substantial national timber resources. Experts tell us that the restoration of timber abundance is possible of achievement, but only after a long period of reforestation under a program which can be administered only by the authority of the Federal Government.

These are but some of the considerations which the committee and the Congress, as well as the executive branch of the Government, must bear in mind in considering the intelligent conservation and utilization of our natural resources to make possible a world in which men may live together in peace.

Proposed Denial of Marshall-Plan Aid to the Netherlands

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article headed "Missions parley urges ERP to cut off Dutch," published in the New York Herald Tribune of January 8, 1949. This news article, which is an Associated Press dispatch, should be of interest to all Senators in view of the fact that the organization calling for strong measures against the Dutch invaders of the Indonesian Republic is the largest Protestant agency in North America.

The Foreign Missions Conference, subject of the article, represents 108 Protestant foreign-mission boards in 61 denominations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSIONS PARLEY URGES ERP TO CUT OFF DUTCH—PROTESTANT AGENCY BACKS UNITED STATES INDONESIAN POLICY, WANTS IT STRENGTHENED

BUCK HILL FALLS, PA., January 7.—The largest Protestant agency in North America called on the United States today to cut off Marshall-plan aid to the Netherlands until that country withdraws from Indonesia.

Leaders of the Foreign Missions Conference commended the United States Government for its stated policy during the present emergency in Indonesia and added: "We respectfully urge that the United States continue unwaveringly in this attitude, even though it may have to stand alone among the great powers in refusing to buttress colonialism in Indonesia."

The resolution, passed by the Protestant missionary leaders at the final session of a 4-day meeting, also urged that the United States representative in the United Nations Security Council be instructed by his Government to continue to demand withdrawal of the Dutch Army to its lines of December 19, 1948, and the release of leaders of the republic; to press for renewed negotiation through the UN Good Offices Committee until a conciliation or arbitration commission has been established; and to insist on due respect for basic legal and human rights of all persons who have been involved in the struggle, whatever the convictions to which they gave support.

The Middle Class Is Defined

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following editorial appeared in the Wausau Daily Record-Herald, Wausau, Wis., on January 22, 1949, and shows a common reaction to the President's income-tax proposal in my district in Wisconsin. We cannot forget the middle class, as they are the big producer and also the big consumer in the American market.

The editorial:

"MIDDLE CLASS" IS DEFINED

Since November 2 quite a lot of people have said that they voted for Mr. Truman because they knew just where he stood on every issue. The President's forthrightness didn't end with his victory, either. For now he has told the people where he stands on the subject of the middle class.

We're obliged for the information, because it has always been hard to recognize the dividing lines in our classless society. We've heard a lot about the common man from Henry Wallace. But just who is he? How many of him are there? Where do they live and work? How much money do they make? We've never found out.

We've had the same difficulty with the same questions about the middle class. This term, unlike the term common man, is not largely one man's property. What it means depends on who uses it.

We've heard about the great middle class when the speaker obviously meant that it was the slightly conservative backbone of the Nation and of the private enterprise system. We've heard others use the term when they were clearly thinking of the middle class as a mass of statistical anonymity.

Mr. Truman hasn't answered all the questions about this segment of our society. But at least he has put it in its economic place. For where would the middle class belong except in the middle income-tax bracket? Thanks to the President, we now know that the middle bracket includes those who make from $6,000 to $25,000 or $30,000 a year.

We would have guessed that the middle-class income began at a slightly lower figure. But that is because we are still inclined to think in terms of the not-too-distant past when $6,000 was quite a respectable annual income. In those days, you had quite a bit of that six thousand left even after the butcher, the grocer, and the collector of internal revenue had got through with you. Why, you could even buy a pretty good house for $6,000.

But now we know better. We also know, however incredible it may seem, that in this happy income bracket there is still some skimmable cream which the tax man will go to work on, if Mr. Truman has his way.

Since we know this much, we may assume that below the $6,000 figure lies Henry Wallace's realm of the common man. Perhaps the $5,900-a-year man can lay claim to membership in the petite bourgeoisie, but the rest seem definitely proletariat.

Whether the heights above $25,000 to $30,000 are occupied chiefly by gluttons of special privilege is another matter. At least they seem to be down to financial skim milk, for the proposed tax boost passes them by. And the President declined to second the suggestion, once made by Mr. Roosevelt, that all net incomes be limited to $25,000 a year.

Mr. Truman almost had to pass that one, if only out of gratitude. For on the same day that he was putting the right class in the right bracket, the Senate was voting him a $75,000-a-year raise—with two-thirds of it tax exempt.

Need of Incentives to Investment

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD a very splendid article dealing with the need of incentives to investment. Many articles have been written on this subject by industrialists and economists, and by those in the field of public service. However, I do not believe that any clearer, finer statement has been made than is contained in a recent article by Mrs. Franklin Delano Roosevelt. She has expressed the matter so clearly and understandingly, that I think everyone interested in maintaining our American economic system ought to read this article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

It is essential to a high level of employment that it be profitable for capital to be invested not just in safe enterprise, but in new and untried enterprises.

MUST BE INCENTIVE

There must be incentive for this, particularly in times of peace. In times of war, when many men are risking their lives at the battlefronts, many others are willing to risk their money to do whatever is necessary for the well-being of the country. However, in times of peace there is not the same patriotic motive with which to prod capital into productive enterprise and, therefore, incentives must be found.

Some of our biggest investors—such as trust companies, banks, and insurance companies—are limited by law in their investments in order to safeguard those whose money they are using. Therefore, if we expect to develop new enterprises, to employ more people, and to have more buying power, there must always be available capital from the individual investors. This is getting harder and harder to find today.

It is of vital interest, of course, to the farmer and the wage earner that the things they have to buy keep on increasing in cost because, even though wages go up and farm prices go up, they never seem quite to cover the increased cost of living brought about by inflation and the passing on to the public of whatever costs have been imposed on the manufacturer.

Therefore, it is going to be necessary, it seems to me, to examine everything not only with an eye to what we would like to do, but with the constant thought before us of what the essentials are that must be done.

PRESERVATION OF CREDIT

The preservation of the credit of our Government is of vital importance to us and to the world as a whole, and while I believe there are many things in our program, as outlined by the President, that are essential and will help to bring us prosperity, I think even the best of them should be weighed with the viewpoint of their essentiality in attaining the objectives that we have before us. These objectives are rehabilitation in the world at large and stability and strength in our own economic system at home.

These ends should never be forgotten and their importance should be explained to the people as each step is taken in this carefully balanced program which alone will see us through the difficulties of the next few years.

Integration of Countries of Western Europe

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. O'CONOR. Mr. President, on Saturday night, the members of the Maryland State Bar Association were privileged to hear a most scholarly address by the Senator from Massachusetts [Mr. LODGE], with regard to urgent domestic and international matters now before the Congress for decision.

Because of the generally excellent impression made by the Senator from Massachusetts in his presentation, and because my own high valuation of the sentiments voiced were echoed generally by the leaders of the Maryland bench and bar there present, I am confident that there will be widespread interest in the address, and I, therefore, request unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an accepted bipartisan American policy to favor the integration of the countries of western Europe—those countries in which the individual is considered to be worth while and to be the master rather than the servant of the state. We favor this integration by economic, by military, and by political means. This means, for example, that we encourage the elimination of tariff barriers in Europe, that we speak favorably of the setting up of a unified European armed force, and that we dream of a United States of Europe. The order in which these three steps are stated represents, I think, the order in which they will come. Certainly the political integration epitomized by a United States of Europe is far in the future. But recent steps have been taken looking toward economic and military integration.

Why do we support this movement toward integration? I believe it is because we think it is best for the nations of Europe, best for us, and, in the long run, best for the world. If there arises a so-called third force of approximately equal population and strength with the two great world powers of today—the United States and Soviet Russia—such a third force would contribute greatly to world stability. This would be a good thing for everybody. Moreover, the alternative—of having a Balkanized Europe—is certain poverty and misery for the Europeans and the likelihood of war. As separate little countries, they are at the mercy of the invader; united, they would be a prosperous and a powerful organization of human beings.

The whole policy of our country is directed toward avoiding war. We must continue our efforts for peace and never give up hope. But if war should come, it is only natural and proper for us to hope that we will have some friends—some allies—who will be fighting on our side. We know that we shall make our fullest effort; the enactment of our peacetime draft bill is proof of our willingness to do so. We shall not shirk our duty or evade the obligation of giving everything we have to any future conflict; but we simply have not the manpower to carry the whole burden of a future war alone.

I can therefore conceive that we in Congress may be asked to help in the setting up of a western European armed force and I can see that it might be strongly in the interests of the United States and of world stability generally for us under the proper conditions to give help to such a force. What are the proper conditions? What are the questions to which clear-cut and satisfactory answers must be obtained?

First is the question of whether or not the proposed pact is modeled on the old-fashioned European alliance, which was in essence a device to spread the war disease as fast as possible by providing that if one country gets into a war it automatically pulls all the other nations in with it. This is not an attractive prospect and I cannot conceive of such a proposal being entered into by the United States Government or being submitted to the Senate.

Second is the question of whether the proposed pact is enthusiastically vouched for by one or more of our American military leaders who actually commanded foreign troops in combat in World War II and therefore knows from experience the realities of coalition warfare. The endorsement of staff officers, however brilliant they may be and however necessary their approval is, would not be enough. There must be approval by a former combat leader based on intimate personal knowledge of the provisions of the pact.

Third is the question of whether the reaction to such a pact in nonparticipating countries has been thoroughly anticipated and whether we are ready to meet such reaction.

Fourth is the question of whether there is a supreme commander on whom all the member nations agree and who really has got the power to command the western European armed force. What is needed is not a chairman of the board but a real general, so that there is an unquestioned single authority.

Fifth, there must be a comprehensive, strategic, and tactical plan in which definite assignments are given to all the military units which are members of this western European armed force. This is absolutely essential if we are to avoid the typical western European catastrophe in which the invader swoops down from the east and the western nations start a long debate as to who is to do what.

Sixth, the nations of western Europe must be in a position to supply their own maintenance and parts for the equipment which we might send them. There is not much use in giving a nation a tank if that nation has neither the skill nor the parts to service the tank and keep it rolling. You know how important it is to have service for your automobile. The same applies to military equipment.

Seventh, we must be sure that the governments involved in setting up this western European armed force be free from Communists because it is obviously unthinkable for top secret military matters to be discussed among nations if these secrets are to leak right away to those who have hostile intentions toward us.

Eighth, the governments of the nations concerned must be strong enough to provide the foundation of civil power which is essential to the existence of a healthy military organization.

Ninth, there must be complete proof that the strategic plan for the defense of western Europe is one which the nations of Europe are actually prepared to carry out insofar as pledging their manpower in regularly organized military units is concerned. Unless they are willing to pledge their manpower as we have pledged ours, and unless the men are presently and actually integrated into units, there is no use in our even beginning to send equipment.

Tenth, we must know how much we can afford to send abroad in relation to our own military establishment and our own solvency.

If favorable answers can be had to all these questions, then we can have faith that the young soldier in Europe sees some hope and would therefore be willing to fight. Having had intimate contact with soldiers of foreign armies during the war, I can say that a soldier in the army of a small or medium-sized European country is generally intelligent enough to realize that his country's army can be gobbled up quite easily and is therefore going to be a very cautious soldier indeed. If, on the other hand, he feels that he is part of a huge unified western European armed force, the aggregate population of which runs into the hundreds of millions and that he has that whole complex of peoples at his back, he will be bold and brave and will put up a good fight.

The factor which is at the bottom of every good military organization is the will to fight of the individual soldier. In Europe this will to fight depends fundamentally on the extent to which Europe unifies itself.

It is for that reason that it is disheartening to read European statesmen saying that they will cooperate with the Marshall plan provided the Marshall plan does not run counter to the vital interests of their country. They should realize that we in America consider the Marshall plan as one of our vital interests and that we hope that the nations receiving aid under the terms of the Marshall plan will regard it as one of their vital interests. Unless there is unity in Europe there is nothing, and any help we may send will, in the long run, be wasted. To the 10 questions I have listed must therefore be added:

The eleventh, and over-riding, question, to wit: "Is there enough unity in Europe to give confidence and fighting spirit to the individual European soldier?"

The National Health Program

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a letter which I have received from Dr. Paul R. Hawley, chief executive officer of the Blue Cross, together with a statement which I have prepared descriptive of the matters contained in the letter.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LODGE

In common with many other Senators, I have for a number of years been deeply interested in trying to find the most intelligent and effective way that the power of government could be used to improve the Nation's health. In fact, 9 years ago, I introduced a bill on that subject which I still believe solves an important part, although not all, of the health problem. The idea held by some groups that Government must sit back and do absolutely nothing has always been to me as distasteful as the notion that we must embark on half-baked and destructive policies which will destroy all the great good that has already been accomplished in the medical field. I have always thought that we were not on the horns of the dilemma of either doing nothing on the one hand or doing the wrong thing on the other. The challenge here in Congress is to do that which is intelligent.

It was with this thought in mind that I read recently the Nation's Health, a 10-Year Program, by Oscar Ewing, Federal Administrator of the Federal Security Agency.

In the acknowledgment printed at the beginning of this report there was listed the name of Dr. Paul R. Hawley, who is now the chief executive officer of the Blue Cross and whose address is Associated Medical Care Plans, Chicago, Ill. I am sure that I do not need to tell the Members of the Senate of the life of this remarkable statesman in the field of medical affairs. Dr. Hawley was a major general during the war and was the chief medical officer for General Bradley in the European Theater of Operations. At the end of the war it was he who set up the new and improved medical service in the Veterans' Administration. He is definitely a man who disagrees with those of his colleagues who think that nothing should be done. But he equally disagrees with those who favor policies which will lower the standards of the medical profession, deprive the patient of the choice of his doctor, and generally nullify the great advances which have been made in medicine in the past century.

I asked Dr. Hawley for his reaction to Mr. Ewing's report in view of Mr. Ewing's mention of his name. He wrote me a letter so full of wisdom and courage that I feel it should be made available to the Members of the Senate for their careful perusal. It is frank in its statements and meets all the issues unequivocally:

ASSOCIATED MEDICAL CARE PLANS,
Chicago, Ill., January 14, 1949.

Hon. HENRY CABOT LODGE, Jr.,
United States Senate,
Washington, D. C.

DEAR SENATOR LODGE: In planning for the National Health Assembly, held in Washington May 1–4, 1948, the Federal Security Administrator invited some 40 people to serve upon an executive committee to assist in the arrangements. These committee members were selected from all kinds of interested groups, and represented all shades of opinion upon the issues to be discussed. The gamut of the thinking in this committee extended from the most extreme left, as represented by social welfare people connected with organized labor, to the far right, as represented by officials of the American Medical Association. I seemed to fit near the center—that is, recognizing elements of weakness in medical care which should be corrected without delay but strongly opposing their correction by radical, socialistic methods which would demoralize the present organization of medical care to the point of producing complete chaos. While the political control of the American Medical Association remains in the hands of ultraconservatives, my association with the rank and file of the medical profession throughout the country has convinced me that the majority of physicians—certainly the majority of the better ones—think about as I do.

Mr. Ewing made it plain to the executive committee from the start that he would be bound neither by the committee nor the National Health Assembly in making his report to the President. It was quite clear that he had decided upon the substance of his report before convening the National Health Assembly, and that the latter was to serve merely as a sounding board or amplifier—to be switched on or off depending upon the direction the discussions took.

Furthermore, it was evident that the so-called executive committee was no executive committee at all. It had no voice in the arrangements nor in drafting the report of the assembly—not to speak of Mr. Ewing's report to the President. Quite a number of the members of the executive committee considered resigning on this account, but most of them—I, for one—decided against this in the thin hope that we could do more from within than from without; and we did not want to be accused of refusing to play if we did not get our own way.

I do feel very strongly, however, that the way the names of the executive committee were used in The Nation's Health bordered upon sharp practice. While it is true that, if one searches closely enough, one will find the statement that "There was no agreement on the question of national health insurance and my recommendation of such a program must be clearly understood as in no way expressing the views of the assembly," this disclaimer is hidden without a paragraph wholly removed from the listing of the executive committee and is easily overlooked. Even if read it is not at once clear that a very large segment of the executive committee opposed this principle.

Unfortunately, The Nation's Health is one of the best prepared documents I have ever read. The large part of its contents is true; and this tends to obscure the downright lies with which it is interlarded at strategic places. For example, the following are stated as facts:

1. "Every year 325,000 people die whom we have the knowledge and skills to save." Well removed from this positive statement is the hedge that this is but a guess. It may well be true, but it is not true that this is due to want of medical care. Every physician has seen many patients die of conditions that are easily curable in other patients, and is at a loss to explain why such patients have refused to respond to methods of proved effectiveness. But Mr. Ewing's inference is that they die because they are unable to obtain proper medical care—which is false.

2. The old myth of the 5,000,000 rejections for physical unfitness during the late war. This has been completely exploded long since. This was not due to any lack of medical care but to conditions which modern medicine by our own armed forces. Any other army cannot yet prevent and to an inordinately severe set of physical standards insisted upon in the world would have been delighted to accept 3,000,000 of this 5,000,000.

I could, without any great compromise, accept all of the goals of Mr. Ewing's program except that of compulsory health insurance.

I am interested in only one issue—that of preserving the medical advances thus far achieved and of stimulating still further progress. I have only one goal—that of a good quality medical care. I am not interested in the slightest in the economic security of physicians except as it is an incentive to practice better medicine.

I am not in sympathy with the position of the American Medical Association. I feel that their resistance to all suggestions has only muddied the waters, and has weakened the position taken by those of us who are thinking only of the good of the people.

But I am firmly convinced that compulsory health insurance will inevitably lower the quality of medical practice in this country. This will be a thousand times worse for our people than a distribution of medical care which may not be all that we want it to be. I think it far more important that 80 percent of our people obtain medical care of the highest quality than that 100 percent get only low-quality medical care. With other measures far less socialistic than compulsory health insurance we can extend high-quality care to all of our people. But compulsory health insurance will force a lowering of quality that can never again be raised.

The Philadelphia Bulletin has invited me to debate this question on March 22 with Mr. Ewing over a national radio net. I am now collecting facts and figures which certainly convince me; but I have little hope of convincing Mr. Ewing.

It was most nice to hear from you, and you may be assured that I follow your public career with the greatest interest and admiration.

Sincerely yours,
PAUL R. HAWLEY, M. D.,
Chief Executive Officer, Blue Cross-Blue Shield Commissions.

Address by Hon. William F. Knowland, of California, at Kansas Day Dinner

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the Kansas Day dinner at Topeka, Kans., on January 29, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and fellow Republicans, 88 years ago Kansas was admitted to the Union as a free State determined to help preserve the Republic at a time when forces were already at work attempting to destroy it.

Lincoln clearly pointed out that this Nation could not continue half slave and half free. The passage of time and the force of events raise the question on a broader scale as to whether or not in this age of the airplane and the atom a passive democracy can survive in the same world with an aggressive totalitarianism, be it Communist or Nazi.

Are the nations of the world forever to be in the position of surrendering one by one to some Hitler, Tojo, or Stalin, whose policy is based on brute force? Must civilization quake in its collective boots at the prospect of a twentieth century Genghis Khan using techniques of this era to destroy what it has taken centuries for free men in a free world to build?

Peace requires the combined efforts of several nations while war may start by the unilateral decisions of one. Our western world politically and economically functions in a goldfish bowl. Our shortcomings as well as our successes are available for all to see. A free press, freedom of speech, and free elections make the governments of the western world responsive to public opinion. Such is not the case in Russia or her satellite powers. The great question, if peace is to be preserved, is how to penetrate through the iron curtain to establish contact with the people despite the barriers erected by their governments.

I firmly believe that it is essential to our national security that western civilization remain outside of the iron curtain. No less do I believe that it is not in our national interests to permit 400,000,000 people of China to become Communist dominated.

At Yalta, secretly and without the approval of either the American Congress or the American people, President Roosevelt made a deal with Dictator Stalin at the expense of our traditional friends, the Chinese. History may record it as a betrayal of greater magnitude than Chamberlain's and Daladier's sacrifice of Czechoslovakia at Munich. Time will tell how much special significance should be given to the fact that sitting in with our high Government officials at Yalta was a State Department official named Alger Hiss.

No longer can or should the American people tolerate any administration violating our concepts of equity and fair play. What was promised to Stalin at Yalta the President had no moral right to promise. What was taken from China without her knowledge or consent was a foul blow to a stout ally. Much of China's present difficulty stems from the Yalta agreements. Our officials were sitting as trustees of the interests of the free world. With a power of attorney they signed a blank note in China's name and gave it to Stalin to collect at a later date. Communism is now collecting. This betrayal was no part of our bipartisan foreign policy.

Both Berlin and Vienna are administrative islands in a Soviet-controlled area. If a county board of supervisors would purchase a gravel pit without assuring the essential rights of way, they would be considered incompetent to transact the public's business.

Yet our Federal Government did worse than that. Any school child should have known that the German and Austrian zones of demarcation to which we agreed left us subject to Soviet pressure and the most drastic type of international blackmail in Berlin.

It should not have been agreed to in the first place, and President Truman at Potsdam should have taken the necessary steps to have corrected the tragic error which has already cost the lives of 26 American airmen in overcoming the Soviet blockade. The agreements which put us in such a vulnerable position were no part of our bipartisan foreign policy.

As one who strongly believes that we should have continuity for an American foreign policy, I wish to strongly emphasize that bipartisan cooperation must be a two-way street. The opposition party must be informed before and not after the event. It must be given a chance to help formulate the policy before final decisions are made. No longer will the administration be able to give the cloak of bipartisan foreign policy respectability to actions which were, in fact, Democratic administration unilateral decisions. Nor does calling minority leaders as a matter of courtesy, just before information is given to the press, constitute bipartisan consultation.

Today the forces of international communism realize that as long as hope exists in the hearts of once-free men, their police-state structures will not be resting on solid ground. The United States of America is the great citadel of freedom to those who still maintain their independence and to those who have lost it. If our Nation should have an economic or political collapse, it would likely be most difficult to maintain free institutions anywhere in the world. We would not be realistic, in the approach to the problems we face, if we closed our eyes to the heavy responsibilities resting upon us.

If the world had paid more attention to Adolf Hitler's Mein Kampf it might have been possible to block his ruthless aggression before he overwhelmed most of Europe.

Recently, I have re-read Problems of Leninism by Joseph Stalin. I call your attention to the following paragraphs from this book published in this country in 1934:

"Replying to those who confuse the dictatorship of the proletariat with 'popular,' 'elected,' and 'nonclass' government, Lenin states: 'The class which has seized political power has done so conscious of the fact that it has seized power alone. This is implicit in the concept of the dictatorship of the proletariat. This concept has meaning only when one class knows that it alone takes political power into its own hands, and does not deceive either itself or others by talk about popular elected government, sanctified by the whole people.'

"Pointing to one of the most important aims of the dictatorship, namely, the suppression of the exploiters, Lenin states: 'The scientific concept, dictatorship, means nothing more nor less than power which directly rests on violence, which is not limited by any laws or restricted by any absolute rules.'"

The final quotation from this book that I intend to read today is found on page 66, in which Stalin repeats the statement of Lenin on the inevitability of conflict with non-Soviet states: "We are living," Lenin writes, "not merely in a state, but in a system of states: and it is inconceivable that the Soviet Republic should continue to exist for a long period side by side with imperialist states. Ultimately one or the other must conquer. Meanwhile, a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable. This means that if the proletariat, as the ruling class, wants to and will rule, it must prove it also by military organization."

Aggressor nations will never be persuaded to preserve the peace through world public opinion alone. To the imperial Germany of 1914 the agreement to preserve the neutrality of Belgium was just a scrap of paper.

To Hitler's Germany neither the pledge at Munich that he would seek no further territorial expansion in Europe, nor the various peace pacts, were any restraint whatever when it served his purpose to attack. The more recent road from Tehran, Yalta, and Potsdam is lined with broken promises by the Soviet Union. To refuse to face these realities is worse than folly.

The long panorama of history makes clear that until and unless the law-abiding nations of the world are willing to do more than give lip service to international law and order, there can be no effective curb upon aggressor powers whenever and wherever they appear.

I have re-read the clippings year by year—between World Wars I and II—of the views that were expressed by presidents, kings, soldiers, churchmen, and civilians that Armistice Day 1918 represented the last day of the last great world struggle. Yet, within 21 years of the ending of World War I, the armies of Hitler's Germany were marching through Poland and World War II was loosed upon a world which had poorly made use of the time intervening.

It might be well to review briefly the 1918 to 1939 period to see wherein civilization failed in its mission to preserve the peace. All nations must assume a share of that responsibility, our own included.

When 1918 passed into history, America turned her back for a time on international responsibilities. The League of Nations struggled to exist when the one nation that might have made success obtainable failed to participate in its deliberations.

In Europe, national hatreds prevented the breaking down of economic and political barriers that might have enabled a sound economic development to have given new hope to a war-weary populace. The result was economic collapse and the birth of strange new ideologies. A failure to face realities led the democratic powers to do too little too late when they might have checked Nazi Germany in its early stages and the same inertia left them helpless in the leadership and military strength to block the Hitler demands at Munich. Prior thereto, the apparent helplessness and hopelessness of the League of Nations had been demonstrated at the time of the 1931 Manchurian and the 1935 Ethiopian crises.

At some point between the Manchurian and the Munich developments it might have been possible to save the peace. After Munich the western powers could only surrender to ever-increasing demands—or fight. The failure cannot be laid to government alone. The people themselves did a lot of wishful thinking and in some quarters they cheered the appeasement at Munich as guaranteeing peace in our time.

On August 14, 1945, the firing ceased in the Pacific, bringing to a close World War II. Yet, no thoughtful person claims that it brought the peace in any real sense.

Nor is it an easy task we face in finding it now. It cannot be achieved without courage and without risk. We must be willing to face realities. Wherever we withdraw, a vacuum will be created that Communist Russia will rapidly fill. Today, the maintenance of a free world of freemen hangs in the balance.

We have arrived at the place in history when we must face up to the fact that peace is indivisible. Aggression or the threat of the same anywhere in the world is of vital concern to law-abiding nations everywhere in the world.

The United States of America is an active member of the United Nations. If this organization for collective security means anything it surely means that its members will not sit idly by while an aggressor power overtly attacks its neighbors.

Within the framework of the United Nations Charter there is provision for regional security pacts. Our Nation has already become a signatory to one embracing the Western Hemisphere. Both historical background and geographic proximity make the prospective North Atlantic pact of equal importance to this Nation. With the degree of collective security such a pact will furnish, it may be possible for the free nations of western Europe to move on to the constructive settlement of their economic problems.

In a real sense, there can be no neutrals in the struggle to establish a free world of freemen whose peace will be secure under a collective-security system based on international law and justice.

No member of the world community can sit this one out. It is a common responsibility and no nation has the moral right to be a drone while its neighbors take all the risks. The Netherlands, Denmark, and Norway, all of which were able to be neutrals in World War I, found that the choice was not

theirs to make in World War II. Others should take judicial notice of this fact.

In extending a helping hand for the rehabilitation of the war-torn and dislocated western nations, we make no request that they pattern their economic or political life on ours. We do have an interest in making sure that the people have and retain a free choice.

The nations we assist have a responsibility to recognize that our aid is primarily of the pump-priming recovery type. The amount and continuance of future recovery funds will depend upon their own initiative in helping to work out their own problems and the productivity they demonstrate in meeting their collective basic needs. Certainly trade and currency obstacles should have been removed by action and not just talked about. An American Secretary of the Treasury once aptly pointed out that "the way to resume specie payments is to resume."

In dealing with what some call the cold war we are facing new techniques that require different counter measures from some the world has used in the past. To an extent we have been developing them. Since communism thrives on economic collapse and chaos, anything we do in Europe to assist the rehabilitation of those war-torn economies helps to establish a climate in which free institutions can be nourished and grow to full strength.

This is the basis of our support of the European recovery program and the reason for communism's aggressive fight to undermine it. The blockade of Berlin, Communist-inspired work stoppages in France, and concerted turmoil in the far Pacific are all part and parcel of their over-all strategy.

The Soviet gamble is that even as rich and powerful a nation as the United States of America may be bled to death if the natural forces of recovery can be undermined so that American economic aid, instead of priming the pump, merely goes into a bottomless sinkhole.

It is now apparent that Europe cannot have a full measure of economic recovery while the constant danger of being dragged behind the iron curtain is facing most, if not all, of the Continent.

Just as a Maginot Line psychology is fatal in a fighting war, so is a defensive position during present conditions. We must realize that if we sit back and permit the undermining of free institutions without any effective affirmative program, the odds will be against us for any long-term success. On the other hand, if we mobilize the full forces of the free world of freemen we can continue to make a better showing than the followers of Marx and by the aggressive use of all the information media available we can penetrate deeper and deeper into the consciousness of those whose domestic sources of factual information no longer exists.

It is this problem that is practical and not theoretical that must receive our attention if peace with honor is to be preserved for ourselves and our children.

A year ago in Europe in conversations with those who believe in a free way of life I was constantly met with the statement, "We understand that your country is on the verge of an imminent economic collapse." This was and is the Communist line which is daily fed by the controlled press and radio of Russia and her satellites to the people already encompassed and to those who are yet free.

In a very real sense a strong America is "the last best hope of earth." Our basic obligation then is to keep America strong. This requires a sound national economy, a solvent government and a constantly adequate national defense in the air, on the land, and on the sea. It requires a development of our human resources as well as our natural resources.

We must not be wedded to the status quo or ruled by the dead hand of the past. We should strive for a dynamic, productive economy with a social conscience.

The period through which we are now passing furnishes problems of no less importance to the future of our Nation than did the active phase of the war which came to an end on VJ-day.

We must demonstrate to the world that here in America we have a sound economy. Here our people, since the founding of the Republic, have looked forward to leaving to their children a better land than they themselves found.

If we are to meet and solve the problems we confront by constitutional means through the legislative process, the two Houses of Congress must be able to function. In the Senate where one Senator or a small group can block the entire legislative process through the use of the filibuster, the rules must be amended to prevent such abuse or power. Senate Republicans are vigorously supporting an effective cloture rule.

The challenge we face is to meet the economic, social, and political needs of the twentieth century while we maintain free institutions under a constitutional government.

Certainly security alone is not the whole answer. The most secure man is the one who has his clothing, food, medical care, and housing guaranteed for life, as an inmate of a State prison.

We should not be complacent about our progress to date, as great as it has been in contrast to other sections of the world, while children in any section of America lack educational opportunities and while the great challenges of health and housing are still not adequately met.

While we are looked upon as a nation of great natural resources few people appreciate the tremendous depletion that has taken place as a result of two great world wars. We need to more completely explore and conserve the potential resources of our Nation.

Recently it was estimated by qualified experts that our known commercial reserves were approximately as follows: Tungsten, 2 years; manganese, 4 years; vanadium, 8 years; lead, 10 years; petroleum, 15 years; copper, 19 years; zinc, 20 years; bauxite, 23 years. It is essential that we stock-pile these and other basic requirements from domestic and foreign sources. Our failure to do so will threaten the security and economic productivity of our Nation in the event we were cut off from overseas supplies.

We need to carry on with the cooperation of private industry and Government a program to reforest our depleted timber areas from the point of view of future building supplies as well as flood control and soil conservation.

The basis for an expanding standard of living for our people rests upon labor and management pulling together and not apart. It also depends upon a square deal for the farmer as well as for the urban dweller. It requires a full realization that when any part of our economy is in distress the chain reaction that takes place will soon react on all other segments.

The farm-support program is based on the recognition of the fact that without an equitable rural economic base there cannot be a sustained national prosperity. The farmer is the best customer of American industry, which in turn assures sustained employment. No city dweller should lose sight of this. When World War I terminated and the demand for farm products at home and abroad greatly diminished, the American farmer was caught holding the bag. He had been encouraged to expand his acreage and his productivity beyond the point that prudent judgment would have deemed wise for the purpose of helping to win the war.

With the coming of World War II the farmer was again urged to go all out to produce food for our armed services, our civilian population, and to help feed the hungry war-torn world. In the light of prior experience it was only reasonable to assume that he should have some protection against a possible postwar economic collapse.

A sound agricultural policy should provide for the efficient production of necessary food, fiber, and forest products at a level of income to farmers that will result in their remaining as stable users of goods and services furnished by other segments of our economy.

It should not be such as to encourage the enlarged production of items already in oversupply. I feel certain that the overwhelming majority of the producing farmers of the Nation look with disfavor upon any malfunctioning of the program which leads to the destruction of foodstuffs.

No program should become so dominated by Federal controls that the farmer only becomes a statistic in a Washington office. His initiative and common sense have contributed greatly to the building of this American system of ours and controls that will so enmesh him that he cannot properly function will neither be good for him nor the Nation.

The time has come, I believe, when labor and management, with the help of Government, must get down to the nugget of what is really needed in America. The sustained stability and progress of our American system of capitalistic free enterprise requires high real wages, sustained buying power for abundant markets, and maximum production at low-unit costs.

Both of these conditions—high wages and maximum production—must be achieved. Neither, without the other, will be sufficient for a sustained prosperous America under present-day world conditions. The way to get them both, stated simply, is to link them together at the source. This can be done by broad adoption of a system of paying fair, guaranteed wages for average production, and extra-high wages for extra-high production.

In meeting the growing challenge of socialism and communism the dynamic American system must continue to demonstrate that labor, management, and investors all have a vital interest in maintaining our way of life.

High productivity and widespread distribution of that which our Nation can produce is more sound than the doctrine of scarcity brought about by stoppages of production or by governmental action.

A free economy can better bring about a higher standard of living for our people than any permanent regimented economy of domestic origin or foreign import.

In the growth of our economy there have developed powerful groups in business and in labor. Not all of them have recognized that with power must go responsibility. No man or group of men in the ranks of labor or business have the right to strangle the economic life of 140,000,000 Americans and by so doing endanger the entire free world.

The Government of the United States established economic traffic laws many years ago to protect our businessmen and consumers against unregulated monopolies. These were the antitrust statutes. More recently, first through the Labor Relations Act of 1935 and later through the Labor-Management Relations Act of 1947, the Government has sought to establish a national

labor policy that would be fair and equitable, not alone to labor and management, but to the general public as well.

It is neither a constructive nor realistic approach to the problem for Congress to be asked to repeal the 1947 Labor-Management Relations Act and reenact the old Wagner Act. Threats to defeat Members who refuse to go along for outright repeal is an attempt to legislate by intimidation. This is not the American way. While some well-thought-out amendments are in order, they should be weighed in the light of their effect upon the entire population and not just one part.

Our entire national economy must not be at the mercy of one man or small group who can give an order that will cause a creeping paralysis to close down our factories and transportation systems and work a hardship on countless people. This is far too much power for any responsible man to want and any irresponsible man to have.

Our Federal Government is now so large that prudent officials and citizens must examine new proposals which would increase costs to see if they will endanger its functioning or impair its solvency. We must find ways of eliminating duplication and waste so that we may better meet essential needs.

In a period of 20 years the number of civilian employees has increased from 570,000 to 2,100,000. Federal expenditures have increased from $8,852,000,000 in fiscal year 1939 to $40,180,000,000 in 1949.

The Federal debt, which in 1939 amounted to $40,439,000,000, now stands at over $252,000,000,000 or 6 times as large. Interest alone is now greater than the total cost of the Federal Government in 1930.

For the one fiscal year of 1950 the President has requested a budget of almost $42,000,000,000, which is greater than the total Federal debt in 1938.

Our Federal receipts, amounting to an estimated $40,985,000,000 for the fiscal year commencing July 1, are almost double the 1943 war year receipts of $22,201,000,000. Yet on top of this, the President is asking for $4,000,000,000 more in new taxes or an amount which in itself is greater than the total cost of the entire Federal Government in 1930.

There are some in Government who apparently believe that if an individual spends his own money it is inflationary, whereas if the Government takes it from him and spends it such is not the case. This is economic nonsense. Government spending has been a major inflationary factor.

I make no claim that we can "unscramble the eggs" of Federal finance, but I do maintain that we should no longer ignore the warning lights that have led to disaster when ignored elsewhere in the world.

We should keep our Federal budget balanced and pay each year on the national debt no less than $2,500,000,000. This can be done by wise economy rather than by disruptive new taxes.

The problems facing us on the home front cannot be solved by Government alone. They cannot be solved by labor, management, or the farmer alone.

Here in America, as Lincoln put it, we have "this last best hope of earth." Each of us has an individual and collective responsibility for its preservation. We are interdependent one on the other. An American economic collapse would bring despair everywhere except in Soviet Russia.

While I would not have our people become complacent about our progress to date nor ignore those places in our history when we have been subject to legitimate criticism, I do get fed up with those who are constantly trying to make a case for what is wrong with America. Let us unite in showing the world what is right with America.

Where in the history of Soviet Russia that pounced upon Finland, violently absorbed Lithuania, Estonia, and Latvia, grabbed the eastern part of Poland, and holds an iron hand upon half a dozen so-called independent satellites, does one find comparable actions to those of the United States of America in establishing a free and independent Cuba and a free and independent Philippine Republic?

I might also add, where in the history of the Russian Empire of the Czar or Stalin does one find a comparable act to that of the Government of Great Britain in establishing the independent nations of India and Pakistan?

While Russia uses her blockade to starve into submission a large part of the civilian population of Berlin, our Air Force, Army, and Navy unite to bring food and fuel to that beleaguered place.

If we do our job properly, if we use all the media available to the free world to get the meaning of all this and more, behind the iron curtain, to men and women who were once free, there will spring anew hope in the oppressed. Then, with time, with the free world out-producing the Communist-dominated world, the inevitable pressures will crack the iron curtain wide open. Given the instruments with which to work, men who love freedom will know how to use them. For they, more than others perhaps, will realize that it is better to die on your feet, as a freeman, than to live on your knees as a slave.

There is a basis upon which a just and lasting peace can be built. Let Soviet troops be withdrawn from all the satellite powers and when they have gone let free elections under supervision of the United Nations be held to determine a government of the peoples' choice. Then let all the members of the United Nations guarantee the territorial integrity of all the countries of Europe against any aggressor power. In Finland, Latvia, Lithuania, Estonia, Poland, Hungary, Romania, and Bulgaria a great new incentive to work and build for Europe would take place. Confidence would replace fear. When this had been successfully accomplished, the western powers and Russia could jointly withdraw their troops from Austria and Germany, leaving a joint commission to see that the terms of the armistice were carried out.

But there can be no real peace through a temporary patchwork expedient to solve the Berlin problem if a month from now we are to be faced with the same pressure tactics in Vienna or in Korea. Any satisfactory settlement must be global in character and backed by adequate guaranties.

Yes, America has come of age. We can no more return to a policy of isolation than an adult can return to childhood. We must assume our responsibilities as a great world power without whose active support there can be no adequate international system of law and order.

It was Lincoln who said: "Fellow citizens, we cannot escape history. * * * The fiery trail through which we pass will light us down in honor or dishonor to the latest generation. * * * We, even we here, have the power and bear the responsibility. * * * In giving freedom to the slave we assure freedom to the free. * * * We shall nobly save or we shall meanly lose this last best hope of earth."

I am convinced that Americans all over this great land of ours are determined that we shall not lose this last best hope of earth. With the same courage and common sense that fortified the founders of our Republic and those who have fought to preserve it ever since, we shall meet the challenges of this generation.

Count of Electoral Votes

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain newspaper editorials commenting on the constitutional amendment proposed in Senate Joint Resolution 2.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York (N. Y.) Daily News of October 17, 1948]

YOUR VOTE ISN'T WASTED, BUT—

A reader by the name of Earl Parker writes us:

"Will somebody enlighten me on this subject? I have registered and am waiting to vote. Now I'm told it won't mean a thing in the coming election. I'm all confused about electoral and popular votes. If my vote won't help elect a President, why should I waste time going to the polls?"

Mr. Parker is being misinformed by persons who either are misinformed themselves or are trying to kid voters to stay home on election day.

Your vote is not wasted in an American election. But the reasons for Mr. Parker's and many other people's confusion about popular and electoral votes are interesting and important. Here's the explanation.

The so-called electoral college was created by the Constitution when that document was adopted in 1789. In most States you vote for members of this body, not for the Presidential and Vice Presidential candidates by name. Each State has as many electors as it has Senators and Representatives—47 for New York, 35 for Pennsylvania, and so on. In each State the popular-majority winners take all the electoral votes.

The electors, several weeks after being chosen by popular ballot on the Tuesday following the first Monday in November, cast their votes for the candidates to whom they are pledged. These votes are then certified from the State capitals to the President of the United States Senate. Early in January a joint congressional session supervises the counting of the electoral ballots.

If no candidate gets a majority of all the electoral college votes, the House of Representatives must pick a President. Currently there are 531 votes in the electoral college, so 266 are needed to win.

ELECTORAL MISFIRES

The system has been faulty from the start. It fails to reflect the popular vote correctly. Three times it has permitted a candidate who got the minority of popular votes to win an electoral college majority, and thus to become President.

In 1824, Andrew Jackson led John Quincy Adams by 50,000 but missed a straight majority over his three opponents. That threw the election into the House, where Henry Clay managed to maneuver the Presidency to Adams.

In 1876 Samuel J. Tilden (Democrat) polled 4,300,590 votes to Rutherford B. Hayes' (Republican) 4,036,298. But the electoral votes were so distributed as to give Hayes a majority of 1, and Rutherford was in.

When Grover Cleveland ran in 1888 against Benjamin Harrison, Cleveland got 5,556,543 popular votes, and Harrison trailed with

5,175,582. But again the electoral college misfired, and Harrison copped.

There have been several cases of highly inaccurate electoral reflection of the popular vote, though the candidates with popular pluralities got to the White House.

For examples: In 1912, Woodrow Wilson polled 42 percent of the popular vote, but took 82 percent in the electoral college; in 1936, F. D. Roosevelt had 60 percent, popular, 98-percent electoral; in 1940, Roosevelt took 54-percent popular and 84-percent electoral.

SENATE JOINT RESOLUTION 200

It is now proposed to change all this and make United States Presidential elections correctly register the voters' majority and minority wishes. The thing would be done by an amendment to the United States Constitution.

The proposed measure bears the easily remembered title of Senate Joint Resolution 200, and is sponsored by, among others, Senator HENRY CABOT LODGE, Republican, of Massachusetts, grandson of the noted World War I Senator of the same name and brother of Representative JOHN DAVIS LODGE, Republican, of Connecticut.

Resolution 200 would abolish the electoral college. Each State would keep its accustomed number of electoral votes. These would be divided according to the number of popular votes between the majority and minority candidates, with fractions of less than one one-thousandth disregarded unless they would change the election result. Suppose a 3,000,000-vote State had 30 electoral votes, and the winner got 1,550,000 to the loser's 1,450,000 popular ballots. The winner would get 15½ electoral votes, the loser 14½.

The candidate getting a Nation-wide majority of electoral votes would be declared President. If two or more were tied electorally, the holder of the most popular votes would take the prize. Same as to the Vice President.

This seems a far better system than the present one, and we hope something of the sort may go into operation in time for the 1952 election.

[From the Boston (Mass.) Globe of December 8, 1948]

ELECTORAL COLLEGE AGAIN

The Supreme Court of the United States has written finis to an attempt by the Governor of Alabama to compel electors of that State to deposit ballots at the electoral college for Mr. Truman. It is just as well that this issue is settled once for all. The Constitution, as the Court points out, permits an elector to vote freely for whomsoever he pleases. To put him under constraint in the matter would violate our fundamental law as it is written.

In Alabama, moreover, all the electors were pledged beforehand to vote for Governor Thurmond, the Dixiecrat candidate, if he carried the State, which he did. Thus, the Governor's effort would have made the electors twice foresworn.

This whole episode lends further strength to Senator HENRY CABOT LODGE'S endeavors to make the electoral college's role conform with modern realities. The college should be given a constitutional redefinition of function and responsibilities, as he suggests. Or it should be abolished. Arbitrary efforts to maneuver it, while the Constitution remains unchanged, are extremely unwise as well as illegal.

[From the Buffalo (N. Y.) Evening News of December 1, 1948]

OUT WITH THE ELECTORAL COLLEGE

If further proof of the dangerous obsolescence of our electoral-college system were needed, the recent election provided it in several shades and sizes. As it turned out, Mr. Truman's popular plurality was approximately 2,000,000, his electoral-college majority 38 more than the bare 266 needed. But because of the archaic electoral system, look what a switch of a few thousand votes (out of a total of 47,000,000 plus) might have done:

If 5,000 voters in Ohio and 17,000 in either California or Illinois had voted for Dewey instead of Truman, no candidate would have an electoral majority. The Presidency then would have been thrown into the new House, with each State delegation there voting as a unit until one of the top three contenders had a majority (25 States).

Republicans will have a majority in 20 State delegations in the new House, Democrats in 25, and 3 will be evenly divided. But the Democratic States include four whose electoral votes were pledged to the Dixiecrat candidate, J. Strom Thurmond. Thus, neither Truman nor Dewey could have counted on a majority of the State delegations in the House, and we would today be in one of the worst political messes of our constitutional history—wondering what sort of crass deal one party or the other might be making with the Dixiecrat balance-of-power group.

That they would hold the balance was, of course, the Dixiecrats' main hope. Yet having been formed with that in mind, they now don't seem to know what to do with the 38 electoral votes they have. The people voted for these electors on the understanding they would vote for Thurmond, but now there is talk (which Mr. Truman welcomes) of swinging to Truman after all. Thus, the very States that voted against the President (or thought they had) may end up with their votes recorded in his column, since there is nothing but their own sense of propriety to keep these electors from voting for whomever they wish. This is but further proof of the inadequacy of the present electoral system.

Now suppose that the nip-and-tuck balance had been tipped to Dewey in all three of the States he lost by a whisker (California, Ohio, and Illinois). That would have given him a bare electoral majority without materially changing his popular vote. Both Houses of Congress would be decisively arrayed against him, and he would be serving, not as the popular choice, but as one who got in on a fluke despite the fact that a substantial plurality of the people had voted for his opponent. How could any semblance of responsible party government have resulted from such an impasse?

Yet this is the penalty we came close to paying for an archaic voting system we have simply been too inert to change. In a democratic republic, the legitimacy of any regime founded on anything less than a popular plurality is always in question, and the party that benefits temporarily may be sure it will lose more than it gains in the long run.

The question is how the system should be changed, and the answer is fortunately available, in a proposed constitutional amendment that already has strong bipartisan backing in Congress as well as the tacit approval of this year's Republican Party platform. This amendment, by Senator LODGE, of Massachusetts, and Representative GOSSETT, of Texas, would divide each State's electoral votes in exact proportion to the popular vote. It would thus preserve the relative weight of the small as against the more populous States, an essential compromise without which no amendment would have much chance of winning ratification. This year's election is not the first time we have barely escaped a constitutional crisis as a result of the electoral college system, but it offers the most conclusive proof yet that we dare not procrastinate any longer. The Lodge-Gossett amendment commends itself for prompt adoption.

[From the Richmond (Va.) Times-Dispatch of November 19, 1948]

FOR A NEW PLAN OF PRESIDENTIAL ELECTION

The extraordinary shenanigans resorted to during the recent Presidential campaign apropos of the electoral college, and the manner in which efforts were made, especially in the South, to distort the electoral process almost beyond recognition, make a change in the method of choosing the President of the United States more than ever desirable. The Times-Dispatch has been advocating such a change for 5 years.

Specifically, the electoral college should be abolished, but the number of votes which each State now has in that college should be retained, and they should be divided among the candidates in proportion to the popular vote cast for each in the respective States. This is provided in identical resolutions to amend the Constitution sponsored by Senator HENRY CABOT LODGE, of Massachusetts, and Representative ED GOSSETT, of Texas. These resolutions have received the unanimous approval of the House Judiciary Committee and the approval of the Senate Judiciary Committee.

Under the existing system electors not only enjoy freedom to vote for anybody they wish for President and Vice President (and this is the chief source of the abuses referred to above), but the electoral vote of each State goes entirely to the candidate who carries that State, even though he may carry it by only one vote. Both these provisions of the law are objectionable.

In the first place, it is not desirable that electors should be threatening to thwart the will of the people, as has happened at various times, notably in the last two Presidential contests. In one or more Southern States in 1944 certain anti-Roosevelt politicians hatched a plot whereby even if the State in question went for Roosevelt, the electors would vote for somebody else. Similar jugglery was resorted to in the campaign just ended, and in Virginia last winter a fantastically bad plan to withhold this State's Democratic electoral vote from Mr. Truman was proposed. This sort of thing should be made impossible, under the Constitution, and it will be very nearly so if the proposed resolution is adopted by Congress and ratified by the States.

Americans have grown accustomed, under the existing system, to having the entire electoral vote of a given State go to the candidate who gets a bare plurality in that State. New York's 47 votes went to Dewey in the recent election, for example, even though Dewey got less than half the votes there, and his excess over Truman was only a few thousand votes. Similarly, Truman got Ohio's entire bloc of 25, although his majority there over Dewey was slight.

Under the proposed plan, each State's electoral vote would be divided among the candidates in proportion to the popular vote polled there. In other words, if Dewey got 50 percent of the New York vote, Truman 45 percent, and Wallace 5 percent, the State's electoral vote of 47 would be divided in those precise ratios among the three candidates. Thus each candidate would get a portion of New York's vote, whereas under the existing dispensation the entire bloc of 47 goes to the contestant who polls a plurality over his opponents.

The new plan would not only be fairer, but it might be expected to have several other highly beneficial effects:

1. It would greatly reduce, if not eliminate, the incentive which now exists for candidates to appeal to minority groups of voters in the big States. Such groups often hold the balance of power, and they are furiously wooed by the various parties and nominees, whereas States which are almost sure to go lopsidedly

for one party or the other, receive little attention. Minorities would be whittled down to their true dimensions under the proposed plan, for 400,000 voters, say, in New York States would have no disproportionate weight in the final reckoning, whereas now they can make the difference between 47 electoral votes and none at all for a given candidate.

2. Creation of two-party systems in States which do not now have them would be definitely promoted by the new plan. In Virginia, for example, the Republicans usually know that in a Presidential election they will get none of the State's electoral votes, since Virginia is so strongly Democratic, but under the proposed arrangement there would be a definite incentive to the Republicans to vote as heavily as possible. The more votes they cast, the larger the proportion of Virginia's bloc of 11 they would receive. If they polled one-third of the ballots, they would get one-third of 11 electoral votes, and the Democrats would get the other two-thirds, with perhaps a fraction of a vote going to Henry Wallace, or any third candidate who happened to be running.

3. Such a system should win much more political attention for the South, since it would make this region fighting ground for both parties in all Presidential contests, and would greatly reduce the importance of the huge populous States which today produce so preponderant a percentage of the nominees. A candidate who carried New York by a slim margin, under the plan, would get about 24 electoral votes to 23 for his opponent, instead of the 47 he now gets. It would be almost as advantageous for the candidate to carry Virginia by a slim margin, and thus to win 6 electoral votes to 5 for the opposition. In each case the winner would get only one more electoral vote than the loser.

Are there any "bugs" in this plan? It has the formal endorsement of the Brookings Institution, of Washington, and there seems to be little opposition to it in Congress. A few critics prefer election of the President and Vice President by direct popular vote with the two candidates who get the biggest total from the country as a whole declared elected. But this has several disadvantages. For one thing, it doesn't preserve the system under which the electoral votes are now apportioned, i. e., one for each Member of the House from a given State, plus the two Senators. The latter provision gives the smaller and less populous States slightly more weight in the scales than they would otherwise have, and is in accordance with the desires of the founding fathers. Another objection is that it would apparently make necessary uniform voting requirements throughout the Union, and, for example, might force reduction of the voting age everywhere to 18, since Georgia has that limit.

[From the New York (N. Y.) World-Telegram of November 5, 1948]

A Too Narrow Escape

The will of that largest group of American voters which wanted to keep President Truman in the White House came dangerously near to being defeated in Tuesday's election.

A switch of fewer than 100,000 votes in five States could have done the job.

Mr. Truman carried Illinois, Ohio, Wisconsin, Iowa, and Nevada by narrow margins.

Suppose a comparative handful of Truman voters in each of those States, ranging downward from less than 35,000 in Wisconsin to 1,000 or so in Nevada, had cast their ballots instead for Gov. Thomas E. Dewey. And suppose all other States had voted just as they actually did.

Mr. Dewey would have been elected. His total in the electoral college would have been 267 votes, one more than enough.

Yet in the country as a whole, Mr. Truman still would have had around two and a half million more popular votes than Mr. Dewey.

Or suppose about 65,000 people in only two States—Illinois and Wisconsin—had voted Republican instead of Democratic. Because of the 38 electoral votes won by Dixiecrat J. Strom Thurmond, neither Mr. Truman nor Mr. Dewey would have had a majority in the electoral college. The Presidential choice would have been thrown into the House of Representatives. While the House probably would have given Mr. Truman eventual victory, the country would have been in for many weeks of harmful uncertainty and controversy.

We're not trying to prove, for our own cold comfort, that the candidate we supported wasn't badly beaten. Since the next Congress is to be under Democratic control, we're glad Mr. Truman was elected.

But we do say, again, that before the next Presidential election Congress and the States should change the old system which gives the entire electoral vote of each State to the candidate who carries that State by even a bare majority or plurality of popular votes.

The new system needed would be provided by a proposed constitutional amendment proposed by Republican Senator Henry Cabot Lodge, Jr., of Massachusetts, and Democratic Representative Ed. Gossett, of Texas. Under it, the electoral votes of each State would be divided among the various Presidential candidates in ratio to their shares of that State's popular votes. The next Congress should submit this amendment to the States for prompt ratification.

Then the combined electoral votes of all States will reflect accurately the whole country's popular vote. And the danger of splinter-party candidates keeping any major-party nomineee from a majority in the electoral college will be reduced to a minimum.

Address on Atomic Energy by Hon. Bourke B. Hickenlooper, of Iowa

---

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. O'CONOR. Mr. President, the distinguished Senator from Iowa [Mr. Hickenlooper], who served during the Eightieth Congress as chairman of the Joint Congressional Committee on Atomic Energy, delivered an address earlier this month in Baltimore, before the Association of Commerce, on the developments in, and the importance to the American people of, atomic energy.

Because of the profound impression created by the address of the Senator from Iowa, I ask unanimous consent to have printed in the Appendix of the Record an article from the monthly magazine Baltimore concerning the address and the very excellent reaction to it on the part of the members of the association.

There being no objection, the address was ordered to be printed in the Record, as follows:

Many people have asked me, "Do the Russians have the atomic bomb?" I will say to you that I don't know. I don't believe that they have.

Thus spoke Senator Bourke B. Hickenlooper, chairman of the Joint Congressional Committee on Atomic Energy, before a gathering of over 400 businessmen in the Lord Baltimore Hotel on January 6. The luncheon membership meeting was sponsored by the association to provide members with authoritative information on progress being made in the field of atomic energy. Charles S. Garland, president of the association, presided.

The Senator from Iowa, who took a leading part in drafting the legislation which established the United States Atomic Energy Commission, began his talk with a frank admission that he was talking about atomic energy from the standpoint of the layman only.

"There are many fields of it that I cannot discuss intelligently with you," he said. He is regarded as one of the best informed persons on this subject in the United States.

The Senator emphasized that it was American genius and industry that were responsible, in the main, for the production of the bomb.

"But we have not yet found answers to two great questions," he said. "These are, first, What are we going to do to make atomic energy work for the benefit of mankind; and, second, How can we stuff this genie back in the bottle to control its destructive force forever?"

Senator Hickenlooper pointed out that we were successful in producing the bomb, that it served its purpose in bringing a speedy end to World War II. Throughout his speech, however, he both inferred and openly expressed his hope that the people of this country and the world will realize what a fearful weapon the bomb is in the hands of those who are in a position to use it against a nation in war.

It has the equivalent explosive force of 20,000 tons of TNT, he revealed. "It is considered to be the most practical instrument of warfare heretofore developed," the Senator noted.

Tracing the history of the bomb's development and use, the Iowa Senator explained that our initial intention was to build a bomb that would blow up.

"In the course of this development," he said, "all kinds of interesting fields of cosmic research were opened up, but laid aside before the more important job of ending the war. After the war, when we settled down to a period of relaxation and rest, we began to wonder what we could do."

The Senator explained briefly the birth and provisions of the Atomic Energy Act of 1946. He called this act the most revolutionary and startling assumption of powers by the Federal Government that has ever been undertaken in this country. But he explained that there was no other course except that the Government take over its control. He added that the Atomic Energy Commission operates subject to regular and complete checks by his congressional committee and that it is the intention of all concerned, and the act itself, to turn over activity in this field for investigation and handling to private enterprise as soon as is practicable.

"The whole reason for this monopolistic control, even to the preemption of metals underground and patents and patent rights in business, is the presence in this new field of this unbelievably destructive force and all its fearful portents. This is the only, but a sufficient, justification for the control system we have set up," the Senator declared.

Turning to a discussion of the potentialities of atomic energy, Senator Hickenlooper emphasized that the one big field is still atomic weapons. "This is the field that is utilizable and practical," he added.

He pointed out that many of the current ideas and rumors concerning the uses of

atomic energy in the near future for such things as curing human ailments and driving battleships "should be taken with a grain of salt."

"We must not delude ourselves into thinking that these physical results will come soon. They may not come in our lifetime," said the Senator.

Speaking of this country's present position in the atomic energy field, the Senator declared that, "I cannot say how many bombs we have but we have not been asleep at the switch. We are strongly situated in the atomic field and in the weapons field, but I hope that we may never have to use it against any nation or group that may attack us."

Returning to a discussion of the potentials of atomic energy, the Senator stated that "we have opened up the most highly technical and dangerous law of cosmos that has ever been revealed, a power as strong as the sun itself and a subject the surface of which man has not yet even scratched. We have not yet begun to see the dawning of the rising sun that future generations will know."

And near the conclusion of his address, Senator HICKENLOOPER sounded the somber note that was the undertone of his entire talk. Of his personal feelings toward the changes for permanent control of atomic energy in the hands of those whose motives were humanitarian, he said:

"There have been times when I was hopeful that leaders of nations would be ruled by humanitarian ideals. There have been times when I was without hope."

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered recently by Lucius E. Burch, Jr., a leading member of the Memphis, Tenn., bar. Mr. Burch gives a viewpoint that should be considered by Members of Congress considering labor-management legislation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am a corporation lawyer. The larger part of my livelihood is derived from the representation of corporations and not a small part of my time is spent in connection with the legal matters arising from labor disputes and grievances. I hope you will not think that such a damaging admission as to discredit me entirely, for I believe myself to be a true friend of labor and I think I can say that without disloyalty to any of my clients, for the truth is that I do not believe that there is any fundamental difference in interest between employers and employees.

On the surface of things it seems strange that there should be much tension in the field of labor relations at this time. Corporate profits are at an all-time high and industrial wages are higher than they have ever been. Notwithstanding this apparently happy state of things, there persists strong distrust between some employers and employees, and my purpose is to explore the background of that feeling to see what can be done to remove and prevent it.

In the past there have been serious shortcomings on the part of both capital and labor and the labor movement has such a brief history in this country that those abuses are vividly remembered by men who are still active in forming the policies of labor unions and employing companies.

I suppose that there are many men in this room who have worked 50 or 60 hours a week at straight time and for low pay. All of you remember that it was only 15 years ago that the right of collective bargaining was guaranteed by law. Many of you older men have known friends who were discharged, disciplined, or discriminated against for activities in behalf of labor, and I suspect that some of you have had experiences with imported scabs and strikebreakers.

On the other hand there are many men who have much to do with formulating the labor policies of companies, who have had bitter experiences with jurisdictional strikes, secondary boycotts, sit-down strikes, violence on the picket lines, and have seen shattered windows and machines damaged by emery dust. Those things are hard to forget, but they must be forgotten and ancient differences and old wrongs must not be kept alive and warmed over.

If labor and capital could obliterate from their memories these old wrongs and walk together hand in hand, with the idea of mutually examining the conditions that affect them both, what would they see?

Capital would realize that the most efficient plants are so much junk unless they are in production, and production depends on purchasing power. The best insurance that capital can have for continued prosperity is an abundant purchasing power on the part of labor. Any intelligent employer would realize that he is creating customers for his product when he pays the highest wage that his industry is capable of paying. He would know that, as man does not live by bread alone, labor seeks and is entitled to diginity and security; and to this end is clearly entitled to the right of collective bargaining and to those safeguards of collective bargaining, including the union shop, union maintenance, and decent and fair grievance procedure. Such a fair-minded employer would know that, as men are more valuable than machines, they should not be required or permitted to work under conditions that adversely affect their health and safety. These are some of the things that any intelligent employer should know and respect.

Now let us see how capital would appear from the viewpoint of a fair and sympathetic employee. Such an employee would realize that human muscle and intelligence unassisted is not highly productive. The reason we are a wealthy nation is because we are a productive nation, and we are productive because we have the tools for production. We are producing 35 times more goods than we did in 1850, although we have only 9 times as many workers, and they work an average of only 43 hours a week, instead of 70 hours a week, as they did when they were producing only one thirty-fifth of the goods that are now being produced. The reason for this is found in the great amount of mechanical horsepower that is supplied to each worker and that requires tremendous capital investment. On the Illinois Central Railroad it requires an expenditure of $17,500 to provide a job for one worker. Capital does not grow on trees, nor can it be plucked from the thin air, and if we are to grow wealthier, we can do so only by increasing production, which is going to require greater and greater capitalization. The only way that this capital can be secured is by investment, and investment results when people put their money in a venture with the hope of some profitable return from it. Capital will not flow into any industry that is not profitable, and it is to the selfish interest of every employee to see that his employer is engaged in a profitable operation. Any employee who asks for a wage greater than can be paid without making the business profitable is damaging the ability of the employer to pay any wage at all. Employers, too, are entitled to security and fair dealing, and it is simply not fair for any employer to have his plant tied up by work stoppage over any dispute that does not exist between him and his employees, and it is just as wrong and just as reprehensible for a labor union to violate its contract as it is for an employer to violate his.

I have spoken of ancient distrust that exists between capital and labor as being a major cause of misunderstanding. There is another fundamental cause, and that is ignorance—ignorance on the part of most employers of the true status of labor and ignorance on the part of labor of the problems and conditions of capital.

Many employers look at the high money wages of labor without ever realizing the difference between money wages and real wages, and there are too few employers who follow the cost-of-living index and know just how little goods and services the money wage will buy.

The average employee is just as ignorant about conditions affecting capital. He points to high profits and says that the companies are getting rich, without thinking about high replacement costs and accelerated depreciation. I think most of you would be shocked to know just how little capital is making, just as most employers would be shocked to realize how little your wages will buy. Let me give you an illustration to exemplify this.

Let us suppose that you have accumulated savings to the extent of $5,000. You can loan this money out at interest on good sound security, such as a mortgage on real estate, and get a return of 5 percent a year; but let us suppose that you are not satisfied with such an investment and that you want to invest that money in a business, thereby providing jobs and increasing the production of wealth, but at the same time taking the risk of losing your investment by reason of more efficient competition, fluctuation of business conditions, casualty, or any of the numerous things that can ruin a business. What would you think was a fair return on such an investment? I think none of you would feel that a return of 10 percent to compensate for such risk would be unfair or excessive.

Last year one of the largest labor unions in the country employed an outstanding economist, Robert Nathan, to report on the earnings of business. Mr. Nathan reported that in the years 1936–39 corporate earnings were only 3.2 percent of sales and only 2.9 percent of net worth. In the boom year of 1946 corporate earnings were only 5.5 percent on sales and 7.6 percent on invested net worth. You can see right there that business is not such a fat turkey as some people think. Furthermore, those figures do not tell the whole story. The earnings of business are not all distributed to the investor. A large part of earnings must be put back into a business and just as the laboring man has his deducts, the investor has his. The dividend check which is the investor's take-home pay was considerably less than half of net corporate earnings, so you can see from that that the investors who are providing the tools of production are not getting enough return to stimulate increased capital investment to provide those magnificent but expensive new tools which in turn will result in greater wealth through production and more leisure for all of us.

More than anything else, capital and labor need to arrive at a common understanding of each other's problems. This can be reached only by a forgiving and forgetting of old differences and by a better knowledge of each other's problems. We need more union officials as directors of large companies. More employees should be stockholders of the companies for which they work, and they should be interested in annual reports and the condition of business which affects their

employer. When a man works his way up through the ranks, as practically all of our corporate officers do, they should not tear up their union cards but should remain interested in the union, its activities and its problems. We need to see more corporate officers and union leaders having lunch, playing golf, hunting and fishing together, and they should do these things naturally and without any pious feeling of being broadminded, as is now too frequently the case on both sides.

My solution to the problem is that of Senator Lamar who, during the days of bitter feeling after the Civil War, made such an outstanding attempt to bind up the Nation's wounds. In a great speech made on the floor of the Senate he addressed his colleagues of the North and of the South, saying: "My brothers, you must come to know one another and then you will come to love one another." That is a good prescription for all of us.

Memorial Address on Franklin Delano Roosevelt by Senator Kefauver

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Tennessee [Mr. KEFAUVER] last Friday night at the annual memorial dinner for the late President Franklin Delano Roosevelt.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to join in this tribute to the memory of Franklin Delano Roosevelt.

I am certain that we who are gathered here are witnesses to the inauguration of a ceremony which will shortly become a Nation-wide annual institution.

The greatest homage we can render to the ideals of Franklin Roosevelt is to work for our country in that spirit of broadness and humaneness which he brought to public affairs.

ADA, at its founding 2 years ago, was dedicated to those ideals, and since that time it has been working steadily for them.

Tonight is, in a sense, a victory celebration—a celebration of the victory of those principles which, for many years, were symbolized in the person of Franklin D. Roosevelt.

All the glitter and glamour of the recent inaugural ceremonies are passed; yet, the people of America are still thrilled at the obstacles overcome in the triumph of President Truman and Vice President Barkley.

This is more so in the minds of us who have learned the vicissitudes of politics the hard way.

President Truman accomplished the most startling political upset of our time.

While he deserves the fullest credit, I feel his grand accomplishment was due in no small measure to the zeal and forthrightness with which he championed the basic tenets of his great predecessor's political philosophies.

I believe, too, that the public felt this kinship and similarity of fundamental purposes between these two Presidents.

The other day—during the splendid and impressive inaugural ceremonies—my mind's eye had a vision of President Roosevelt participating in the festivities. There he was, off to one side, with his head tossed back jauntily; his jaw protruding defiantly; and his face alight with his contagious smile as he enjoyed the victory of his way of government to the full extent of his tremendous capacity.

This was only a mental picture, of course; but, in truth, the slow-moving parade down the long avenue was led by the indomitable spirit of the man whom we honor tonight.

"We have nothing to fear but fear itself."

The fireside chat.

The New Deal.

A three-horse team pulling together to plow the field.

"I love a good fight."

The Tennessee Valley Authority.

"One-third of a Nation ill-clothed, ill-housed, ill-fed."

I could go on and on.

Who of you within sound of my voice will ever forget these and many other ideas and expressions released from the lips and the heart of our gallant leader, the great humanitarian, Franklin Delano Roosevelt?

Three years nine months and sixteen days have passed into the realm of history since that familiar voice, known to billions throughout the world, was silenced. And yet we still hear it admonishing us to win completely the peace as we won the military victory; reminding us to be concerned with the well-being of our fellowmen; charging us with the responsibility of being fair and just in all walks of life. And so it will ever be.

He was one of the many war casualties, but he will continue to lead; not only to lead men, but men's thoughts; continue to release the highest and noblest which is lodged in our inner selves.

He has left us, true; but he will never die.

This man of vivid vision was able to see beyond the horizons which limit the minds of most men.

He met the weight and complexity of our problems for 12 eventful years.

He was the master of the microphone, and he utilized his pleasing personality to soothe and allay our fearfulness; to suggest remedies and compound cures for our economic ailments.

He was at once the "Aaron," interpreting into words the ideals of the less articulate; and the "Moses," leading his people out of the wilderness.

But, even as Moses, who was privileged to lead his people to very threshold of the Promised Land, this fearless foe of fascism was also denied the privilege of entering the modern promised land of permanent peace, and plentiful prosperity.

Franklin Roosevelt was ambitious for all men—particularly, the little man.

He coveted for all his fellow Americans—for all men everywhere—the complete freedom for which he believed all men were destined by the great Creator.

This honored regent of reform yearned that every person should have a decent home, a decent education, and a decent later life.

Because of this ambition—this yearning—he was the best-loved and the most-hated statesman the world has yet produced.

Throughout history, when men have emphasized the dignity of man rather than the rights of property, the criticism has been embittered.

Experience is proving to us a rule of the universe: in every period of crisis, fate and destiny call to leadership one who is equal to the task. Certainly, Franklin Roosevelt was a case-in-point.

He was in public life for many years—as Governor of our largest State; as Under Secretary of the Navy in time of war; and in 1920, he was nominated as Vice President of the United States.

But, his moment of service was not then at hand, in the mysterious manner of moves, which surpasses our understanding, he tasted defeat—and, thereby—he was saved for the higher and nobler task which lay ahead.

Thirteen years later, he answered, and successfully, the call to the cause of democracy. His chance to leave the world a little better than he found it came to him, as it invariable does, in one way or another, to every one of us.

He was equal to the momentous task, and rendered unremitting service to his people in time of sorest need.

You recall the situation; I need not recount it here. He found the greatest Nation civilization has produced in a state of chaos and catastrophe; in a state of near revolt.

Something had to be done. And it had to be done hurriedly, effectively, and sensibly.

There were—and are—some who termed his measures "radical," but time has proven them sound.

His genius for leadership during this period remains unmatched.

Our banks were saved.

Our gold was recovered.

Mortgage foreclosures were halted.

Unemployment was diminished.

Business improved.

Confidence was restored.

The night of doubt and fear was over.

There was, probably, no man in all America who agreed in every particular with everything President Roosevelt did.

He was making his way on untrodden paths in almost everything he did.

It could not be expected—in reason—that the dramatic innovations included in the New Deal would meet the approval of all.

But, on mature reflection, we, in this great democracy, are learning to minimize our differences and accentuate our positives.

But, even in doubting the wisdom of his principles or policies, few ever really doubted his genuine sincerity of purpose.

So much good emanated from his fertile mind that we are constrained to consider his errors—if he was wrong—as microscopic in comparison with the alleviation of human suffering and human fears for which he was so largely responsible.

Errors of the mind are much easier forgiven than errors of the heart.

Even in the perplexing confusion he applied well his special gifts of wisdom and understanding to the problems of the world.

As we are removed, progressively, from the proximity of prejudices related to anyone's personality—regardless of the good qualities in it—and begin to consider the man as a whole, history is recording Franklin Roosevelt as one of America's all-time great. (Greatness has a way of growing in proportion to the quality of the subject.)

As it has been so aptly put by the Vice President, Mr. BARKLEY: "Franklin Delano Roosevelt held to the belief that—

"All men are created equal—not in physical power, not in intellectual endowments, not in moral fiber, but, regardless of differences of one kind of another, equal—in the right and opportunity to enjoy the blessings of freedom under a system which undertakes to guarantee—so far as human institutions can do so—the equal enjoyment of every right which a government ought to guarantee to those who support and defend it."

When we pause to remember that Franklin Roosevelt was born to wealth it is the more remarkable that he should have busied himself so raptly in advancing the dignity of the common man.

It is unusual, but commendable, that he found himself discontent to be idly rich and

content to devote his energies to those whose names never appear in print; who dwell in the shadows rather than on the mountain top.

These little people—and I refer to them as little only in comparison to the great and the affluent—found in Franklin Roosevelt a symbol and spokesman of all the better things of which mortal man is capable of visualizing.

All the magnitude of his ideals; all of his dramatic performances; all his incredible accomplishments; the sum of his global influence, belonged to them.

They held—and hold—him in high respect—almost reverence.

In their name he lashed out at social injustice; advanced a wholesome and heartful economy; dared to venture to the far regions of political frontiers.

He was the champion of their individual freedom.

Because he gained the confidence of the great masses of the American people, President Roosevelt was able to arouse us to the imminence of danger—and to organize us for the victory.

Our course could have been different if the burden had rested on less competent shoulders.

If—with justification—one can draw a line of demarcation anywhere, the South—more than any other section of our country, or segment of our economy—needed and profited by the leadership of Franklin Roosevelt.

Many had exploited the plight of the South for political favor in the past, but the stainless character of Franklin Roosevelt excluded political prostitution.

He gave us more than mere lip service.

He promised, and then he performed.

From the planning board he transformed the invaluable Tennessee Valley Authority into a sprawling system of hydroelectric dams. He converted eroded gullies into productive fields.

He held back the flood waters that had ravaged our lowlands of fertile soil; he taught us to conserve that precious top soil.

He made possible navigation from the headwaters of the Tennessee River to the Ohio and Mississippi.

The scientific fertilizers flowing from TVA experimental plants enhanced the value of our crops.

Because of his dream, our homes are lighted with cheap electricity; our farms can use power machinery; and we in the South are being lifted from the role of economic problem No. 1, to a potential Ruhr Valley of America.

His program saved our farmers; salvaged our small businessmen; lessened the freight-rate discrimination against our section; and, restored our dignity.

Franklin Roosevelt gave us a new lease on life; a glimpse of the potential the future held in store; and inspired us to lend ourselves and our resources to the betterment of all mankind.

As a result, we have a necessary feeling of belonging; no longer do we consider our section the stepchild of America.

Had Franklin Roosevelt not believed and practiced the principle of the dignity of the individual, the South would have remained America's stepchild.

WHAT IF NO FUTURE

President Truman—in his inaugural address this month—reaffirmed to the world America's devotion to this principle. He asked that we improve the undeveloped areas of the world.

Our task here in America is under way, and we must turn our efforts in the direction of our friends.

This is the political thinking advanced by Franklin Roosevelt.

This is the political thinking required to preserve our way of life in this terribly unsettled world.

Ours is a proud heritage.

The concept of a strong, vital, democratic society, interested in the welfare of its citizens, and capable of assuring a better life for itself, and the whole world, is—in no small measure—the heritage which Franklin Delano Roosevelt has bequeathed to us.

Address by Renah F. Camalier to Graduating Class of Anacostia High School

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. WILEY. Mr. President, on January 26, Renah F. Camalier, a distinguished citizen of Washington, delivered an address to the graduating class of Anacostia High School in Washington. The address is very illuminating, and I feel that it can be read with profit by all Senators.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mrs. Corkery, Mr. Lee, guests of the graduating class, and young ladies and gentlemen of the graduating class, please sit back and relax. This idea of a speaker appearing before the graduating class is an old American custom, and must be endured.

I look at the fathers and mothers here, with their beaming countenances, then at the wide-eyed, wondering graduates. And the picture reminds me of the youngster who was being chided for his low grades in school. As an alibi, the young boy said:

"Well, all the other boys, they got C's and D's, too," but, quizzical and doubting, dad said: "How about little Johnny Jones, he received high marks?" "Oh, yeah, dad, but he's different; he has two bright parents, and I only have mother."

This beautiful setting carries me back many years. One of the milestones in the life of a boy and a girl is his or her birthday. Graduation day is another.

In the one, you seem to travel alone, except for fond parents, beaming grandparents, cynical brothers and sisters, and doting relatives.

In the other you do not travel alone. You are not only surrounded by your parents, grandparents, brothers and sisters, and doting relatives but you have standing with you many other boys and girls with whom you have been associating daily over the passing years.

Such associations, if founded upon good principles, good habits, and high ideals, will always be a blessing, and will, on that basis, ripen into friendships sufficiently strong and desirable to stand the test of time and adversity.

Young ladies and gentlemen, you are facing a most remarkable and even-to-be-desired era. May I dwell, for just a moment, on the life with which we have been endowed.

I will not be so bold or boring as to attempt to tell you what constitutes life, but from my own experience I can tell you it is a wonderful thing just to live, and that is the subject of my talk.

What I might develop here is directed primarily at the young men, who must face the trials of the professional and business worlds. The young ladies are so beautiful and attractive, I am convinced they will but face the trials of the home, the wives of the young men of their choice, and that is a marvelous career.

Young men, face your trials with your head erect and your shoulders straight back, with the proud consciousness that you are an American boy.

If you will look about you through your eyes of eagerness and expectation, you will see life everywhere. But this life is a very practical thing, and it is very unwise to contemplate it simply as a thing of beauty. It has its problems and its opportunities, its benefits, and its burdens. In plain words, it's a great life if you can take it.

Tonight we stand in the foreglow of your new years of hope and promise. Down through the ages it has been the task of man, through tireless efforts, the expenditure of money and energy to a fabulous degree, to attempt to anticipate, to unravel, and to reveal the future. You might as well try to stop the sun.

This is now your today. It is your gateway to that dark, foreboding, and uncertain yet welcome future; but as we face it we stand with renewed hope and high anticipation, girded on every side by modern concepts of cooperation and brotherly aid. Boundaries which have circumscribed peoples and nations in the past have disappeared. But the concepts are no longer obscured and present efforts indicate the prospect of success in every honest endeavor. Therefore life is worth while and enchanting.

Personally, I am an irrepressible optimist, and no matter how burdensome life becomes at times, I have always managed to come up smiling. I heard the whole thing summed up in a remark by a little 3-year-old child last Sunday, when she said, "Unka Willie, I always say 'Hello, Mr. Sun,' in the morning."

Young men and women, live while you may, live today, but live wisely and well, never too rapidly, and always with a purpose. Never be satisfied with yourself, for it has truly been said that there is no hope for a satisfied man. And, that is an irrefutable statement.

Do you know how to take this life? Possibly it will help you, if I give the approach outlined by one of the greatest teachers and philosophers of modern times, a man who was considered also the finest humorist in America. What does Mark Twain say in this regard:

"How to take life? Take it just as though it was—as it is—an earnest, vital, and important affair. Take it as though you were born to the task of performing a merry part of it—as though the world awaited your coming. Take it as though it was a grand opportunity to do and achieve, to carry forward great and good schemes, to help and cheer a suffering, weary, and it may be, a heart-broken world."

Mark Twain knew his life. And he knew how to take it.

There are two things which should be guarded by every one, with ceaseless care. One is character, the other reputation. And if you think those two things are old-fashioned, just go out and look for a job without them.

Character is what a man really is; reputation is what he would have you think he is—two vastly different ideals.

The first, character, is something which gold cannot purchase, but history records many instances, each sad, humiliating, and final, when gold has caused the sale of a man's character.

And a man, having sold that priceless possession, immediately has three strikes on him. He is out before he leaves the home plate. He has destroyed that which he has received from God. It is the final put-out.

In this day, and in the days which you are now facing, you will do well to remember this one word of mine, without character you will have no real or fancied chance in life.

The second is reputation. It takes years to build a good reputation, and it can be lost overnight, never to be fully regained. It is something born of man, and must be consistently maintained if any steady progress in life is to be expected.

Without character and a good reputation you might as well quit right now.

This is 1949—almost the half-way mark in the twentieth century—and history is violently in the making.

I am reminded of the chemistry student. The professor asked: "Just what does HNO_3 signify?" The student hesitated, "Sorry, sir; ah, it is right here on the tip of my tongue." "Well you had better spit it out. It's nitric acid."

The old world still trembles for momentous happenings, and great changes are taking place. It is like nitric acid.

We are living in a wonderful age, and it behooves us to keep abreast of the times or else drop by the wayside. Not one of us can afford to get out of step or lose heart, or confidence, or determination; and, above all, not one of us can afford to allow ourselves to be swept by passion or prejudice, indifference or intolerance, for if we do it is a safe bet we will drop by the wayside.

And will the world stand still and wait? Not so. If you have contributed anything toward the betterment of conditions, the world will feel your absence from the line of march, but just as surely as the sun creeps over the horizon tomorrow morning, that same old world, which applauded you yesterday and today, will shake itself from the shackles and press on to the ultimate goal, leaving you still by the wayside. Who will be the loser? Only you.

Do not fool yourselves, young people, but be as understanding as the old colored man who read the inscription on the tombstone: "He is not dead, but sleepeth," to which he remarked sagely, "Boss, he ain't foolin' nobody but hisself."

And you, also, will fool only yourselves if you are like the boy in the class when the teacher slapped a half dollar on the desk and asked, "What is that?" To which the bright young wit replied, "Tails." Oh, no, fellows, you will do better to get passing marks, and not be so qualified in such questionable pursuits of entertainment or possible gain.

You have been through the courses set down here for your physical and moral advancement. You have gained much knowledge. You have acquired much education.

But this knowledge which has been gained and acquired is history; what you have learned is in the same category. It is yours to be sure, it is in your minds and hearts, and it has become the foundation of your intellect, but it treats of yesterday.

Now, education is something different. Education treats of today, and tomorrow, and every day. You will never cease to acquire education in some form or another. Life itself will see to that, but there you must also be careful that you do not acquire education along the lines which will make you something akin to an outcast.

Don't be like little Tommy, who came home proudly from his first day at school:

"What did you learn in school?" asked his mother.

"Nothing," said Tommy, then, seeing the look of disappointment on her face, he added, "But I learned a lot during recess."

That boy was wise beyond his years.

Keep your hearts and minds clean; otherwise your education will never pay dividends in this exacting world.

Personally, I have seen many young persons boastfully satisfied and content with their apparent progress and achievement in education. You have seen them. They are the boys and girls who always act as if they have the world by the tail. What a fallacy.

Just look a little further, and see what history shows. The best way for me to express it is to say that these little "big shots" always find themselves thrown for a heavy loss by the very world which they feel they have conquered, and are holding by the tail.

Anacostia High School is an American institution, a part of our American system of public schools, the melting pot for millions of boys and girls, pointing the way to those things upon which this Nation was founded and builded nearly 200 years ago.

Those of us who are a little older are passing on to you a priceless heritage, that of freedom.

There are in the world peoples and organizations who would deprive you of that heritage, but, before you relinquish it, be sure you put upon your shoulder the equipment necessary to fight and die for its preservation, for it is upon the preservation of that heritage that this great land of ours must ever depend for its glory and its perpetuity. Guard it well, zealously and ceaselessly.

America is proud of its public-school system, and many of the things which its enemies proclaim never exist; and this is true not only of the schools, but of other American institutions against which charges without foundation have been hurled since the cornerstone of the Nation was laid.

Too much, in my opinion, has been said about juvenile delinquency arising from institutions.

Rather, let us look into our private homes, and there urge that the basic principles of Americanism be instilled in the hearts and minds of children.

Let them be taught the rudiments of common politeness, good manners, and consideration for the acts and feelings of others. No greater contribution to the welfare of our people can be made by the parents of our oncoming generation.

Let there be instilled in their minds respect for public authority, thus bringing to an end the all-too-prevalent idea that the office of President, or Senator, or Representative, or minister, or priest, or rabbi, or public-school official, or any other loyal American official, is necessarily subject to criticism and ridicule.

If that were done, less criticism would be leveled at our institutions, both public and private, and at their directing heads.

The growing tendency in American life to condemn, ridicule, and vilify those in authority is productive only of harm, and the breaking down of respect for that authority throughout the country. It can be stopped by proper instruction in the home.

As an adjunct to this teaching by parents, all schools could well afford to make it compulsory before graduation that boys and girls be grounded in the ethics of life, and so far as our public schools are involved, I heartily suggest, Mr. Lee, that the Board of Education join in any definite movement to increase respect for public and private rights and properties, or inaugurate such a movement itself.

I firmly believe civic and other organizations throughout this city are vitally interested in bringing about a deeper respect and reverence for law and order, and will be glad to join in such an endeavor.

Good luck, young men and women, in this your world of promise, and hope, and opportunity, and may you progress year by year, and may that progress lead you along paths which will insure that each and every one will be a fine, upstanding citizen and leader of this, or any other community, ever ready and qualified to tackle the problems of your day.

And then, when the passage of time causes you to give way to the boys and girls who will graduate in the years to come, you will be able to sit back and live, live in the happy reflections of a well-spent life.

Good luck.

Peter Marshall

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. MAGNUSON. Mr. President, on Tuesday, January 25, we received word that Peter Marshall, our Senate Chaplain, had died. All of us who knew him were shocked and grieved.

During the 2 years Peter Marshall served as Chaplain of the Senate each of us came to know, respect, and revere him. From his words we drew counsel and guidance.

Peter Marshall's influence in the United States Senate extended to the Press and Radio Galleries.

Mr. Tris Coffin devoted his column of January 28 to an appreciation of Peter Marshall. I ask unanimous consent to place in the Appendix of the RECORD Tris Coffin's column, The Daybook. Further I recommend that each Senator and member of the galleries read this tribute to Peter Marshall.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Times-Herald of January 28, 1949]

THE DAYBOOK

(By Tris Coffin)

The clear voice with the faint Scotch burr sounded across the dim and gloomy Chamber, "* * * May Thy will be done here and Thy program be carried out above party and personality, beyond time and circumstance, for the good of America and the peace of the world."

The Senators sat quietly, a little humbled as they always were by the sincerity of the young Chaplain. These were the last words spoken by Peter Marshall in the United States Senate. He died the next morning, a man who had lived a full and rewarding life, at 46.

Dr. Marshall, a Scotch Presbyterian, was the conscience of the Senate. His voice was soft and gentle, but his words cut cleanly through the pompousness and demagogery on Capitol Hill. He told this correspondent wistfully one morning, "The Senators may not want me long for their chaplain, but I must speak out."

One of his admirers, Senator HARLEY KILGORE, of West Virginia, spoke of him in awe: "Peter Marshall expresses more feeling and says more in his short prayers than all the Senators put together the rest of the day."

Dr. Marshall's belief in human rights was a passion so deep it glowed in his face and burned in his words. Yet he was a soft-spoken man who had no use for cheap dramatics. He spoke honestly of what was on his mind, and that was all. He died at 46 because he devoted all his energies to helping others.

Everything Peter Marshall did, he did with great care. In his small, old-fashioned office in the New York Avenue Presbyterian Church, Dr. Marshall worked for hours over his short daily prayer in the Senate.

One of the great documents of recent times was Peter Marshall's Fourth of July sermon 2 years ago. It was reproduced in the CONGRESSIONAL RECORD. Fifty thousand copies were mailed out on request.

The young pastor said: "The freedom that was purchased 171 years ago was not paid for in one down payment. Installments have

been kept up for more than two lifetimes, for this is one possession that exacts a perpetual price. There is a danger in your sitting back smugly applauding when the flag is thrown upon the movie screen, puffing yourself up with pride, as you boast of America. For you were free-born.

"Unless you have lived in other lands, unless you have known hunger and persecution, unless you have come as an immigrant to this good land, you have no idea how good it is. Nor can you truly be grateful, since you have no conception of what it means to be without all the things you take for granted.

"You have never known anything else. It is because they who went before you were willing to stake their lives, their fortunes, and their sacred honor, that you have what you now enjoy. But you forget how bitterly it was won.

"The story of the waste of this country's resources is a sad story of greed and selfishness. The wildlife of this Nation has long been exploited to satisfy the greed and so-called sporting instinct of free Americans. That same kind of greed was shown in our treatment of the land.

"It was good land, but we were greedy. We wanted money crops, and the slogan was, 'Plow and plant, plow and plant.' We moved on when the land gave out. Our reckless stripping away of the vegetable cover of the soil has driven out the animals and invited erosion.

"The same wanton waste and disregard for the future is to be seen in the almost criminal waste of oil; in the deforestation of our country, when the slogan seemed to be, 'Cut and sell, cut and sell.' Surely freedom does not mean that people can do as they like with the country's resources. The natural resources of America are the heritage of the whole Nation, and should be conserved and utilized for the benefit of all people.

"It is time we put the Bible back into our Government; time that our statesmen began to make their decisions on all moral questions on the basis of the authority of God's holy word. It is only by applying Christ's solutions to the problems that plague us, it is only by living under His blessing and guidance, that we can ever hope to add any new glory to Old Glory."

A National Prosperity Budget

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "For a National Prosperity Budget," published in the magazine section of the New York Times of January 9, 1949. The article is written by Mr. Leon H. Keyserling, vice chairman of the Council of Economic Advisers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR A NATIONAL PROSPERITY BUDGET—TO MEET OUR PRESENT ECONOMIC PROBLEMS A NEW KIND OF VOLUNTARY PLAN IS PROPOSED

(By Leon H. Keyserling)

WASHINGTON.—The debates preceding the national election made it clear that people of all shades of opinion look upon the stability of the American economy as our domestic problem No. 1. The best sign of the spirit in which that problem will now be faced resides in the legislative and executive record of those who have molded national policy in peace and war since the end of the great depression 15 years ago.

That record contains both successes and mistakes. But viewing the record as a whole, it would take more than a few weeks of speculative flurry on the stock market to lead any thoughtful citizen to suspect that our economic future has been clouded by the recent popular reaffirmation of principles and programs which, up to the present moment, have been accompanied by the highest business prosperity and standards of living ever achieved.

Clearly nothing in this record should cause any group now to suspect any punitive, inconsiderate, or reckless action. All men of good will can work together to make our economy even more stable, more prosperous, and more just under the leadership of a President whose dedication to that purpose is, I believe, felt by all.

Cooperation in human affairs is founded upon a commonly accepted definition of where we now stand and a commonly held aspiration for the years ahead. This article proposes a national prosperity budget, to stress the great things that hold us together rather than the little things that tear us apart, and thus to give us one big objective to strive for together instead of leaving us only with many smaller issues about which to contend.

Before discussing this prosperity-budget idea, however, it is necessary to take a fresh look at the current economic situation. With the cost of living and wholesale prices other than for farm and food products now near their all-time peaks, it is a bit premature to assert that inflation has ended because the cost of living has dropped 1.3 percent in 3 months, after 5 consecutive months of upswing and 12 months of upswing out of the last 18. Many people, including the Federal Reserve Board presidents in New York and Chicago, have recently pointed out that inflationary problems may continue or even augment during the next year, and that, whether prices in future seek much higher levels or hover near their present levels, the results of past inflation and the potentials for further inflation require substantial efforts to promote long-range economic stability.

But far more important than forecasting whether inflation will continue or subside is the task of defining precisely what we mean by inflation so that we may deal with it sensibly. Our economy since VJ-day has been characterized in the main by these three conditions: (1) Full employment straining against the labor force, high production straining against available materials, and high incomes and spending straining against output; (2) highly organized business, labor, and agriculture straining to protect their real or fancied interests and to get as large a share as they can of the Nation's income, coupled with a people organized through their Government to perform functions and services of immense range; and (3) prices and costs generally rising with variations in timing and speed.

Never before the war were all three of these conditions, particularly the second, so abundantly apparent. Their combination creates an economy so fundamentally different from prewar as to call for a drastic readjustment in traditional economic thinking.

To be sure, inflation could be overcome by getting rid of all three of these conditions. But the first condition, though few yet admit it, is really a permanent characteristic of a full-employment economy, to the preservation of which we are committed by national law, by popular sentiment, and by every imperative of world conditions. Nobody can propose any democratic way of getting rid of the second condition, even if anyone wanted to. The problem, therefore, is to get rid of the third condition while maintaining the first and accepting the second.

Or more exactly, we want to modify the third condition of rising prices and costs, not because it is inseparably connected with the other two conditions, but rather because it threatens the first condition of full employment, especially where the second condition of highly organized groups prevents the automatic adjustments of which Adam Smith dreamed.

Why is high-level prosperity threatened by rising prices and costs? Certainly not because they are bad per se. We had a falling price level after 1929 and the country was in the doldrums. We had a rising price level after 1932 with increasing employment and production. We had a fairly stable price level in the later 1920's and yet something must have been wrong in view of what ensued.

The vital point is not the absolute levels or trends of prices, wages, and other incomes, but rather the relationships among them. When these relationships inflict needless hardships upon millions of individuals, or when they create distortions in our pattern of production, consumption, or national income which may make it impossible to sustain maximum employment, productive investment, and business confidence, then we are in for trouble.

For these reasons, a mere leveling off of prices, while hailed by some, may not be a happy omen. It may be instead the traditional link in the chain of circumstances by which our economy passes from an unhealthy boom to a recession. A cycle, if it is big enough, looks flat when we are standing at the top. Further, an apparent leveling off of prices, when it is merely the average of some prices moving upward while others are moving downward, may generate distortions in the economy which threaten lasting prosperity even more than when all prices are moving upward.

The dangers generated by post-war inflation, in short, are not just that prices and income have moved up; the remedy cannot lie just in moving them down. They have moved up in an uneven manner which has created or aggravated certain specific maladjustments in the whole price-income structure.

The first serious maladjustment relates to family standards of living.

During the accelerated price rises since mid-1946, a majority of families in the middle-income and upper-income brackets have received increases in money incomes as the cost of living has advanced. But a majority in the lowest income brackets have received no such increases or have suffered decreases. By 1947 about 50 percent of all families had incomes below the $3,200 a year estimated by the Bureau of Labor Statistics to be required to maintain an urban family of four at a reasonably satisfactory standard of living; and a quarter to a third of all families had incomes below $2,000. By early 1948 about 28 percent of all families had no liquid assets.

This serious maldistribution of income, in the long run, could lead to the oversaving or underconsumption which drives employment and production downward. And even in the short run, it is unsettling because it necessarily produces intense pressure drives to change the price-income structure so long as people are alert and organized for the protection of their interests.

The second threat to economic stability arises out of the pronounced downward trend of farm prices and incomes, during a year when national income and production as a whole have been increasing. The problem of agricultural adjustment will soon be with

us again, not in terms of relief from the excessively high farm prices of 1947, but rather in terms of preventing that relative weakness in the farm sector of the economy which did us no good in the 1920's. The economy can be healthy only if the farm population moves toward parity with the rest of us in basic opportunities and standards of living.

A fair treatment of high retail food costs must recognize and not neglect this fact. It is essential to reduce the spread between what the consumer pays and what the farmer gets, to lift agricultural output to meet postwar standards of consumption at full employment, and to improve farm efficiency so that somewhat lower prices may result without general reductions in farm income. We do not yet have an adequate program to do this.

The third threat to economic stability is that some important industrial prices have moved higher than can permanently be sustained. This has happened in areas where the postwar demand has been extraordinarily high, fed by the business reconversion and equipment boom, the cumulative shortage of housing, the special requirements of the preparedness program and the foreign-aid program—all of which are somewhat temporary factors.

For example, the country needs for at least 10 years an annual volume of housing output as large as, or considerably larger than, the level of house construction since the war. But when the relatively thin market of those who can buy high-priced or luxury housing is saturated, and when the residential construction industry is faced with the task of supplying the mass market for those who need far more moderately priced housing, there is likely to be a collapse in the postwar building boom analogous to that which took place after 1925, unless costs are substantially lowered and other measures adopted. Since the spring of 1948, housing starts have declined alarmingly.

Industrial prices are in large areas administered—or at least partially administered prices, which do not respond so rapidly or so sensitively as farm prices to changes in the composition of demand. Hence, the unpalatable outlook is that the industrial price situation will cumulate eventually in substantial unemployment and cut-backs in production if prices move further above levels which can be permanently maintained or which are essential to provide adequate incentives and funds for optimum business expansion.

This growing unbalance in the economy, semiconcealed so long as inflation lasts, may be appreciated most fully by examining the composition of national expenditures and incomes. The expenditures of consumers dropped from 74.7 percent of the total national output figure in 1939 to 69 percent in the fourth quarter of 1948. Contrasting the same two periods, business investment (and net foreign investment) rose from 11 percent to 15.6 percent. This reflects industry's postwar reconversion boom and does not in itself reveal anything undesirable.

However, to achieve a workable balance between production and consumption in a more normal peacetime economy, consumer expenditures will need to assume a relatively larger role. And the preliminary indications are that the changing structure of national income does not bode well for this orderly transition. Compensation of employees has dropped from 65.9 percent of the national income total in 1939 to 61.6 percent in the fourth quarter of 1948, while corporate profits and inventory valuation adjustments have risen from 8 percent to 14.7 percent.

One traditional answer to this problem is that consumer income is now more than adequate to take the supply of goods available for consumer use, and that when more goods become available their production in itself will create the income to absorb them. But our economic system does not react wholly in this way. The more typical reaction to dwindling market prospects is not to decrease prices or increase wages, but, rather, to resort to curtailment of employment and production. This is already occurring in a few areas, and when such a trend becomes generalized and leads to erratic or panicky price reductions a recession or depression is under way.

No such general trends seem likely in the very short run. I share the view of many others who believe that high-level production and employment may continue for some time. But the essence of sound national policy is to treat the time still granted us as a precious asset for the development and application of corrective measures before the eleventh hour.

Viewing the several aspects of the problem of stability, there are no quick and easy overall solutions.

We cannot increase production very much in the short run, under existing conditions of full employment, shortages of some materials and almost full utilization of resources. Moreover, the chief threat to sustained production and gradual expansion by technological advance, improved productivity, better management, and removal of bottlenecks are the maladjustments already portrayed. To put the horse before the cart, we should attend to these maladjustments and then production in the main will proceed smoothly.

Nor is the reduction of total demand a sure cure, although it is frequently hailed as such. While control of consumer credit can curb the demand of some who now obtain too large a share of available goods, it cannot help the primary victims of inflation who now obtain too few goods, and should not be used against them. Control of bank reserves can be used to abate some loans and activities. But other activities which should now be curtailed are not sufficiently dependent upon new credit to be affected, while still others which should now be stimulated might be impaired by tightened credit. While taxes should be high enough to maintain a budgetary surplus and reduce the national debt, the use of taxes to achieve all the needed adjustments in the production-price-cost structure could not be sufficiently selective without becoming unwieldy and appearing highly discriminatory.

It is true that fiscal measures—such as credit restriction and high taxation—could end inflation if carried so far that total production declined and unemployment rose. But this would worsen the position of the people who have already been hurt most. Nor has anyone proposed a plan for drastic contraction which would bring relationships into better balance instead of worse, or prevent our highly sensitive economy from rolling into the valley of depression if we deliberately started it down the mountainside. The idea that we can protect production and employment by reducing them a little bit is about as safe as the ancient remedy of bloodletting.

The moral is that these fiscal measures can be most effective only if supplementary to adjustments in the private policies which affect production, prices, wages, and national income. This is true not only because these private policies can be applied more selectively, but also because they bulk much larger in the operation of the economic system.

Any effort to limit the free play of these private policies by selective governmental control of allocations or prices or wages is justifiable only in a situation requiring remedial action before management, labor, and agriculture can acquire the Nation-wide perspectives to forage voluntary adjustments in the interest of the whole economy. What selective controls the new Congress will authorize will depend in part upon how successfully voluntary price adjustments proceed, and in part upon the evolving economic situation. But in any event, temporary controls would provide only a short-run necessary breathing spell. In the long run, it should be our fixed purpose that workable relationships among prices, wages, and other incomes be developed and applied not primarily by Government, but rather by the prime movers in our voluntary economic system.

By definition, however, the development of the Nation-wide perspectives required for this task cannot rest exclusively with any individual or group. Consistent with our traditions of freedom, I believe appropriate governmental sources should therefore encourage the preparation of the national prosperity budget to which I earlier referred, focused upon the working of the economy as a whole and the interdependence of its parts.

This budget, by estimating for a few years ahead the maximum output that our resources and skills can achieve without the forced draft of a war economy, and what this would mean in profits and general well-being, would challenge the enterprise and imagination of every element in our economic system. By defining some of the key requirements for this volume of output—such as the amount of steel, transport, and agricultural production—it would shed light instead of heat upon some of the most vexatious problems now confronting us.

By objective analysis of the relationships among profits, wages, and other incomes which would provide both the capital funds and the incentives for this expansion and the purchasing power to absorb it, the prosperity budget would distinguish the long-run welfare of all from the short-run gains of contending groups, and thus provide a surer foundation for the mutual adjustment of industry, agriculture, and labor through voluntary action.

By looking at the economy as a whole, it would also offer a better test of governmental policies, such as farm-price supports, taxation, minimum-wage legislation, and public works, all of which promote adjustment or aggravate maladjustment depending upon how well they are attuned to the whole situation.

Most important of all, by implanting everywhere the conviction that reasonable stability is attainable, it would dispel the fears that cause restrictionist practices by industry and labor, and provide the quickening impulse for clear affirmative action.

The preparation and popularization of such a national prosperity budget, and its annual revision, should draw continuously upon the resources and thinking of many individuals and groups. Instruments of consultation and cooperation should be established, subject always to the purifying influence of constructive public criticism. The budget would not be forced upon any one. It might be ignored or followed just as the weather reports, depending upon its demonstration of utility. Being essentially an informational device, it might gradually become more authoritative; but it would not become authoritarian. By furnishing major economic groups with a comprehensive market survey, so to speak, to complement the more limited surveys of individual concerns and industries, it would tend to identify particularistic interests with the common good.

The core of this proposal is already implanted in the Employment Act of 1946. The next step might be the encouragement of conferences among industry, agriculture, labor, consumers, and Government—at regional or national levels—to discuss the elements of a stability program and to appraise its worth. This would serve to emphasize the primary aspirations that hold us together instead of the secondary differences that divide. Above all, a forthright and unified effort to maintain our economic stability would provide a heartening demon-

stration that our Nation intends to do something about inflation before inflation does a great deal to us. This alone, in a democracy, would be a gain of inestimable value.

The problem of economic stability poses one of the supreme issues of our generation, which is a moral issue in its core implications. Will our democracy make manifest its innate sense of justice, which rebels against hardships for so many people even in the presence of prosperity? Will our democracy make manifest the strength and the unity to act before the ultimate crisis appears, just as we have made manifest the strength and the unity to act upon the event of crises—especially when we know that some of these crises would never have appeared if we had acted in time?

Record of the Republican Party

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. SALTONSTALL. Mr. President, in the absence of the Senator from Nebraska [Mr. WHERRY], I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "God Hates a Coward," published in the Omaha, Nebr., Evening World-Herald of January 26, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOD HATES A COWARD

That's gospel truth. If any witness were needed to attest it the Republican Party of 1936–48 would more than suffice.

For 12 years the Republican Party has been a coward; the worst kind of coward, a moral coward. In consequence it begins to take on the appearance of something the cat dragged in.

It is hard to define as an entity the Republican Party or any other large group of people, since, however closely banded together, all cannot think alike in all respects. But, speaking broadly, the Republican Party consists of men and women who in firm conviction are opposed to the swift trend toward the omnipotent state that is sweeping over every section of the earth. Whether it be defined as communism, fascism, socialism, totalitarianism, statism, the New Deal, the insurance state, these men and women regard it as a thing of infinite menace, however cunningly disguised, and however ardently supported by good but misguided people.

But the Republican Party has lacked the courage to say what its rank and file believe. Out of hunger for the flesh pots it has lacked the patriotism, the loyalty, to stand up for the free Republic of the founding fathers and to fight for it. Due to that lack of moral courage, of loyalty to the American creed, the United States, almost the sole remaining bulwark against the advancing tide, finds itself without a spokesman, without a champion to proclaim and battle for its traditional, glorious creed. And it finds the once-so-firm foundations of its temple crumbling.

The fact is known of all men.

Here, too, in our own America, the state is taking control and ownership of the people. It is using the power to tax to destroy their independence and self-reliance. It is converting freemen into vassals and dependents. It is devouring the substance of self-supporting people to render them self-supporting no longer, and to establish a condition of universal reliance upon the biased paternalism of a great white father—a father corrupted and corrupting, since great power does corrupt and absolute power corrupts absolutely.

And the Republican Party has not dared resist the tide; it has gone along with it. Not out of conviction but out of cowardice. It has not dared to be a Daniel; to have a purpose and to make it known. Its plea for votes has been the shameful one: Give us the offices, the power, and we'll give you as much of what we believe to be wrong as will the Democrats themselves.

Americans do not respond to any such appeal. They, too, hate a coward. They despise hypocrisy. They hunger for a leadership of good faith. They will accept a brave and fighting leadership tainted even with Pendergastism and absolutism rather than a leadership that crawls—and trails its flag.

What a wonderful thing it would be if the Republican National Committee meeting here in Omaha, if other constituted Republican leaders, could realize how desperately these United States need an honest and brave Republican Party—how true Republicans above all others hunger and thirst for it. A Republican Party to raise high the flag of a loyal opposition. Opposition not alone to a misguided and recreant Democratic Party here at home, but opposition tenacious and resolute, brave and unyielding, to all the monstrous wrong and error that today menaces freedom, self-reliance, the courage to adventure, human dignity, in every land and every clime.

How joyously, with what reborn hope, men and women of the ancient faith of this Republic would rally about such a standard. Proud of it they would be in victory. No less proud in defeat.

Surely, surely, it shall not be recorded by amazed historians of a later day that when the black flag of absolutism was raised back in the twentieth century, when the fate of all mankind was involved, there was nowhere, in any land, not even our own, an organized body of men and women who had the courage, the devotion, the wisdom, the loyalty to God who made men free, to challenge that foul intruder and to dedicate their lives, their fortunes, their sacred honor, to driving him back into the dark ages whence he emerged.

Never has there been sounded such a call to service as rings today in the ears of the Republican Party. Never, for men and women of courage, of character, of conviction, has there been afforded such an occasion for rising to the heights of human devotion to imperishable ideals.

The Republican Party can keep on crawling ignominiously along the dusty trail of an order it abhors but shrinks from challenging. Or it can rise out of the dust of four merited defeats, stand erect and unafraid, proudly to take up the battle for all that free men prize.

Courage or cowardice? Loyalty or recreancy? Conviction or time serving?

It is as simple as that, ladies and gentlemen of the Republican National Committee.

Post-Office Deficits

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. HENDRICKSON. Mr. President, I have before me an editorial on the subject of post-office deficits from the Trenton Evening Times under date of January 14. I think the editorial is a very fine one and should be read by every Member of this body. I ask unanimous consent to have it inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GOOD SUGGESTION

There isn't any reason why newspapers, magazines, and advertising circulars shouldn't pay their fair share of the post-office deficit. President Truman has suggested in his budget message that second- and third-class mail rates be increased. He points out that the post-office deficit is $400,000,000. First-class mail pays its own way and there is no reason why newspapers, magazines, and circulars should be subsidized.

In the past, newspapers and magazines have been treated with kid gloves by Congress and the post office when it came to postal rates. Perhaps Government officials were wary of being attacked by the press. But the simple fact is that the press should not be given this subsidy. The press can and should stand on its own feet, maintain its independence, and be indebted to no officeholders. Mr. Truman is absolutely right. The extremely low rates on second- and third-class mail ought to be raised.

International Fisheries Commission

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Nations Pull Together So Everybody's Happy," published in the Seattle Times of January 16, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONS PULL TOGETHER SO EVERYBODY'S HAPPY

The recent conference here of fishermen and fishing-vessel owners with the International Fisheries Commission provided new reminder of one of the world's outstanding instances of international cooperation. Representing the United States and the Dominion of Canada, the Commission's purpose is to conserve halibut resources of Canadian and American waters of the North Pacific Ocean.

For years, the Commission has administered these halibut fisheries on a scientific basis, through mutual agreements between the two countries, so that the fishing industry might prosper and make a nutritious sea food available for public consumption, without depleting the halibut run of this ocean area. It is safe to say that no cooperative effort between two nations has been more productive of good will or more successful in fulfilling its purpose.

The Commission's work has also been a striking instance of cooperation within an industry. All the elements of the fishing fleet of this State, British Columbia, and Alaska have participated in the program, to their mutual advantage. The results have been outstanding. A fishery resource that once was threatened with extinction has been restored and preserved for the utilization of generations to come. The waters of

the North Pacific Ocean now produce three-fourths of the world's entire supply of halibut.

Seattle can take much pride in the fact that two Seattle men have been foremost in furthering this movement. Miller Freeman, Seattle publisher, was one of its first supporters, and an early chairman of the Commission. His work has been carried on by Edward W. Allen, Seattle attorney, also a former Commission chairman. This community, as well as the fishing industry, owes these two leading spirits and their associates in the Commission's activities a great debt of appreciation.

Trial of Communist Leaders

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the RECORD two articles by Vivian Meik, dealing with the New York trial of Communist leaders. Vivian Meik is a former well-known English editorial writer, now writing for the Deseret Evening News of Salt Lake City. These articles were published on January 18 and 19 of this year.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

NEWS REPORTS ON NEW YORK TRIAL ARE HISTORIC

(By Vivian Meik)

For the next few weeks you will be reading reports which, even though you may not think so, will be covering one of the most important phases of the history of America.

I speak of the trial which opened Monday of the 12 leading Communists in this country—the Politburo of a land which is giving them safety and sanctuary, tolerance, and even personal sympathy to a degree they would have received nowhere else, least of all in that Russia whose orders they are taking to "bite the hand that feeds them."

This trial is going on to cause a vast surge of emotion. It will create violent discussions. It will be the instrument by which interested parties will try to tear the real issue to shreds so as to open a way along which everything else can drive fast except truth.

It is well then to get the fundamentals, the basic facts, the very core of the whole business straight, here and now.

The indictment against these 12 men is not that they are Communists, it is not that they are not entitled to be Communists if they desire, it is not that they cannot exercise the right of free speech or free thinking in accordance with the Constitution of the United States.

The indictment against them is that they have used this freedom under the Constitution in a way that has transformed that honest liberty into dishonest license, in a way that has exploited that freedom so as to work to destroy that Constitution by force or other forms of violence under the direct orders of Moscow—Moscow, the synonym of an ideology that is pledged to destroy the American way of life.

That, and that alone, is the indictment against these 12 chiefs of the Communist Party in America.

Even at this stage anyone with experience of such matters can tell you that you will see every trick of law and technicality brought in to cloud the issue.

ATTRACT FROM TRUTH

You will see demonstrations, and especially propaganda, designed to take your attention away from the truth of the whole case. You will be told that if this case doesn't end in acquittal it will be a threat to your personal liberties—that you will not be allowed to think or say or do what you like according to your idea of freedom.

Already many columnists, including myself, have received cunning appeals to consider how our liberties are being threatened by this trial. Many of us have also received threats that if we write as we do it is going to be just too bad for us.

That is as it may be, but, in the meantime, what there is no doubt about is that in this trial there will come to light an exposure of the ruthless, cynical, and cruel determination of our enemies to destroy all that we hold most dear.

And that means your way of life, especially your freedom to bring up your children in love of home and family.

In the next 2 or 3 days demonstrations are planned by Communist Party members in Washington itself to try to intimidate the Government into calling off the trial. Every argument will be used by the Communists to hide the truth. It is well, therefore, that each one of us always keep the truth before us in its true perspective.

OUT TO DESTROY

Communism, as has been so ably proved, is out to destroy us—nothing else or nothing less.

Their agents, well organized and well directed, with unlimited funds at their disposal, cannot yet do this by force. But they can keep on trying by other methods to rot us away from within.

If we let them get away with it by allowing ourselves to be bluffed into a sense of false security, we have only ourselves to blame, but I believe I am one who speaks for many millions of good Americans who cannot see why all that our fathers have striven for should be taken away from us in order that we should be reduced to the slavery of those already under the Communist heel.

I believe that by far the great majority of Americans think like this—only till now they have had no time or facilities to hear the truth.

That truth—or much of it—will come out at this trial.

Let us all then study it closely and keep it in the front of our individual intelligence till communism, as an evil, treacherous force, is thrown out once and for all of this great free country of ours.

REDS' THREAT TO EVERYONE IS INSIDIOUS

(By Vivian Meik)

Since my article Tuesday about the real significance of the trial of the Communist leaders in this country I have been asked—indeed, I have been challenged—to show how and why we have the right to indict free American citizens, even if their Communist views are actually what they are supposed to be.

I propose not only to take up the challenge but to ask my challengers (whom I suspect gave me assumed names) to disprove any single statement I make.

From the very beginning I have said that I am not concerned merely with Communist views held by freemen. As far as I am concerned, any man is entitled to believe he is the greatest being in the world. It is only when he tries to impose that belief on others by demanding tribute to his self-imposed greatness that I object. If he is free to think himself so great, I am equally free to regard the fruits of my own labors as my own right and to refuse to hand them over on demand because of his views.

My case, therefore, against these Communist leaders and others of the ilk is not against their views but against their methods of implementing those views.

I think I cannot do better than to contrast a little of the way of life of those who think as I do and those who have allowed themselves to pay tribute as required by Communist practitioners.

There is no need to go into detail about our way of life, but you might find it interesting if I describe in simple terms the way of life in Communist countries.

In Russia it is a criminal offense for a man to express himself in any form against Communist policy. It is as much as his life is worth to proclaim that he would like to see the formation of any political party other than communism.

THE CONCENTRATION CAMP

No person in Russia may be an active Republican, or Democrat, or anything else. He must be a Communist or nothing. In fact, at the most, he may only be a negative non-Communist Party man provided he accepts Communist Party ruling without demur. Otherwise the concentration camp.

At this point I could, perhaps, mention that when I use the phrase "criminal offense," I also mean that the resultant sentence generally alternates between death and long terms in the prison camps.

Under communism, no workingman has the right to bargain collectively through his union. Strikes are criminal offenses.

I go further and can tell you categorically that it is a serious matter for a worker even to be late for his job. And as if that were not enough, no working man or woman may change his occupation without special permission. Labor is directed and there is no appeal from a decision of party bosses.

But that is only one phase of actual day-to-day living under the Moscow regime.

Under communism, every child goes through a system of education from its earliest years which is specifically designed not only to deny the existence of God and the eternal verities such as, for instance, the ideal of mother love, but also to throw religion in any shape or form into a permanent discard.

It is a prerequisite of communism that no party member can believe in God or any form of religion.

In the day-to-day life of people, because human nature is what it is, there are always some who transgress against the law. There is no such thing in Russia as pleading not guilty, because an arrest by a Communist secret police agent is regarded as the result of infallibility and it then resolves itself merely into a matter of passing sentence by another Communist agent.

In other words, any accused is simply kept in prison until he admits he is guilty. It is unnecessary for me to explain why some people admit guilt quickly.

NO HUMAN RIGHTS

I have space only for these few random examples of the system imposed by the brute force of the secret police and communism.

If these people who are now being tried and who squeal and squawk for protection under our Constitution were ever to get into power in America, that same Constitution which safeguards you would be entirely destroyed because in no other way could communism survive in power for an instant. We would have neither free speech, constitutional guaranties, nor indeed, any human rights at all.

This trial is one of the efforts we are making as a free people to prevent that fate from overtaking us.

Operations of Farm Credit Administration

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the Farm Credit Administration of Spokane, Wash.; also a letter signed by its nine directors to the editors of Life magazine regarding an article printed in Life on December 6, 1948, in which there is apparently a great deal of misunderstanding regarding who makes United States loans within the Farm Credit Administration. This statement is explanatory of the article.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

FARM CREDIT ADMINISTRATION
OF SPOKANE,
Spokane, Wash., January 21, 1949.

The Honorable WARREN G. MAGNUSON,
Senate Chamber, Washington, D. C.

MY DEAR SENATOR MAGNUSON: At the direction of the Farm Credit Board of the Spokane district, I enclose copy of a letter its seven members have written to the editors of Life regarding an article appearing in the issue of that magazine dated December 6, 1948. Because of the prominence of this magazine, the article referred to has in all probability come to your attention; and since it relates to matters concerning which the Congress may perhaps take action, the Board feels that the true facts should be called to your attention.

Cordially yours,
DANA E. BRINCK,
General Agent.

FARM CREDIT ADMINISTRATION
OF SPOKANE,
Spokane, Wash., December 22, 1948.

EDITORS OF LIFE,
New York, N. Y.

GENTLEMEN: The members of the Farm Credit Board of the Twelfth Farm Credit District, comprising Montana, Idaho, Oregon, and Washington, at their monthly meeting now being held at Spokane, Wash., have given serious consideration to the article appearing at pages 74–78 of the issue of Life of December 6, 1948, and to the effect upon the public of its including in the list of All These Make United States Loans, on page 76, the national farm-loan associations, the production-credit associations, and the Farm Credit Administration. The inference from this article is that the institutions mentioned loan Government money. Because of the almost universal circulation of Life magazine and the great respect in which it is held by the public, it is felt by us that these inferences, uncorrected, may result in substantial harm to the institutions mentioned.

It is true that national farm loan associations and production credit associations are supervised by the Government, through the instrumentality of the Farm Credit Administration, but it is not true that either of such associations loan Government funds.

The national farm loan associations merely assist the Federal land banks in making loans to the association members, and these are made exclusively from funds obtained by the banks by selling their bonds to private investors in the open money market. Not a cent of Government money is loaned by the banks or by such associations; and the association members own all of the stock of the associations, and the associations in turn own all of the stock of the Federal land banks. Pursuant to acts of Congress, such banks reimburse the Treasury of the United States for the entire cost to the Farm Credit Administration of their supervision and operation.

Likewise, the production credit associations do not loan any Government funds. Most of the funds which they loan are derived by discounting with or borrowing from the Federal intermediate credit banks, which in turn obtain all of their money so furnished the associations from the sale of their debentures to private investors in the open money market. All of the earnings of that bank accrue to the Government.

There are some 300,000 farmer-members of national farm loan associations and 430,000 farmer-members of production credit associations. Both classes of associations are purely cooperative and mutual.

This letter is signed by all of the members of the Farm Credit Board above mentioned.

Respectfully,
R. E. BROWN,
Bozeman, Mont.
WM. J. HOLMAN,
Boise, Idaho.
E. A. MCCORNACK,

Educational Freedom Unharmed by University of Washington Decision

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, of Gary, Ind., Post-Tribune, contains sound logic on the problem of communism in our universities:

EDUCATIONAL FREEDOM UNHARMED BY UNIVERSITY OF WASHINGTON DECISION

The growing opposition of the country to communism is well illustrated by the firing of three Communist professors and the placing on probation of three ex-Communist professors by the University of Washington. The men were given a fair hearing and no one has risen thus far to charge that academic freedom has been murdered. Indeed there seems to be general satisfaction that the trial and the decision were in the best tradition of American freedom.

What most Americans would like to know is how these six individuals got on the faculty of the university and, indeed, how men possessed of minds and characters university professors are supposed to have could have joined the Communist Party or remained in it after joining. Of course it is the nature of a student to judge events and ideas critically but why has so much effort been given to tearing down our own society simply because it is not perfect?

Certainly even the devotees of communism do not claim perfection for it, the weaknesses and imperfections being so clearly evident. But they do see it as the coming millennium, at least some do. Some others, no doubt, are simply led from one thing to another until they find themselves enmeshed by the serpent. The fact that three of the professors are ex-Communists indicates that even professors can learn.

The trial at the university was a long one and every phase of communism and academic freedom must have been explored. A complete report of the proceedings and findings should be prepared for the education of the American public. Communism is one of our greatest problems and all of its implications should be spelled out so there can be no question about its purpose.

That can be done by telling this story. This is not so much to educate people about the need of keeping the teaching of communism out of our schools, but to teach them precisely how communism acts and what it teaches. Too often the term Communist is used to designate someone with whom we disagree rather than the individual who is trying to subvert our Government and society.

The problem of the schools and universities is not in firing known Communists, but in keeping minds which cannot distinguish between fact and fiction out of all teaching faculties. How do such people get appointed? Surely teaching is not so theoretical and so lacking in facts as to lead balanced minds to accept the vaporings and lunacies of prejudiced and often debased saviours.

We have no doubt that our educational system has considerable responsibility for the spread of such an idiocy as communism. Some brilliant heads, being supported by feet that tread air, never learn how we really live. Some ideas generated by these heads may be of value to society, but our educational system will have to learn that it has some responsibilities other than merely turning ideas loose.

Indeed, it seems to us that one of the first duties of any educational system is to see that the education offered is neither phony nor unpatriotic. At times judgment in this respect may be difficult but we now possess one criterion about which there can be no question—communism. Any member of the Communist Party should be summarily fired and short shrift should be given to any advocate of communism.

Someone in authority must decide something. It would be a curious educational system which hired teachers indiscriminately and let them teach whatever they wished. Of course we must preserve freedom to teach about communism and to discuss it and all other isms. That is the way we learn, and the only way. Academic freedom can be preserved without turning our educational system over to those who want to tear it down.

Who Pays the Taxes?

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Record an editorial entitled "Just Who Does Pay the Taxes?" published in the Miles City, Mont., Daily Star of January 29, 1949.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

JUST WHO DOES PAY THE TAXES?

Mr. Truman proposes that Congress saddle some more taxes on the backs of already overloaded taxpayers. When asked where the increases on individuals should

begin, he opined that those earning from about $6,000 per annum should start to bear the brunt. Of course he quickly swung over to the old theory of "soaking the rich" by saying that the great bulk of increased taxes should be laid on the corporations "who were making too much money."

Well, the New Deal, out of which Mr. Truman's super New Deal is an outgrowth, has been peddling the bunk about "soaking the rich" to benefit the lower-income classes for 16 years. They have certainly had every device at their command to "soak the rich" and "redistribute the wealth," for they have been in complete control of all branches of the Federal Government during those 16 years, with the exception of the 2 years Congress came under control of the Republican Party, and in those 2 years the only reduction ever accomplished, which took some 17,000,000 people from income-tax rolls, was affected.

But after stopping the little fellow from going through the tax wringer, what do we find? The answer is the New Deal boys have been deluding the public all of those 16 years. It is true, they have been soaking the rich all right enough. But along with them they have been soaking everybody else, including the poor. And just now they had the effrontery and unmitigated gall to want the Federal amusement tax knocked off all tickets sold by the hawkers and squawkers in Washington who were trying to cash in on President Truman's inauguration. Only a combination of Republicans and upstanding southern Democrats prevented that first-hand raid on your right to go to your own picture show without being discriminated against. You even have to pay to give a charity, such as an infantile paralysis dance. But the Democratic hangers-on, and a lot of Democratic Congressmen wanted to chisel, while shaking down the public who went to Washington to see a President inaugurated.

As to who pays the taxes—Federal taxes—even now, after 16 years of New Deal blessings and soak the rich, an undisputed Washington authority gives these figures:

Forty-three percent comes out of the hides of individuals (via income tax);

Nineteen percent more comes out of the same hides through hidden excise taxes (taxes on your telegrams, telephones, electric-light globes, show tickets, drugs, and hundreds of other things used every day);

Twenty-eight percent from corporations (these are the "filthy" rich who are supposed to have been paying the taxes all the time—these 16 years);

Ten percent from customs and miscellaneous taxes (many of which probably have been passed on to the individual again).

You can bet your bottom dollar that the super New Dealers will again have their hand in the pocket of every small wage earner, one way or another, unless they have the hand sawed off by a combination of Republicans and conservative Democrats. Truman is already shouting for $8,000,000,000 for questionable socialistic schemes. Where is that coming from?

There is only one answer: Out of the financial hides of those who are already paying more than 62 percent of all Federal taxes collected (individual income taxes and hidden excise taxes).

When one views the colossal waste of the Federal Government all over the Nation, from highly liveried porters leisurely distributing linen hand towels throughout the marble palaces of offices in Washington, to the thousands and thousands of Government-owned-and-operated cars that literally crowd you off your own highways nowadays, the question of some economy in government arises in one's mind.

Is economy the forgotten word of the administration that was to be the savior of the forgotten man? It seems so.

All Americans, Everywhere, Share in the Justifiable Pride That the Honorable Stuart Symington, Our Great, Young, Dynamic Secretary of the United States Air Force, Expressed When He Recently Declared: "We Have Learned That We Can Fly Anything, Anywhere, Anytime—Climate, Mountains, Oceans, Weather, They Cannot Stop the United States Air Force"

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. BOYKIN. Mr. Speaker, last week, in common with all Members of Congress, I received a copy of the first annual report of the Secretary of the newly created Department of the Air Force.

Needless to tell you all that, in consequence of a very busy inaugural week, I was compelled to limit my reading to the most important of my correspondence and such of the local papers from my district as I had a chance to scan.

Several days ago in the cloak room my attention was directed to an editorial carried in the Washington Daily News entitled "A Report That Doesn't Report."

The editorial in question was hypercritical of the type of the report for the year 1948 issued by one of our great armed services. While I do not of necessity agree with a great deal of the sentiment expressed by one of my colleagues, it did appear that there was such a paucity of fact alleged to have been contained in that document, I determined to inform myself more fully with respect to the subject report discussed in the editorial by comparing the several reports under discussion—one with the other.

Because of that determination, I assembled and carried from my office to my hotel copies of all three departmental reports discussed by the writer of the editorial—the one issued by Secretary of Defense Forrestal, that of Secretary of the Air Force Symington, and the one of the Secretary of Navy Sullivan.

Mr. Speaker, yesterday morning—as is my custom—I arose at my usual waking hour of 4 o'clock and began to peruse these three documents.

Not alone did I quickly learn what gave rise to the caustic comments made by the editorial writer of the Daily News, but, moreover, I can well see why in evaluating their several merits—he paid glowing tribute to the Report That Did Report, the activities of the Department of the Air Force for the fiscal year 1948.

Mr. Speaker, it is unnecessary for me to point out that for more than a century past our country has been well and justifiably proud of the great tradition and accomplishments of the United States Navy, greater today in power and in personnel than ever before in the history of the Nation.

We are equally proud of the long record of the heroic achievements of our great United States Army, of our Marine Corps and of our Nurses Corps, of our SPARS, our WAVES, our WACs, and their components in every woman's auxiliary of our armed services.

Mr. Speaker, we now have another great arm of our National Defense Establishment, that of the newly created Department of the United States Air Force, the invincible might of which was recognized by our people long before that newly created branch of our armed services was established by the Congress a short 16 months ago.

Mr. Speaker, when I say that our Air Force is invincible, I am reminded of a statement made by Gen. Jimmie Doolittle, who led the intrepid Eighth Air Force, after conducting the never-to-be-forgotten raid over Tokyo and subsequently thereto fought in every theater of war then raging on the European Continent.

In one of his pithy and descriptive speeches, General Doolittle, in discussing the invincible might of the United States air power, told of the tremendous organized strength of the Mikado's forces that were amassed in Japan to defend the Japanese homeland against the invasion of the armed forces of our United States.

General Doolittle summed the situation, as it then existed, in language somewhat like this: "There," he said, "stood the mighty and all-powerful United States Navy, with every last modern nautical weapon of war at its command, ready to make a successful, though a bloody and costly landing on the shores of Japan. There, also," he said, "stood the United States Army, with scores of divisions of the finest soldiers in the world, many of them veterans from the European war, ready to make a bloody and costly invasion and occupancy of that country; but there," he said, "was also the invincible air forces of the United States, which made the expenditure of human life which would have followed that bloody and costly invasion of Japan unnecessary."

Mr. Speaker, with that prophetic statement impinged on my mind and with all that I have heard with respect to the interdepartmental battle that is said to be going on in the Pentagon among the several armed services over the appropriations for the coming year, you can readily understand why these reports were of such great interest to me.

After spending 2½ hours reading all three reports and after rereading the summation of the report of the Secretary of the Air Force, I must say it is little wonder that the Washington Daily News spoke so glowingly of the completeness of that document.

It is indeed no happenstance that that clear, concise, factual report rendered by Mr. Symington is just such a statement as one would expect a modern business executive in private industry to make to the stockholders at the annual meeting of his concern—and I need not remind you all that Stuart Symington is one of

America's young, outstanding businessmen and executives.

Neither need I tell you that he is a man of great administrative abilities—a creative builder of business—one whom the Nation is indeed fortunate to have heading the great Department of our Air Force. He is a man of ability and capabilities. He is a realist and one who poses every problem and faces every fact.

Mr. Speaker, I was heartened to at long last come upon a departmental report that stressed two facts: (1) The huge expenditure of funds that is involved; and (2) the patent need to produce the maximum of security at a minimum of cost to the taxpayer.

Mr. Speaker, when Stuart Symington became head of the newly created United States Air Force, he availed himself of every advantage arising from the fact that he had inherited no musty, old, hoary departmental traditions. He, therefore, started from scratch to create—what we in Congress had long talked about—a modern, streamlined business administration within the structure of the Federal Government.

For the first time, to my knowledge, the funds which we appropriated are budgeted and all allocations therefrom are now being made for the exact work that is to be done rather than that of following the long-practiced, inefficient, and wasteful method of making appropriations for "organizational divisions."

All Air Force procurement has been streamlined and procedures instituted to place the buying process on a modern business basis.

To the Department of the Air Force Mr. Symington associated the Honorable Arthur S. Barrows, past president of Sears, Roebuck & Co., who now is in charge of all Air Force procurement programs. Thus, we find now working for our Government one of the greatest, if not the greatest and most experienced, purchasing agents that the Nation has ever known.

Efficiency and economy were established as the watchwords of the United States Air Force.

To show in part what has been achieved, let me quote just a few paragraphs from Secretary Symington's report:

A comptroller organization was established in Air Force Headquarters as well as in all major commands of the Air Force. Modern business-management-training courses were instituted through an established educational system. Priority emphasis was placed on management control through cost control, thereby stimulating cost consciousness throughout the Air Force.

Businessmen of proved ability were placed in key positions, to the end that managerial ability and accomplishment now constitute the standards by which Air Force officers are evaluated.

The Air Force developed a new budget structure, predicated on allocation of funds according to functions and programs rather than according to organizational divisions. This structure, among other things, permits a more realistic appraisal of the effects which changes in budget allowances have on specific Air Force activities and projects.

Initial steps were also taken toward developing improved methods of budgetary reporting and control.

Procedures have been instituted to place the buying process on a modern business basis. Every effort is being made to purchase highest-quality equipment at the lowest possible cost.

Comparable to the Nation's largest private procurement organization, a system of specialized buying has been placed into effect, in order to provide individual treatment for each type of commodity procured.

Procurement operation within the three services is now governed by a single set of regulations. Similar work in the direction of cataloging and specifications should further increase both operating efficiency and economy.

Other economies will result from the initiation of interservice cross-training in various schools, consolidation of aerial ports of embarkation, and consolidation of procurement facilities.

With the cooperation of the Department of Justice and the Federal Bureau of Investigation, the Air Force reorganized and strengthened its inspection and investigative system. An FBI-trained investigator of proved ability, having been commissioned in the Air Reserve, was then called to duty as Air Force Director of Special Investigations. Although he works under the Inspector General of the Air Force, by agreement this Director has access at all times to both the Secretary of the Air Force and the Director of the Federal Bureau of Investigation.

This revised organizational structure and procedure combines three previously separate investigation units—the Criminal Investigation Division (CID), the Counter Intelligence Corps (CIC), and the investigative elements of the Air Inspector's Office—into one centrally directed agency. This agency furnishes a single investigative service to all commands of the Air Force.

This system insures competent and thorough investigation of matters either initiated within the Air Force, or brought to its attention by outside agencies or individuals.

Mr. Speaker, I wish every Member of Congress would take time out to read that splendid, concise, candid summation comprehended in the first 18 pages of the annual report of the Secretary of the Air Force for the fiscal year 1948.

Therein they will find in detail, not alone the economies and increased efficiency that have been achieved to date with respect to securing our Nation against foreign enemies, but they will find an equally frank and candid report under the heading of "Unsatisfactory progress" pointed out and pictorializing to this House the things that we in this Congress might do to further increase the national security and do so with a minimum of expenditure of the taxpayers' dollars.

How many of this Congress realize that in the last 12 months the modern aircraft of the United States Air Force has penetrated the sonic barriers, not alone with guided missiles, but with piloted aircraft which travel faster than the speed of sound—at a speed of something less than 1,000 miles per hour?

How many of my colleagues realize that our Air Force has sent sounding missiles into the upper atmosphere to a height exceeding 20 miles, or that the Air Force is now completing the second year of an unbroken daily all-weather flying operation over a test route between Wilmington, Ohio, and Andrews Field, here near the District of Columbia.

I want all of my colleagues to ponder on the fact that on September 18 passed an occasion that I am sure was not appreciated by many Members of this House, for on that day 50 United States Air Force B–29 bombers took off from various bases on different fields on the other side of the world, carrying payloads of bombs, and landed within minutes of their estimated time of arrival at cities throughout the United States from Alabama to Minnesota and from New York to California.

The saga of the Air Force's operation of the Berlin airlift, which now is maintaining our rightful place on the European Continent in the midst of cold war, has become the sole effective weapon of America's peacetime diplomacy.

In addition thereto, and of extreme importance to all of us, and especially to my colleagues from Western States, is the "operation haylift," which at this very moment is saving thousands of head of livestock in snow-locked range lands of the West, through relief provided by House Joint Resolution 112.

Mr. Speaker, it is feats like these that make us realize how near to each of us is the modern method of waging warfare.

Just a few weeks ago B–50 bombers were refueled from aerial tankers, carried a pay load of bombs and, dropping them at an imaginary target, returned to home base after a continuous flight of 9,400 miles.

Almost identical with that time one of our great modern United States Air Force B–36's, herself so tremendous in size that it could readily accommodate two Washington streetcars within its fuselage, with a loaded weight of 278,000 pounds, equal to that of a modern Diesel locomotive, shot off the earth from its base and after cruising more than 4,700 miles across the Pacific, dropped its equivalent pay load of bombs, and returned 4,700 miles to its home base in a nonstop flight.

I know that every Member of this House shares the pride of Stuart Symington, that great, young, dynamic Secretary of our Air Force, when he recently declared:

We have learned we can fly anything, anywhere, anytime—climate, mountains, oceans, weather—they cannot stop the United States Air Force. We have learned that the future of military air transport, and inevitably of commercial air cargo transport, is in big aircraft. We have learned that American-built planes will stand up and take a beating day after day, moving the full loads and frequent take-offs and landings, on a schedule that keeps them actually in the air 10, 12, and even 14 hours out of every 24.

Mr. Speaker, do you wonder at the personal pride I myself feel in the United States Air Force, when I say that my own son is a veteran of that great service?

From my home in Mobile, Ala., I can hear the drone of the aircraft as I stand in the shadows of the great oceangoing air transports that make regular scheduled trips from off the runways of our great Brookley Field to practically all parts of the globe.

Brookley Field, or more properly called Brookley Air Force Base, is one of the most active and the largest installations of its kind operated by the United States Air Force.

Situated on the mouth of both the Alabama and Tombigbee Rivers, which I trust will soon be connected with the Tennessee to supply such points as Oak

Ridge in Tennessee and provide slack water for boats returning to Cairo from New Orleans, Brookley Field stands ready in case of emergency to become one of the most important defense posts of our continental borders. It will be ready to launch fighter, bomber, and supply planes in any direction. Tied in with the radar stations in the Southeast, this base would be the control point for defensive measures for the whole Gulf of Mexico, the Caribbean, and South American area.

Moreover, it is one of the seven largest bases of the Air Force Matériel Command in the continental United States. Brookley Air Force Base is responsible for the receipt, storage, distribution, salvage, and disposal of practically all the supplies and equipment used in Alabama, Mississippi, Kentucky, and parts of west Florida. In addition thereto, Brookley Field is charged with all supply activities for the entire Caribbean and South American air operations as well as for the supply of a great number of specialized material and equipment used on a world-wide basis for the United States Air Force.

In addition to furnishing all supplies, Brookley Field takes care of the maintenance of all aircraft, vehicles, and other specialized equipment of the Air Force which cannot be handled at other bases within this huge area. It is responsible, also, for the maintenance and storage of all Air Force rescue boats and marine equipment of the San Antonio, Oklahoma City, and Macon air matériel area as well as the maintenance and repair of all aircraft and automotive tires of all Air Force bases east of the Mississippi River.

Mr. Speaker, now one of the most important activities at Brookley Field is that conducted by the Sixteen Hundred and First Air Transport Group, which maintains the aerial port of embarkation for scheduled and feeder-line supply flights to the outlying bases in the Caribbean and South America.

Operating from that headquarters, the huge Globemasters—C–74 transport planes—take off on scheduled flights every Monday, Tuesday, Thursday, and Saturday for Berlin, Germany, as a part of Operation Vittles.

In addition thereto, Military Air Transport Service makes 11 flights monthly from Brookley Field into the Caribbean area, while other scheduled flights leave Brookley for the Panama Canal Zone, Puerto Rico, and Rio de Janeiro.

Mr. Speaker, my good friend, Maj. Gen. R. K. Taylor, is currently in charge of the Mobile air materiel area. His headquarters are at Brookley Field. I have been knowing Maj. Gen. Bob Taylor for a long time and America has neither a more distinguished gentleman nor a more capable and qualified officer in any of its armed services. The people of Mobile and of Alabama in general are proud of the United States Air Force and of the work that General Taylor is doing at Brookley Field.

I am authoritatively informed that, for one thing, the percentage of aircraft out of commission at Brookley Field ranges far below the national average.

Low supply costs have consistently placed Brookley Field either in first or second place through the maintenance of an efficiency rate which averages below the national standing.

The same picture holds true with respect to the Supply Division's Administrative, Property Accounting Branches and in the cost per ton of supplies handled at Brookley.

Last, but not least among Air Force operations, is the daily contribution which the men at Brookley Field are making to the successful operation of the Berlin lift. A vast majority of all aircraft engines, engine and other parts, together with a veritable catalog of other supplies are constantly being ferried out of that great Air Force base at Mobile, Ala., to support Operation Vittles.

This is the project by which we contribute all things necessitous to the life of more than 2,000,000 beleaguered and imprisoned people in the western sector of the city of Berlin, by far the greatest weapon being used in the cold war now raging in Europe, and, certainly, by far the greatest air transportation project ever conducted.

Only last week Brookley achieved another accomplishment. A dispatch from the Mobile Register tells of the new record flight made from Brookley Field to the airlift and back.

That news article reads as follows:

An Air Force Globemaster carrying 38,000 pounds of cargo today completed a round trip between Mobile and Frankfurt, Germany, in 42 hours and 35 minutes flying time.

Military air-transport service officers said the flight set a new record for the southern crossing to and from Europe by the giant C–74 transports.

The Globemasters are used to carry high-priority cargo and parts in support of the Berlin airlift. They make four flights a week between Mobile and Rhein-Main air base at Frankfurt by way of Bermuda and the Azores.

Mr. Speaker, while I cannot too highly recommend the great work that is being done by the United States Air Force—and by its great Secretary, Stuart Symington—I cannot emphasize enough the importance of the contributions made to that service by this typical base down on the Gulf coast to the over-all efforts of the United States Air Force in particular and the National Defense Establishment in general.

Yesterday's Tools and Tomorrow's Business

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

JONES & LAUGHLIN STEEL CORP.,
Pittsburgh, Pa., January 25, 1949.

YESTERDAY'S TOOLS AND TOMORROW'S BUSINESS

To Our Shareholders and Our Employees:

Our company has a problem that will interest you.

Eight years of war and reconversion to peace have strained the steel-producing equipment of the Nation. And still there is a call for more steel. Americans want to live better. They want more refrigerators, more cars, more of countless other useful articles made from steel. "To have more we must produce more." And to do this we need more and better machines, more and better equipment. We can't use yesterday's tools for today's work and be in business tomorrow.

But to replace tools costs money—great quantities of money. And, for all the apparent prosperity we have today, industries that are keeping pace with America are caught short of cash. One big reason for this is a tax system which doesn't take account of the rising price of equipment.

A STORY OF BREAD AND TAXES

Let me tell you a story of a small bakery business. It will show you what, on a much larger scale, has happened to our company.

Suppose it is 1938. You and I have saved $10,000 and are able to borrow $10,000 more. We buy a small bakery for $10,000. Another $5,000 goes for a new oven. That leaves $5,000, enough to buy flour, sugar, coal, and other supplies, and to cover our pay roll and customers' unpaid bills.

During the next 10 years business is good. We pay the high taxes of the war years and still make a profit. We are able to save a little to pay off some of our debt. When prices shoot up at the war's end, it costs us more and more to buy flour and pay our helpers. But we are able to raise our own prices and cover these higher costs. Repairs around the shop and bakery are up too. But we can deduct these day-to-day charges from our income before figuring our taxes. And we are able to show a cash profit after paying our taxes.

But by 1948 we are in trouble. Our oven is ten years old and worn out. In 1938 it cost $5,000. We charged this amount off against our taxable income over the 10 years. In other words, the oven has been fully depreciated. But the new oven costs $10,000. This is just twice as much as the tax law allowed us to lay aside out of our income to buy a new oven.

The tax law allowed us to deduct the higher cost of flour and wages. But it didn't provide us with the help we need now for the higher cost of the oven. Still we need the oven just as much as we need flour to run our bakery business.

SOURCES OF CASH

How can we get the cash to meet the added cost of the new oven over the old? Here are three possible sources:

1. We can borrow the money from a bank if the bank is willing.

2. We can seek others willing to invest more money in the business—in other words, sell stock.

3. We can take the money out of profits which would otherwise go to you and me, owners of the bakery, for food, clothes, education of children, etc.

When the time comes to pay our taxes, we will be sharply aware of our need for cash. What a help it would be if we could write off, say, half the cost of the new oven against this year's profits.

This would save us money on taxes at a time we are making what looks like a good profit but need more cash. Still it would mean no loss to Uncle Sam in the long run. He would pick up the taxes in years to come because larger property write-offs now would leave that much less to take in later years.

HOW THIS STORY APPLIES TO STEEL

Now let us go back and see how this story of the bakery business applies to the present situation of our company.

To begin with, we understand these two facts:

1. An ample steel supply is as important to our Nation as bread. This is true in both

peace and war. Jones & Laughlin Steel Corp. is doing its full share to build new plants to meet the Nation's need.

2. The steel industry requires far heavier equipment than most industries. And that equipment is much more costly today than it was yesterday.[1] During the last 3 years we have spent $104,000,000 to replace and improve our plants. During the next 4 years we are already committed to spend an added $106,000,000. In addition, we plan to spend $50,000,000 more in these 4 years. All this totals $260,000,000.

Now what have we done to prepare for the replacement and improvement of our expensive equipment?

In the first place, we have done what we could in recent years to lay aside money. During the last 8 years we have paid less than 45 percent of our profit in dividends to our shareholders. In the 1947–48 period we paid still less—only 26 percent. But of what we have been able to lay aside from earnings during the last 8 years only $13,000,000[2] remains for the large expenditures still ahead of us. And part of this is needed in the till as working capital because of the rise in cost of material and labor.

WHAT WE HAVE BORROWED

Just as in the bakery business, we have not been able to lay aside nearly enough money to meet the swollen cost of new equipment. So we have had to go to the other sources for cash.

We have borrowed. Since the war's end we have borrowed $60,000,000. About half this was used to pay off other debts we already had. Then, during the past year, we have arranged for borrowing another $40,000,000 on a temporary basis through a bank credit agreement. But we can't go on borrowing indefinitely. Borrowed money must be paid back sometime.

WHAT ABOUT SELLING STOCK?

We can consider the sale of stock. But there is a difficulty. Even though our dollar profits look larger than ever before, our common stock sells at less than 40 cents on the dollar of investment or asset value.

And why is this? It is because investors, who keep a sharp eye on business, see the need of huge outlays of money in the steel business. They know steel companies have had a hard time paying adequate dividends to shareholders. Thus our common stock now sells at about $32 per share—far less than its asset value of $89 per share. So, although our profits appear good, the present dividend of 65 cents per quarter per share is less than an annual return of 3 percent on this asset value.

WHAT WE HAVE TAKEN OUT OF PROFITS

As for paying for new equipment out of profit, we have gone as far as we can go in that direction. In 1947 and 1948 we earned a net profit of $50,447,000, but we paid dividends of only $13,213,000, or about a fourth. During the 2 years we spent for equipment $83,500,000, or $33,053,000 more than the total net profit before paying dividends.

We do not seek to have our cake and eat it too. We do not believe we are entitled to profits big enough to pay big dividends and meet the costs of expansion as well. We do believe a shareholder is entitled to two things: First, a fair return on his investment; and second, to have enough money plowed back into the business to keep it in shape. If he is willing to forego a fair return now, a shareholder is entitled to expect the money to be used to bring him greater returns later.

WHERE WILL THE COST COME FROM?

So we return to the original problem. Our company will need more cash. Be assured the problem is not ours alone. It is shared by every company keeping pace with the needs of America today and tomorrow. And where is the cash to come from?

A PROPOSAL

My proposal is a simple one and a fair one for government and business alike.

At present, companies write off the cost of equipment over the period of its useful life. This we call depreciation. I suggest a change in the Federal tax law to allow them to write off the cost in shorter time. This we call amortization.

I propose that companies be allowed to write off up to one-half of equipment costs within 1 to 5 years, as they choose, and that they be allowed to deduct this amortization from taxable income.

There should be a limit on the amortization deducted in any one year. I propose it be set at one-half the taxable income for that year before the amortization is deducted.

Perhaps such a change should be considered a temporary measure to cover only the present period of need.

THE EFFECT IT WOULD HAVE

What would be the effect of this change in the tax laws?

Here's what would have resulted for our company in 1948:

	Present basis	Proposed basis
Income after deducting depreciation of $16,131,000 but before amortization and income taxes	$50,172,000	$50,172,000
Amortization—complete in 1 year (50 percent of $48,000,000 capital expenditures for plant and equipment)		24,000,000
Taxable income	50,172,000	26,172,000
Federal income taxes	18,950,000	9,830,000
Balance for profit	31,222,000	16,342,000

Our taxes for the year would be reduced from $18,950,000 to $9,830,000, but this cut would be only one-fifth of what we spent on plant in the year.

Our profit would be cut $14,880,000. But out total cash would increase by the amount of the cut in taxes, or $9,120,000.

AND WHAT WOULD BE THE RESULT FOR THE NATION?

The Government would not lose tax money in the long run. Reductions during this period would be no more than a deferment of payment. If a company used up its tax deduction for write-off of plant now, it could deduct less from taxable income in future years. Uncle Sam would not lose. He would, in fact, gain because the Nation's industry will be able to produce more and thus be able to pay more taxes.

The Nation as a whole would gain in stronger industries which would have a chance to build for emergencies. And stronger industries will assure protection of employment, production, and shareholders' investments.

If you agree with the proposal I have made, I suggest you write to those who represent you in Congress and urge them to support it.

BEN MOREELL,
Chairman of the Board of Directors and President.

[1] We know only too well how the worth of the dollar has slumped. The estimated cost of a 900,000 cubic foot per minute turbo blower for a blast furnace installed complete in 1939 was $401,000. At the present time, this same item costs $798,000—an increase of almost 100 percent. Another instance is the cost to reline a large blast furnace which in 1939 was $653,000 and today is $1,375,000—an increase of about 110 percent. The almighty dollar is worth no more than it will buy.

[2] The total resources generated from our business in the last 8 years, from net income and depreciation, depletion, and amortization amounted to about $226,000,000. During the same time $49,000,000 has been paid out in dividends and $164,000,000 for plant—a total of $213,000,000. The difference is $13,000,000.

National Brotherhood Week

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. McCORMACK. Mr. Speaker, National Brotherhood Week, first proposed in 1934 by a Catholic priest, the late Right Reverend Monsignor Hugh McMennamin, of Denver, Colo., is to be observed this year from February 20 to 27, and, in accordance with established practice, will be so proclaimed by the President of the United States, Governors of the States and Territories, and the Commissioners of the District of Columbia. This noble custom is actively supported by the National Conference of Christians and Jews and, in fact, by all others who think—and act—in terms of true human relations. In furtherance of such brotherhood spirit, and pursuant to unanimous consent, I am inserting in the CONGRESSIONAL RECORD the 1948 statement of the Catholic bishops of the United States, entitled "The Christian in Action," and copy of letter on that subject, addressed, under date of December 31, 1948, to His Excellency the Most Reverend John T. McNicholas, O. P., D. D., archbishop of Cincinnati, chairman of the administrative board of the National Catholic Welfare Conference, by James Patrick McGovern, of Washington, D. C., who is well known in his private and public career as a citizen, soldier, lawyer, poet, and historian:

THE CHRISTIAN IN ACTION

(Statement of the bishops of the United States, 1948)

Human life centers in God. The failure to center life in God is secularism—which, as we pointed out last year, is the most deadly menace to our Christian and American way of living. We shall not successfully combat this evil merely by defining and condemning it. Constructive effort is called for to counteract this corrosive influence in every phase of life where individual attitudes are a determining factor—in the home, in the school, at work, and in civil polity. For as man is, so ultimately are all the institutions of human society.

To combat secularism, the individual Christian must get the full vision of Christian truth. It is not divisible. One cannot pick and choose from it. Either it is accepted as a whole or it counts for little in real life. When the Christian does get this full vision, he becomes enthusiastic in trying to share it with the world about him. It is a wonderful vision which gives new meaning to human life and an impelling urge to selfless action. The sorry fact is that many, very many Christians, see this vision only dimly and

vaguely and miss its impact on reality. They hold themselves to be Christians and are accepted as Christians, but they have never been thrilled by the glory of the truth of Christ in action. By their apathy they actually abet those who work for destruction and chaos. They criticize and even deplore the decay of morality and the spread of corruption in public life, but they feel no obligation to do anything about it. They simply do not realize that the great wonder of divine love is that it brings the Divine into human life and that godliness in living is giving self to God. The great Christian paradox is that to find you must lose, to get you must give. Much of the confusion and chaos about us is attributable more directly to the inaction of Christians than to the effectiveness of the feverish efforts of the destroyers. The destroyers are definitely a minority, and yet the work of destruction goes on. The crisis is at hand. Today every Christian must face the full Christian vision and with no thought of compromise must seek vigorously to live it. Every day he must ask himself: What am I doing to build a Christian world? No matter what his condition or state, there is much that he can do. The reconstruction must start with the individual. He must be vigorously Christian in thought and in action—in the home, in the training of his children, in his office or workshop, and in his community.

RELIGION IN THE HOME

In the full Christian vision there is the divine ideal of the home—the basic social institution. It is not enough to profess the Christian truths of the stability and sanctity of the marriage bond and to keep in mind the purposes of marriage. The Christian must make his home holy. It remained for modern history to record the first experiment in secularizing the home, an experiment which is at the root of so many of our greatest social evils. The Christian home must realize the Christian ideal. The whole atmosphere of the home must be impregnated with genuine Christian living. The domestic virtues must be practiced, and family prayer made a daily exercise. It is in the home that the children learn their responsibility to God and in this responsibility their duty to others. The home is the child's first school, in which he is taught to make the vision of Christian truth the inspiration of all living. We strongly commend organized effort to make the home more truly Christian. Our Catholic Family Life Bureau plans and offers programs which make for a veritable apostolate of the Catholic home. It is gratifying to see the use that is being made of these programs by our Catholic lay organizations and the spread of this work in our dioceses. These activities serve as a powerful antidote to the venom of secularism and withstand its withering effect on piety and virtue in the American home. All of us are familiar with the problems which the family faces in our complex and maladjusted society. In trying to solve these problems we must not compromise our Christian principles. The solution of these problems is only a part of the solution of the wider social problems of our day. To do their part our homes must be thoroughly Christian and must let the glory of the full vision of Christian truth illuminate them.

RELIGION IN EDUCATION

We know the sacrifices made by our people to educate their children in schools in which the "superabundant wisdom" is the gospel of Christ. Catholic parents closely associate their schools with their Christian homes, because they know that human living must center in God. Year after year we are making wider provisions for the education of our Catholic youth. At a time when secularism has captured the minds of very many leaders in education, it is heartening that Catholic parents are becoming more insistent in their demand for schools in which the best standards of instruction and training are integrated in the teaching of religion. It behooves us to see that we enable our schools to work out fully the Christian educational ideal. The field of higher education in particular demands a wider and more active interest. Our institutions of higher learning are the natural training grounds for Christian leadership. The ranks of Christian leadership will draw recruits largely from the undergraduate schools, but these ranks will not be filled without the Christian scholars who are formed in graduate schools. Perhaps much of the success of the secularist is due to the fact that the number of excellent Christian scholars is inadequate for the needs of our times. We ask a deeper appreciation of the contribution our institutions of higher learning are making to a Christian reconstruction of society, and we urge a more generous support of their work. For if we as Christians are to do our part in restoring order to a chaotic world, Christ must be the master in our classrooms and lecture halls and the director of our research projects.

RELIGION AND ECONOMIC LIFE

Christian principles should be put into action in economic life. It is not enough to find fault with the way our economic system is working. Positive constructive thought and action are needed.

The secularist solutions proposed by eighteenth century individualism or twentieth century statism issue either in perpetual conflict or deadening repression. Christian social principles, rooted in the moral law, call insistently for cooperation, not conflict, for freedom, not repression, in the development of economic activity. Cooperation must be organized—organized for the common good: freedom must be ordered—ordered for the common good. Today we have labor partly organized, but chiefly for its own interests. We have capital or management organized, possibly on a larger scale, but again chiefly for its own interests. What we urgently need, in the Christian view of social order, is the free organization of capital and labor in permanent agencies of cooperation for the common good. To insure that this organization does not lose sight of the common good, government as the responsible custodian of the public interest should have a part in it. But its part should be to stimulate, to guide, to restrain, not to dominate. This is perfectly in line with our Federal Constitution, which empowers government not only to establish justice but also to promote the general welfare.

Catholic social philosophy has a constructive program for this organic development of economic life. Pope Pius XI, rounding out the social principles formulated by Leo XIII, laid down the broad outlines of this program 17 years ago. In line with that constructive program we advocate freely organized cooperation between the accredited representatives of capital and labor in each industry and in the economy as a whole, under the supervision but not the control of government. The agencies of this freely organized cooperation have been called by various names: Occupational groups, vocational groups, or more recently industry councils. American Catholic students of the social encyclicals have expressed their preference for the name "Industry Councils" to designate the basic organs of a Christian and American type of economic democracy into which they would like to see our economic system progressively evolve. This evolution can come only as the fruit of painstaking study and effort to safeguard, in justice and charity, the rightful interests of property and the rightful interests of labor in the pursuit of the dominant interest of all, which is the common good.

Such a constructive program of social order seems to us to be the answer to the questionings of high-minded leaders of industry and to the explicit proposals of sound and responsible leaders of organized labor. We bespeak for it in these critical times dispassionate consideration and calm, open discussion in an atmosphere of good will, and in a disposition to seek solutions by agreement rather than by force, whether political or economic. We call upon men of religious faith and principle, both in management and labor, to take the lead in working out and applying, gradually if need be, a constructive social program of this type. For the moral and social ideals which it would realize are their heritage.

RELIGION AND CITIZENSHIP

The inroads of secularism in civil life are a challenge to the Christian citizen—and indeed to every citizen with definite religious convictions. The essential connection between religion and good citizenship is deep in our American tradition. Those who took the lead in establishing our independence and framing our Constitution were firm and explicit in the conviction that religion and morality are the strong supports of national well-being, that national morality cannot long prevail in the absence of religious principle, and that impartial encouragement of religious influence on its citizens is a proper and practical function of good government. This American tradition clearly envisioned the school as the meeting place of these helpful interacting influences. The third article of the Northwest Ordinance passed by Congress in 1787, reenacted in 1790, and included in the constitutions of many States enjoins: "Religion, morality, and knowledge being necessary to good citizenship and the happiness of mankind, schools and the means of education shall forever be encouraged." This is our authentic American tradition on the philosophy of education for citizenship.

In the field of law our history reveals the same fundamental connection between religion and citizenship. It is through law that government exercises control over its citizens for the common good and establishes a balance between their rights and duties. The American concept of government and law started with the recognition that man's inalienable rights—which it is the function of government to protect—derive from God, his Creator. It thus bases human law, which deals with man's rights and their correlative duties in society, on foundations that are definitely religious, on principles that emerge from the definite view of man as a creature of God. This view of man anchors human law to the natural law, which is the moral law of God made clear to us through the judgments of human reason and the dictates of conscience. The natural law, as an outstanding modern legal commentator has written, is binding over all the globe, in all countries, and at all times; no human laws are of any validity if contrary to this. Thus human law is essentially an ordinance of reason, not merely a dictate of will on the part of the state. In our authentic American tradition this is the accepted philosophy of law.

On this basically religious tradition concerning the preparation of the citizen through education and the direction of the citizen through law, secularism has in the past century exercised a corrosive influence. It has banned religion from tax-supported education and is now bent on destroying all cooperation between government and organized religion in the training of our future citizens. It has undermined the religious foundations of law in the minds of many men in the legal profession and has predisposed them to accept the legalistic tyranny of the omnipotent state. It has cleverly exploited, to the detriment of religion and good citizenship, the delicate problem of cooperation between church and state in a country of divided religious allegiance. That con-

crete problem, delicate as it is, can, without sacrifice of principle, be solved in a particular way when good will and a spirit of fairness prevail.

Authoritative Catholic teaching on the relations between church and state, as set forth in papal encyclicals and in the treatises of recognized writers on ecclesiastical law, not only state clearly what these relations should normally be under ideal conditions, but also indicates to what extent the Catholic Church can adapt herself to the particular conditions that may obtain in different countries. Examining, in the full perspective of that teaching, the position which those who founded our Nation and framed its basic law took on the problem of church-state relations in our own country, we find that the first amendment to our Constitution solved that problem in a way that was typically American in its practical recognition of existing conditions and its evident desire to be fair to all citizens of whatever religious faith. To one who knows something of history and law, the meaning of the first amendment is clear enough from its own words: "Congress shall make no laws respecting an establishment of religion or forbidding the free exercise thereof." The meaning is even clearer in the records of the Congress that enacted it. Then, and throughout English and colonial history, an "establishment of religion" meant the setting up by law of an official church which would receive from the Government favors not equally accorded to others in the cooperation between government and religion—which was simply taken for granted in our country at that time and has, in many ways, continued to this day. Under the first amendment, the Federal Government could not extend this type of preferential treatment to one religion as against another, nor could it compel or forbid any State to do so. If this practical policy be described by the loose metaphor "a wall of separation between church and state," that term must be understood in a definite and typically American sense. It would be an utter distortion of American history and law to make that practical policy involve the indifference to religion and the exclusion of cooperation between religion and government implied in the term "separation of church and state" as it has become the shibboleth of doctrinaire secularism.

Within the past 2 years secularism has scored unprecedented victories in its opposition to governmental encouragement of religious and moral training, even where no preferential treatment of one religion over another is involved. In two recent cases, the Supreme Court of the United States has adopted an entirely novel and ominously extensive interpretation of the "establishment of religion" clause of the first amendment. This interpretation would bar any cooperation between government and organized religion which would aid religion, even where no discrimination between religious bodies is in question. This reading of the first amendment, as a group of non-Catholic religious leaders recently noted, will endanger "forms of cooperation between church and state which have been taken for granted by the American people," and "greatly accelerate the trend toward the secularization of our culture."

Reluctant as we are to criticize our supreme judicial tribunal, we cannot but observe that when the members of that tribunal write long and varying opinions in handing down a decision, they must expect that intelligent citizens of a democracy will study and appraise these opinions. The Journal of the American Bar Association, in a critical analysis of one of the cases in question, pertinently remarks: "The traditionally religious sanctions of our law, life, and government are challenged by a judicial propensity which deserves the careful thought and study of lawyers and people."

Lawyers trained in the American tradition of law will be amazed to find that in the McCollum case the majority opinions pay scant attention to logic, history, or accepted norms of legal interpretation. Logic would demand that what is less clear be defined by what is more clear. In the present instance we find just the reverse. The carefully chiseled phrases of the first amendment are defined by the misleading metaphor "the wall of separation between church and state." This metaphor of Jefferson specifies nothing except that there shall be no "established church"—no state religion. All the rest of its content depends on the letter of the law that sets it up and can in the concrete imply anything from the impartial cooperation between Government and free religious bodies (as in Holland and traditionally in our own country) all the way down to bitter persecution of religion (as in France at the turn of the century). As was pointedly remarked in a dissenting opinion: "A rule of law cannot be drawn from a metaphor."

A glance at the histroy of Jefferson's own life and work would have served as a warning against the broad and devastating application of his "wall of separation" metaphor that we find in this case. The expression first appears in a letter written by Jefferson in 1802 and, significantly enough, in a context that makes it refer to the "free exercise of religion" clause rather than to the "establishment of religion" clause of the first amendment. Twenty years later Jefferson clearly showed in action that his concept of "separation of church and state" was far different from the concept of those who now appeal to his metaphor as a norm of interpretation. As the rector of the State University of Virginia, Jefferson proposed a system of cooperation between the various religious groups and the university which goes far beyond anything under consideration in the case at hand, and Mr. Madison, who had proposed the first amendment and who led in carrying it through to enactment by Congress, was one of the visitors of the University of Virginia who approved Jefferson's plan.

Even one who is not a lawyer would expect to find in the opinion of the Court some discussion of what was in the mind of the Members of Congress when they framed and adopted the first amendment. For it would seem that the intent of the legislator should be of capital importance in interpreting any law when a doubt is raised as to the objective meaning of the words in which it is framed. In regard to the "establishment of religion" clause, there is no doubt of the intent of the legislator. It is clear in the record of the Congress that framed it and of the State legislatures that ratified it. To them it meant no official church for the country as a whole, no preferment of one religion over another by the Federal Government—and at the same time no interference by the Federal Government in the church-state relations of the individual States.

The opinion of the Court advances no reason for disregarding the mind of the legislator. But that reason is discernible in a concurring opinion adhered to by four of the nine judges. There we see clearly the determining influence of secularist theories of public education—and possibly of law. One cannot but remark that if this secularist influence is to prevail in our Government and its institutions, such a result should in candor and logic and law be achieved by legislation adopted after full popular discussion, and not by the judicial procedure of an ideological interpretation of our Constitution.

We, therefore, hope and pray that the novel interpretation of the first amendment recently adopted by the Supreme Court will in due process be revised. To that end we shall peacefully, patiently, and perseveringly work. We feel with deep conviction that for the sake of both good citizenship and religion there should be a reaffirmation of our original American tradition of free cooperation between government and religious bodies—cooperation involving no special privilege to any group and no restriction on the religious liberty of any citizen. We solmenly disclaim any intent or desire to alter this prudent and fair American policy of government in dealing with the delicate problems that have their source in the divided religious allegiance of our citizen. We call upon our Catholic people to seek in their faith an inspiration and a guide in making an informed contribution to good citizenship. We urge members of the legal profession in particular to develop and apply their special competence in this field. We stand ready to cooperate in fairness and charity with all who believe in God and are devoted to freedom under God to avert the impending danger of a judicial establishment of secularism that would ban God from public life. For secularism is threatening the religious foundations of our national life and preparing the way for the advent of the omnipotent state.

WASHINGTON, D. C., *December 31, 1948.*

To His Grace the Most Reverend JOHN T. MCNICHOLAS, OP, DD,
Chairman Administrative Board, NCWC, Cincinnati, Ohio.

DEAR ARCHBISHOP MCNICHOLAS: The Christian in Action, 1948 statement of the bishops of the United States, is before me.

Living today more and more in the shadow of laws and regulations of the state, we are losing our freedom and personality in proportion to our increasing efforts to retain them. While our study of sociology, economics, and government receive special emphasis, our social relations, economics, and politics recede to new ebbs in selfishness and rivalries. Likewise our arts are so governed by fashions and propaganda that they scarcely make any pretense to inspiration and to fidelity to the universal in man and nature. Our efforts should turn from the outer to the inner, from society to the individual, from the material to the moral and spiritual. If we have wise and high-minded citizens, society will naturally and inevitably take care of itself. We need most of all to cultivate the character of our youth, in whose development parents, schools, and spiritual education should more responsibly have primary parts. A nation of honest and intelligent men is in the last analysis a greater force for peace and happiness than millions of soldiers and atomic bombs. It is in such a spirit I humbly submit the following lines:

JEOPARDY

Men of America, in jeopardy
Stand the traditions of our country's soul;
Less and less the Nation's glorious role,
Gemmed with starry truth's white majesty,
Lives in our flag, long-famed in peace and war.
False gods of justice, virtue, beauty spurn
The wisdom of our fathers and unlearn
The human heart and simple nature's lore.
The fashions, rivalries, fanfare and din
Serve private ends and not the commonweal;
The billions of our riches, gold and steel,
Grow Frankensteins, gross idols, public sin.
Have we no Christians now who live and die,
With truth their cross, to challenge every lie?

Sincerely yours in Christ,

JAMES PATRICK MCGOVERN.

Expansion Estimates to 1960 for Pacific Northwest Industries

EXTENSION OF REMARKS
OF

HON. HOMER D. ANGELL
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ivan Bloch, from Western Industry for January 1949:

EXPANSION ESTIMATES TO 1960 FOR PACIFIC NORTHWEST INDUSTRIES

(By Ivan Bloch, Ivan Bloch and Associates, Portland, Oreg.[1])

If electric-power consumption is an index of industrial activity, then the Pacific Northwest can expect a four-to-about-sixfold expansion in major industrial enterprises by 1960. This is the indicated forecast contained in the Review Report of the Columbia River Tributaries, the completion of which has just been announced by the United States Corps of Engineers.

This monumental report was authorized in a resolution of the United States Senate Commerce Committee in 1943, which requested the Corps of Engineers of the United States Department of the Army to prepare a review of its past plans for the comprehensive development of the Columbia River. The task was made the responsibility of the North Pacific division, headquartered in Portland, Oreg., under the direction of Col. Theron B. Weaver, division engineer.

In order to arrive at a rational appraisal of the needs for additional development of the Columbia, the division engineer secured the staff assistance of numerous other Federal and State agencies. Each prepared exhaustive analyses of the physical, economic, and technical aspects of the future growth of the region comprising the drainage of the Columbia: Oregon, Washington, Idaho, western Montana, portions of Wyoming, and of British Columbia.

Thus the corps prepared for preliminary public hearing purposes a bold yet realistic plan of action for the construction of numerous river control works including seven main dams on the Columbia River and its tributaries for flood control, navigation, power, irrigation, and other purposes. These major structures will provide a direly needed additional 6,000,000 kilowatts of generating capacity which would bring the total in the region to some 10,000,000 to 11,000,000 kilowatts by 1960.

The four appendixes to the main report, on power markets and developments in the Pacific Northwest, represent the summary of over 2 years of continuous work by the former industrial staff of the United States Bonneville Power Administration, aided by selected staff members of the United States Forest Service and the United States Bureau of Agricultural Economics. The supporting reports, several inches thick, are encyclopedic in the scope and detail of their analyses of raw materials, production costs, and markets of important industrial segments of the future economic pattern of the Pacific Northwest. It is not likely that such an exhaustive study has ever been attempted and completed in any other area of the world.

To accomplish the task of appraising future industrial growth in the Pacific Northwest, the former staff of the Division of Industrial and Resources Development of the Bonneville Administration was divided into teams of economists, chemists, and metallurgists to analyze each major industrial group; production processes and costs, producers and production statistics, markets (world, national, west coast, and Pacific Northwest).

From these analyses, summary forecasts were then derived for plant capacities and power requirements. Upon completion of the analyses of each industrial group, and the condensation of bulky memoranda into summary reports, each report was submitted to an extensive number of industrial corporations throughout the United States for critical review. The final reports, as utilized by the Corps of Engineers, embody the many practical suggestions of major industrial concerns.

Because of time and fund limitations, greatest attention was given to major power-consuming industries. These included:

Light metals industries: aluminum and magnesium.

Ferrous metals and related industries: rolled steel and stainless steel, iron and steel castings, ferroalloys, electrolytic iron and manganese.

Nonferrous metals: zinc, lead, copper, and antimony.

Nonmetallic industries: cement, artificial abrasives.

Electrochemical industries: phosphorus, phosphoric acid, phosphates, and phosphate fertilizer, sulfuric acid, calcium carbides and derivatives, such as acetylene, acetic acid, acetic anhydride, chlorine, caustic soda, chlorates and perchlorates; carbon disulphide; rayon.

Forest and forest products industries.

Agriculture and food processing.

Many other industries, however, were not covered, such as for the production of rare earths and rare metals, and numerous electrochemicals such as hydrogen peroxide and synthetic fuels.

RANGE OF ESTIMATES

In order to reduce the hazards of appraising the extent of possible industrial expansion over a period of some 15 years in the future—the trends of which would be complicated by the inability of the most expert to anticipate technological changes—two ranges of estimates were selected. The minimum expectable range was that obtainable from the continuation of current trends and the known plans of individual industries. The maximum expectable range generally was set to reflect feasible power requirements, assuming that the policies of the Federal Government and industry will encourage the most rapid development of power resources and industry in the Pacific Northwest.

A basic assumption adhered to within other limiting factors was that the Pacific Northwest should prepare itself to have enough power capacity to provide for continuous industrial production. It was felt that, inasmuch as electric power is an essential tool of production, the extent of its availability should never be permitted to be a limiting factor upon the expansion of potential industrial production capability. Had such a basic and essential policy been adopted by appropriate agencies of government since the end of World War II, the Pacific Northwest and the west coast generally would not be faced with existing critical power shortages and resulting slow-down in industrial expansion.

The total estimated demands for firm energy in the Pacific Northwest by the year 1960 were thus developed. The truly fabulous total industry range of 3,641,450 to 5,384,100 kilowatts was arrived at for 1960. The extent of this anticipated growth is demonstrated by comparison to the 1945 requirements of 977,000 kilowatts—a percentage increase of between 275 to 450 percent. The details of these forecasts are shown in table 1, Summary Table—Estimated 1960 Range of Production and Power Requirements for Selected Pacific Northwest Industries.

Most startling of the estimates are those relating to light metals and particularly aluminum. The percentage Pacific Northwest production increase—1946–60—for aluminum alone is indicated at 778–1116 percent, representing a production capacity of between 1,300,000–1,800,000 tons as against current primary reduction capacity of about 300,000 tons, and a current national total of 680,000 tons.

The analyses on aluminum, probably the most extensive of the entire report, are carefully bulwarked with appraisals of markets and production cost trends. Extensive contact with both consuming and producing segments of national industry resulted in a rational estimate of national requirements for aluminum. These are summarized in table 2, United States Outlook for Feasible Markets for Aluminum, 1960.

Because of the industry's imperative requirements for large blocks of firm and low-cost electric power, and the enormous potentials of this type of power in the Pacific Northwest, it is concluded that a large portion of future total national aluminum production capacity will become established in that area. Recognition is given in this appraisal to the possibilities of atomic-energy production in areas favorably situated in relation to sources of bauxite and alumina. In this respect, allowance is made for the establishment of alumina plants in the Pacific Northwest to be supplied by imported bauxite and supplemented in time with nonbauxitic materials for which it is assumed advanced technology will provide ultimate opportunity of utilization.

The allocation of power capacity for the Pacific Northwest aluminum industry expected to be established in 1960 is shown in table 3, Pacific Northwest Power Use for Aluminum, 1960. The related levels of employment which would result are summarized in table 4, Pacific Northwest Employment in Aluminum, 1960. Although considerable attention was given during the preparation of the report to the potentials of Pacific Northwest aluminum fabricating industries—foil, extrusions, castings, and so on—the difficulties of specifically appraising markets and technological advances in these fields coupled with time limitations for required studies made it desirable to eliminate forecasts at that time.

Determination of magnesium potentials provided considerable difficulties. The state of flux in the fabricating portion of the industry, reflecting into uncertainties as to the national outlook for primary production, made it necessary to exercise considerably more diffidence in forecasts than for almost any other industrial group. However, it seemed justified to provide for the ultimate 1960 Pacific Northwest production of between 6,000 to 25,000 tons of the primary metal, entailing power capacity requirements on the order of 15,000 to 55,000 kilowatts. The report concludes that the greatest obstacle to the large-scale production and use of magnesium is the cost of fabrication. It observes the paradox that lower costs await large-scale production while the larger market awaits the development of lower costs.

[1] Until the end of 1947 the author was Chief of the Division of Industrial and Resources Development of the U. S. Bonneville Power Administration and special consultant to Secretary of the Interior J. A. Krug on western and Alaskan industrial development. It was under his direction that the staff of the Division of Industrial and Resources Development, during 1945–47, prepared the voluminous industrial appendices to the U. S. Corps of Engineers' Review Report on Columbia River and Tributaries.

The report's general conclusions on ferrous metals and related industries may prove somewhat disappointing to those expecting very large expansion in the Pacific Northwest. However, the analyses reflect a realistic appraisal of the effect of recently increased ferrous metals' capacity in California and Utah, as well as the limitations of raw materials available in and to the Pacific Northwest for the establishment of large basic production. However, as shown in summary table 1, Estimated 1960 Range of Production and Power Requirements for Selected Pacific Northwest Industries, percentage increases for various segments of the industry are by no means insignificant.

Notable for forecasted expansion are the ferroalloys and electrolytic iron, both of which are highly dependent on abundant quantities of low-cost firm electrical energy. Relative to electrolytic iron production, the report observes that if current production of high-quality iron powder on a somewhat small scale in the Pacific Northwest were to demonstrate the feasibility of low-cost production, the large market for this product would assure substantial development of this industry in the region. Tables 5 and 6 reveal some details of the market appraisals for steel ingot, rolled steel, cast iron pipe and fittings as estimated for 1960.

With respect to nonferrous metals—copper, lead, and zinc—the report's forecasts rest in large measure on the raw material factors for these industries. The favorable position of the Pacific Northwest in its ore reserves of all three metals is described at some length particularly with respect to the renewed attention and interest in such mining districts as those of northern Idaho and eastern Washington for both zinc and lead, and of Butte for copper. The steady trend to electrolytic refining in zinc, for example, coupled to the nature of the raw material reserves from which the industry must draw its major supplies provides production estimates for 1960 which are shown in tabular form in table 7, Estimates of Production of Zinc Concentrates and Zinc Slab in the Pacific Northwest, and Power Requirements, 1960. A similar tabulation is shown for lead in table 8.

Establishment of additional cement production capacity is discussed in the report's section on nonmetallic industries and summarized in table 9, Estimates of Portland Cement Production and Power Requirements in the Pacific Northwest, 1960. The report observes that the consumption of cement in the region has been higher than the national per capita use because construction and related developments are proceeding at a high rate in the area. It further observes that this is to be expected because of the very large growth of population, and the consequent rising demands for highways, dams, residential and commercial building and the like, all of which require increased tonnages of cement.

The current construction of one of the nation's largest artificial abrasive plants in Vancouver, Wash., serves to highlight the report's appraisal of this industry's future in the Northwest. The demands—domestic and export—for fused alumina, silicon carbide, and other artificial abrasives, translated into the high power requirements per unit of material produced, provide an estimate of between 13,000 and 22,000 kilowatts by 1960. This would correspond to the production of between 8,000 to 12,000 tons of silicon carbide per year, and 10,000 to 20,000 tons of fused alumina.

As indicated in summary table 1, one of the largest increases in Pacific Northwest industrial capacity is expected in the field of phosphorus and related chemicals. The report's forecast, derived in 1947, already appears to be conservative in view of increasing interest in western phosphate deposits and current plant construction in southern Idaho and Utah.

It may be observed that the national demands for phosphatic fertilizer and for the large variety of phosphorus chemicals are running headlong into Pacific Northwest power stringencies. If it were not for the lack of adequate firm supplies, the phosphorus industry would undoubtedly be moving into high gear in the vicinity of the phosphate deposits in Montana, Idaho, Utah, and Wyoming. Table 10, Estimates for Phosphate Industry in the Pacific Northwest, 1960, tabulates the requirements for various phosphorus-consuming industries.

One of the report's conclusions, developed by intensive studies for several years, relates to the need for the production of high concentration phosphatic fertilizers so as to reduce the cost of contained plant food to the ultimate farm consumer. The report also details at length the rapidly growing needs of soils west of the Mississippi for phosphatic plant food, the supply of which will be derived from plants in the West and especially in the Northwest.

Relative to the demands for phosphorus chemicals other than fertilizer, the report indicates that past national production of calcium, sodium, and ammonium phosphates for soaps, cleansers, and food industries has been concentrated in the East. It further states that western demands for these essential products and the availability of 60 percent of the Nation's phosphate reserves in the West assure the expansion of the industry in the West.

Although not a large consumer of power, but because it is essential to the growth of industry, sulfuric acid draws a major share of attention in the report. The anticipated size of consumer demands for the acid are tabulated in table 11, Estimated Market in 1960 for Sulfuric Acid in the Pacific Northwest, Exclusive of Southern Idaho and Utah. Among these estimates, those for rayon production account for the greatest potential amount.

Calcium carbide, the western production of which was unknown prior to the war, is given considerable attention. A heavy power consumer, that industry is expected to grow considerably, as shown in table 12, Estimated Market for Calcium Carbide Accessible to the Pacific Northwest. Its importance, discussed at length, lies in the development of numerous industrial substances for which acetylene is a base. These include acetic acid, acetic anhydride, tetrachloroethane, vinyl acetate, and vinyl acetylene.

Particular attention is drawn to the requirements of the synthetic-rubber industry for acetylene, and of the rayon industry for acetic acid and acetic anhydride. The latter two are regarded as most important to the development of cellulose-using industries in the region, and to the greater utilization of its timber resources. Because calcium-carbide production requires large quantities of power, it is estimated that between 27,000 and 54,000 kilowatts will have to be provided for this industry in the Northwest by 1960.

The Pacific Northwest is already a major producer of chlorine, caustic soda, and related chlorine chemicals. The major outlet for Northwest production has been in the pulp and paper industry, and it is the report's conclusions that these will continue to furnish major markets. These are shown in table 13, Estimated Market for Chlorine Accessible to Pacific Northwest Producers, 1960. Inasmuch as the production of chlorine and caustic soda ranks at the top of power consumers, between 46,000 to 66,000 kilowatts will be required to service that industry.

Carbon disulphide, important to the manufacture of viscose rayon, is discussed in the report for that reason. Although it is admitted that the bulk of national production of this chemical has been accomplished in externally fired retorts, it is believed that Pacific Northwest factors will favor electric-furnace methods. The report estimates the need for some 135,000,000 to 150,000,000 pounds of carbon disulphide in the region by 1960, with power requirements in the vicinity of 3,000 to 4,000 kilowatts.

One of the constant hopes of the Northwest has been for the establishment of rayon manufacture. It seems clearly uneconomic for the region to ship its dissolving cellulose pulps to eastern rayon plants, with return shipments of finished rayon products to the Pacific Northwest. The report concludes that the rapid growth of western population and particularly the expansion of its garment and textile industry, and of its tire manufactures, should make it possible for the establishment of several rayon plants in the Northwest.

Thus, provisions for the establishment of several plants are made in the report's summary power requirements for a total of between 54,000 to 71,000 kilowatts of which 10,500 to 15,000 kilowatts would be purchased, the remainder self-generated from byproduct steam. The capacity of the anticipated Pacific Northwest rayon industry is estimated at from 135,000,000 to 175,000,000 pounds per year by 1960.

Numerous other chapters in the engineers' report deal with forest and agricultural product industries. With respect to timber products, the report notes the trend to greater manufacture of finished products even though the basic industry may adjust itself downward toward a drain on the timber resources more compatible to sustained yield principles. Reflecting increased manufacturing, and hence greater power utilization, the summary conclusion is that the forest industries of the Pacific Northwest will require on the order of 700,000 to over 1,000,000 kilowatts by 1960.

Agricultural production is anticipated to achieve increasing diversity, with great emphasis on local processing particularly in the production of frozen fruits and vegetables. Sugar beet production in 1960 is estimated to double estimates available for 1940–44. Thus, the report estimates that total power requirements for agricultural processing industries will require well over a half million kilowatts of capacity.

Other chapters deal with railroad electrification and power demands in the home, the farm, commercial and small industrial establishments. Their compounded requirements together with those of industry reach the impressive total of almost 12,000,000 kilowatts.

TABLE 1.—*Summary table—Estimated 1960 range of production and power requirements for selected Pacific Northwest industries*

Industrial product	Estimated 1960 Pacific Northwest production	Estimated 1960 Pacific Northwest power demand	Production, 1946 to 1960 increase
	Tons	*Kilowatts*	*Percent*
Primary aluminum	1,300,000–1,800,000	2,865,000–4,135,000	778–1,116
Primary magnesium	6,000– 25,000	13,000– 55,000	
Rolled steel	400,000– 480,000		38– 66
Rolled stainless steel	6,000– 20,000		
Steel castings	40,000– 50,000		85– 130
Iron castings (including cast iron pipe)	150,000– 190,000	131,100– 252,800	101– 154
Malleable iron castings	6,000– 8,000		
Ferro alloys	55,000– 100,000		83– 233
Electrolytic iron	5,400– 36,000		500–3,900
Electrolytic manganese	7,000– 15,000		

TABLE 1.—*Summary table—Estimated 1960 range of production and power requirements for selected Pacific Northwest industries*—Continued

Industrial product	Estimated 1960 Pacific Northwest production	Estimated 1960 Pacific Northwest power demand	Production, 1946 to 1960 increase
	Tons	*Kilowatts*	*Percent*
Primary slab zinc	265,000– 340,000	250,000– 327,000	25– 60
Primary refined lead	130,000– 180,000		86– 157
Primary refined copper	125,000– 175,000		67– 133
Primary antimony	3,000– 5,000		25– 108
Cement	1,500,000–1,700,000	50,000– 62,500	62– 83
Artificial abrasives	18,000– 32,000		
Phosphorus	100,800– 186,000		
Phosphoric acid	400,000– 625,000		535– 892
Phosphates	30,000– 40,000		
Triple superphosphates	350,000– 550,000		843– 817
Sulfuric acid	226,000– 380,000		277– 533
Calcium carbide	70,000– 140,000	331,750– 561,800	159– 419
Chlorine	85,000– 122,000		112– 212
Caustic soda	109,000– 158,000		137– 243
Chlorates and perchlorates	4,600– 7,000		2– 56
Carbon disulfide	25,000– 27,000		
Rayon	67,500– 87,500		

TABLE 2.—*United States outlook for feasible markets for aluminum, 1960*

Feasible markets	Estimated aluminum requirement (million pounds)	
	Minimum	Maximum
Building products	350	700
Automobiles	285	1,380
Displacement of copper [1]	250	450
Wire and cable	175	300
Other uses	75	150
Trucks	211	968
Light	3	9
Medium	175	810
Heavy	18	81
Trailers	15	68
Busses	40	56
Railroad cars	51	88
Aircraft	51	109
Displacement of zinc die castings [1]	34	52
All other uses	2,500	2,500
Total	[1] 3,772	[1] 6,303

[1] There is some duplication of figures representing displacement of copper and zinc because of the use of these metals in automobiles, trucks, and busses for which aluminum estimates were made without an analysis of metals displaced.

TABLE 3.—*Pacific Northwest power use for aluminum, 1960*

Power use for aluminum	Thousands of kilowatts	
	Minimum	Maximum
For reduction capacity as of 1947	650	650
For rolling capacity as of 1947	50	50
For aluminum needed for Alcoa, 1947 capacity	15	25
For additional reduction capacity by 1960	2,000	3,000
For additional alumina capacity by 1960	150	400
Total	2,865	4,125

TABLE 4.—*Pacific Northwest employment in aluminum, 1960*

Plant	Productive capacity (thousands of tons)		Employment	
	Minimum	Maximum	Minimum	Maximum
Alumina	1,900	2,900	5,000	7,000
Aluminum reduction	1,300	1,800	15,000	21,000
Aluminum rolling	150	150	5,000	5,000
Total			25,000	33,000

TABLE 5.—*Estimated annual power requirements in the production of steel ingots and rolled steel in the Pacific Northwest, 1960*

Item	Kilowatt demand	
	Minimum	Maximum
Total	42,000	71,000
Existing rolling mills:		
Portland, Oreg	15,000	20,000
Seattle, Wash	20,000	30,000
Mills to be constructed, Seattle, Wash	7,000	15,000
Conversion of open hearth ingot capacity to electric-furnace ingot capacity, Seattle		6,000

TABLE 6.—*Pacific Northwest accessible markets for cast-iron pipe and fittings, 1960*

Accessible market	Minimum net tons	Maximum net tons
Pacific Northwest States	53,000	70,000
Alaska and Hawaii	2,000	3,000
Western Canada	3,000	4,000
Other foreign countries	2,000	3,000
Total	60,000	80,000

TABLE 7.—*Estimates of production of zinc concentrates and zinc slab in the Pacific Northwest and power requirements, 1960*

Item	Annual power requirements (kilowatt demand)		Annual production of concentrates and zinc slabs (net tons)	
	Minimum	Maximum	Minimum	Maximum
Total			150,000	194,000
Zinc mining and concentrating, total	300,000	380,000	24,000	32,000
Northeastern Washington	60,000	80,000	5,000	7,000
Southern Idaho	25,000	40,000	2,000	3,000
Northern Idaho	140,000	160,000	11,000	14,000
Western Montana	75,000	100,000	6,000	8,000
Zinc slab, total	265,000	340,000	126,000	162,000
Tidewater [1]	60,000	80,000	30,000	38,000
Southern Idaho		30,000		14,000
Northern Idaho	45,000	60,000	21,000	30,000
Western Montana [1]	160,000	170,000	75,000	80,000

[1] In the event tidewater plants are not established by 1960, it is expected that imported concentrates would continue to be processed in Montana. Consequently, the total power would remain unchanged.

TABLE 8.—*Estimates of production of lead concentrates and primary lead slab in the Pacific Northwest and power requirements, 1960*

Item	Annual power requirements (kilowatt demand)		Annual production of concentrates and pig lead (net tons)	
	Minimum	Maximum	Minimum	Maximum
Total			32,000	45,000
Lead mining and concentrating, total	[1] 160,000	[1] 200,000	15,000	19,000
Northeastern Washington	15,000	25,000	1,500	2,500
Northern Idaho	110,000	125,000	10,000	11,000
Southern Idaho	15,000	25,000	1,500	2,500
Western Montana	20,000	25,000	2,000	3,000
Pig lead, total	130,000	180,000	17,000	26,000
Tidewater (smelting and refining)	20,000	30,000	3,000	5,000
Northern Idaho (smelting and refining)	75,000	90,000	12,000	15,000
Southern Idaho (smelting and refining)		20,000		3,000
Western Montana (smelting)	35,000	40,000	2,000	3,000

[1] Lead content approximately 75 percent, or 120,000 and 150,000 tons.

For water treatment and sanitation	2,000	5,000
For liquid bleach	1,000	2,000

FEPC Versus Constitutional Liberty

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. LANHAM. Mr. Speaker, with my full approval and with leave to extend my own remarks in the RECORD, I am inserting the remarks of Mr. Charles S. Dudley, executive vice president of the Associated Industries of Georgia, entitled "In the Court of Public Opinion, United States of America—Petition of John Q. Citizen in the Matter of FEPC Versus Constitutional Liberty, Pending":

IN THE COURT OF PUBLIC OPINION, UNITED STATES OF AMERICA, FEPC VERSUS CONSTITUTIONAL LIBERTY, PENDING

To "We the People," the Honorable Judges of Said Court:

The petition of John Q. Citizen, respectfully shows and alleges:

1. That your petitioner is a citizen of, and a stockholder in the United States of America.

That as such citizen and stockholder he has organized his activities and staked his future on the guaranties of his government that he is "endowed with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

That upon the establishment of his government by "we the people" he was guaranteed by the Constitution and its amendments, that the foregoing inalienable rights will, to him, be held inviolate.

That the United States is a Government with powers limited to those specifically enumerated in the Constitution, and only within the enumerated powers shall it be the supreme law of the land.

That the limited powers granted to the Congress are spelled out in section 8, of article I, of the Constitution, and that the powers denied to the Congress are set forth in section 9, of article I, of the Constitution.

Your petitioner would show that we the people drafted and enacted into law, for the purpose of safeguarding and preserving our inalienable rights, 10 amendments to our Constitution, which we call our Bill of Rights.

The first of these amendments says "Congress shall make no laws," etc. It is respectfully submitted, therefore, that the amendments are limitations upon the powers of Congress, and that they are not binding upon the States.

And, recognizing further, that the inherent rights of human beings are so varied and so numerous that they cannot be specified, and to the end that, forever, all of such rights may be preserved from governmental interference, we the people declared in the ninth amendment, that—

"The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

Your petitioner would further show that in a superabundance of caution, "we the people," through the tenth amendment, fairly shouted to our Government that—

"The powers not delegated to the United States are reserved to the States respectively or to the people."

Your petitioner respectfully insists that his personal and sovereign rights as first set forth in the Declaration of Independence, later incorporated in the Constitution, and finally spelled out in detail in the Bill of Rights, are a part of the fundamental law—the supreme law of the land, and as such are removed for all time beyond interference by his Government.

"The Declaration of Independence and the Constitution of the United States are parts of one consistent whole, founded upon one and the same theory of government—that the people are the only legitimate source of power, and that all just powers of government are derived from the consent of the governed."—John Quincy Adams.

That neither the President, chairman of the board, nor the Congress, board of directors, has any authority whatsoever to enact a law, or issue a decree altering any of the inherent rights of your petitioner as confirmed in the Constitution and its amendments, is too clear to require debate.

Justice Brandeis, a great liberal of our Supreme Court, recognized this when he said:

"The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. * * * They knew that only a part of the pain, pleasure, and satisfaction of life are to be found in material things.

"They sought to protect Americans in their beliefs, their thoughts, their emotions, and their sensations. They conferred as against the Government, the right to be let alone—the most comprehensive of rights and the right most valued by civilized men."

Your petitioner would show that "we the people" provided and spelled out in article 5, of the Constitution, the only methods by which changes may be made in our fundamental law:

1. By ratifying in three-fourths of the legislatures of our States, or by conventions in three-fourths thereof, an amendment proposed by two-thirds of both Houses of Congress; or

2. When by application of the legislatures of two-thirds of the States, Congress shall call a convention for proposing amendments, and when ratified by the legislatures of three-fourths of the States, or by conventions in three-fourths thereof, as Congress may direct.

Further would your petitioner show this honorable Court, that the "officers and directors" of his Government, namely the President, the Vice President, and the Members of both Houses of Congress have, by their oaths as required in article 6, of the Constitution, avowed that they will support the Constitution.

INALIENABLE RIGHTS OF YOUR PETITIONER NOW THREATENED

2. Your petitioner now respectfully shows and alleges that, notwithstanding the guaranties of his Government to hold inviolate to him his inalienable rights, which include his right to be the architect of his own fortune; to engage in the business of his choice, where and when he pleases; to associate with, and employ in his business, such individuals as in his best judgment will contribute to the success and prosperity of his business; and/or to freely exercise his religion by employing associates of like faith.

He is now being threatened with the enactment of a national act against discrimination in employment which will strike down and deprive him of those sacred and inalienable rights guaranteed to him by his Government.

Your petitioner would show that the proposed legislation aforesaid, and which is more commonly referred to as FEPC, is a vicious invasion of the rights of the individual, and that its enactment into law will crucify him on the cross of "social engineering" constitutional liberty as guaranteed to "we the people."

The findings and declaration of policy as set forth in section 2 (a) of the proposed act states merely a conclusion of its authors "that the practice of discrimination in employment against properly qualified persons because of their race, religion, color, national origin, or ancestry is contrary to the American principles of liberty and equality of opportunity, is compatible with the Constitution, forces large segments of our population into substandard conditions of living, foments industrial strife and domestic unrest, deprives the United States of the fullest utilization of its capacities for production, endangers the national security and the general welfare, and adversely affects the domestic and foreign commerce of the United States; and

(c) That the right to employment without discrimination because of race, religion, color, national origin, or ancestry is hereby recognized as and declared to be a civil right of all the people of the United States.

Your petitioner respectfully shows to this honorable court that this proposed act while purporting to be in the interest of domestic tranquillity is in reality a tyrannical method by which one segment of our citizenry can, and will, be subjected to involuntary servitude. A condition outlawed and prohibited

by the thirteenth amendment to the Constitution.

Two wrongs do not make a right. And while it may be urged that it is not right to deny a job to a man because of his race, religion, color, national origin, or ancestry, by the same token how can it be urged that an individual employing people must employ those he does not wish to employ, and thereby be required to invest his labors and his talents in behalf of those who to him are wholly incompatible. Be it remembered that an employer is also a worker. Does this not force him into involuntary servitude? Is this the promotion of domestic tranquillity as sought by the Constitution?

Your petitioner recognizes that a more abundant life for all is a goal for which we should ever strive, but a more abundant life for all is not to be obtained by any law, act, or decree which strikes down the liberty of one for the benefit of another. Any and all such measures strike at the very heart of constitutional liberty.

"It will be a sad day for society," said Woodrow Wilson, "when sentimentalists are encouraged to suggest all of the measures that shall be taken for the betterment of the human race."

Among the several indictments charged in the Declaration of Independence, the following are noted:

"He has combined with others to subject us to a jurisdiction foreign to our Constitution, and unacknowledged by our laws; giving his assent to their acts of pretended legislation."

"For depriving us in many cases, of the benefits of trial by jury."

To rectify the foregoing abuses of individual liberty, note the guaranties written into the Constitution:

"Every State of the Union is guaranteed a republican form of government which may not be altered either by the President or Congress.

"The trial of all crimes except in case of impeachment, shall be by jury."

Section 7 (i) of the proposed act provides that if the Commission shall find that the person named in the written charge has engaged in any unlawful employment practice, the Commission shall state its findings of fact and shall issue the cause to be served on such persons requiring him to cease and desist from such unlawful employment practice and to take such affirmative action, including reinstatement or hiring of employees, with or without back pay, as will effectuate the policies of the act.

Your petitioner respectfully insists that the foregoing provisions violate the right of individual contract and set up a condition unacknowledged by our laws. Further, that the provisions are in violation of the sixth amendment, which guarantees the right of trial by jury. To require of an employer the payment of back pay to an individual with whom he has had no dealings, and, further, to require such payment in the nature of a fine for infraction of an alleged duty to the Government does, indeed, set up a theory of human relationships in our organized society wholly unacknowledged by our laws.

Under section 10 of the act the President is granted power to make and establish rules and regulations governing persons who make a contract with any agency or instrumentality of the United States, to prevent such persons from committing or continuing any unlawful employment practice.

Your petitioner respectfully shows that the granting of such power to the President is wholly unacknowledged by our laws and that it is the equivalent of granting to the Chief Executive the right to exercise legislative power, which power is specifically denied to him in section 1 of article 1 of the Constitution.

Section 9 authorizes the Commission or any of its agents to enter private places of business when a written charge has been filed by a member of the Commission that any person subject to the act has engaged in any unlawful practice. Here the act is strangely silent as relating to the probable cause and seeks to grant authority to a superduper snooper to invade the privacy of the person being investigated.

Your petitioner would show to this honorable court that the foregoing is a gross violation of the fourth amendment, which guarantees to the people that they are to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, and that no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the person or things to be seized.

Your petitioner respectfully submits that we the people are opposed to Russia's form of government, and/or to the establishment of a Federal gestapo.

Section 6, subdivision g (4), of the proposed act seeks to empower the Commission with the power to make such technical studies as are appropriate to effectuate the purposes and policies of this act and to make the results of such studies available to interested governmental and nongovernmental agencies.

Your petitioner makes bold to inquire of this honorable court wherein our fundamental law lends any approval or encouragement to the creation of nongovernmental agencies whose sole objective and purpose would be to stir up strife between the several segments of our citizenry.

ARGUMENT AND CONCLUSIONS

Shall we discard the American credo that the individual is endowed with certain inalienable rights and substitute therefor an act which by its very terms and provisions will hand out only such rights as may be decreed by Executive order, administrative government, a bureaucratic agency, or by Congress bypassing the constitutional guaranties of freedom to the individual?

Since when has it come to pass that a job is a civil right? Does not the right to employment mean more than qualifications? Is it not the individual right of one having employment to offer, to refuse employment because of bow-legs, a bald head, or crossed eyes?

If we are to have a free society is not employment a matter of contract or agreement between individuals?

Since when did it become the prerogative of the Federal Government to force upon the States and upon citizens of the States its own political views as to what constitutes civil rights?

"A law which would discriminate injuriously against one portion of the citizens, abridging equal civil or political privileges, or which would afford less protection to life, liberty, or property, to one class than another, would clearly violate these amendments. Equality of rights, privileges, and capacities is the condition of all citizens, established by these organic laws. Special privileges can be conferred upon none, nor can exceptional burdens or restrictions be put upon any." (10 American Jurisprudence, 896, citing numerous cases.) "The fourteenth amendment has relation to a State action exclusively. It was, in other words, designed as a protection against acts of the States and not the acts of persons, and has, therefore, no bearing upon acts of discrimination by one individual against another." (10 American Jurisprudence, 899, citing numerous cases.)

"Discrimination by private individuals is not a violation of the fourteenth amendment to the Federal Constitution, as that amendment is simply prohibitory of State legislation and State action." (10 American Jurisprudence, 909, cases cited.)

"The basis of our political system is the right of the people to make and to alter their Constitution which at any time exists, till changed by an explicit act of the whole people is sacredly obligatory upon all."—George Washington.

Is it not in order to now suggest that Members of Congress should, in good conscience, pause and seriously reflect upon their solemn oaths that they will support the Constitution. Madison said:

"It certainly is very material that the true doctrine of liberty as exemplified in our political system should be inculcated upon those who are to sustain and administer it."

"The Constitution is a written instrument. As such its meaning does not alter. That which it meant when adopted it means now * * *. Those things which were within its grants of power as those grants were understood when made are still within them; and those things not within them remain still excluded." (*South Carolina* v. *United States* (199 U. S. 437).)

Said the Court in *Hodges* v. *The United States* (203 U. S. 1):

"With these decisions, and many others that might be cited, before us, it is vain to contend that the Federal Constitution secures a citizen of the United States the right to work at a given occupation or particular calling free from injury, oppression, or interference by individual citizens. Even though such right be a natural and inalienable right, the duty of protecting the citizen in the enjoyment of such right, free from individual interference, rests alone with the State."

SUMMATION

The tenth amendment reserves to the States and to the people all powers not delegated to the United States by the Constitution, nor prohibited by it to the States. Section 2 (b) of the proposed measure violates this amendment.

The fifth amendment protects the persons and their property. Any attempted interference with this right by government violates the liberty of contract which is a sacred individual right in the pursuit of happiness.

Forcing an individual to employ persons who to him are incompatible, by reason of their religion, violates the first amendment which assures to the individual free exercise of religion. Furthermore it is in violation of the fifth amendment, which guarantees to the individual that he shall not be deprived of life, liberty, or property, without due process of law, and wherein he is also guaranteed equal protection of the laws.

The thirteenth amendment abolished involuntary servitude, but provisions of the proposed Fair Employment Practice Act place employers in a condition of involuntary servitude when they are forced to work for employees and associates against their will.

The sixth amendment guarantees trial by jury. The provisions of section 7 (i) of the proposed Fair Employment Practice Act set up a system of criminal prosecution without a trial by jury, in gross violation of the sixth amendment.

Your petitioner respectfully submits that in the light of all the foregoing, the Congress of the United States is without the power to enact legislation governing the rights of individuals as applying between themselves in the relationship of employer and employee, whereby an employer is subjected to whims and caprices of autocratic government, and/or the social views and opinions of a bureaucratic agency.

Wherefore, your petitioner respectfully prays that there be entered upon the docket of this honorable court of public opinion a judgment and order of permanent injunction against enactment into law by our representatives in the Congress of a measure such as the national act against discrimina-

tion in employment which will have for its effect absolute, arbitrary power over the lives, liberty, and property of free men. A condition which Madison said exists nowhere in a republic, not even in the largest majority.

JOHN Q. CITIZEN,
Petitioner.

The Future of the Republican Party

EXTENSION OF REMARKS
OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. TAFT. Mr. President, on January 28, 1949, I delivered an address at the McKinley Memorial at Niles, Ohio, on the subject the Future of the Republican Party. I ask unanimous consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure for me to return to Ohio and speak again at this meeting held annually in memory of the great Republican President, William McKinley. The Republican Party was founded in 1854 as a party determined to restore the actual practice of liberty in this country in accordance with the theory of liberty which had brought about the founding of the Republic. It enjoyed a long lease of power from 1860 to 1884, but for 20 years prior to 1896, it was a weak party, living on its Civil War reputation and hardly ever commanding the support of a majority of the people. Then, in 1896, it had a new birth, because in that campaign it presented fairly and frankly and effectively its conservative philosophy. It pointed out to the workingman that the full dinner pail depended on sound fiscal principles and the free economy so necessary for progress. An interesting article in Fortune magazine for January describes the real Mark Hanna as opposed to the caricature created by the cartoonists, and describes Hanna's sincere interest in the American workingmen and American prosperity. It was that interest, and his ability to convince the people of his sincerity and that of McKinley, which won an overwhelming victory for the Republican Party and gave to it 16 years of power.

Some Republicans are discouraged today, because for five elections now the Republican Party has met defeat. But its defeats have been due more to its failure in presenting its principles to the people than in those principles. It has lost by narrow margins in 1940, 1944, and 1948. Let us remember that nearly half the people voted for it in the recent election, and that its organization is still strong in many localities throughout the Nation. Political parties have a strong will to live. The only political parties which have died are those which have forgotten or abandoned the principles on which they were founded.

A party can only live if it does represent a great principle or a set of great principles. The two-party system is based on the theory that a large number of men who think differently on many subjects unite in the belief that certain principles are vital to the welfare of their country, and that differences on less important questions must be reconciled or forgotten in the common effort to secure those basic principles. A political party is not just an organization in which men of completely different points of view join because their parents or their friends belonged to that party, or because they became members through youthful and forgotten prejudices.

The Republican Party will continue to live and will prevail if it dedicates itself again to the principles for which it was founded, and if it presents those principles to the people in the forceful and aggressive manner in which McKinley and Hanna presented them in 1896.

1. HUMAN LIBERTY

What is the Republican philosophy? First, and before all, it is the same philosophy of human liberty which created the United States of America. Every American today still pays lip service to the term "liberty." But he does not feel it as he did for a hundred years, when the idea of liberty inspired all Americans and they boasted of it until it became tiresome to every visiting foreigner. The example of America and of France spread the idea throughout the world, and the philosophy of free government was accepted in nearly all sections of the globe, even where the thing itself did not really exist. But today, many Americans and most people throughout the world have forgotten what it means. The limitations on liberty have grown until in many totalitarian states the substance of liberty has completely disappeared. The totalitarian theory that government must plan and direct and control dominates the thinking of today throughout the world, and has made great headway here in the United States without a realization of the fact that it means the end of individual liberty.

What is liberty? It is freedom of speech and of the press, as the President said in his inaugural—but it is much more. It is the freedom of the individual to choose his own work and his life occupation, to spend his earnings as he desires to spend them, to choose the place where he desires to live, to take the job that fits him whether some union official is willing that he get it or not. It is the freedom of the local community to work out its own salvation when it has the power to do so. It is the freedom of cities, of counties, of school districts; the freedom of educating one's own children as he thinks best. It is the freedom of thought and experiments in academic institutions. It is the freedom of men engaged in industry to run their business as they think best as long as they do not interfere with the rights of others to do the same. Certainly, there are limitations which must be imposed by the state to protect the liberty of others more and more as our economy becomes complex. But a party which believes in liberty will see that such limitations are only imposed to the extent it is absolutely necessary.

As we look back through history, we see brief periods in which liberty has prevailed, but in the major part of historical time it has been suppressed by emperors and kings, by oligarchies, by plutocracies, by so-called democracies, and proletarian majorities. It is hard to gain and easy to lose unless it is kept alive by an aggressive determination that it shall not perish from the earth. Today the battle between liberty and totalitarian government permeates every problem of life. It lies at the base of our battle with fascism and nazism and communism. The American people believe in liberty, but the totalitarian creed which we face abroad dominates today the philosophy of the CIO and therefore of the Democratic Party and if it prevails it must ultimately destroy liberty here at home.

It is strange indeed that our people in recent elections have tended to support the theory that the Government should be the source of all planning, of all control, and of bread and circuses for the multitude. It is strange, because at this very moment we see the magnificent success of a system of liberty in the United States as contrasted with the comparative poverty and dissatisfaction of many foreign nations. Liberty has succeeded in the United States in developing original thinking, original methods, and new ideas. It has succeeded in giving a wide distribution of property and income to our people. It has succeeded in building up a tremendous production of material things and a standard of living higher than has ever been seen before in the history of the world. A man from Mars who studied the world today could only come to the conclusion that only the free can solve the problems of production.

There are many other aims besides liberty to be sought by political policy and party principle, but every policy must be justified either as an affirmative policy to secure liberty, or as a policy of human progress making no sacrifice to the god of the totalitarian state.

There may be many differences among Republicans as to the application of the principle of liberty to different situations, and certainly I do not assume to speak in any way for the Republican Party. Tonight I intend only to express my own beliefs with which I hope the Republican Party may agree. Because of my belief in the vital need of liberty, I am opposed to price control and wage control and allocation control in time of peace. I was opposed to the OPA and the WPB after the war ended because they attempted to substitute a detailed control of business for the freedom of competition and the freedom of enterprise. I am opposed to socialized medicine because it takes from the people the right to buy the kind of medical service they wish to obtain, and takes their earnings in taxes to be returned in the form of Government medical care under a long series of bureaucratic regulations. I am opposed to a tremendous burden of taxation, because it takes from the people the right to spend the money which they have earned in the sweat of their brows, and spends it for something which the Government thinks is good for them, whether they want it or not. I have been opposed to universal military training, among other reasons, because it takes from a boy and his family the right to choose and pursue his own education and occupation and imposes a year of training and indoctrination determined by so-called experts in Washington.

2. EQUAL JUSTICE UNDER LAW

The second ideal of the Republican Party is another one which is universally accepted in inaugural addresses and widely disregarded in practice, the ideal of equal justice under law. It is a necessary corollary of liberty. There can be no liberty if the life and property of men are subject to the arbitrary will of other men. Those who would destroy freedom in any country must make the courts a tool of the Government as they are in Russia. Modern totalitarian government cannot admit the right of any court to balk its policies. Of course the Communists go further. They do not admit that such a thing as real justice can exist, or that any tribunal can be truly impartial or decide cases on their merits. My objection to the Nuremberg trials was that, while clothed with the forms of jutsice, they were in fact an instrument of government policy, determined months before at Tehran and Yalta. Those who wrote the United Nations Charter at Dumbarton Oaks completely forgot the ideal of justice, and even today the charter is subject to serious criticism because it gives the Security Council power to act on grounds of expediency unrestrained by justice. Fortunately, when the issue is clearly presented, the American people feel deeply that we must have free and impartial courts. They reacted violently to the New Deal attempt to swamp the Supreme Court. We must oppose the powerful forces which today are still attempting to take from the courts the power to interpret the Constitution.

The New Deal and the present administration still seek the solution of every problem by the creation of boards and commissions, with power to make regulations having the force of law, with power to file prosecutions, try the alleged culprits and condemn them, practically without recourse to the courts. Of course, in our complicated modern system, there must be some control by administrative law, as in the fields of radio and air traffic, but it should be imposed in such a way as to preserve the maximum amount of freedom for those regulated, and subject the boards in enforcing it to the definite principles laid down by Congress on which an appeal can be taken to the courts.

Perhaps the greatest miscarriages of justice which have ever occurred in the United States occurred under the National Labor Relations Board interpreting the Wagner Act. Yet, today, President Truman is trying to restore the unlimited and unrestrained power of that Board. The Republican Party should stand today as it has stood in the past, for a rule of law instead of the rule of arbitrary men.

3. EQUALITY NO SPECIAL PRIVILEGE

In our defense of liberty, while today the primary threat is from totalitarian government seeking arbitrary power, we are equally determined to protect the individual from the oppression of private privilege and private power.

The Republican Party enacted the Sherman Act to prevent the economic power of monopoly. People often say that it is ineffective. My judgment is that it has an effect on all business thinking in the United States, and has done more to maintain freedom in the economic field than any other measure ever enacted. The contrast today between conditions here and those brought about in Europe by the cartel system is striking and conclusive.

Last year we passed the Taft-Hartley law for the parallel purpose of restraining the arbitrary power of labor-union leaders. Under previous laws their power had grown until they were able to dominate every private employer, except the largest ones, and to defy the public interest.

We have favored the increase of the minimum wage to protect the unorganized worker against the oppression of employers unrestrained by the proper power of labor unions.

Liberty may be ended by the tyranny of a majority of the people as well as by the tyranny of special groups. We are concerned that minorities shall receive fair treatment, the same rights to vote, to work, and to live their own lives as the majority. We are concerned that the economic system does not work to the unfair disadvantage of any group, either large or small, that the small-business man shall be able to prosper if he deserves it, that the general level of farm prices and farmers' income be not out of line with the level of industrial prices, that taxation fall with substantial equality on all the people in accordance with their ability to pay. Therefore, we enacted last year a bill directing the Government to maintain the price of farm products in reasonable relation to other prices, the concept of parity. We enacted a fair tax-reduction bill removing 7,000,000 of the lowest-income taxpayers from the income-tax rolls. We have sought repeatedly to enact anti-poll-tax and antilynching laws.

In all this kind of legislation, from the Sherman Act to the antilynching laws, the exact form of the statute must be such as to infringe as little as possible on the freedom of the individual and the local community. We should inject Federal power only where absolutely necessary and subject any action which may be authorized to review by impartial courts.

4. PEACE

Fourth. The Republican Party believes in peace. Republican Presidents have regarded war as evidence of the failure of their foreign policy. They have felt that there can be no greater tragedy than war and the limitation of liberty itself, even for the victorious nation; war, with its death and destruction, and perhaps the destruction of the very liberty it is designed to preserve. Horrible as war has been in the past, it will be still worse in the future. It can only be justified as absolutely essential to protect the liberty of our people. But today we have quietly adopted a tendency to interfere in the affairs of other nations, to assume that we are a kind of demigod and Santa Claus to solve the problems of the world, and that attitude is more and more likely to involve us in disputes where our liberty is not in fact concerned. It is easy to slip into an attitude of imperialism where war becomes an instrument of public policy rather than its last resort.

We must assist many nations to restore their economies from the disruption arising from the war because the spread of communism will encourage Russia to end the peace and threaten the freedom of America. We can well give economic assistance to underdeveloped areas of the world to relieve human misery which may lead to war. But let us do it in the spirit of humility. Let's not use our economic power to assume political power. Let's not promise a millennium which can only be reached by a people's own efforts and ability and character, and which we cannot deliver.

Of course, to preserve liberty, we must maintain armed forces sufficient to deter any attack upon us, but even that policy should not be carried to an extent in which the whole Nation is militarized and all our resources devoted to military purposes. We must not permit our over-all military policy to be determined by other than civilian administrators, or we would soon find that civilian life must be regulated as in time of war, and the very liberty which we are seeking to protect from foreign attack is destroyed at home.

5. HIGHER STANDARDS OF LIVING

And so we come to policies which will maintain full production, full employment, and a higher standard of living. In recent years, the American people, or perhaps only the politicians, have sometimes forgotten the essential principles of life in their search for more material welfare. Fortunately for us, liberty itself has proved to be the most active agent to bring about increased prosperity. It is unquestionably due to our system of a free economy that we have become the most productive country in the world, to which all other countries look for assistance and support. We have come where we are because the American has still the right to keep the proceeds of his efforts. There has been a constant incentive to redouble those efforts because of the reward given in material welfare. The Socialists overlook the tremendous importance of that incentive—the fact that most men do not like to work unless there is something to be gained. Lethargy has been the greatest enemy of progress.

We are concerned that the Government keep the economic machine running at a high rate of speed with as little friction and intermission as possible. We believe this can be brought about by sound fiscal policies, by balancing the budget, by a sound currency and proper control of credit. We believe in more of the same incentive and reward for workmen for good work done, such as that our system gives to the man who risks his time and money in new enterprise. Government action should be confined to keeping competition alive and preventing the destruction of freedom and should not be used to kill incentive. I am opposed to price control and wage control, to the prohibition of strikes even if collective bargaining has failed, to allocation controls; and, in general, to all attempts to substitute Government planning for the normal forces of competition.

I was in Europe in December. Every European country is hamstrung by government controls, by black markets, by the planners who forget human nature. Every country with controls is looking to the United States to share some part of the products of its liberty with those to whom liberty is denied.

I favor lower Government expenses because of the tremendous burden of taxation on the economic machine to which we look for production in taxes themselves. Already taxation is taking more than 25 percent of our national income. Already it is discouraging the development of private industry in some fields. Already the choking effect of the tax burden on productive activity is discouraging the very energy which produces the taxes, and once a buyer's market prevents the passing on of so much of the tax burden to the consumer it will be infinitely worse.

6. TO PREVENT HARDSHIP AND POVERTY

Finally we are interested, as every man concerned in government must be interested, in promoting better education, better health, better housing, better security for our people, and equality of opportunity, particularly for the children. These tasks are primarily the job of our States and local governments, and while Federal aid is often necessary in order that they may be properly done, particularly in the poorer States, there should be no Federal control or concentration of power in Washington. I believe the American people are convinced that with the tremendous productivity of our free country, we can prevent extreme hardship and poverty in the United States today, that we can maintain a minimum floor under education, health, housing, and food. We have recognized that obligation in the past, but the job has not been systematically done. With Federal aid it can be done, but there are plenty of pitfalls and dangers to liberty in the way in which it is done.

There are many respects in which we can promote efforts in behalf of the whole population, but our efforts should not include direct or indirect subsidy to the bulk of the people, or give men something for nothing, except where we do face problems of extreme hardship and poverty. Nothing can so quickly kill the incentive and the production of the people as to encourage them to look to Government as their benefactor and supporter.

Aid to those in the lowest income class is not dangerous because little of the energy and incentive is found there in any event. But a policy of Government hand-outs to all would impose an intolerable tax burden, would sap at the energy and liberty of the people and would destroy the American character.

Furthermore, no people as a whole can get something for nothing. They can only be fooled into such a hope. The idea that people can get their medical care from the Government without paying even a greater price than they pay today is fantastic. To the extent that we do support those at the very lowest end of the income field by aid or subsidy, they can only be supported by the other four-fifths of the population; and the burden must not be so great as to discourage that four-fifths from the magnificent job they are doing today.

I favor Federal aid to the States and local governments to enable them to extend medical care to all those who are unable to pay for it, but I am strenuously opposed to the system of socialized and nationalized medicine outlined in the Murray-Wagner-Dingell bill. Organized charity or Government welfare service to the whole population can destroy the freedom and also the character of the people to whom it is extended. It can increase the power of the Central Government in Washington until Washington bureaus govern the daily lives of every family

in the United States. Incentive and initiative can be paralyzed. We will be ruled by people who take no personal risks and create no jobs. The people will be taxed without realizing it through a deduction from pay roll, and perhaps get some part of those taxes back in the form of Government services and activity which they may or may not want. There is real danger to liberty in the welfare state.

But like Federal aid to medical care, I believe that Federal aid should be extended to enable local communities to provide decent public housing for those unable to pay the rents charged by privately owned homes of decent character. I favor the extension of Federal aid to States, particularly the poorer States so that they may provide adequate primary and secondary education for children no matter how poor the State or community in which they live. I favor the extension of the old-age-pension plan to all those employees not now included. There are other fields of social welfare in which the Federal Government can be of assistance if the safeguards are properly observed.

I have tried to outline what I conceive as the basic principles of the Republican Party. There was a time when these were the principles of all American parties, while they differed on less consequential matters. Even today the Democratic Party gives lip service to many of the varied principles which its policies are certain to destroy. The Republican Party has not done a very good job of publicizing its principles or the principles of American history and government. They are the principles in which the great majority of the American people still believe today. When their liberties have been directly affected by regulation, as the farmers in 1938 and the housewives in 1946, they have risen up with indignation against the party of Government controls. But they have not always realized the steady reduction of liberty by the steady advance of totalitarian government, nor the further threat involved in the program which is now presented by the Democratic Party. The Republican Party will survive and prevail, because it is in fact the party of American principle.

Need for Retrenchment in Federal Expenditures

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, January 31, 1949

Mr. KEM. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the January 26, 1949, issue of the Christian Century. The editorial is entitled "What Are We Promising?"

This editorial has been sent me by Rev. Bernard A. McIlhany, D. D., minister of the First Presbyterian Church at Fulton, Mo. In his letter of transmittal, Dr. McIlhany makes this very pertinent observation:

Some of us are terribly alarmed by the rising costs of government and signs which have recently appeared of decreasing employment. A day of judgment, we feel, cannot be far off, economically speaking. For that reason we are convinced that the time has come for some in authority to take a most courageous stand in favor of retrenchment in our Federal expenditures. If this is not done, then we cannot but believe that ill may be in the offing for us in our Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT ARE WE PROMISING?

By this time every literate American presumably knows that the $41,858,000,000 budget for the fiscal year starting July 1, which President Truman has asked Congress to endorse, is the largest in the Nation's peacetime history. Presumably, most Americans also know that more than 75 percent of this huge sum is to pay for the Nation's defense establishment, its aid to foreign nations, its veterans' benefits, and its interest on the national debt—in other words, to pay for past wars or to prepare for future ones. The peacetime budget thus goes up another $1,658,000,000 over last year (it would be almost $4,000,000,000 higher if the President had stuck to the same bookkeeping used in previous years) and is more than $8,000,000,000 above the budget of 2 years ago. It is no wonder that Mr. Truman, finding that the Government will wind up slightly in the red this year and calling for these increased expenditures next, wants an additional $6,000,000,000 in taxes.

I

It has become trite to say that figures of this size have no real meaning for most of us. We know that they will push taxes up, and with approximately a quarter of the entire national income now going for taxes—Federal, State, and local—we ask ourselves in a vague grumble where this process is going to end. That mythical but mighty American, Joseph P. Doakes, can quickly estimate that a Federal budget of almost $42,000,000,000 means a tax of $284 for every inhabitant. In other words, if Joe is the sort of American who has a wife and three children, it means that the Federal tax for his family, if levied on a per capita basis, would be $1,420—which is as much as the total cash income of almost 40 percent of all the Joe Doakes' families in the United States.

Really, however, the only way to get any idea of what such figures mean is to compare them with something. Take, for example, the post-World War I national budgets. The peak year of Government costs in that war was 1918–19, when the figure, then regarded as stupendous, reached $18,522,000,000. After that it dropped steadily to $3,697,000,000, 4 years after the war—where we are today in relation to World War II—of which only $700,000,000, about 5 percent of the last war year's budget, went for defense. This 1923–24 total was, note, less than 18 percent of the 1918–19 high. Today our budget, in comparison with the $100,397,000,000 peak in 1945–46, is 41 percent of the wartime top, and more than a third is directly ticketed for defense, to say nothing of the additional sums to put other countries in shape to fight again.

Only a quarter of the President's budget is earmarked for all costs of Government at home, aside from the military costs already named, and for all the social-service expansions which made up the core of the President's policy message. Nevertheless, the tendency of the press has been to accept the military costs as beyond amendment—unless they are to be amended upward—and to hold that if the staggering cost of Government is to be reduced anywhere, it must be in the civil items. Thus, the conservative New York Times, while remarking that the Nation wants to get its money's worth for what it pours into the defense establishment, specifically points to the items for social welfare, agriculture, natural resources, transport, and communications as the places where Congress can best wield its pruning knife. Congressmen talk in the same vein.

II

Yet one of the most important facts about the budget message was that the President stated that the $21,000,000,000 he asked for defense and for foreign aid was not all that he would ask. More requests of the same sort, he said, are certainly coming, and still more are probable. Among the "probables," he spoke of "furnishing military supplies to certain countries"—the countries being unspecified but not including the Greece, Turkey, China, and Korea we are already supplying. Among the "certainties" will be the cost of the arms lend-lease program which is the heart of what Mr. Truman spoke of as "the prospective North Atlantic arrangements." What this will add to the military expenses to be loaded on the United States taxpayer, no authoritative source has revealed, but it will run into 10 digits at the very least.

The President thus used the occasion of his budget message to put himself behind the magnification of the Truman doctrine into the North Atlantic Defence Alliance, and he did it in such a way as to tell Congress that he assumes the Senate will ratify the alliance. Will it? The Washington correspondents take it for granted that it will. The press, so far as it mentions the proposal, rarely opposes. Labor, farm, educational, and church organizations on this issue are lying low and saying little. But we still believe that before a measure of such permanent consequence, in such defiance of the Nation's history and previous policy, can slip through Congress, the Senate is oath-bound to subject it to searching scrutiny and debate. If it does, the first question that should be settled is, To what does this military alliance commit the United States in the way of promises?

III

On the day President Truman plumped for the alliance, James Reston, the superb correspondent who covers the State Department for the New York Times, had an apparently officially inspired dispatch in that paper saying that the constitutional difficulties in the way of pledging United States military support to the proposed five European allies (see the Christian Century for December 22) had been ironed out. The pending treaty of alliance, according to Mr. Reston, now leaves the United States Congress with its constitutional right to declare war, but it still safeguards England, France, Holland, Belgium, and Luxembourg by making these three promises:

1. It accepts the principle that an armed attack on any one of the signatories is an attack on all.

2. Each signatory would agree to "assist" any other attacked, although the nature of this assistance is not defined as sending troops.

3. The signatories would also be bound to consult together (if requested by one of the signatories) "on any threat to the peace anywhere in the world."

The five European signatories, Mr. Reston believes, will be unhappy about the obvious loophole in the second of these three promises. They will look at the contrasting hard-and-fast promise of all-out military support in the Brussels pact and say that is what they thought they were to get when they started into this North Atlantic scheme. For that reason, Mr. Reston suggests, the alliance may be fought in the Senate because it does not go far enough.

It could not go any farther and leave unaltered article I of the Constitution of the United States. And viewed in the light of political actualities, the loophole is more verbal than real. With the promise that the United States will regard any attack on another signatory as an attack on itself, with the staffs of the United States defense branches interlocked and continuously working as part of the staffs of the other allies, with the United States economy increasingly geared to and dependent on the revived lend-lease, and with United States Army units

scattered in all the occupation posts of Europe, there is no possibility that in case of an overt Russian attack on any of the five European signatories the United States would refuse to assist in military terms.

But how much more do the generalized provisions outlined by Mr. Reston promise? What are the specific implications of the blanket commitments? That is what the Senate needs to find out. Take, for instance, the question of colonies. Britain, France, Holland, and Belgium are not simply nations in western Europe; they are nations with vast colonial holdings in Asia and Africa and in the island world. French rule in Indochina and Dutch rule in Indonesia are under attack today, and there is every chance that British rule in Malaya will be tomorrow. In every instance, if the French and Dutch precedents hold good, attacks on these colonial holdings will be pictured as Communist aggression, Moscow-inspired if not Moscow-financed and led. Before many years pass, the colonial empires of the Belgians and the others in Africa may come under the same sort of attack. So may the British, French, and Dutch regimes in the island colonies which lie athwart the world's ocean trade routes.

To what does this proposed North Atlantic Defense Alliance commit the United States in regard to the ability of our intended European allies to hang onto these colonies? During the recent war, the Japanese drove the colonial governments out of all the colonies in Asia and the Pacific. They would not be back there today if the United States had not put them back. Is this alliance a promise that, having put them back, we will keep them there? Asians, in particular, as well as the people of the United States, need to know.

Or take the case of a Communist aggression against some state not a member of the alliance. For purposes of illustration, let us say Italy. In that event, we are told, the alliance pledges that its signatories will consult. That may look innocuous on the surface. But under such circumstances the United Nations are also pledged to consult. This consultation by the members of the alliance must therefore be either a new method by which to by-pass the UN or a different kind of consultation. Or it may be both. It may be a way of ignoring the UN while the seven allies meet within the framework of their military alliance, under the direction of their military staffs, with a view to joint military action—not only in Italy but anywhere in the world.

If these are the sort of promises which are implied in the military alliance for which President Truman is presently to ask more billions, then the possibilities of involvement stretch out far beyond anything of which the American people have dreamed. Indeed, one strange and disquieting fact about this whole alliance proposal is that up to the present the American people have been kept almost totally ignorant of it, and are therefore so widely indifferent concerning it. There is a real danger that, unless this blanket of silence in which the subject is now muffled can be lifted, the alliance may be slipped through the Senate before any large part of the American public knows what is going on.

Here is a responsibility which church commissions and committees formed to deal with international affairs should not continue to evade. Even more, if there are Members of Congress who intend to be something more than rubber stamps of the Pentagon on matters of foreign policy and military commitments, it is time for them to drag the text of the proposed treaty of alliance into the open and to require of President Truman and the generals a chapter-and-verse definition and explanation of exactly what this Nation is promising.

Foreword to the Memoirs of Gen. Claire Lee Chennault

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, January 31, 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the foreword to the memoirs of Maj. Gen. Claire Lee Chennault, which is entitled "Way of a Fighter." This book is just being published, and this foreword contains information about the tragic Chinese situation, which this Government is largely responsible for through our official policy toward China. It is worth the reading of every American citizen.

Notwithstanding an estimate from the Government Printing Office indicates that it will cost $248.50 to print the foreword, it has such merit and value that I request its printing.

There being no objection, the foreword was ordered to be printed in the RECORD, as follows:

FOREWORD

The United States is losing the Pacific war.

Three years after VJ-day this country is facing the loss of everything it won during the four bloody years it took to defeat Japan.

Here are the facts:

Gen. George C. Marshall told Congress in the spring of 1948 that if Manchuria were lost to the Chinese Communists, the United States position in southern Korea would be untenable.

Manchuria has been lost to the Chinese Communists.

General Marshall also told Congress that if the Chinese Communists controlled north China the United States position in Japan would be extremely serious.

North China has been lost to the Chinese Communists.

Gen. Douglas MacArthur warned the Joint Chiefs of Staff in the fall of 1948 that if the Chinese Communists take the lower Yangtze Valley and Shanghai the American military bastion on Okinawa will be outflanked and his position in Japan will be as exposed and untenable as it was in the Philippines during 1941.

As this is written, the Chinese Communists are fighting toward the Yangtze at Nanking. They are aiming to force a Yangtze crossing and sweep to Shanghai.

A complete Communist victory in China will channelize the undercurrents of native unrest already swirling through Burma, India, Malaya, and Indonesia into another rising tide of Communist victories. The ring of Red bases can be stretched from Siberia to Saigon. Then the stage will be set for the unannounced explosion of world war III.

I have completed a decade of observing and administering American policy in Asia. I am convinced that this policy is plunging us into a disastrous repetition of the errors that dragged us into World War II. I can hear the time fuze of a third world war sputtering in China as it burns toward the final powder keg, and I cannot stand idly by without making every effort in my power to snuff it out.

It was not an easy decision for me to publish this book. I have had my share of heartbreaks and have always felt it best to keep my peace. I have no taste for muckraking as a pastime, and I believe it is important for a people to have confidence in its leaders.

However, it is axiomatic that in periods of crisis a nation must have the very best of its leadership if it is to survive. The last war seared Russia to its heart. In the bloody catastrophes of the early war years the Russian leadership was pared to the hard, competent core that engineered Soviet survival. It is leadership of the very best the Russians can offer that we face today.

I am not so sure the United States has shaken down to its very best leadership. Even now the lingering fog of wartime military censorship obscures the sharp edge of disaster on which we teetered in the spring of 1942 when Japan swept the southern seas. In the flush of final military victory it was only human to forget the lessons of the mistakes that led us into jeopardy. In the relief of the slaughter's end it is all too easy to weary of the battle to keep the peace that follows every war.

Many of the things in this book have been set down with genuine regret. I realize that much written here may be painful for some of the personalities discussed and that the countercriticism that is sure to come may be personally distasteful to me. But I can remain silent no longer. The stakes are now too high. I must take the long chance that by offering my evidence on the last decade in the Orient I may contribute something to an accurate estimate of the problems we now face and the direction in which we are drifting. Nothing less than our national survival depends on how well we understand this drift and navigate a new course.

China is the key to the Pacific. Politics are variable, but geography is a constant. It is the geography of China that makes that unhappy land so important. Whatever sentimental appeal there may be in the American aid for China, the United States attitude toward China should be based on a thoroughly realistic appraisal of China's value to the United States.

This country is now engaged in a worldwide struggle with Russia over organization of the world. The problem is whether war with Russia is inevitable or whether the world can be organized as a cooperative venture. The in-peace decision depends entirely on the shifting balance of strength between the positions of the United States and Russia.

There is a growing accumulation of intelligence to indicate that Soviet leaders already consider their Asiatic victories of sufficient strategic importance to tip the world balance of power decisively in favor of Russia.

The Russians understand the role of China in this balance well. Since the beginning of the Chinese Revolution in the early 1920's Russians have been active in bending China to their purpose. After they lost their first chance to gain control of China in 1927, the Soviet leaders vigorously aided any cause that might weaken the Japanese program to hitch China to its imperialistic chariot. Now, with Japan defeated, Russia is again shrewdly exploiting the weakness of American policy in China to make her most determined bid for domination of that vast, strategic area.

The Russians seem to learn something from history. They have watched their German neighbors go down to shattering defeat twice in a two-front war. There is considerable evidence that the Soviet leaders are determined to avoid that pitfall. While Germany was a prewar menace on the western flank, Russia carefully avoided war with Japan despite ample provocation by the Japanese. Pitched battles using airplanes and tanks were fought on the Manchurian frontier in 1932 and 1936 between the Russians and Japanese, but the Russians refused to be

baited into a full-scale war. Russia was also wary of taking on even a badly mauled Japan in 1945 until the Soviet victory over Germany was complete.

I seriously question that Russia will make anything more than probing skirmishes in Europe until her Asiatic flank is secure. The flurries of Russian activity in Europe are largely tests of American policy and smoke screens to divert attention from the fact that Russia is acquiring vast natural resources, strategic bases, and securing its most vulnerable flank in the Orient.

The Russians are well aware, even if most Americans are not, of the strategic implications of China. North China and Manchuria were the industrial bases that furnished more than one-third of all Japanese war production. From air bases built for the Americans during the last war at Chengtu, Sian, and Lanchow in northwest China, all of the vast Russian industry east of the Ural Mountains is open to air attack. From these same bases and dozens of others in north China the slender thread of Russian communications between eastern and western Siberia could be snapped by even a small air force. With north China controlled by a government friendly to the United States, Russia's only access to these fields would be across a thousand miles of Turkestan desert. As a result of the Communist sweep in China many of these vital fields are already in the hands of Chinese Communists. From Okinawa, Japan, and the Philippines, American air power can only peck away at the perimeter of Russia's vitals. From north and central China the same force could strike deeply into Russia's industrial heart.

These, then, are the stakes for which we are playing in China. If China remains friendly to the United States, the Russians will dare not move deeper into Europe leaving their vitals exposed on the Asiatic flank. If the Asiatic flank is secured and American air power is pushed out beyond a critical range, then the way will be open for new and more powerful ventures in Europe.

It is now obvious that the United States played its prewar hand in Asia badly. Initial Japanese aggression in Manchuria during 1931 and 1932 was the tip-off to the potential aggressors that the world would not be organized on a basis of collective security. It showed clearly that the Western Powers would not stick together to keep the peace. It is the answer to precisely this same question that the Russians are probing for today. On this answer will depend their future plans. Our record in China so far has provided them with the same answer as in 1931. If our China policy continues along its present course the Russians will probably be justified in concluding that our determination to preserve the peace is no stronger now than that of the western nations in 1931–32. In that case, their decision will favor further aggression that can only lead to war.

After Japanese attacks on China in 1937 the United States failed to enforce its open-door policy in China and allowed Japan to exclude us from the Yangtze and China's coastal ports. At the same time the United States sold enormous quantities of scrap iron, oil, and aviation supplies to Japan. We were wakened from that fool's dream one Sunday morning by the sound of Japanese bombs blasting Pearl Harbor.

Our wartime policy in China failed to retrieve our prewar losses. Primarily because of the leadership of Gen. Joseph W. Stilwell, we failed to achieve either the military or the political objectives desired in China. Not until Stilwell was succeeded by Lt. Gen. Albert C. Wedemeyer did American policy in China bear any resemblance to that of two allies fighting a common foe.

Immediately after the war, Wedemeyer continued to execute a firm and constructive policy. Already he had regained much of the ground lost by Stilwell and had promising prospects of complete success. Collapse of Japan found the Generalissimo's armies still in south and west China far from the vital ports and industrial centers held by the Japanese. Chinese Communist armies, in contrast, lay along the lower Yangtze Valley and near all the major centers of north China. But in this race to relieve the Japanese, the United States provided air lift that enabled the Generalissimo's armies to leapfrog Communist forces in their path and occupy the key cities. Navy transports later moved other Chinese divisions to Manchurian ports to begin occupation of the vital area.

To his everlasting credit, Wedemeyer diagnosed the situation accurately and acted with promptness and decision to avert this initial Communist crisis and prevent the Chinese Communists from taking over control of China's key areas from the Japanese. Later Wedemeyer made a thorough study of China's postwar problems and blueprinted a detailed plan for the type and quantity of American aid required to help the Chinese effectively reorganize their shattered country. The recommendations of this report were not only ignored but the report itself was ruthlessly suppressed, and the American people and their Congress have been deprived of the testimony of a man who is perhaps our best authority on postwar China. Even at this late date the Wedemeyer report on China should be made public.

After a summer of diplomatic maneuvering between the Generalissimo and Chinese Communist leaders, the civil war broke out into the open again in October 1945. The Generalissimo's armies still had their American-supplied equipment. Well equipped with trucks, artillery, machine guns, and mortars they began a systematic mop-up of Communist troops wherever they could be found. The Generalissimo's offensive was well under way and progressing successfully when Gen. George C. Marshall reached China in November 1945 as a special emissary. Marshall has now retired in poor health after devoting a life-time of great service to his country. He carries with him the respect of all those, including myself, who worked with him during the war and of all who shared his labors during the trying postwar years.

It was unfortunate that his assignment in China was to carry out a policy set for him by the State Department that was utterly impossible to execute. The failure of Marshall's China mission had its roots in these faulty orders. Under normal circumstances it would seem less than fair not to ignore this episode in the career of a man who has done so much for his country. However, a full discussion of this period in our China policy is absolutely essential to understand what is going on in Asia and why our national survival is at stake. Here in Shanghai, with China crumbling before my eyes, I have no choice but to discuss the Marshall mission frankly.

Marshall was a rigidly disciplined "spit and polish" soldier of the "Black Jack" Pershing school, and he came to China fresh from five years as the head of the most powerful military organization in the world. Marshall was used to conducting his business through direct orders promptly executed without question. By the time Marshall reached China that country was reduced to a state of disorganization where getting things accomplished by the Chinese Government required rare tact, flexibility, and judgment. Only 4 years of a far less brutal enemy occupation reduced France to a position where it is still impossible to organize a responsible government. China suffered 8 years of occupation interlarded with intermittent civil war that left economic chaos and political turbulence so violent it was impossible for an occidental to understand it at first glance. Marshall's judgment of China by his strict soldier's standards and tight concept of organization could hardly have aided his understanding of the Chinese problems he came to solve.

Marshall also came to China with a set of orders utterly impossible to carry out. They were given to him by a State Department that was the source of a Russian policy now admitted to have been a grievous error. Marshall did not originate that policy, and, when he became Secretary of State, he was the leader in the fight to change it. However, in his China mission he was saddled with these State Department orders; good soldier that he was, he strove to carry them out to the letter despite all obstacles and regardless of how hopeless he himself may have thought the task set for him.

Marshall's orders were to bring an end to the Chinese civil war and stimulate a coalition government in China by taking the Chinese Communists into the existing government headed by the Generalissimo. These orders were the product of the Yalta-Potsdam political climate that based American policy on the assumption that it was both possible and necessary to cooperate with the Russians. During the period when this utterly mistaken notion guided American policy, it was China that suffered the most serious consequences.

To guide him in this complex and difficult role, Marshall had the conflicting testimony of two of his close personal friends—Stilwell and Wedemeyer. Unfortunately, he accepted Stilwell's version of China and Chinese leadership almost at face value. This could not help but complicate his task.

Net result of Marshall's 15-month mission to China was much the same as Stilwell's earlier experience. The trend of a gradually stronger Central Government was reversed and the military balance shifted again in favor of the Chinese Communists.

Stripped to its essentials, here is what the Marshall mission did to China. It forced a truce to the Chinese civil war at a time when the Central Government forces were winning. When the Generalissimo naturally balked at endorsing a policy that meant military disaster for his forces, Marshall applied pressure in the Stilwell manner by shutting off the flow of all American military aid to China, including war surplus bought and paid for by the Chinese. This arms embargo lasted for nearly a year. He also summarily scuttled a Sino-American agreement made in September 1945 whereby the United States agreed to supply China with planes and equipment for an eight and one-third group air force, including four-engine bombers. Marshall also extracted a promise from the Generalissimo not to use the Chinese Air Force already in China against the Communists on the grounds that this would constitute offensive action. Restricting the Chinese Air Force deprived the Generalissimo of his most potent weapon. It was also implied that discussions regarding a $500,000,000 loan to China could not be resumed until a truce was effected in the civil war. Marshall did not know then that the most effective Washington opposition to the Chinese loan was coming from Henry Wallace, a man whose position on Russia has since become quite clear.

The truce sponsored and pushed by Marshall, with all the diplomatic resources of the United States at his disposal, forced the Generalissimo to halt his anti-Communist offensive at a time when it was on the verge of wiping out large bodies of Chinese Communist troops. Some 50 truce teams each were dispatched to trouble spots all over China. Each was headed by an elderly American colonel specially picked for his white hair to impress the Chinese. Here are some specific examples of what they accomplished.

North of Hankow some 200,000 Government troops had surrounded 70,000 Communist troops and were beginning a methodical job of extermination. The Communists appealed to Marshall on the basis of

his truce proposal, and arrangements were made for the fighting to cease while the Communists marched out of the trap and on to Shantung Province, where a large Communist offensive began about a year later. On the East River near Canton some 100,000 Communist troops were trapped by Government forces. The truce teams effected their release and allowed the Communists to march unmolested to Bias Bay, where they boarded junks and sailed to Shantung.

The worst fiasco was at Kalgan Pass. This gap in the north China mountains is a historic gateway between China and Manchuria. At the end of the war there were no organized Communists in Manchuria. Chinese Communists flocked from their base in Northwest China through the Kalgan Pass to join the Russian troops in Manchuria. When the Chinese Government troops occupied Manchuria they found the great industrial centers stripped bare of machinery and the tremendous arsenals of the famed Japanese Kwantung Army empty. There was no trace of either the Kwantung Army or its equipment.

Early in 1946 a government offensive captured Kalgan and sealed off the pass, trapping nearly a million Chinese Communists in northwest China who were moving toward Manchuria. The Communists complained that they were merely returning to their prewar homes in Manchuria. Marshall made strenuous efforts to get the Generalissimo to open the Kalgan Pass for these Communists. Eventually the Generalissimo yielded, withdrew his troops in June 1946, and the Communist horde poured into Manchuria. The Communists then broke the truce by fortifying Kalgan Pass. A year later Chinese Government armies had to fight a bloody campaign to recapture the pass they voluntarily evacuated under the truce.

In January 1947 the mystery of what happened to the Japanese Kwantung Army equipment was solved. The poorly armed Chinese Communists who marched north the year before now swarmed south from Manchuria armed with Japanese rifles, machine guns, mortars, tanks, and artillery. They even had Japanese aircraft, but no gas or pilots to operate them. The Russians had simply turned over the Japanese equipment to the Chinese Communists and thus endowed them with a rich military legacy.

Conservative estimates of the Japanese military stock pile in Manchuria seized by the Russians appraise it as sufficient matériel to supply a million men for 10 years of fighting. By using Japanese munitions the Russians avoided the necessity of investing their own resources and are able to claim that no Russian arms were sent to China. The Manchurian booty represents the total investment the Russians can afford in China at present. They lack the industry in eastern Siberia to supply a sustained war effort even for themselves. Transportation facilities across Siberia are too meager to supply China from the Russian Ural industrial area.

It was these troops who marched under a safe conduct of the American-sponsored truce through Kalgan Pass and returned with Japanese arms that won the decisive battles in Manchuria in the summer of 1947. They were opposed by the Government's American-trained divisions. While the Communists were being rearmed by the Russians, the Government divisions had their supplies cut off by what Marshall freely admits was a 10-month embargo on American military supplies to China. Since these Chinese divisions had been equipped in the spring and summer of 1945 their arms, ammunition, and trucks badly needed replacement. Two years of hard campaigning had worn their rifle barrels smooth, exhausted their ammunition, and battered the trucks they relied on for transport and supply. All of their equipment was American and without American replacements, spare parts, and ammunition it was virtually useless.

It did not take long for the well-armed Communists to chew up the Government divisions, armed only with the worn remnants of 2-year-old American equipment and minus an effective air force. The Chinese armies that Stilwell and Wedemeyer trained in India and west China perished early in 1947 on the frozen Manchurian plains. The stage was set for the final mop-up of Manchuria in the summer of 1948 and the Communist offensive into north China that at this writing has swept almost to the north bank of the Yangtze and gravely threatens Nanking and Shanghai.

Marshall also sought, as part of his orders, to force the Generalissimo into a variety of political changes, including formation of a coalition government with Communists in the cabinet.

At the time of the Marshall mission the Chinese Communists' terms for entering the Chinese National Government were one-third of the cabinet members, including the war minister, retention of a Communist army of 48 divisions, and the governorships of all provinces where the Communist troops then claimed occupation of a majority of the area. The fate of Czechoslovakia has since proved how fatal this would have been to the existing Government of China. Inclusion of Communists in a coalition front is a standard preliminary tactical maneuver in a Communist seizure of power. It is a technique that may well be attempted again in China if the Communists feel that an attempt to gain complete military victory may cost more than they can afford.

The Generalissimo had been dealing with Communists inside and outside the Chinese Government for more than 20 years. He got part of his education in Moscow's Communist academies. He thoroughly understood the Communist motives and techniques and knew that a Communist minority in a coalition government would actually result in complete Communist domination of China.

Marshall was then just beginning his political dealings with the Communists. It is obvious he has learned a good deal about their tactics since then. Marshall's orders in China did not permit him to act as though the struggle between the Communists and Chinese Government were anything more than minor maneuvering between rival political factions. He was not able then to view it as the basic struggle that it certainly is wherever that issue is drawn. Marshall had to persist in professing the idea that including Communists in a coalition government was no more serious than adding a few Republicans to a Democratic cabinet. Too many Americans tend to interpret the life and death struggles of foreign politics in the same light as the bitter, but by no means fatal, rivalry of American politics. There is a vast difference.

When his coalition plans collapsed and fighting flared again, Marshall finally gave up his China venture. He returned to the United States with a "plague on both your houses" speech that was a remarkable confession that his early profession of faith in the integrity of the Communists was not justified by their subsequent actions. Marshall's disillusionment over the prospect of working with Communists on a basis of mutual trust was symptomatic of the general shift in American policy toward Russia that occurred during roughly the same period. American policy in Europe was adjusted to this realistic appraisal of the Communists and their intentions. Our China policy never changed.

While Marshall has done a good job of applying the lessons of his Chinese political education to Europe, he has been reluctant to undertake the fundamental reappraisal of his China policy required by subsequent events. Current American aid to China is largely food relief because of the State Department's insistence that military aid cannot be effective until the Chinese Government inaugurates sweeping political and economic reforms.

In this policy I believe the State Department has the cart before the horse. Military aid should have top priority. Without a military decision there can never be the internal stability required for any effective reforms. Last March, when the Marshall plan for China was presented to Congress, I was appalled to note that only one-sixth of the program was devoted to the military aid so desperately needed.

At the request of the House Committee on Foreign Affairs, then headed by Representative CHARLES EATON, of New Jersey, I flew from Shanghai to Washington to plead for a more realistic approach to China's problems and a more intelligent understanding of the United States stake in Asia. My 51-hour flight on a Great Circle course from Shanghai to Washington via Northwest Airlines offered dramatic evidence of how the Pacific world had shrunk when compared with my initial 14-day steamship trip to China in 1937.

I told Congress last March that unless effective military aid was immediately forthcoming for China, the Chinese Communists would overrun Manchuria and be well on their way to taking all of North China within 6 months. Congress authorized military aid of $125,000,000 to China, but the summer was spent in endless dickering with the State Department and National Military Establishment over details of that aid, and not until October of 1948 did these munitions begin to flow to China. By then, 7 months after my gloomy prophecy, the Communists had all of Manchuria and most of North China, and were marching toward Nanking.

The situation is now deteriorating so rapidly in China that I cannot venture further prophecy on its outcome. However, there are two salient facts of which I am sure. First is that the United States needs a new and effective policy in China. This will require a thorough reexamination of our present policy and our capacity to support any changes. But there is an acute danger that we may no longer have time for such consideration and that the Communists may win complete victory in China before a new American policy can be formed. Reliable reports indicate that the Communist generals are planning to force a Yangtze crossing early in the spring of 1949. Russians are now reported to be training a Chinese Communist air force near Mukden to provide the air cover without which a crossing of the Yangtze might be impossible. Captured Japanese planes and Russian second-line fighters are being turned over to the Chinese Communist air center.

In view of this situation the immediate goal of the United States must be some sort of holding action that will prevent a decisive Communist victory while our China policy is being debated. This action requires neither vast monetary nor military outlays. Its principal requirement is swift action lest we lose our chance forever. The recent history of China is studded with examples of how small technically well-equipped forces can exert decisive influence in China out of all proportion to their size.

This holding action in China to prevent the Communists from organizing the great Chinese land mass against us is imperative if we are to gain the time required for a searching analysis of our world-wide foreign policy and the development of a sound method of working with the Chinese to replace our present policy of sticking a finger in the European dike while the Asiatic dam bursts.

My second certainty is that the price of peace in the Pacific world is going up at an

astronomical rate, and we shall eventually have to pay that bill in full. Looking back over the last decade, we can easily trace the soaring cost of an effective American policy in China.

During the war, cost of such a program would have been negligible. The twin goals of defeating Japan and establishing a strong, friendly Chinese regime were orginally inseparable segments of a common goal. Stilwell's failure to recognize this fact lost that opportunity and helped set off the chain reaction that brought us to the brink of the current crisis.

Immediately after the war the cost of China aid rose only slightly. Thanks to the good work done by Wedemeyer and his staff and the availability of a vast stock of war surplus in the Pacific bases, the Chinese Government could have been given the military power to withstand aggression and turn to the pressing problems of internal reform with little additional cost to the American taxpayer. Marshall's arms embargo on China squandered that opportunity and gave the Chinese Communists the breathing spell they needed to refurbish their ragged hordes at the captured Japanese stock piles in Manchuria.

By the spring of 1948 official estimates of the cost of China aid had risen to a billion and a half dollars, plus establishment of a large American military mission in China. That opportunity, too, was lost largely as a result of the State Department's insistence on economic aid that did little but waste American dollars, instead of the military aid required. How high the cost will eventually go or how many further opportunities we will allow to pass without action I cannot guess. I am only sure that eventually we shall have to pay it in full just as we had to pay the long-deferred bill for a decade's indifference to the Orient that Japan presented at Pearl Harbor just 7 years ago.

We face essentially the same choice the British faced in 1938 in Munich. I am well aware of the dangers of bleeding American economy white through a vast arms program and foreign aid. That could be as disastrous as military defeat. But we must face up to our present problem as the British failed to do at Munich. Then they were appalled at the possible price for resisting German aggression. They felt they could not afford that cost. Yet that choice only boosted the final bill to the fantastic total they had to pay. When the bill was finally presented they had no choice but to pay it or accept the end of their nation. The failure to pay the price at Munich eventually cost the British five grinding years of war that eroded their national economy to a bare sustenance level and lost the bulk of their Empire. The United States must not make the same mistake simply because we shrink from facing facts.

Many people now admit the validity of this thesis. Few, however, believe there is anything we can do about it. Can we really do anything? We most emphatically can. First we can throw in small, carefully selected military aid tailored to meet the specific problem of the moment in China—a holding action to defend the lower Yangtze Valley and Shanghai. If Shanghai can be held, it will prevent the Communists from organizing the north bank of the Yangtze well enough to support a military thrust across the river into South China.

Along with this aid we must send technically skilled and imaginative leaders who can improvise to meet rapidly changing situations and who can gain the confidence of the Chinese with whom they work. The Chinese may not understand the workings of an internal combustion engine, but they can see through a man and tell what makes him tick in an instant. They have been evaluating human nature for thousands of years and are experts. Naturally the Chinese will not work effectively with foreigners unless they feel these foreigners are genuinely sympathetic to their cause and country.

We must recognize that the Orient is a primary field of American interest and must stop allowing our affairs in this area to be conducted by second-rate men. We are only now beginning to develop some China experts in the field who show real promise, but policy in Washington is still formulated by incompetent scrubs in the State Department, not deemed fit to play in the European game, while men of Wedemeyer's caliber and ability sit on the side lines.

Many of our so-called China experts contend that things are so bad in China now that it is impossible to do anything to change them. This is sheer nonsense. This is the same type of thinking that said it was impossible for China to resist Japan in 1937. Yet it was Japan who suffered the final defeat.

The experts said the American volunteer group wouldn't last 3 weeks in combat, yet with 250 men and $8,000,000 we smashed the Japanese air force over China and kept bombs off Chinese cities for the first time in 3 years.

The experts wrote off China as finished again when the Japanese took Burma and cut the last land line of supply. They said the air lift across the "hump" was impractical and impossible. The airmen of the air transport command and China National Aviation Corp. did the impossible by flying more than a million tons across the "hump" and kept China going on airborne supply for as long as was necessary. The military experts said the Japanese Army would run the Fourteenth Air Force out of East China, but again a handful of good men with good airplanes refused to be licked. In the spring of 1945 it was the starving Japanese Army that was getting out of East China as fast as its underfed legs could carry it, and not the Fourteenth Air Force.

Again after the war I was assured by the experts that it would be impossible for me to organize a new air line in China. Today that air line is flying 4,000,000 ton-miles a month. I have been working with Americans and Chinese for so long now who have been doing the alleged impossible for many years that I have no patience with the critics who are experts only at inventing reasons for doing nothing. I think it is high time we scuttled them in favor of leaders who have the imagination, energy, and intelligence to accomplish the so-called impossible. That is certainly the type of leadership that has made the United States a great Nation.

It is not yet too late for effective action in China. The Chinese Communist armies are operating off lines of supply that are badly stretched. Their present position is similar to that of the Japanese at the end of their initial push into east China in 1944 when they were vulnerable to the stranglehold of airpower. The Communists are now moving into territory that has not been politically organized in their favor as well as the northern provinces. The Communists, like the Japanese before them, do not—as yet—have the air umbrella necessary to protect their ground offensives against sustained air attacks. It is certainly not impossible for a small force of stout men who know the terrain to apply the best of modern equipment against critical Communist weak spots and halt the advance in its tracks. This would save the lower Yangtze Valley and south and west China as a base in which Chinese nationalism could reorganize, and after learning the lessons of its defeat, political and military, set out again under its own steam to liberate the rest of China.

Whatever happens in China's immediate future, if it is considered United States policy to prevent Communist organization of that country, it is necessary to maintain this base and maintain some form of non-Communist central government in China. If the territory not yet conquered by the Chinese Communists is allowed to revert to the domination of provincial war lords, it will eventually be divided, defeated, and absorbed by the Communists piecemeal just like the small separate states of eastern Europe.

The creation and preservation of a central government has been the historic role of Generalissimo Chiang Kai-shek in modern China. He has been the driving will that has held together a country of loose political organization and primitive communications in even a semblance of national unity. It is significant that leaders of all the divergent political elements in China except the Communists have appreciated the necessity of Chinese unity. For this reason they have supported the Generalissimo on broad national issues regardless of their disagreements with him on internal policy. It is for this reason that I, too, have loyally supported the Generalissimo during my long residence in China. It was the Generalissimo who stood between China and surrender to Japan, and it was the Generalissimo who stood between China and complete chaos after the war.

Whatever the future may hold, it will be necessary to have some centralizing force to preserve the independent spirit of China and prevent its domination by foreign powers.

Despite a decade of American bungling in China this country still has a vast reservoir of good will among the Chinese people. The Chinese Government now has little faith in us because of the long record of broken American promises and action that only served to strengthen the Communist opposition. In the coastal ports most Chinese look on the Americans as successors to the British and French economic imperialists whose only aim is to exploit China for personal profit. But in the vast hinterland there are millions of Chinese who still look on the United States as the only hope in establishing a peaceful and independent China and still remember the American airmen as the reason Japanese bombs stopped falling.

It would not take much concrete effective aid to capitalize on this sentiment. Many Chinese are now accepting the Communists only because they feel the United States has abandoned China to its fate. At the first real sign of American interest in China these marginal millions would abandon the Communists.

As a practicing warrior for many years, I am convinced of the complete futility of war. It settles only problems of the past and creates the new problems of the future. There is no place in the world today for the narrow, competitive nationalism that sparks the tinder of war. My long experience as an airman has taught me the folly of the artificial borders of political states. The ease with which the airman passes them by with his load of peaceful commerce or atomic destruction should have served notice long since that they are no longer necessary.

I am convinced that the people of this planet must ultimately and inevitably move toward a single form of world government if civilization is to survive. But it is our immediate task to see that this world government comes as a mutual federation of free peoples rather than through the ruthless domination of a master state enslaving all the others. In this struggle there are still many battles that cannot be avoided. The most critical of these now is to prevent the Communists from organizing the vast and rich land mass of China under their whip and turning its weight against us and the other free peoples of the world.

CLAIRE LEE CHENNAULT.

SHANGHAI, CHINA, *January 1949.*

News Letter to Constituents

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my own remarks, I am including my semimonthly news letter to my constituents:

JANUARY 25, 1949.

IN THE MILL AT WASHINGTON

(By Congressman LAWRENCE H. SMITH)

INAUGURAL DAY, JANUARY 20, 1949

The weather favored Harry Truman on his great day. It was midwinter, of course, and for 2 days before weather reports said: "A blizzard is sweeping across the Plains States." We did not see how it could miss Washington. The city was in a gala mood, a carnival atmosphere prevailed with bleacher seats along the entire parade route. In anticipation of bad weather, snow-removal machinery was on hand from Pennsylvania, Ohio, Maryland, and Virginia. But the day was beautiful—clear and crisp. The next day it rained steadily. Harry Truman's luck held out. One Republican said: "How can you beat him when the Lord is on his side?"

PRESIDENT TRUMAN'S ADDRESS

As he spoke to more than 25,000 people in front of the Capitol, he was a confident individual. He was not hampered by the shadow of Roosevelt. This time he was on his own, it was his day. He made the most of it. The crowd was in a serious mood.

His speech was a declaration to the world of his aims for the United States. Peace was his central theme. But he lashed out against communism; Russia was the target and the Soviet ambassador who was present refused to comment. Truman's four points covered the United Nations, support for world economic recovery, military agreements for security with freedom-loving nations, and, finally, said he, "We must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas." This means a world WPA and its objective is to cushion a recession, now on the way. New Deal strategy.

His program is an ambitious one. It will not be achieved in the next 4 years. Much of it is controversial. The country is united in the desire to prevent the spread of communism. Is it not strange, however, that he did not refer to communism in the United States? While he was uttering his condemnation of communism abroad, ten Communist leaders were on trial in New York for subversive activities. Yet the President has said that this is only a "red herring."

He spoke of liberty and freedom for all peoples everywhere—yet while he did so the Red Communists in China were taking over. And our own foreign policy is responsible for this disaster. Roosevelt, at Yalta, put the skids under China in exchange for a promise by Stalin that Russia would enter the war against Japan. All our efforts and sacrifices in the Pacific have now gone down the drain. Russia commands China and Manchuria, so how can we prevent Japan, the Philippines, Australia, India, and all of the Pacific from going communistic? Here are planted the seeds for world war III. It is Mr. Truman's problem and responsibility.

MILITARY FASCISM IN SOUTH AMERICA

How can we reconcile his statements about the necessity for freedom, when, as he spoke, the State Department was giving full recognition to military dictatorships in South America? Civilian authorities, duly elected by the people, have been overthrown by the military groups in Peru, Venezuela, and El Salvador. Yet his administration affirms and supports such conduct. Is this in the spirit of liberty and freedom? This is unadulterated fascism. Where are these so-called liberals who rave and rant about Fascists? Our foreign policy is a mess. The story is a longer and sadder one and someday it will be told.

A RICH MAN'S TAX BILL?

That's what Mr. Truman said of the tax bill passed by the Eightieth Congress during the last campaign. But since his election he has made no mention of it. He has said that taxes should be raised only on the middle and upper bracket incomes which he defines as starting at $6,000.

Now let us take a look at that tax bill and see what it did. (1) It removed about 7,000,000 taxpayers in the lower brackets off the tax rolls giving them a tax saving of 100 percent. (2) A married couple with two children and $2,500 income got a tax reduction from $95 to $16.60 or an 82 percent cut; with an income of $3,000, the reduction was from $190 to $99.60—a 47 percent cut; an income of $4,000, the tax was reduced from $380 to $265.60—a 30 percent cut. (3) Of all the revenue lost to the Government by this "rich man's tax bill," 71 percent went to families or individuals with incomes of $5,000 and under. Obviously, the charge of "rich man's tax bill" was just campaign oratory and Harry Truman knows it. Incidentally, the day before his inauguration he signed a bill giving himself a tax exemption on $90,000 of income. These are facts the people should know and understand.

THE PRESIDENT'S BUDGET

It is not unfair to say that the President's proposed budget for 1950 offers a comprehensive blueprint for a new tidal wave of Federal Government expansion into State-local fields, into industrial enterprise, and into social welfare and military services new to the American scene. Spending innovations in the proposed budget reflect a new doctrine enunciated in a single sentence in the President's economic report of January 1949, which reads: "We want the greatest amount of economic freedom that is consistent with the security and welfare of the people; but we do not want to sacrifice that security and welfare because of narrow and selfish concepts as to the acceptable limits of Government action."

Please note his reference to "narrow and selfish concepts." For 160 years our American system has proceeded on a philosophy which is exactly the reverse of what appears to be the sense of the President's statement. Until now our people have been presumed to want the greatest amount of economic security consistent with the retention of their personal freedom; and they have possessed very definite concepts as to how far big Government should be permitted to dominate their lives.

PRICE SLUMPS

The cost of living is going down. This is good news for every consumer. This slump is in response to the operation of the law of supply and demand, not of arbitrary governmental controls. The advocates of consumer controls are strangely silent. Farm prices generally are going down. The farm leaders are concerned about it and this will raise the whole question of farm subsidies. These leaders are not in agreement on the support program. City people must never forget that the farmer is the most important economic factor in their lives. He produces 90 percent of our food. And that's important, isn't it?

TAFT-HARTLEY ACT REPEAL

The labor bosses in Washington are furious. They have demanded repeal of Taft-Hartley Act—pronto. But on the Senate side they have been advised to take it easy. Labor, taking credit for the Truman victory, insists that the strategy must be to repeal that law and substitute the old Wagner Act, then (2) consider a new bill. In the House this view will prevail, but not in the Senate. Chairman THOMAS, Democrat, plans to hold hearings on the repeal legislation which will take about 6 weeks. We are advised by those who are administering the present law that it is a good one even though it is not perfect. Some day the average union member will acknowledge that it is working for his benefit.

Please note: Promptly advise change in your address.

The Truman Program

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editoral from the Wall Street Journal:

THE TRUMAN PROGRAM

(Reprinted by special permission of the Wall Street Journal)

There is a rather general inclination to believe that the program which President Truman has offered to Congress in his three separate messages—state of the union, budget and economic report—is made up of things which the errant political breezes blew in through the window.

The idea is by no means wholly incorrect. Certainly in his bid for reelection Mr. Truman stole some of Henry Wallace's thunder. Some of his bids for labor and farm support conform to no logical economic program.

But the judgment that there is no element of cohesion in what Mr. Truman proposes seems to us faulty; to accept it is likely to weaken the case of those who oppose or question many of its phases.

When the experience of the late 1920's and early 1930's turned attention to means of leveling off the so-called "boom-and-bust" cycle we began to hear about something called the "compensatory budget" or sometimes the "compensatory economy."

The bare bones of this idea was that the Federal Government could, by use of its taxing and spending functions, keep things on an even keel. If industry and trade lagged, they could be stimulated by Government fiscal action; if they threatened to run away, there could be retarding action.

The sponsors of the idea said that it was unnecessary for the Government to set up and exercise the controls involved in the managed economy. The function of Government was to create the climate in which private enterprises would act to bring about a desired result.

The idea was experimental and rather nebulously so. Furthermore it involved some knowledge of things which the man who runs as he reads—which is the bulk of us—did not have.

But presently something new was added to this idea. That something was the slogan "full employment." People understood that. If the Government by the exercise of a few controls remote from the everyday affairs of most people could bring about a condition by which all people who wanted a job could have one, let's be about the matter.

So soon after the end of the war there came up in Congress a bill which eventually was passed and which became known as the Employment Act of 1946.

During his career in the Senate, President Truman had taken an interest in this bill and while he was not formally one of its sponsors, he had been sympathetic to it.

In its original form the bill was sweeping. It made jobs for everybody who wanted to work the responsibility of the Federal Government. It made the purpose of full employment the touchstone of Government policy.

Before the bill finally was passed, it was considerably modified. The language was made less sweeping. Very sensibly also, it was recognized that production and not merely employment was the criterion of prosperity or the lack thereof. But the bill did become law and under its provisions the President named his council of three economic advisers.

The advisers, presumably with the agreement of Mr. Truman, have given the bill a rather broad interpretation. Sometimes it seems that they have forgotten that it was amended and like to believe that it was passed in the form originally proposed.

It seems to us that this Employment Act of 1946 furnishes some key to the objective which Mr. Truman has in mind.

While his program has some elements of chaos, some measures which seem to work at cross purposes—high farm prices and low food costs, for instance—it is not wholly without some conscious objective.

Neither can it be charged with being avowedly and immediately socialistic. It might end up at that destination, but we doubt if Mr. Truman wants it to or thinks it will.

It is overstating the case against Mr. Truman's program to say that he contemplates the planned state or the socialistic state. It is also said that he contemplates the welfare state. That is right, so far as it goes. The more accurate description seems to us the full-employment state.

We doubt that what President Truman appears to have in mind is practical, if we are to retain a Government of divided powers.

The idea that industry and trade can be stimulated and retarded by Government turning on a spigot now and turning it off later surely envisages a power which can make the adjustments at the proper time.

If the one who is to do the turning must stay his hand while 531 Members of Congress debate the matter, the timing that is necessary would be thrown off. So if the plan is workable, it is only workable by a central authority which has the power of action.

Then, again, under this scheme someone in authority attempts to set the economic climate which will stimulate or retard growth.

Suppose the economy, or some part thereof, insists it is cold when the authority has decreed that the thermometer shall register 72. What do you do in such a case? The answer is not difficult.

Many people in Washington think the present climate is right for the steel industry to expand. But it does not expand as fast as they would like. This, they apparently conclude, must be due to studied recalcitrance of steel men. So they propose to build Government plants.

When the Government undertakes to rule the economy or guide the economy and when its initial measures do not work, then it must seek other and more direct measures. And once that process is started there is no end short of complete control.

However, that is not at this time the greatest force pushing us in the direction of the compulsory state.

President Truman may envisage one kind of a State. His opponents say he is carrying us toward another kind.

It is a good deal more than possible that they are all wrong and that we are already in the kind of a State that none of them want; furthermore that we don't quite know where we are or how we got there.

Considerable could be said to prove that we are in the "military" or the "garrison" state.

Preoccupation with rearmament furnishes an important element of the full employment state. It gives the Government an unanswerable and constant justification for taxes and spending.

That assistance is transitory, however. Military expenditures are for things mostly nonproductive and it is only by constantly increasing the facilities of production that full production with full employment can be assured.

So far as President Truman's program has developed, his request for direct controls—allocation, price fixing, rationing, etc.—are traceable to the situation caused by military expenditures, including in that category the European recovery funds.

It is possible that if the military necessity was not present, President Truman would still eventually be driven to these devices as the rather remote Government controls failed to perform as directed.

We think that would happen. President Truman's economic advisers apparently do not think it would.

We can only hope that before Congress grants extraordinary powers, it go into the reasons for them, that it make clear their purpose and that it limit them as to time.

We have a situation where the man who came to put out the fire may settle down and join the family.

Protest Influx of Lawless Elements of Other Sections of the World

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. DAVIS of Georgia. Mr. Speaker, the various posts of the American Legion in the Fifth Congressional District of Georgia, which I represent, are aware of the menace which confronts our country because of the influx of lawless elements from other sections of the world. While all immigrants are not undesirables, nevertheless, there are many undesirable and dangerous aliens in our country, and they continue to come. For our preservation, it is necessary to deport from time to time dangerous and undesirable aliens. Present deportation laws need strengthening, and we need stronger laws to provide for the detention of undesirable aliens who have been apprehended, pending completion of arrangements for deportation.

Representative HOBBS, of Alabama, on January 3, introduced House bill H. R. 10, the purpose of which is to facilitate the deportation of aliens from the United States, and to provide for the supervision and detention pending eventual deportation of aliens, whose deportation cannot be readily effectuated, because of reasons beyond the control of the United States.

On January 25 at a meeting of Asa Warren Candler Post, No. 65, of the American Legion, at Brookhaven, Ga., a resolution was adopted supporting House bill 10, and Commander George Willis, of that post, has sent a telegram to me informing me of the passage of that resolution.

For the information of Members, under leave previously granted, I insert Commander Willis' telegram herewith.

JANUARY 26, 1949.

Hon. JAMES C. DAVIS,
House of Representatives,
Washington, D. C.:

Meeting of Asa Warren Candler Post, No. 65, American Legion, Brookhaven, Ga., passed a resolution requesting your support of House bill 10.

GEORGE WILLIS, *Commander.*

An American Speaks

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, Hamilton Fish, long a Member of the House, was ever an outspoken enemy of communism. After the long-continued efforts of the Communists, friends of the Communists, and those whom Mr. Fish had antagonized by his outspoken Americanism, his enemies were finally joined by Governor Dewey and they succeeded in defeating him.

Congressman Fish, in spite of the campaign of vilification which was waged against him by New Deal and left-wing columnists and radio commentators, had the confidence of the people of his district—the home district of President Roosevelt. Unfortunately for the country, when the Communists, their sympathizers, President Roosevelt and his friends, Governor Dewey and his political allies all joined in the opposition to Fish, he lost the general election, being defeated by a Democrat who was supported by Governor Dewey. It is possible that a few Republicans who might have voted for Dewey, remembering his opposition to Fish, did not vote at all last November.

His return to Congress was prevented but that fact did not silence him and he is still speaking out for the Republican Party, for America.

I commend to your attention a letter received from him on January 26, and which reads as follows:

NEW YORK, N. Y., *January 25, 1949.*

DEAR CLARE: The Republican Party is confronted with a definite crisis. It must face the vital issues squarely, and not continue to dodge and squirm as it did in the recent disastrous Presidential campaign.

The Republican Preidential nominee threw away certain victory by conducting an inept and evasive campaign. He fiddled a "me too" motif to most of the New Deal foreign and domestic policies, or, just as ruinous, failed to present any constructive ones. He declined to uphold the record of the Republican Eightieth Congress, and thereby contributed to the defeat of the Republican majorities in the Senate and House. He even side-stepped the long record of Democratic appeasement of communism at home and abroad for fear of losing the votes of New Deal supporters of F. D. R. which he never could have gotten anyhow.

We permitted China to be sacrificed to the Communists because of the whims and prejudices of the left-wingers in the State Department, without a word of protest for fear of undermining a mythical bipartisan foreign policy, from which President Truman received credit for what was good, and successfully tied the hands and sealed the mouths of the Republicans on the miserable failures in China, Greece, and Germany.

It would be unfair to blame the members of the Republican National Committee for the inefficient management of the campaign because they were practically ignored by the Republican standard-bearer who would have lost New York State by 45,000 votes if it had not been for the big vote cast in that State for Henry Wallace.

What can the Republican National Committee do?

1. It can serve definite notice that no twice-defeated Republican candidate for President has any justifiable claim, in law or in fact, to titular leadership of the party. It is a myth that must be exploded immediately, or else we will suffer the consequences of the 1948 fiasco for the next four years.

2. It can render a real service by calling a "grass-roots" Nation-wide conference next summer or fall to give the fullest opportunity to all Republicans to discuss future policies and promote the welfare of the party and the country.

3. If Representative SCOTT is unable to give his entire time to being a year-round chairman, it can select a full time chairman or director with a salary of $15,000 and an expense and traveling allowance of $10,000, preferably from the Middle West.

4. It can insist on affirmative and courageous leadership along constructive and progressive lines, and put an end to the "me-too, no-but" variety that spells the disintegration of the party.

It should be the aim of the Republican Party to unite all conservatives, true liberals and progressives against the New Dealers, radicals, Socialists, and Communists who have thrown economy out of the window and are urging further regimentation of our people through bureaucratic statism, vast increases in Federal spending, virtual confiscation by taxation, the socialization of our industries and the extension of political and economic totalitarianism in our own country similar to national socialism which we helped to destroy in Germany.

Yours for party success and the preservation of our American form of government.

Respectfully submitted.

HAMILTON FISH.

The Nebraska Legislature Opposed Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. CURTIS. Mr. Speaker, the Nebraska Legislature has forwarded to me their Legislative Resolution 5 setting forth strong opposition to Federal aid to education.

Under leave to extend my remarks in the RECORD, I include a copy of said resolution:

Legislative Resolution 5

Resolution memorializing the Congress of the United States to defeat Federal aid to education

Whereas there is pending in the Congress of the United States a bill, Senate File No. 246, providing Federal aid to elementary and secondary schools of the United States;

Whereas should this bill be enacted into law, there is reason to believe that it will lead inevitably to Federal control and supervision of the public schools of the Nation, thereby taking control out of the hands of the local districts;

Whereas the several States are now able through their own taxing powers to make ample provision for their elementary and secondary schools without Federal aid; and

Whereas the Federal Government is already burdened with a staggering debt of more than $250,000,000,000, calling for retrenchment if the solvency of the United States is to be preserved: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in sixty-first session assembled:

1. That Senate File No. 246, or any similar legislation, now before the Congress of the United States be defeated.

2. That copies of this resolution be transmitted by the clerk of the legislature to the Vice President of the United States as presiding officer of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to each Member of the Congress of the United States from Nebraska.

CHARLES WARNER,
President of the Legislature.

Government Spending

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent:

PILING UP OF SPENDING BY GOVERNMENT SEEN BY RITCHIE IN 1936—LATE MARYLAND GOVERNOR FORETOLD TREASURY RAIDS FOR POLITICAL ADVANTAGE

(By Frank R. Kent)

Back in 1936, when the so-called New Deal had sufficiently developed to make its purposes clear, the late Governor Ritchie expressed the conviction that something had been started in this country which could not be stopped. The current Truman program, with its supporting forces in and out of Congress, attest the truth of that statement.

What the Maryland Governor meant was that once a national administration, instead of standing in the path of radical and unreasoning elements, organized and led them, opening wide the Treasury doors, casting aside moderation and restraint, buying political support with the people's money, then the direction could not be reversed. Once we gained impetus on the "tax, tax, spend, spend, elect, elect" track, we could not go back—we had to go forward.

It seems impossible for thoughtful men to look at the present situation without concluding that we are headed for economic disaster. From the White House has come a score of recommendations for spending more money for new experiments and at the same time expanding the old ones in size and cost. If only a part of these are approved, the dangerous lopsidedness of the whole Federal fiscal structure will be greatly enhanced.

Senator HARRY BYRD, of Virginia, who knows this situation better than anyone else, predicts a $10,000,000,000 deficit for the year 1950–51. From the groups with which the administration is politically linked—particularly the labor bosses—there is great pressure to go far beyond the President's proposals in the way of social-security extension, compulsory health insurance, wage increases, food subsidies, etc.

RECKLESS PROMISES

Let the Administration indicate a desire to proceed along these lines (in accord with its reckless campaign promises) and it is almost irresistibly urged to leap and run, instead of walking and looking. An example is in the suggestion, inserted in the President's message, it is said on the advice of Leon Keyserling, one of his economic advisers, that the Government examine the possibilities of increasing steel production through the use of Government funds. Immediately a bill sponsored by three left-wing Democratic Senators is presented to appropriate $14,000,000,000 for this purpose. Another example—the President's request for an increase in the minimum hourly wage—is followed by a Senate proposal for a guaranteed minimum annual wage.

So it goes all down the line, and not the least significant thing is that Republicans are pressing hard for such proposals as well as the Democrats. Obviously the Republican theory is that they have been regularly defeated because these great voting groups have been taken over by the Democrats; that this is due to the favors with which the Democrats have bought their support; that the only way for the Republicans to share in this support is to pay as high or higher price for it. Accordingly they insist that the Republicans must make the party "virile" by standing for "liberal constructive and progressive" policies. So far no one has thought of any such which does not appeal to one or more of these voting groups and does not increase the cost of Government and the cost of doing business.

From neither the Administration nor the "modern" Republicans is there more than a perfunctory word about economy. It is interesting that neither any longer favors taxing any one except the well-to-do; that the old idea once accepted by all as sound, that while the rich should always carry the load, every citizen, according to his means, should pay something toward the support of government in order that the Nation as a whole should be tax conscious and economy minded, is now in the discard.

FEW CARRY ON FIGHT

There are, of course, a few in both parties who still hold to these notions and are not afraid either to voice or fight for them, but they have not been able to get far—certainly not far enough to reverse the direction—or even slow down the spending forces. Denouncing these men as reactionaries, small minded, backward looking, penny pinchers, concerned only with property rights, disdainful of human rights, not aware that anything has happened in the world since the Hoover administration, etc., is the favorite—in fact, the only—answer to their insistence that unless some real effort to put on the brakes and recover control of Federal finances is made at this session, it will be too late.

Clearly, if we do not regain this control, all we can do is wait for the big bump which may or may not bring us back to our senses but certainly will be attended by great pain for us all.

Such is the view of many members of Congress and most of the better grade men in the Administration, none of whom, however, is doing—or intends to do—anything about it. The reasons are clear—both parties have gone overboard for the spending policies and the pressure groups in the belief that only through them can elections be won. Considering what they can contribute in the way of votes, there seems no political nourishment in the advocacy of economy, reduction, reason and restraint. No man will

grow popular these days doing that. Apparently, that is the way to make enemies and lose friends. Apparently, it now takes more character and courage for a public man to face the facts and tell the truth than most of them possess.

Only a few, like Senator BYRD, ever try it. James A. Farley got close to doing so in a New York speech a few days ago. Yet it is difficult to believe that if the men in both parties who think alike on this vital business were bold enough to put the national interests above their personal interests, they not only could arouse the country but influence their parties and get a response that would profit them politically as well.

A Neutral European Federation

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. PATTERSON. Mr. Speaker, I have received from a constituent a communication and excerpts from newspapers outlining his views on the proper affiliation between our country and the nations of Europe. Mr. Hoogendyk suggests a neutral European federation as an alternative to the contemplated military alliance being designed at present.

I believe his views to be pertinent and meritorious enough to warrant the serious consideration of the Members of Congress.

SHARON, CONN., *January 17, 1949.*

MY DEAR MR. PATTERSON: Some time ago I received your letter containing your report to fifth district constituents.

At present $3 out of every $4 of the present budget are to be spent on either preparation for war or on debts incurred by previous wars. Never before has the future of this country depended as much on our foreign relations.

In a very brief paragraph of your report you refer to our hope that by our present efforts we may bring about a more rapid and complete recovery of European countries.

You are undoubtedly aware that our present policy of containment of Russian Communist expansion is springing already some very bad leaks. On the whole, Washington is not very optimistic about the ultimate results even of the Marshall plan. One thing already appears certain—that unless the European nations will be able to unite in their efforts for recovery and unless the Marshall plan be extended over a longer period than anticipated, there will be in Europe a return to economic chaos.

The proposed Atlantic military pact will provoke for a great many reasons a great deal of opposition in the Senate. There is furthermore tremendous opposition in some European countries against any military alliances, which will ultimately lead to another war. Without going into any of the details involved, I nevertheless feel that you might be interested in my proposal for a neutral federation of the states of continental Europe with multipower guarantee.

An ever increasing number of prominent Americans with distinguished records in foreign affairs are interested in my proposal and all feel that it merits the most careful consideration and study by the Department of State.

The Department of State is already fully acquainted with all details of the plan and so are our delegates to the United Nations and many other officials.

The enclosed copies of clippings will give you a general idea of the proposal. Trusting that this information may be of interest to you, I am

Sincerely yours,

F. VANROSSEN HOOGENDYK.

[From the New York Herald Tribune of August 10, 1948]

A NEUTRAL EUROPEAN FEDERATION—UNION OF CONTINENTAL STATES, NOT WESTERN GROUP, PROPOSED

To the New York Herald Tribune:

In the blockade of Berlin, Russia again holds the offensive. It is she that once more has chosen the moment at which to embarrass her former allies—this time by forcing them to improvise hurriedly a counterproposal more suitable than that for a separate west German state.

We have had ample opportunity to acquaint ourselves with the Soviet viewpoint. Russia is in urgent need of recovery and for that reason most likely would prefer to cut her cost of armaments. But notwithstanding the fact that we have allowed her to expand beyond reason, she still feels insecure. The very reason for this stems partially from our bitterness over these unnecessary and preposterous concessions made to her—unnecessary because they were made at a time when our military might in Europe was at its all-time high and Russia's badly sapped by the German armies.

The creation of a west German state, unless war is being considered a mathematical certainty, which we may assume it is not, would be an irreparable blunder, because it would mean acquiescence in the absorption of eastern Germany by Russia and the lasting division of the continent in two opposing blocs, openly two military alliances directed against each other. Obviously such an arrangement cannot ever be a permanent solution of either the German or the European problem. It would be solely a makeshift and a dangerous one at that.

Having observed our continued lack of acumen in foreign affairs during the postwar period and having suggested a concrete proposal for the over-all solution of Europe's problems, may I once more point out the grim danger and likelihood of defeat of our European policy to date. If and when the German people decide for themselves that of two evils a Russian alliance will, for them, be by far the least costly, then we may well consider ourselves defeated, unless at this last hour we can table an acceptable proposal, protecting and favoring all contestants in like manner, one therefore that will lead straight toward economic recovery of all Europe and Russia.

The creation with our approval of a western European union including an independent west Germany, plainly directed against the Soviets, foreshadows to the German people another war, in which Germans will kill Germans and in which what remains of their country will be further ground down. Not only Germany but also France is alert to this danger, as she has repeatedly shown. This fear is a strong argument used by Communists all over Europe.

Russia from her viewpoint is justified in encouraging German nationalism and demand for a unified Germany in opposition to our present encouragement of a west German state within a western union. In doing so she has a fair chance of winning the Germans ultimately to her side. The latter realize that 10 years hence Russia will still be right on their doorstep, while not a single American soldier will be left on the Continent. The Germans will not thank us any more than Hitler for having helped to bring about this situation, but may have to accept the facts.

We may assume that the Kremlin and our State Department both fully realize that Europe can never recover economically nor attain permanent peace under two competitive recovery programs. In this respect Russia is, of course, even more concerned than the United States. Every European economist knows that the free flow of trade between western and eastern Europe is the prerequisite of European recovery. Hence, for example, the prompt objection only the other day by the government spokesman of one of the Benelux countries to our blocking all rail traffic from the west into the Soviet zone, as a reprisal against the Russian blockade of Berlin.

My proposal for the establishment within the framework of the United Nations, as provided for in the Charter, of a neutral federation of the states of continental Europe, with a federal constitution that would make all foreign military alliances unconstitutional and the neutrality of which would be guaranteed by the Union of Soviet Socialist Republics, the United Kingdom, and the United States, would meet all requirements for general recovery and the peaceful solution of Europe's problems, including the negotiation of German and Austrian peace treaties, as well as of ample security for the guarantors themselves.

Certainly within such a neutral federation would be found the guaranty that Germany would never again be able to assert herself as a military power. Germany did actually have an unsolved problem in her expanding economy hampered by trade barriers, but within a neutral continental federation such trade barriers should ultimately disappear as they are gradually within the Benelux countries. Moreover the other European countries would have proportionate access to German coal, steel, foodstuffs, etc., and vice versa through federal allocation commissions.

The federation as a whole would benefit by the ability of some noted satesman of the smaller nations. Both the wisdom and integrity of these men are sorely needed, but because they do not represent one of the superstates, their contributions are mostly lost to the world at large today. Free elections could be supervised by federal commissions, as could the control of the manufacture of armaments.

The proposal would eliminate once and for all the military superiority and inferiority complexes of all European countries, large and small. Both the Ruhr and the Skoda works, instead of again making armaments for two opposing worlds, would be working in a joint effort to rebuild European economy. Trade would again flow freely between the states within the federation and between them and the rest of the world.

We have it within our power not only to propose such a permanent solution but also we can exert considerable pressure to bring it about. In due time Russia might well agree to this proposal which instead of being directed against her gives her full security against attack from the west and aims directly at the natural and certain recovery of Europe as well as of Russia herself. Furthermore, it would allow early withdrawal of all non-European armies of occupation, substituting them with a federal police force if necessary. Automatically it would abolish the competitive character of American and Russian relief. It would bring about at least partial disarmament by the great powers and last but not least its immediate effect would be to relieve the present state of world tension and the restoration of self-respect everywhere. By this proposal all pending problems would be lifted on a common plane from which they would be far less apt, as

they are now, to sink back into the mire the moment they come up for discussion with the Soviets.

F. VAN ROSSEN HOOGENDYK.
SHARON, CONN., *August 7, 1948.*

[From the New York (N. Y.) Times of May 26, 1948]

FEDERATING EUROPE FOR PEACE—WRITER PROPOSES A NEUTRAL FEDERATION OF CONTINENTAL POWERS

TO THE EDITOR OF THE NEW YORK TIMES:

A weakness in pleading with the peoples of Europe our case against Russia has been their justified claim that our plans in their regard are subject to continual changes. Insofar as these are due to our particular kind of democratic Government, it is hard to effect amelioration. There is, however, one aspect in regard to this complaint which admittedly constitutes one of our greatest handicaps: that of the lack of an enduring American foreign policy.

To our steadily deteriorating relations with Russia there is no immediate solution. They are the outcome of events and actions which cannot now be made retroactive.

Although it is apparent that we can expect the present Russian Government today to oppose any plan advanced in good faith by the United States, the following, which I have advocated for Europe for many years, is, I believe, the only one that offers any chance at all for ultimate agreement. Meanwhile, and this I hold as of the greatest importance, it would at once command the respect of all European peoples and eventually even of the Russian people.

Once in effect, it would not eliminate our differences with Russia elsewhere in the world. But since it would establish permanent peace on the continent of Europe, it would greatly reduce the chances of armed conflict between Russia and ourselves.

GUARANTY OF NEUTRALITY

The plan is for a federation, within the framework of the United Nations organization, as provided for in the Charter, of the states of continental Europe with a federal constitution that, like the Swiss, would make any foreign military alliances unconstitutional. The neutrality of the federation to be guaranteed by the U. S. S. R., the British Commonwealth and the United States in the same manner as the Powers of the Congress of Vienna and the Treaty of Paris of November 20, 1815, guaranteed the perpetual neutrality of the Swiss Federation.

If this plan would be firmly established as part of our foreign policy, it would irrevocably put the United States on record with an enduring, positive, constructive and on our part unselfish policy for permanent peace and freedom for Europe. It offers protection, moreover, to both Britain and Russia, as well as ourselves.

The present pact between the Benelux countries, France and Britain, is primarily a military alliance, necessitated by present circumstances. However, we can propose that it be transformed into a neutral federation of continental powers only, when and if Russia and Britain agree. Should Britain retain any military alliances on the continent, then approval by Russia would obviously become illusionary. Moreover, Britain and the British Commonwealth will always remain our natural allies, and will always be considered so by Russia.

To Britain as well as ourselves the advantages would be enormous, for Europe, federated and neutralized, would get on its feet sooner and with less assistance. The proposed plan, when it should finally be effected, would hold out further the promise of partial and increasing possibilities for disarmament and the hope that, if once we should have arrived at a working agreement with Russia in respect to Europe, we might accomplish more.

It is being fully realized that we have every reason to distrust Russia as a direct neighbor to such a neutral and militarily weak federation. However, whatever we decide upon, Russia will retain this geographical advantage over us.

TO IMPLEMENT AID

While nothing could have created a more favorable effect on the European situation than the ERP, nothing in turn would bolster its effect as much as its implementation by an enduring all-round beneficial European policy on our part, holding out not only a promise, but a guaranty for permanent peace and freedom.

The proposed plan concerns regional integration. As such it has by its nature limited objectives. It has many ramifications, and many difficult economic and political problems will have to be worked out and overcome before it could go into effect. Yet it appears that all other proposals offer more difficulties, greater danger, and far less chance of eventual agreement.

Our present show of military strength to counter Russian expansion could be and must be maintained until the proposed federation of the continental states of Europe would be consummated. Meanwhile, a clear formulation of the plan as part of our foreign policy would disarm Russian propaganda of the argument that our policy of containment is solely aimed at jockeying for position in the war we allegedly intend waging against her, using the European states as pawns.

F. VAN ROSSEN HOOGENDYK.
SHARON, CONN., *May 24, 1948.*

Science, Religion, Faith

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. BREHM. Mr. Speaker, in my opinion, one of the greatest news stories in many generations appeared in this morning's press. I refer to the article entitled "Bible's Story of Creation Supported by Science Study." There has never been too much conflict between science and religion, and I sincerely trust that this present study may serve to lessen the distance still more.

It is difficult in this age of skepticism to take by faith some of the man-made suggestions which are being presented to us. However, it should not require unlimited faith to accept the Biblical teachings, and I sincerely believe that if we were willing to accept the divine word by faith and follow those divine teachings that they would go far toward helping us solve some of our perplexing problems.

The first sentence of Genesis says, "In the beginning God created the heavens and the earth." Up until now science had held to the belief that the earth was created much later than the heavens were created. The article uses the words that "the earth was a very late comer." My humble opinion is that science is the late comer in not having accepted by faith the handiwork of God rather than trying to solve His mysteries.

China Falls—Truman's Responsibility—Now the Russians Can Afford To Offer Peace

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the fall of China to the Chinese reds is a tragedy of great importance to the United States. The people of this country do not fully realize this fact. It is a responsibility that President Truman and the Democratic Party cannot avoid, nor can they laugh it off.

It is no mere coincidence, Mr. Speaker, that Stalin has just offered to talk peace terms with Mr. Truman. Russia now has China under its control, it has gained its objective in the Far East without firing a shot. And the basis for the double cross occurred at Yalta when Roosevelt dealt our ally China out of the game. The Yalta Conference will go down in history as a "black day," even worse than Pearl Harbor.

Mr. Speaker, under leave to extend my remarks I include an article by that prominent writer Mr. Mark Sullivan, as it appeared in the Washington Post for January 29, 1949:

REPUBLICAN HOPES

(By Mark Sullivan)

IMPLICATIONS OF CHINA'S FALL

The meeting of the Republican National Committee at Omaha this week dealt almost wholly with a not very vital matter of intraparty organization, a controversy over choosing a chairman of the national committee. In what went out through news channels, there was little to impress the public with much beyond lack of party morale and self-confidence.

This is an epitome of the Republican situation ever since the November election, nothing very important to the public taking place within the party, and the public not giving much thought to it. It is the opposition party, but not an opposition party eagerly on its toes for fray ahead—in this case the congressional elections next year and the Presidential one in 1952. It has had the downcast appearance of a party that had been 14 years out of power, that had made a strong start back in the congressional elections of 1946, that confidently expected to complete the comeback in the Presidential election last November—but instead got such a blow as has rarely if ever been experienced before by either party. The Republicans have been dazed, not so much by the degree of their defeat, which was really not great, as by the utter unexpectedness of it.

In this condition—confused uncertainty within the party, indifference to it on the part of the public, and elated confidence on the part of the party in power—there took place an event which must drastically change the political picture. When the fall of China to communism is fully grasped; when there is understanding of its causes and its consequences, especially to us in our relation to Russia and communism; when it is seen as the climax of a long course of policy and action by our own Government, our people are likely to be deeply moved and to express themselves politically. Such political consequences as follow cannot

avoid being detrimental to the party that was in power when the fall of China and the events leading up to it took place.

During some 2 years, beginning after late 1946, the United States under the Truman administration has become the spearhead of resistance to the attempt of Russia and communism at world domination, the head and front of one side in a world conflict. This has had the complete approval of our people, including support by the opposition party for a bipartisan policy. Our people have not merely seen the only safety for our own Nation to lie in resisting Russian and Communist aggression, they have taken pride in our role of head contender against communism throughout the world, have given heart to the fight and vast amounts of goods and money to carry it on.

In the world conflict we have now suffered an extreme reverse. We have seen further that we have ourselves been a large cause of the reverse. Preceding the period of resistance to Russia, there was a prior period, reaching back into the Roosevelt administration, in which our policy was one of strong friendliness to Russia. During that period President Roosevelt, at the Yalta Conference in early 1945, made agreements with Stalin by which Russia at the end of the war got territory and other advantages at the expense of China. From that territory and with these advantages came impetus and headway for the Communist drive that has now gone on to overthrow of the Chinese Government.

In most countries, when serious reverse is suffered in a conflict having in any serious degree an aspect of war, actual or potential, the tendency is to reject the party in power at the next ensuing election. Another tendency is to turn out the party in power at the first election following a war, as in the English defeat of Churchill and the Conservatives at the end of the recent war, and our country's defeat of the Democrats following the First World War.

By this tendency of peoples and these precedents, the Democrats and President Truman should have been defeated last November. The many predictions of defeat were sound enough as an interpretation of history. In any thorough examination of the reasons Mr. Truman was not defeated, it is not merely a loose "if" to suggest that if the fall of China had taken place last September the outcome of the election might have been different. By the same token, the fall of China that has now taken place is a foreboding omen to the party in power in the congressional elections next year.

Problem of Displaced Persons in Massachusetts

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Harold H. Hodgkinson:

Twenty-four hundred new Americans will enter the port of Boston during the month of January, according to the latest plans for the arrival of pilgrims to this country under the Displaced Persons Act of 1948. They will go to various parts of the United States as did the arrivals of last November, the first to enter through New England.

The Massachusetts Displaced Persons Commission, a voluntary group, is planning suitable greeting and reception for these new Americans, and a Greater Boston Committee, including all types of organizations, both governmental and voluntary, will see that they are looked after on the pier efficiently and properly started on their journeys to their final places of employment.

The Massachusetts commission, appointed by the Governor, is now engaged in the organization of a policy of operation, including the definition of its exact responsibilities. It has assumed the responsibility for the official welcoming reception at the pier on the arrival of the ships. It is conducting a survey of the needs of the Commonwealth for new Americans and is helping to develop a publicity program which will keep the people of the State informed as to when, how, and where they can apply for and receive new Americans.

As the Massachusetts commission, under the Governor's directive, is advisory it has assumed the above responsibilities under the authority of the United States commission at the request of Chairman Carusi, who is in general charge of the work in the United States under the congressional act of 1948.

In order that the present operation of the entry of new Americans will be understood more clearly, I should like to indicate the present lines of authority. Application blanks for the entry of new pilgrims can be obtained from any one of the following agencies:

The United States Displaced Persons Commission, Washington, D. C.; National Catholic Welfare Conference, 45 Franklin Street, Boston, Mass.; Church World Service, 248 Boylston Street, Boston, Mass.; United Service for New Americans, 72 Franklin Street, Boston, Mass.; Polish-American Congress, 231 Springfield Street, Chicopee, Mass.; Hebrew Immigrant Aid Society, 41 Tremont Street, Boston, Mass.; International Rescue and Relief Committee, 72 Gardner Street, Allston, Mass.

In addition, it is planned to have a local branch of the United States commission, which will have headquarters in Boston within a short time where the latest information and details pertaining to the entry of displaced persons can be secured.

Many questions have been asked which indicate that it is not clearly understood just who is a displaced person. It is our understanding that those eligible for entry into this country under the act must have been in DP camps in Germany, Austria, and Italy before December 22, 1945, and were still in these camps on January 1, 1948. They must be guaranteed employment without displacing anyone from work, have the assurance that they will not become public charges, and have housing that does not displace some other person from such housing.

After the application blanks are secured, they are forwarded to representatives of the United States Displaced Persons Commission in Europe, who select the new Americans. The new Americans are transported to this country on United States Army transports paid for and in charge of the International Refugee Organization. They are looked after in Boston on the pier by the Greater Boston Committee. The national voluntary agencies are responsible for arranging their transportation to their final destinations.

Only two ships have arrived in this country so far. On the first ship arriving in Boston the largest single nationality group was Polish, with 347. The occupations of the group included medical workers, clothing workers, students, farmers, and others. In all, 80 different skills were represented. The religious break-down of these new Americans was 275 Roman Catholics, 118 Greek Catholics, 275 Jews, 96 Protestants, 46 Orthodox, and 3 whose religion was not listed. The pilgrims on the ship went to 27 States, but only a very small number were destined for Massachusetts. Every person should review the needs in their locality and make sure that proper applications be made immediately, since the offers of employment in Massachusetts seem to be lagging although housing is available.

Incidentally on a world-wide program there will be more than 25 ships of the International Refugee Organization moving new citizens to 73 different receiving countries, of which the United States is one, with over 200,000 to be received before June 30, 1950.

At this point I should like to thank the Polish-American Congress for their kindness in inviting me to speak and to help spread the information regarding the displaced persons' activities.

The Massachusetts Displaced Persons' Commission consists of a chairman, 3 vice chairmen, and 12 members. An extremely valuable service is being rendered by these ladies and gentlemen. In the western part of the State the members of the commission are Miss Alice Halligan, of Springfield, and Mr. John Chandler, of Sterling, who are untiring in their efforts toward helping with the arrival and placement of new Americans.

Your speaker had the honor of presiding at the reception of the new Americans on the arrival of the first transport in Boston. As the great ship *General Bundy* nosed into Commonwealth pier, the rails were lined with pilgrims seeing for the first time the shores of New England, where another kind of pilgrim landed in 1620. As the first mooring lines touched the deck the fine band of the United States Navy played the Star-Spangled Banner. The fireboats of the city of Boston drew alongside the Army ship with giant streams of water playing in the air as a symbol of welcome.

The first voice heard over the loud speaker was that of Dr. Frank Jennings delivering an invocation. Then the sincerity of welcome of the Commonwealth and the depth of feeling of the Bay State were expressed in a speech delivered by Governor Bradford. Then there were more words of greeting from Msgr. Augustin Hickey, vicar general of the Catholic archdiocese of Boston, and a 'glad to be here" message from the representative of the President of the United States, Ugo Carusi, Chairman of the United States Displaced Persons Commission, himself a New Englander by birth.

The giant ocean liner was now snugly tied alongside the dock and the initial reception program closed with a benediction from Rabbi Dudley Weinberg.

Your speaker today personally saw the arrangements on the pier, which were most adequate and most effective, talked with the engineer of the 14-car train which was drawn upon the lower level of the pier to take the new arrivals to their destinations; he walked from stem to stern and main truck to keel of the ship and is proud to tell you that no finer reception or greeting or care could have been offered them than that given at Commonwealth Pier on the arrival of the *General Bundy* and during the voyage.

Assisting in the work of sponsoring and receiving 205,000 new Americans to our country is a pleasant and exciting task because the desire to help comes from our hearts and our consciences. The work of the governor's commission has been made very easy because of the magnificent work being done by all the social and religious agencies. They really deserve the major part of the credit for the smooth operation of the act up to the present time.

My own father came down a gangplank from the old world to these shores not so many years ago, so there is a special tug at my heartstrings when I have the honor and privilege of speaking to so many new Americans who will arrive in this country for the

first time and to speak over the air today to so many Americans who have exactly the same history of arriving from a foreign land as in my own case.

I am reminded constantly that it is only chance that finds me in wonderful America and not in a displaced-persons camp in Europe awaiting passage to a land of opportunity. I am sure that everyone in this Commonwealth should be lifted up with new faith, courage, and nobility by our Government's program for new Americans. I am both proud and happy to do all I can to have a small part in helping this great work.

Private Power Lobby Opposes CVA

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. MITCHELL. Mr. Speaker, when President Truman instructed members of his Cabinet and staff to promptly draw up legislative recommendations for a Columbia Valley Authority, this announcement was greeted with a howl of criticism by the private utility lobby. As reported in the New York Times of January 25, the proposed creation of a Columbia Valley Authority "has aroused the private utility industry to a degree of opposition unequaled since passage of the Tennessee Valley Authority bill in 1935."

P. L. Smith, president of the National Association of Electric Companies and the highest-paid lobbyist in Washington, has declared that there is no need for a CVA. Mr. Speaker, this spokesman for financial and private utility interests is hardly qualified, I dare say, to determine what is needed to promote the development and welfare of the Pacific Northwest.

Lobbyist Smith also stated on January 28 that there is no need for a TVA steam generating plant at New Johnsonville, Tennessee. Residents of the Tennessee Valley area will not accept lobbyist Smith's definition of their welfare any more than we in the Pacific Northwest.

Leaders of Northwest farmer-labor organizations, representing more than a million members, are unanimous in their support of a CVA. These groups include the Washington and Oregon State Granges, the Oregon, Washington, and Idaho State Federations of Labor, the Congress of Industrial Organizations, and the Oregon, Idaho, and Montana Farmers' Unions. Added to these are many other citizens, comprising, in my considered judgment, the great majority in the Pacific Northwest, who heavily endorse the CVA program for the region.

Opposition on the part of the private power lobby is not something new. In the past it has been directed against great Federal projects like Bonneville and Grand Coulee on the Columbia River. Those two plants now produce more than half of the power consumed in Washington, Oregon, Idaho, and Montana. The time has come to coordinate the various Federal activities in the region for a more efficient, comprehensive program to overcome the acute power shortage, to control floods, to irrigate farm land and to develop the vast resources of the region. That is the object of the proposed CVA.

In contrast with the selfish and intemperate opposition to CVA by the private power lobby, I wish to cite the following editorial from the Christian Science Monitor of January 27, entitled "The Valley Programs":

THE VALLEY PROGRAMS

President Truman has asked members of his Cabinet to draft a bill setting up a Columbia Valley Authority. Within hours the National Association of Electric Companies, the registered lobby for private power interests, issued a statement condemning the action as the first step "to create a superstate."

In this directive and this reaction there is epitomized an issue likely to remain before the American people for a good many years to come. It is an issue in which, as is so often true, the generally accepted bulk is sometimes completely befogged by dust kicked up from an exceedingly controversial fraction. It is a very sizable bundle of questions, also, which needs to be looked at in the round before it is safe to assume that reprints of TVA necessarily would provide all the answers, or before it is sensible to be stampeded by the extravagant alarms set up by the power lobby.

There are practically no informed doubts that the United States must energetically conserve certain of its resources and develop others if it is to remain great. Nor is there much questioning that the tasks group themselves naturally around great river systems.

And as to conservation, only extreme devotees of laissez faire, perhaps, would deny that it is a Federal Government job. No lesser sovereignty has the power or should have the power to coordinate and integrate programs of flood control, navigation, reforestation, soil restoration, and irrigation as demanded by the diverse needs of vast valleys which simply blanket State boundaries.

There is argument over what agencies should be entrusted with the undertaking—whether semiautonomous authorities, such as TVA, or teams from the regular departments, such as the Reclamation Service and the Army Corps of Engineers. But the biggest and hottest controversy centers about what is at once a development of underexploited resources and a logical by-product of rehabilitating the overexploited.

Whether the primary task be to control floods and build soil, or to irrigate dry lands, or to deepen channels to aid navigation, the chief devices are dams—big dams and little dams. Dams can produce power—electric power. And this electric power offers to the Government and the taxpayer one of the few means of getting direct return on a mountain of bread cast upon the waters. To residents of the valleys it represents, also, a boon to homes and farms and an incentive to industry. From the average citizen's standpoint it is at least reasonable to ask whether power thus produced from public-owned rivers and public-built facilities should be sold back to the people for private profit.

But to the power companies even to ask such a question suggests an entering wedge to nationalization of their industry. Although they are fighting it on every front, the real controversy appears to boil down to whether Government or private enterprise shall distribute this power direct to consumers. And that dispute is hot.

Nevertheless, it should not be allowed to obscure the broad purposes of husbanding and developing the Nation's vital resources in soil and water, or overshadow other important questions bearing on how and when these purposes can best be carried out.

International Military Tribunal—Was It Established To Insure Justice or for Political Punishment?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, in our zeal to fix the guilt for German war atrocities, justice, in many instances, has miscarried. The Nuremberg trials have mocked justice and the mischief that has been done there will eventually rise to haunt us. Already the Chinese Communists are demanding that the Nationalist Government surrender Chiang Kai-shek as a war criminal.

Mr. Speaker, you can bet that Stalin and the Politburo has prepared its list of American war criminals. If it has, then Truman, Marshall, Byrnes, General Clay, Admiral Leahey, and other top-flight civilian and military leaders are on the purge list. Let us not forget that we have established and participated in this unheard-of ex post facto punishment; we have shown dictators and tyrants the way to punish the innocent. There is nothing in Anglo-Saxon jurisprudence to match this precedent.

Mr. Speaker, as part of my remarks I include an article by George Sokolsky apropos this subject which appeared in the Times-Herald for January 25, 1949:

Some of the judges on the International Military Tribunal had a difficult time reconciling justice with political punishment. The idea that an entire nation is guilty for a war and that each individual in it is liable to punishment is certainly not American.

Our view is better expressed by the draft; that is, Congress once having decided upon war, each citizen is expected to do his duty.

In a decision involving I. G. Farben, Judges Curtis G. Shake, of Indiana, and James Morris, of North Dakota, Judge Paul M. Hebert, of Louisiana, concurring, wrote a decision which today is buried in the archives of the Tribunal but which may some day become important should international law and morality ever be resurrected. The judges said:

"To depart from the concept that only major war criminals—that is, those persons in the political, military, and industrial fields, for example, who were responsible for the formulation and execution of politics—may be held liable for waging wars of aggression would lead far afield."

"Under such circumstances there could be no practical limitation on criminal responsibility that would not include, on principle, the private soldier on the battlefield, the farmer who increased his production of foodstuffs to sustain the armed forces, or the housewife who conserved fats for the making of munitions."

And, of course, what is said of Germany is now true of Japan, and may some day be true of the United States, should we ever fight a losing war. For therein lies the danger in all this.

As long as we are victors we can enforce our will, but what we have actually done at Nuremberg and Tokyo tribunals has been to lay down the precedent that the victor alone determines what is to be done to the conquered people.

Judges Shake and Morris make this point:

"It is, of course, unthinkable that the majority of Germans should be condemned as guilty of committing crimes against peace. This would amount to a determination of collective guilt to which the corollary of mass punishment is the logical result for which there is no precedent in international law and no justification in human relations.

"We cannot say that a private citizen shall be placed in the position of being compelled to determine in the heat of war whether his government is right or wrong, or, if it starts right, when it turns wrong.

"We would not require the citizen, at the risk of becoming a criminal under the rules of international justice, to decide that his country has become an aggressor and that he must lay aside his patriotism, the loyalty to his homeland, and the defense of his own fireside at the risk of being adjudged guilty of crimes against peace on the one hand, or of becoming a traitor to his country on the other, if he makes an erroneous decision based upon facts of which he has but vague knowledge."

Under such a rule of life, only the traitor, the coward, the quisling, the bribed agent, would be right and everyone else wrong.

Many in the United States today hold that view when applied to some other country. They would, of course, deny an American citizen the right to betray his country in time of war, although they expect every citizen of every other country to do it at their convenience.

Those who forced the Chicago Symphony Orchestra to cancel the contract of the conductor Wilhelm Furtwaengler, were of the opinion that he should not have conducted in Germany during the Nazi regime and when his country was at war with ours.

And it is a pity that those who control the Chicago Symphony Orchestra permitted themselves to be coerced into an acceptance of this outrageous view.

Undoubtedly their reasoning was that the anti-Furtwaengler pressure group was more vociferous than the unorganized majority of Americans who fight a war not against individuals but against countries.

How silly to spend billions on the Berlin airlift yet to practice vengeance on an orchestra conductor or a soprano. At any rate, one is proud of the fact that some of our American judges believe in justice and tell the truth.

Council of Europe

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Sunday Star of January 30, 1949:

COUNCIL OF EUROPE

Two virtually simultaneous official pronouncements highlight the antithetical trends within Europe today. The first of these is an announcement by the five powers forming the western union under the Brussels pact that they have agreed to create a council of Europe. The second is a blast from Moscow which not only assails the projected North Atlantic defense pact but likewise attacks the western union and the Marshall plan as being parts of a warmongering plot by the ruling circles of the Anglo-American bloc, bypassing the United Nations in an openly aggressive course of policy, the final purpose of which is establishment by force of Anglo-American world domination.

The reason for Moscow's ire at the drawing together of the western democracies in defensive arrangements against potential aggression from the totalitarian East is understandable. If effectively implemented, those arrangements will constitnute a dependable equipoise to the power of the Soviet bloc, perhaps permanently checkmating Moscow's avowed scheme for world domination. Certainly, the "council of Europe" just agreed upon in principle represents a major step toward that integration of the European Continent which has been the dream of idealists and statesmen for centuries. It may be recalled that this was the aim of the "grand design" formulated by King Henry IV of France around the year 1600, while the concept of a "United States of Europe" has been vigorously advocated by eminent leaders like Aristide Briand and Winston Churchill.

The council formulated by the five Brussels pact nations (Britain, France, and the Benelux trio) is twofold. There will be a rudimentary executive composed of government ministers meeting in secret and capable of making binding decisions. This might mean an actual delegation of sovereign powers to a European body. Alongside this ministerial committee there will be an advisory consultative body representing the national parliaments of the constituent members, which will meet in public and hold open discussions. That is tantamount to a rudimentary European legislature.

Although the agreement is as yet confined to the five members of the western union, it is specifically intended to be broadened so as to include all democratically minded European nations. Indeed, an invitation is understood to be on its way to the Government of Italy, which is ardently receptive. As Italian Foreign Minister Count Carlo Sforza says: "European union is born, and Italy will be one of the founding states. Italy will give all her efforts with full loyalty to the creation of the council of Europe." Other ground-floor invitations are expected to be sent to Portugal and the Scandinavian countries, though the latters' attitude may be influenced by hostile Soviet pressure, especially as applied to Sweden.

The Displaced Persons Act

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

THE DISPLACED PERSONS ACT

The executive committee of the National Catholic Resettlement Council, meeting in Washington on January 26, 1949, released the following statement:

The National Catholic Resettlement Council, in general assembly, has formulated the following proposals as practical applications of the basic principles which guide its policy, and which might be considered in the present effort to bring about an impartial and effective administration of the Displaced Persons Act of 1948:

1. That in order to avoid discrimination in favor of or against the race, religion, or national origin of any displaced person, visas issued be made available to each group and element of the DP's in the proportion each bears to the over-all total of displaced persons.

2. That the present eligibility date of December 22, 1945, be extended to the effective date of the act, as amended, or in any case not prior to December 31, 1948.

3. That up to 400,000 immigration visas be made available without regard to quota limitations for a period of four fiscal years following July 1, 1948. That particular emphasis be placed upon the family groups.

4. That the provisions for persons of German ethnic origin, so called, under section 12 of the Displaced Persons Act, be retained, and that the numbers now provided for be doubled and extended over a period ending June 30, 1952. It is hoped that special preference will be given to orphan children in this group.

5. That in order to assure the most general distribution of displaced persons, to areas best suited to resettlement, funds be provided to cover costs incidental to the transportation of such displaced persons from ports of entry to points of destination in the respective States and Territories.

The National Catholic Resettlement Council is the official organization of the Catholic church in the United States, established for the purpose of resettling displaced persons in the United States in accordance with provisions under the law established by Congress. This council is composed of the following organizations: National Conference of Catholic Charities, National Catholic Rural Life Conference, National Council of Catholic Men, National Council of Catholic Women, and 11 major national groups; American Relief for Poland, United Lithuanian Fund of America, Slovak Catholic Federation of America, Catholic Hungarian League, Latvian Relief, Inc., American Aid Societies, Croatian Refugee Committee, Slovak Catholic Federation of America, National Alliance of Czech Catholics, Polish Immigration Committee, World Association of Estonians.

The Task of the South

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial, the Task of the South, which appeared in a recent issue of the Raleigh News and Observer.

This editorial came from the brilliant mind of Jonathan Daniels, editor of this outstanding southern newspaper. Of further interest is the fact that Mr. Daniels during the past week received first-place award in the best-editorial division of the North Carolina Newspaper Institute for this editorial, the Task of the South.

In my opinion, Mr. Speaker, Mr. Daniels rendered not only a great service to the South but to the Nation and this Congress in coming to grips with a subject that must be honestly and courageously faced.

[From the Raleigh (N. C.) News and Observer of November 19, 1948]

THE TASK OF THE SOUTH

In the southernmost city of the United States, on Tuesday, President Truman made it clear that he will urge in his state of the

Union message to the Congress in January the enactment of his civil-rights proposals.

There is nothing strange about that. Indeed, one certain thing is that Harry Truman means what he says. He believes that the poll tax which keeps thousands of southerners from the polls should be eliminated. He believes that there should be Federal legislation to deal with the crime of lynching. He believes that legislation is necessary to prevent racial discrimination in economic opportunity. He believes that where the Supreme Court has ruled against Jim Crow laws in interstate transportation that the ruling of the Court should be enforced.

That is the sum total of his recommendations, so far as the South is concerned. That is also the irreducible minimum of the President's purpose. In the past campaign no issues aroused such high feeling. It was on the ground of civil rights that some southerners withdrew into the Dixiecrat camp. It is true, of course, that some of those who led them into that abortive revolt were much more interested in the States' rights of tideland oil and economic privilege than the States' rights of anything else. The certain thing is that they reduced the old business of southern threats and fulminations to ultimate impotence. Fortunately, the great majority of the southern people declined to be a party to a movement which was phony to begin with and ludicrously futile at the end, and the southern people today do not wish any other actors in the Congress or anywhere else to use Dixiecrat methods in presenting and defending the customs and opinions of the South.

This does not mean that the election of Truman showed that the South has changed its mind upon the basic idea that both races in the South will best be served by the fair and orderly separation of the races in the South. No such idea entered the mind of the thousands of white Democrats who carried all but four of the Southern States to the standard of the Truman victory. The South still holds its ancient faith in the separate but equal doctrine. But fair-minded southerners in increasing number recognize that southern honor depends upon fulfillment of the South's own promise. They know quite as well as President Truman does that in the field of racial relations in the South—and particularly in those States which went Dixiecrat—there is a job to be done in honesty, in generosity, in warm-heartedness to give all people a better chance.

And now is the time for the expression of that true southern spirit in the coming debate upon this national issue. If the South has only the angry debate of filibuster to offer, this election showed that the South can count upon an increasing tide of impatience with its threatening. But if the South has wisdom to bring out of experience with a difficult problem, there will be national readiness to meet and receive any really creative counsel which the South brings to a difficult and an emotional question. Fury will not serve the South, but good sense and good manners from the South could serve the Nation, too.

It is time the South faced the civil rights one by one and faced them squarely. Here they are:

The poll tax. Nothing is so clear as that the poll tax as a prerequisite to the right to vote is a device to limit and deny democracy to poor white men and Negroes. It was long ago rejected in such a southern State as North Carolina and no southerner can suggest that the results here have disturbed either racial relationships or the equality of government provided. Indeed, this State has today not a single law which denies the right of suffrage to any man or woman on racial grounds. It is time for all southerners to recognize the right of every man and woman to the full rights of citizenship regardless of color or economic position.

The poll tax should go. It might be better if this anachronism in democracy were removed by the States which still make it a barrier between the citizen and the ballot. If they will not act, many would prefer to see it eliminated by constitutional amendment. But certainly if a law can be passed which would meet the test of constitutionality, it should be passed. The thing is bad and does not become any better because of long arguments about States' rights.

The antilynching law. There is much to be said for the southern argument that no such law is necessary. There has not been a lynching in nearly 2 years. The number of lynchings in recent years has been steadily reduced almost to the vanishing point. All the same, if a law is framed to suppress extralegal violence in all the States, the South should not ask exemption or act as if it needed exemption. If an antilynching law can be passed which meets the test of constitutionality, let it be passed. The South has no special interest in preventing a law which is designed to end such crime. It should not act as if it did.

FEPC (the fair employment practices law). Many southerners and northerners, too, believe that this legislation would do more harm than good. It is an attempt to end discrimination in employment by law. As such it would be a sort of prohibition law against prejudice in the economic field. It is by all odds the most objectionable bill proposed in the civil-rights package.

Yet it certainly touches the most serious question in this whole field. Lynching is disappearing. The number of poll-tax States declines. But the need for increasing economic opportunities for more and more trained and educated Negroes remains. Nowhere is it more necessary to improve the economic status of the Negro than in the South itself. Obviously, this region cannot be permanently prosperous so long as a fourth of its people are permanently poor. This situation has been greatly improved by present conditions of prosperity. There is even today, however, much room for creative southern thinking on the long-term provision of a better chance for more Negroes with education and training to get better jobs.

Segregation in interstate transportation. This involves not a proposal of the President's but a decision of the Supreme Court. That Court held in effect that no State could impose local Jim Crow laws on travelers on interstate trains, air lines, busses, etc. The President has only insisted that the decision of the Supreme Court should be enforced, as every decision of that Court should be.

Nobody, North or South, should suggest that these four questions present simple problems. They are complex and emotional. They are rooted in old faiths and old freedoms. They involve old fears and new ones too. But the very difficult and emotional quality of these questions should mean that they receive the best intelligence which the South and the Nation together contain. Neither the South nor the Nation will be served by any Dixiecrat gyrations in the coming Congress. But both the South and the Nation, the President and the Congress need a creative and intelligent approach to this matter. The South needs it most of all. It will do the South no good to win a filibuster and win the increasing impatience of the people of good will in the country as a whole.

Today the Dixiecrats have only succeeded in making themselves look contemptible. Their furies in retrospect look comic by the disclosure of their lack of power even in the South. Fortunately, the South of good sense and good will was not captured by them. And it does not wish to be represented by any men of their spirit. In the coming Congress Southern Senators and Representatives have a responsibility to bring to these questions which concern their countrymen not anger and inflexibility but intelligence and wisdom.

It is not the Southern task today to defend indefensible positions. Its task is the persuasion of a Nation upon the basis of progressive programs for the betterment of all its people, who include so many of the black and the poor. As the region in which democracy had its American beginning, its leaders must be at work for democracy's fulfilment. As the section which has suffered so many discriminations, its representatives must be seeking fair and equal treatment for men.

The South has a task today greater than any which ever confronted it. It will be secure at home in its customs and its culture only as it succeeds in demonstrating not bitter reaction but generous progress in a Nation which is determined to defend and demonstrate true democracy in the world.

A Worried "Grassrooter"

EXTENSION OF REMARKS
OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, typical of many letters from Republican voters and from some who never voted the Republican ticket, is the following letter:

Hon. CLARE HOFFMAN,
Member of Congress,
Washington, D. C.

MY DEAR SIR: Have been watching as much of your case at the Capitol, as much of it as has gotten publicity. I notice in this morning's Chicago Tribune regarding your being kept off the Un-American Activities Committee, if those in control keep on that committee will in deed and truth be an un-American committee.

Saw an article signed by you in the Voice of the People column of the Tribune a short while back, wherein you likened the actions of the Republican Party as to an athletic team. I agree with you fully, there is nothing so demoralizing to teamwork as to have the leaders of a team keep sending those reputed-to-be world-beaters to the fore and have them fail utterly time after time, while those of the team who have done all the supporting work are kept on the bench and never given a chance to show what they could do individually. If Dewey were on a basketball team he would demand he be permitted to do all the shooting.

Now, Mr. HOFFMAN, just what are we of the rank and file going to do about this whole matter? Just sit and take it on the chin and smile about it? My personal feelings are that the Democratic Party died when John Nance Garner and his ilk passed out of the Washington scenery, and unless the Republicans do something very drastic in the next very few months to reinstate the conservative or nationalistic, yes, even the isolationist elements, it too will be as dead as possible. This is a two-party Nation. The New Dealers are internationalists-liberals. There is only one stand for the opposition to take, conservative-nationalism, "me-too-only-betterism," is not the solution. Literally millions of voters went to the polls last fall feeling they only had a choice between two evils; they wanted neither. Many other millions stayed away from the polls because they did

not care which side won. When the Republican Convention nominated Dewey, New Dealism just sat back and smiled, saying "Go ahead, dog eat dog, and may the biggest liar win." And he did. So, I ask, what are we going to do? I am a Republican at heart, but not hide-bound on the subject, most positively not a New Deal Republican. Unless nationalism returns to the leaders, I am ready to join or help organize a new party that will come out square for honest constitutional Americanism. I can accept such men from the the South as BYRD, TYDINGS, GEORGE, or DOUGHTON. I have heard many Republicans say they would be glad to get a chance to vote for BYRD. I am confident such a party would break up the one-party South, and could be a fine thing for the Nation.

The Republican Party is silly to try to appease labor in any way. We should expose the hypocrisy of the so-called civil-rights issue. An honest civil-rights policy is what our Constitution calls for; it means more than merely the rights of southern Negroes to vote. The right of any American citizen to work for whom he pleases, and for an employer to hire or fire anyone he pleases, and all down the line in such matters is just as much a civil-rights matter as southern racial questions. I feel the same on States' rights.

The Eightieth Congress was the first Congress in 20 years that honestly tried to carry out the expressed will of the Nation at the last previous election. It would have gotten the approval of the Nation again had there been as much as one major speech made explaining the situation to the Nation. The Nation got tired waiting for some defense to be made by the two wonderful prosecuting attorneys heading the Republican ticket, and if that campaign had run 2 weeks longer, the Democrats would have carried every State. Our prosecutors never tried to prosecute. "If you tell a lie long enough, big and strong enough, it will eventually be accepted for truth." When he took for his theme song, "That awful Eightieth Congress" and nobody disputed it, only one result could possibly be expected. The campaign was lost in the last 6 weeks.

I wish someone could tell me when our Nation was ever as well off, and as happy, as it was when those two arch conservatives Joe Cannon of the Republicans and Champ Clark of the Democrats were at the wheels. We started slipping when "Do-Gooders" took over. In the name of progressivism our Nation has been going backward ever since Wilson took over.

The Republican Party does not need to copy the New Deal to get issues to attract the young voters. There are many old traditions of our Nation that made us really great that could be expounded, and they are new questions now. Dewey acted as though he was ashamed of his party and his Nation.

Keep fighting, it's the only way out.

Sincerely.

A New Day for Health and Welfare

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, under the permission granted me, I am inserting the following address which I delivered before the American Social Hygiene Association today on the occasion of my acceptance of the William F. Snow award:

ACCEPTANCE OF WILLIAM F. SNOW AWARD BY CONGRESSWOMAN FRANCES P. BOLTON

Mr. Chairman, I accept this William F. Snow award with a glow in my heart, for does it not bind me close within the wondrous circle of those who, like myself, have been privileged to catch a spot of the light shed across the world by the radiant spirit of the man whose name it bears?

I count it among the greatest privileges of a privileged life to have been one of the workers in his vineyard.

I do thank those who considered me worthy, but most of all do I thank you, Dr. Snow, for the joys of my work with you and for the inspiration that flows from you into all the world.

A NEW DAY FOR HEALTH AND WELFARE

(Address of Hon. FRANCES P. BOLTON, Member of Congress, at the National Social Hygiene Day observance of the American Social Hygiene Association and the Social Hygiene Society of the District of Columbia)

Whatever may be one's concept of health and welfare for one's self and for the Nation, from whatever angle one may view the many proposals for securing these assets, this would seem the moment when every effort could and should be made to expose all citizens to opportunity to achieve a maximum of health and a higher minimum of wholesome living.

We have a goal here in America—a vision, which, though often dimmed perhaps, still lives in our minds and hearts. We see before us, ever beckoning, this land of our dreams, our desires, our hopes and our determined efforts: a land where children will be born with fine strong bodies, keen minds and understanding hearts into homes where love and kindness dwell; a land in which each may have the education and training best suited to his capacity and work adequate for his need—a land where there may be in addition a bit of laughter, and time to enjoy the beauty of God's world. Such, surely, is the dream of every one of us; such is the goal toward which we have set our feet.

That we have traveled but a part of the way need not discourage us, for we have progressed.

Look back over the centuries. Certainly the world as a whole is a little better than it was say in the Middle Ages, or in the days of ancient Rome when captives built the great temples and forums and walls, even as in Egypt. Look back when you grow downhearted over our today and without any possible doubt you will see that man for man there is less unhappiness, more joy, in our day than could then have been dreamed of.

True it still is that no one has arisen to tell us the vivid tale of suffering India that all the world would know its truth. Nor has anyone come amongst us to sing of the sorrows of the millions that for thousands of years have been spawned into the great enigma that is China. And who sings the song of the Russia that is filled with sorrow and anguish, agony and despair. And what of Ceylon and Indonesia and all that great East? Who comes to bring light and sane leadership to Africa? But even though we have begun to be aware of these great tragic symphonies we know that man for man there is more chance for joy now than in the days of Tamerlane, of Nero, of Rameses the Great.

Let us rejoice that this is so, and having glanced backward in time let us look with clear eyes upon today that we may set out with fearlessness and faith upon tomorrow's road, uncharted though it be.

As a nation we cannot go far except we have health of body, keenness of mind, clarity of understanding. Two wars have shown us what could be a very frightening health picture were we just to stand before it immovable, aghast. But we have never done that, have we? We have always faced up to unpleasant things when we had to and then have set about doing something about them.

The fact that diseases of death-dealing virulence take heavy tolls annually right here in the United States as well as across the world brings into high relief the efforts of this first half of the twentieth century to establish a better standard of health. And amazing have been the results! Think of the serums and vaccines that can control epidemics of today. Only a year ago cholera began to spread like wildfire over Egypt. What happened? Why, all the countries of the world that had cholera serum sent what they had by plane to Cairo! How could that be? Because men have begun to learn that none can live to himself alone and have brought the World Health Organization into being.

In this day of shrinking distances health and its tragic darker brother, disease, have world-wide significance. Only through intelligent cooperation can we hope to bring about even the first faint vestiges of our dream. Health—that is our goal. What do we mean by the term—just absence of disease? Perhaps that is your concept, but I confess it is not mine. To me health can best be described as a state of ecstasy, a merging with the Great Stream of joyous, unconquerable Life. But for practical purposes I accept the definition given by the World Health Organization constitution: "complete physical, mental and social well-being, not merely the absence of disease and infirmity," for the acceptance of this definition has started a concerted world-wide attack upon three of man's most terrible enemies: malaria, tuberculosis and venereal disease. Hundreds of millions of people all over the world are victims of malaria; tuberculosis has attacked the weakened peoples of the war-torn lands with a renewed and hideous fury; and the venereals have stolen into the very center of our civilization, reaching beyond today into a darkened tomorrow.

Dr. Scheele, our alert, new Surgeon General of the Public Health Service is to speak rather particularly about the actual stamping out of this scourge, which has been the special field in which the American Social Hygiene Association, of which I have long had the rare privilege of serving as vice president under Dr. Wilbur and Mr. Mather, has worked. I shall not intrude into his areas though I share with him the hope that the recent and somewhat spectacular gains in scientific discovery and practical application may speed the day when we shall be free of this bondage.

But in this battle against venereals, science alone cannot win. In no other field of preventive medicine is it more vital to carry on simultaneously correlative activities in education, recreation, social protection and law enforcement. Even these are not enough, for no complete victory will be achieved until each child is brought to a deep and unshakable understanding that the body is, indeed, the temple of the Holy Spirit, to be understood, to be used as an instrument by which the indwelling soul may find its way to God.

Immense gains have been made since I first learned at firsthand something of the national and international problems and shared with scientists and laymen the thrill of a fresh courage to persevere that came with the identification of the spirochete, the development of the Wassermann test, the

final release by Professor Ehrlich of the now long famous arsenic compound "606," which began the long march of science and clinical medicine through successive improvements of therapy to the great benefits of penicillin, which, at the moment, is such a "wonder drug" for the treatment of both syphilis and gonorrhea.

There are high lights along the way—pioneers such as Prince Morrow, Charles W. Eliot, John D. Rockefeller, Jr., Jane Addams, Grace Dodge, Joseph Lee, whose advocacy of the changing attitudes was substantiated by Abram Flexner's epochal book on Prostitution in America, by Raymond Fosdick's studies of police systems, findings of the vice commissions appointed in our leading cities, and the many case studies of patients in clinics and private practice.

My own direct contacts with the problem of venereal disease itself and the means being used to educate both professionals and laymen brought me the conviction that all groups must share the responsibility for the eradication of this scourge and that all professional groups must work shoulder to shoulder in full partnership. So to me the public health nurse became an important factor in the whole picture, and as I have been able, I have joined with the many others of like minds to see that she was equipped with knowledge and then freed to make the intimate often very difficult educational contribution in the homes of our people.

To all of us of the American Social Hygiene Association it has been of great satisfaction that our people were ready to play a vital role when the exigencies of World War II brought the country face to face with the need for integration of all these constructive forces, for trained personnel and facilities, and for essential administration for a dramatic health conservation program which not only helped win the war but demonstrated that its continuance and adaptation to peacetime conditions can put human life conservation on a plane with our programs for conservation of all our natural resources without which our world leadership cannot continue.

As many of you know, our people, our trained personnel, because of their experience and ability, are again serving Government as such in the camp areas. There is a probability that with the enlarged plans for health as a part of the program of the administration we shall be called upon to enlarge our horizons. That we are ready and equipped to do.

But what of the all-important educational field? What of the factor of morals which can be made vital only by a greater recognition of spiritual responsibilities? The American Social Hygiene Society has long known what the Lord Chancelor's Committee of the British Government puts concisely in a recently issued report on family stability and marriage guidance, namely: "The basic causes of marriage failure are to be found in false ideas and unsound emotional attitudes developed before marriage, in youth and even in childhood. The right time to correct those ideas and attitudes is before marriage."

We of the ASHA are ready to contribute in practical ways to whatever methods may be tried in honest efforts to bring a more wholesome way of life to all our children. Much is being done along lines of youth and marriage counseling, as well as advocating the development of practical ways and means of making early marriage possible. In this field the District of Columbia's Social Hygiene Society, of which I had the privilege of being a charter member when it was organized in 1918, can be commended on all counts. Its work is an example of what social hygiene societies everywhere could do.

The quick response of the United Service Organization and the American Social Hygiene Association to specific requests of the Secretary of National Defense for aid in securing nationwide civilian cooperation is most encouraging. Your panel discussion this morning on "The Mutual Responsibility of the Community, the Armed Forces, and the Serviceman," was both interesting and informative. The joint participation of such distinguished military and civilian leaders not only on the national, but also on the regional, State, and local levels, meetings in connection with the Social Hygiene Day programs in all parts of the United States, forecasts a year of great progress in this most difficult sector of social hygiene.

The present policy and programs of our armed forces as outlined in recent announcements and orders attest the validity and importance of securing vigorous national, State and local activity to combat not only commercialized sexual promiscuity, but also the far more difficult problem of what a recent writer has called "girls on the loose," a little emphasized or understood tragedy of today.

It is significant that both the military and civilian groups now recognize that spiritual values, moral responsibility, and self-discipline are just as vitally important to the civilian as to the soldier on leave or furlough as well as during tours of duty.

It is quite possible that Congress may again consider some form of Federal social protection legislation. The nation's experience during the two world wars produced ample evidence of the serious need of Federal cooperation with the States in this matter, and of the concrete benefits of such cooperation when carried out effectively by trained personnel. The arguments and supporting data for continuing similar activities adapted to peacetime conditions are clear and convincing; and only minor details of ways and means are lacking. The public as well as Congress should be giving earnest and early thought to such legislation, especially in this year when most of the State legislatures are also holding sessions.

Whatever the Congress may or may not do, those who have the responsibility for ways and means should envision the fact that in the field of social hygiene the dramatic appeals of wartime for support of specific education, social protection, and training of the boy to be efficient, self-reliant, courageous and ready to sacrifice everything for victory, must somehow be translated into an equally practical and dramatic peacetime appeal in behalf of both boys and girls for these same qualities and training for a successful peacetime career and for marriage and family living. Our generation cannot escape the responsibility for incorporating this objective in our moral, religious and civic preparation of youth, if we believe in Article 16 of the Declaration of Human Rights, adopted December 10, 1948, by the United Nations Assembly, the final paragraph of which reads: "The family is the natural and fundamental group unit of Society and is entitled to protection by Society and the State."

Because of my many years of interested membership in our national body, which grew out of the federation of existing State and local societies in 1914, I trust I may be pardoned if I take a moment or two to remind you that in the American Social Hygiene Association we do, indeed, have a fitting clearinghouse for all its member agencies and affiliates, as well as a means of participation in world-wide action through its membership in the several international unions concerned which have official relations status with the World Health Organization and other specialized agencies of the United Nations. A splendid demonstration of this which has received especial commendation has been the operation, since 1946, of a Regional Office for the Americas of the International Union Against the Venereal Diseases. This has had an important influence in promoting teamwork and correlation of governmental and non-governmental agencies, and public support of the broad concept of this field of health and welfare. What lies ahead for the Society has been so well expressed by our skillful and devoted president, Philip R. Mather, in the summing up in his annual message printed in the January 1949 Journal and News that I hope you will agree with me that they warrant repetition at this time. "It seems clear," he said, "if the gains so far made are to be held, that the American Social Hygiene Association must provide for the immediate future:

"(1) Redoubled drive, by public education and community cooperation, to finish up the job of stamping out VD. VD infections still remain the nation's greatest problem in communicable disease control—still bring tragedy to far too many thousand American homes.

"(2) Constant alertness to the danger of a resurgence of commercialized prostitution, with prompt action when needed. ASHA field studies for 1948 show 38 percent of communities with bad prostitution conditions, as compared with 19 percent a year ago, and 4 percent at the beginning of 1946.

"(3) Expanded activities to utilize the growing eagerness of the public and of special groups, to join in the program for family life education. Each new generation calls for new and up-to-date materials and methods for this purpose, while standard, well proved publications and projects must be continuously made more widely known and used.

"(4) No let-up in the year-round campaign to keep the public informed of all these developments, and working as citizen leaders alongside professional social hygiene workers in well-planned, effective community programs. Every State, every community, needs a rounded, balanced social hygiene program for satisfactory progress in health and welfare."

It has been a pleasure to serve as vice president of the Association and to work with you all for so many years in our attacks upon this important group of problems. In that capacity I feel very deeply that we who are members of this Society, we who are so vividly cognizant of the need America has for better mores, for more wholesome living, for broader recognition of the spiritual foundation stones that must be set upon a rock if our way of life is to prevail, we must find means by which to renew in the hearts and minds of every man and woman, every boy and girl, the flaming certainty that the individual is important to the evolution of God's universe because each is an infinitesimal part of the essence of His Being, and that freedom for the individual and for the Nation and ultimately for the world can be had and retained only through discipline and self-restraint.

To do our part in making the individual a constructive member of a free society, we must renew our ancient faiths and use, with the utmost intelligence and consecration, such scientific secrets as the Infinite Intelligence permits us to uncover, that our children's children may indeed rejoice in sound bodies, clear minds and understanding hearts.

Where do you think we are all going?
I will tell you!
Toward happiness that is beyond dreams;
Toward truth that surpasses thought;
Toward realization of something that is
both within and beyond you;
Toward freedom, peace and love.

With the memories of our yesterdays fresh in our thoughts, the grim facts of today challenging us at every turn and Tomorrow beckoning, we can look forward confidently to a New Day for Health and Welfare in which the American Social Hygiene Association will have full recognition and support commensurate with the public need for its great services.

House Construction Is Falling Off

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. MITCHELL. Mr. Speaker, the housing plight of many American families is dramatized by the mass evictions which started in Tulsa, Okla. Housing is a basic necessity in short supply. The deliberate withholding of shelter at this time is like denying bread to a starving man. This housing strike of landlords is a most reprehensible thing.

Less noticeable, but more important than the brutal drama of mass evictions, are some significant and disquieting facts about the current housing situation. I call the attention of the Members to a publication recently issued by the Housing and Home Finance Agency entitled "Housing Statistics." Therein it will be found that the number of construction starts of new permanent nonfarm dwelling units, privately and publicly financed, has declined each month since May of 1948. The 64,000 units started in November 1948—the last month tabulated—were 9.7 percent less than in October and 34.6 less than in May of the same year.

Mr. Speaker, although the aggregate number of housing units started in 1948 may show up well in comparison with the low levels of previous years, the significant thing is that housing construction is steadily falling off. We are losing instead of gaining in the housing field.

Rental housing, the need for which has been so repeatedly stressed, is not holding its own. In the first 7 months of 1948, rental-type units accounted for 102,000 or 18 percent of new units started. Although this was a substantial increase over the number of rental-type units for the corresponding period of 1947, the added fact is that the proportion of rental-type units to all units has been decreasing since early 1948. In July, the latest month for which data are given, the proportion of rental-type units—15.2 percent of all units started—reached its lowest point for the year.

The reduced rate of home-building and disproportionate decline in rental housing are not the only matters to cause concern. Rents are steadily climbing upward. The residential rent index compiled by the United States Department of Labor shows that rents which were stabilized around 108 for the war years—1935–39 equals 100—began to creep upward early in 1947, reaching 118.8 by November of 1948.

Members who have protested the diversion of materials and construction activity from housing to less essential uses will not be surprised to learn that the value of non-residential building has remained constant over the period in which home-building has dropped. For the latter part of 1948, the percentage of all non-farm-building construction put in place which is accounted for by residential building declined from 62.1 in August to 61.3 in September, 59.9 in October, and 58.1 in November.

Mr. Speaker, a few more facts in the afore-mentioned publication of the Housing and Home Finance Agency are worthy of note. In October of 1948 construction costs, as measured by the Department of Commerce composite index, experienced a slight though noticeable decline. This was the first month since May 1943 that the index has shown a decline over the preceding month. Even though average hourly earnings in private building construction reached a new all-time high of $1.92 in October, construction costs as a whole were not thereby increased but began to go down for the first time in years.

Veterans and servicemen constitute an increasing percentage of the occupants in public-housing units. These groups in June 1948 occupied 62.8 percent, or 457,750 units, under the jurisdiction of the Public Housing Administration, as compared to 57.8 percent, or 433,510 units, in June 1947.

While veterans of low incomes are forced to seek public-housing aid, there has been a precipitate reduction in the number of home loans to veterans guaranteed by the Veterans' Administration under the Servicemen's Readjustment Act. The 24,153 loans guaranteed in November 1948 represent a 48-percent decline from November 1947. The total number for the first 11 months of 1948 was down 34 percent from the same months of 1947.

The Increasing Trend Toward Acquisition of Tax-Exempt Real Estate by the Federal Government Throws an Unfair Burden on Many Communities

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. KEATING. Mr. Speaker, on the opening day of this Congress I introduced H. R. 445, to provide for taxation by States and other political subdivisions of certain real properties owned by the United States or one of the Government agencies.

As the Federal Government has expanded its functions and activities, and in part as the result of wartime necessities, the title to more and more real property has been vested in the United States, thereby acquiring immunity from local taxation and throwing a correspondingly greater burden upon all other taxpayers in the community affected.

According to reports which have been brought to me, not only has the administration done nothing to check this tendency and alleviate the hardship on municipalities resulting from the trend, but actually has actively contributed to the creation of an increasingly intolerable situation by having title taken in the name of the United States or one of the tax-exempt agencies rather than in the name of a Federal corporation which is by statute liable for local taxes.

Thus, we have the spectacle of our Government, which is quick, and properly so, to crack down upon those who use all and sundry devices to avoid Federal taxation, attempting by a legalized contrivance to deprive local taxing authorities of their just dues. The result is that the few in a particular locality pay for a benefit conferred upon the many throughout the country.

What possible justification can there be for a large building owned by the United States and leased for manufacturing purposes or for storage warehouse purposes to be exempt from local taxation?

The measure which I have submitted provides that the United States or the Federal agency owning such a property shall make payment to the local taxing authority of an amount equivalent to the taxes which would be levied if the property were privately owned, with the proviso, however, that if it can be shown that the property does not receive some particular local service, the cost of such service may be deducted from the amount of the payment. A statement of the sum due must be sent by the municipality to the Federal agency involved, after which payment must be made or appropriate steps taken to review any alleged erroneous determination of liability on the part of the local authorities.

As to school taxes, a special provision is included in this bill creating a Federal liability only when officers, agents, or employees of the United States reside on the Government-owned property. In that case the United States must pay to the local school taxing authorities an amount equivalent to the fair tuition charge as determined by the United States Commissioner of Education, for the pupils of school age residing on this property.

Concededly there are many, in fact most, types of uses of Federal property which probably should be excluded from such taxation. It would be a rather startling suggestion, for example, to tax post offices and courthouses, which might be said to serve peculiarly the interests of the people in a local area in the same manner as the buildings which house the administrative or governmental functions of the State, county, or city. Also Federal office buildings and installations employing and bringing to the community large numbers of

people are usually the subject of vigorous competition between various localities, since they normally enhance local values, increase business and substantially improve the appearance of the municipality. There seems to be no adequate reason why in such cases the locality which is enjoying such incidental benefits should receive the additional and unexpected windfall of payments in lieu of taxes.

In the case of Army and Navy posts, camps, and stations which ordinarily receive little, if any, local benefits or services furnished by the municipality other than educational facilities, these are separately treated in this bill. They usually provide their own fire and police protection, their own roads and sewers, and they are normally located in rural or semirural areas. It would seem inequitable to require them to pay an ad valorem tax on the high valuation of their real-estate development.

It is therefore provided in this legislation that Federal office buildings, courthouses, mints, assay offices, customhouses, laboratories, experimental grounds or buildings, testing stations, jails, penitentiaries, reformatories, detention farms, hospitals, cemeteries, national parks or monuments, or Army and Navy posts, camps, garrisons, stations, or yards are exempt from the provisions of this new taxing statute.

The conference of mayors and other municipal officials of the State of New York, as well as many other groups throughout the Nation, have taken official action petitioning the Federal Government to provide substantial payments to local governments in lieu of taxes on federally owned property.

I was very much interested recently to receive a detailed letter from the executive secretary of the American National Livestock Association, with headquarters in Denver, Colo., expressing support for legislation to relieve local and State governments of the burdens resulting from the continued acquisition of real property by the Federal Government.

Accompanying this letter was a map which is most enlightening. It shows that between 24 and 25 percent of the total land area of the United States is now under Federal ownership and that in certain localities, notably the far West, individual State percentages run as high as 86 percent in Nevada and 73 percent in Arizona. All but two of the States show an increase between 1937 and 1947. In the State of New York, for instance, the Federal holdings have nearly doubled in this 10-year period.

A complete comparative percentage table, by States, follows:

State	Percentage of Federal holdings in—	
	1937	1947
Nevada	82.67	86.77
Arizona	63.05	73.41
Utah	60.45	72.07
Idaho	58.07	63.75
Oregon	46.29	53.92
Wyoming	42.72	51.51
California	39.46	45.55
New Mexico	35.32	43.73
Colorado	33.34	38.16
Montana	33.95	35.23
Washington	32.28	35.03
District of Columbia	23.43	23.65
South Dakota	16.13	17.99
New Hampshire	11.22	11.58
Arkansas	6.87	8.44
Virginia	5.22	8.43
Oklahoma	6.31	7.73
Michigan	4.59	6.99
Minnesota	6.52	6.89
Florida	3.93	6.74
West Virginia	5.48	6.03
Wisconsin	5.11	5.95
Tennessee	3.68	5.82
North Dakota	3.84	5.53
North Carolina	4.12	5.49
Mississippi	3.47	4.77
Georgia	3.73	4.64
South Carolina	3.40	4.54
Alabama	5.94	[1] 3.64
Louisiana	2.09	3.61
Missouri	2.17	3.29
Kentucky	1.88	3.50
Vermont	2.51	2.97
Rhode Island	.32	2.89
Maryland	1.82	2.02
Pennsylvania	2.07	[1] 2.02
Nebraska	.92	1.86
Delaware	1.36	1.77
Texas	.43	1.43
Indiana	.32	1.28
New Jersey	.50	1.11
Illinois	.34	.99
New York	.53	.90
Ohio	.21	.68
Maine	.40	.70
Kansas	.17	.54
Massachusetts	.25	.50
Connecticut	.22	.44
Iowa	.10	.17

[1] Decline.

The alarming feature about this subject is the ever increasing trend of expansion, resulting in additional inequities and abuses which should be promptly ended. Either H. R. 445 or some other measure to meet this problem should be enacted in order to effect equity and fairness to all property owners.

Equality in Naturalization and Immigration

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a memorandum fully explaining the aims and implications of important legislation pending now before the Committee on the Judiciary of the House.

I am referring to five identical bills introduced in the Eighty-first Congress. The basic purpose of this legislation is to wipe out the remaining racial restrictions of our immigration and naturalization statutes.

I may add that this is definitely a nonpartisan matter. The legislation first originated in the Eightieth Congress when the Representative from Minnesota, Dr. WALTER H. JUDD, introduced H. R. 4824 and later H. R. 5004, which was rewritten into H. R. 6809 and unanimously approved by the Subcommittee on Immigration and Naturalization of the Committee on the Judiciary in the Eightieth Congress. On the other hand, the President's Committee on Civil Rights stressed the necessity of amending our immigration and naturalization laws so as not to deny the privilege to become a citizen of the United States to people who qualify in every other way except for their ancestry.

The memorandum follows:

LEGISLATION TO PROVIDE EQUALITY IN NATURALIZATION AND IMMIGRATION

LEGISLATIVE PURPOSE

"The real objective of the bill(s)—stated in a few words—is to eliminate all racial barriers in existing naturalization laws and to make it possible for Asian and Pacific peoples to enter the United States as quota immigrants; and, yet, from a practical standpoint, to keep within a reasonable number those persons who may come to the United States." (From Department of State analysis of this legislation.)

BILLS BEFORE THE HOUSE—EIGHTY-FIRST CONGRESS

Identical bills have been introduced as follows: H. R. 90, GEORGE P. MILLER, Democrat, California; H. R. 199, WALTER H. JUDD, Republican, Minnesota; H. R. 308, FRANCIS E. WALTER, Democrat, Pennsylvania; H. R. 1214, JOSEPH R. FARRINGTON, Republican, Hawaii; H. R. 1444, SIDNEY R. YATES, Democrat, Illinois.

LEGISLATIVE HISTORY

The main outline of these bills was worked into legislative form late in the first session of the Eightieth Congress (H. R. 4824). Early in the second session, upon the advice and suggestion of the Departments of State and Justice, a tighter and somewhat expanded version was developed (H. R. 5004). Both Departments were vigorous in their support of this legislation. The Department of National Defense found the bill outside its area of responsibility, but specifically offered no objection.

This latter bill (H. R. 5004) was the basis for comprehensive open hearings held April 19 and 21, 1948. Following these hearings, H. R. 5004 was further worked upon by the Subcommittee on Immigration and Naturalization of the House Judiciary Committee (Messrs. FRANK FELLOWS, Maine, LOUIS E. GRAHAM, Pennsylvania, J. CALEB BOGGS, Delaware, Republicans; and EMANUEL CELLER, New York, Frank L. CHELF, Kentucky, and ED GOSSETT, Texas, Democrats), primarily in the direction of tightening the provisions relating to immigration. The perfected bill was introduced as H. R. 6809.

UNANIMOUS SUBCOMMITTEE APPROVAL

H. R. 6809 was unanimously approved by the subcommittee, late in the second session of the Eightieth Congress.

FINAL CONSIDERATION DELAYED

Action by the full Judiciary Committee and by the House was not taken primarily because of two considerations: The obvious fact that the Senate Judiciary Subcommittee on Immigration and Naturalization, under the chairmanship of Senator Chapman Revercomb, of West Virginia, would not be able to take action before adjournment, and secondly, the early date of adjournment.

PERFECTED LEGISLATION

The purpose of the present bills was widely discussed and strongly supported in comprehensive open hearings. With very minor technical revision they are identical with H. R. 6809 as perfected and approved by the House Judiciary Subcommittee on Immigra-

tion and Naturalization of the Eighteth Congress.

HEARINGS ON H. R. 5004, APRIL 19 AND 21, 1948

Basis of favorable testimony: Testimony, overwhelmingly in favor of enactment, was based on three broad considerations:

1. As an act of justice of immediate value to American moral leadership in the Far East while that area of the world is yet in a state of political flux.

2. As an act of justice to long resident Asian immigrants who have made a positive contribution to America (96 percent Japanese immigrants here 30 to 50 years).

3. No new policy is involved, but rather extension of the policy developed by the Congress by enactment of the act of December 17, 1943, ending Chinese exclusion and of July 2, 1946, granting the privilege of naturalization and immigration to the people of India and the Philippines.

Far-eastern relations, State Department: Mr. W. Walton Butterworth, Director, Office of Far Eastern Affairs, Department of State:

"For many years the maintenance of normal friendly relations between the United States and oriental countries has been impeded by racial discrimination present in our immigration and naturalization laws. * * * This * * * bill has the hearty endorsement of the Department of State."

Far-eastern relations, Joseph C. Grew, former Ambassador to Japan: "From the standpoint of our relations in the Far East * * * the question is one of principle, of recognition of the innate equality of peoples, of giving force to our own democratic beliefs.

"I believe the present to be an exceptionally favorable time to take a step of this nature * * * since it is a time of great movement among these peoples, of realinement and choosing of friends. Burma is newly independent, Indonesia is seeking a new status—everywhere there is receptivity to new ideas.

"Nowhere is this more evident than in Japan, where a new leadership is emerging under our tutelage.

"It seems to me to be the height of folly to ask the support of democratic elements in these countries, yet at the very point where our democracy comes to test, to back away. If we want to hold our friends, we must support them.

"The ending of exclusion now would provide concrete proof of American good faith at a time when it is most important that new leadership be oriented in our direction."

Naturalization on the basis of individual qualification: Concerning the privilege of naturalization, Mr. Grew summed up a basic attitude when he said:

"It seems (to me) there can be little room for disagreement that any immigrant who is allowed to remain permanently in the United States should not only be permitted to seek citizenship, but should be encouraged to do so. * * * It is wholly in keeping with American tradition that in so deeply important a matter as citizenship, admission or denial be made only on grounds of individual behavior and qualification."

Naturalization, John J. McCloy, wartime Under Secretary of War: "I believe legislation such as this, at least as it affects the interests of the Japanese Americans, is only an appropriate form of recognition for the loyalty which Japanese Americans as a whole evidenced to this country during the war."

Naturalization, Brig. Gen. Bonner Fellers, Pacific theater: "I have first-hand, intimate knowledge of the service rendered by the Nisei in General MacArthur's headquarters during operations against the Japanese. The loyalty of the Nisei was absolute, and their willingness to go to the front where capture, even their presence, meant risk of their lives. I have the highest regard for the Nisei and feel the United States owes them a debt of gratitude for the magnificent service which they rendered in the Pacific."

Naturalization, Gen. Mark W. Clark: "The supreme test of citizenship is the willingness of a man to risk his life so that our country may live.

"Under my command in Italy the Four Hundred and Forty-second Infantry Regiment and the One Hundredth Infantry Batallion, composed of Nisei, fought the Nazi combat forces with the valor and skill characteristic of the young Americans that they are.

"The parents of these heroic Nisei should have the privileges of the democracy their sons helped to preserve."

Naturalization, Mike Masaoka, veteran, All-Nisei Four Hundred and Forty-second Regimental Combat Team: "I am very full on this subject. I could go and talk on and on, because I know these people (the noncitizen parents of the Nisei), as I say, and I wish I had the opportunity to tell you more about them. I am sure that no one can deny one fundamental fact. These people are Americans by every standard of conduct that you can think of except that of technically belonging.

"I, as an American soldier, fought, with the thousands, millions, of other American soldiers, for the right of all people to be recognized as individuals, and that is all we are asking, not to be judged or classified on the basis of race.

"On the field of war, on the field of battle, when race and nationality count for nothing and the worth of a man counts for everything, I think we children of these people who are ineligible for citizenship proved that we belonged. We now want our parents to belong."

NOTES CONCERNING PERSONS OF JAPANESE ANCESTRY IN THE UNITED STATES

Source: The testimony of the Committee for Equality in Naturalization (pp. 96–110 of hearings) discusses the characteristics of persons of Japanese ancestry in detail. The findings demonstrate a suitability for citizenship. A very brief summary follows:

Length of residence: Aliens ineligible to citizenship: Three-fourths have lived here for 30 years; nearly half for 40 years or more.

Numbers: Aliens ineligible to citizenship: According to the 1940 census—37,353 in Hawaii; 48,158 in the United States.

Age and sex: Average of immigrant generation: About 50 years. There are eight males to every five females.

Birth rate: In 1940 (U. S. Census figures) lower in California, Oregon, and Washington than the general birth rate.

Relief and unemployment: Negligible.

Education: Average to above average.

Crime: According to the FBI uniform crime reports, their crime rate was about one-half the national average.

SUPPORTING TESTIMONY

Congressional: Supporting testimony included the following: Hon. Walter H. Judd,[1] Representative from Minnesota; Hon. George P. Miller, Representative from California; Hon. Bertrand W. Gearhart,[1] Representative from California; Hon. Joseph R. Farrington,[1] Delegate from Hawaii.

Administrative: Hon. W. Walton Butterworth,[1] director, Office of Far Eastern Affairs, State Department; Hon. Watson B. Miller,[1] Commissioner, Immigration and Naturalization Service; Mr. Samuel W. Boggs,[1] special adviser on geography, Department of State.

[1] Denotes personal appearance.

Private individuals and representatives of organizations: Hon. Joseph C. Grew,[1] former United States Ambassador to Japan; Mr. John J. McCloy, president, International Bank for Reconstruction and Development; Gen. Mark W. Clark; Gen. Bonner Fellers; Mr. Dillon S. Myer, president, Institute of Inter-American Affairs, former director, War Relocation Authority; Mr. Richard J. Walsh, president, John Day Publishing Co.; Dr. Walter W. Van Kirk, Federal Council of the Churches of Christ in America; Mr. C. Lloyd Bailey, Friends Committee on National Legislation; Mr. Edward J. Ennis,[1] chairman, Committee for Equality in Naturalization; Mr. Robert M. Cullum,[1] secretary, Committee for Equality in Naturalization; Mr. Mike Masaoka,[1] national legislative director, Japanese American Citizens League, Antidiscrimination Committee; Mr. Sanford H. Bolz,[1] Washington representative, American Jewish Congress; Mr. Walter Jhung, Korean Immigration and Naturalization Committee.

Resolutions: San Francisco Board of Supervisors; Los Angeles Board of Supervisors; executive committee, Federal Council of Churches; National YWCA.

Editorial comment: St. Paul (Minn.) Dispatch, April 12, 1948; Washington (D. C.) Post, April 21, 1948; Lewiston (Mont.) Democrat News, September 12, 1947; Louisville (Ky.) Courier-Journal, January 14, 1948; Palo Alto (Calif.) Times, February 17, 1948; Milwaukee (Wis.) Journal, March 29, 1948; New York (N. Y.) Post, March 29, 1948; Denver (Colo.) Post, April 10, 1948; Pacific Citizen, Salt Lake City, Utah, April 10, 1948; San Francisco (Calif.) Chronicle, April 27, 1948; Stockton (Calif.) Record, April 29, 1948.

OPPOSING TESTIMONY

Organizations: Mr. John B. Taylor, American Coalition; Mr. Harry V. Hayden, Jr.,[1] national legislative representative, the American Legion.

FAVORABLE ACTION NOT RECORDED IN HEARING

California American Legion: On September 5, 1948, the California Department of the American Legion passed the following resolution:

"That our naturalization laws should be broadened to enable all who can legally qualify to become American citizens, without regard to race or national origin; and

"That the Department of California, American Legion, requests further concurrence by the national convention of the American Legion."

National American Legion: In the 1948 Miami convention, the national American Legion adopted a resolution favoring extension of the privilege of naturalization to all parents of servicemen, present or honorably discharged.

Los Angeles Chamber of Commerce: "Provided that the numerical quotas are maintained in conformity with the national origins quota principle established by the Immigration Act of 1924; we endorse the principle that the privilege of becoming a naturalized citizen of the United States shall not be denied or abridged because of race; and we endorse the principle of permitting the native or indigenous people of each country to utilize their respective quotas.

"Provided that the total of all minimum quotas does not exceed 5,000 per year, irrespective of changes in territorial limits or sovereignty."

TECHNICAL EFFECT OF PROPOSED LEGISLATION

Naturalization: All racial discrimination in American nationality law will be eliminated. In 1940 (last available census figures) there were 48,158 persons in the United States and 39,784 in Hawaii who were ineligible to citizenship solely because of race. A few of these

[1] Denotes personal appearance.

are Koreans, Polynesians, and other Asian peoples, but more than 96 percent are of Japanese origin. All have been in the United States and Hawaii for at least 25 years; their sons, 35,000 strong, contributed to the victory of American arms in World War II. These are the men and women who will be given the privilege of applying for naturalization, subject to all the usual requirements of individual examination.

Immigration: National origins quotas, strictly computed, will replace the discredited policy of Oriental exclusion. By so doing, the national policy which granted naturalization and quota immigration to the Chinese, East Indians, and Filipinos will be brought to completion.

Asia-Pacific triangle: To accomplish this end, the legislation creates an "Asia-Pacific triangle, comprising all quota areas and all colonies and other dependent areas situate wholly east of the meridian 60° east of Greenwich, wholly west of the meridian 165° west, and wholly north of the parallel 25° south latitude." This includes all of Asia Major and western Pacific Oceania. Persons of ancestry indigenous to this Asia triangle, when immigrating to the United States, will be chargeable to the quota of the country of their ancestry rather than country of birth. This follows the general formula developed by Congress when the Chinese exclusion laws were lifted.

Exact computation of quotas: The number of far eastern peoples who will be eligible to immigrate to the United States for permanent residence in any one year may be exactly computed, since, under the proposed bill, all persons of one-half or more Asian ancestry, wherever born, must enter under the quota of the country of their ancestry or under the small (100) Asia-Pacific quota. (This special Asia-Pacific quota was specifically designed to be used by persons of Asian ancestry born in colonies of the great powers, and to eliminate the confusion which now exists in the laws relating to chargeability of persons of mixed Asian ancestry.)

Thus, under this legislation, persons of Asian ancestry born in North or South America would be charged to the country of ancestral origin; those born in colonies of the great powers (Hong Kong, for example) will be charged to the special Asia-Pacific quota. Furthermore, since all quotas for Asian countries are less than 200, all members of a family must come in under quota.

Total annual authorizations for all Asian and Pacific island quota areas will be 1,890.

Number made eligible: Actual immigration of less than 1,000 Asian peoples in any one year is a safe estimate, since many of the countries covered are remote, and unlikely to use even a small part of their authorized quotas. (During the 10 years, 1938–47, Afghanistan used about 14 out of 1,000 available quota numbers. Nauru, with a standard minimum quota of 100, is an island of but a few square miles in extent, with a total population of 3,500. Bhutan, Nepal, New Guinea, Samoa, and the Pacific Island Territories, each with a minimum quota of 100, are similar areas, entirely unlikely to contribute any sizable number of immigrants to the United States.)

Stay on deportation and joining of families: Moreover, 50 percent of the largest of these quotas, that for Japan (185), will be exhausted for many years under section 19 (c) of the 1917 Immigration Act providing for change of entry status in meritorious cases. Much of the remaining 50 percent of the Japanese quota will undoubtedly be filled by members of families of American citizens, thus simplifying the problems of immigrant adjustment.

No flood of Asian immigrants; restrictions on multiplication of minimum quotas: Under the provisions of this bill, there is no possibility of a flood of Asian immigration. A proportionate decrease in the size of minimum quotas is provided if changes in territorial limits or sovereignty should increase the number of minimum quota countries to more than 50; total immigration from minimum quota countries may never exceed 5,000. Thus, possible fragmentation of the Far East into an increased number of sovereignties would have no appreciable effect on immigration from that part of the world. Of the 41 minimum quotas now in force, 29, using 2,900 quota numbers, go to non-Asian countries.

Limitation on non-Asian colonial immigrants: A separate but generally related provision of the legislation limits non-Asian immigrants from colonial powers to 100 from any one colony in 1 year.

Mechanical simplification: Mechanical simplification of quota computation, provided by these bills, will reduce over-all quotas by 635—from 153,929 to 153,294.

Specific quotas for Asian countries: Specific Asian quotas are set forth on the following page. It may be noted that minimum quotas of 100 are now in force for most of these countries, but that the use of such quotas is limited to persons eligible to naturalization, i. e., Caucasians, Negroes, and American Indians born in these countries. By eliminating racial barriers to naturalization, this legislation enables persons indigenous to these countries to enter the United States as quota immigrants.

Except for the special Asia-Pacific quota described above, these bills do not create new quotas beyond those now provided by law, and increases only one, that for Japan, from 100 to 185, as required by national origins computations.

ASIAN QUOTAS

For convenience in analysis, Asian quotas shown below are divided into five groups. For each group, the first column shows quotas authorized by present law; of these only those in group I may now be used by people indigenous to the countries named. The second column shows quotas authorized by this legislation, all of which may be used by indigenous peoples.

	Present law	Proposed bill	Comment concerning group
Group I:			
Afghanistan	100	100	Neither these quotas nor the persons eligible to use them will be affected by the proposed legislation.
Chinese quota [1]	105	105	
India	100	100	
Philippine Islands	100	100	
Group II:			
Japan	100	185	Minimum quotas for these countries are now in force. Under the bill, only the quota for Japan is raised by use of national-origins computations.
Siam	100	100	
Group III:			
Bhutan	100	100	These remote areas are entirely unlikely to contribute any sizable number of immigrants to the United States. Minimum quotas for these areas are now in force.
Nauru (trust territory)	100	100	
Nepal	100	100	
New Guinea (trust territory)	100	100	
Samoa (trust territory)	100	100	
Pacific Islands (former Japanese mandate).	100	100	
Group IV:			
Burma	100	100	These countries, newly independent, are not now included in the quota proclamation, but undoubtedly would be carried in any new proclamation under present law.
Ceylon	100	100	
Indonesia	100	100	
Korea	100	100	
Pakistan [2]	100	100	
Group V: Asia-Pacific quota	----------	100	This new quota is designed to simplify present unworkable procedure for allocating persons of mixed Asian ancestry to a proper quota. Persons born in Asian Colonies of the Great Powers will also be charged to this quota.
Total Asian quotas	1,705	1,890	

[1] A separate minimum quota for China, usable only by Caucasians, Negroes, and American Indians born in China, will be unaffected by the proposed bill.

[2] Under the law of July 2, 1946, Pakistanians appear to be eligible to naturalization and to immigrate to the United States, but must be charged to the quota for India. This ambiguity would be cleared by passage of the proposed bill.

St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert copy of a resolution passed by the Common Council of the City of Milwaukee relative to the development of the St. Lawrence seaway and power project.

The development of this seaway is most important to the interests of the State of Wisconsin.

The resolution follows:

Whereas President Truman, in his state of the Union message and in his annual economic report to the Congress, strongly urged upon the Congress immediate development of the St. Lawrence seaway and power project, to alleviate power shortages and to furnish necessary expansion of our national transportation facilities; and

Whereas the development of the St. Lawrence seaway project will extend the benefits of direct ocean transportation to the city of Milwaukee, the State of Wisconsin, and the entire Great Lakes area; will permit Milwaukee industries to import essential raw materials at low cost and, through the advantage of direct ocean service, to reach new foreign markets and to expand greatly the foreign trade of this area; and

Whereas the development of the St. Lawrence River will provide vast quantities of low-cost hydroelectric energy now running wastefully into the sea, and, in general, will enhance the economic prosperity, the industrial strength and the well-being of the entire Nation and our friendly neighbor, Canada; and

Whereas the events of World War II demonstrated the absolute necessity of the St. Lawrence seaway for the national defense and the military security of this Nation by providing a safe interior location for national defense industries, for storage of strategic

materials, and for construction of naval and merchant vessels—considerations which have been certified to the Congress by our most eminent military authorities; and

Whereas the constant growth of population and industry necessitates intelligent utilization of all of our national resources and reasonable expansion of our national transportation plant; and our new international responsibilities require this Nation to rise above sectional considerations and to develop its full potential strength in the interest of national security and world peace, which national objectives can be appreciably enhanced by the added industrial and military potential of the St. Lawrence seaway project: Now, therefore, be it

Resolved by the Common Council of the City of Milwaukee, That we hereby reaffirm the unalterable belief of the city of Milwaukee, and its citizens in the merits of this great project which holds such vast potentialities for the future welfare, prosperity, and security of this Nation and the entire world; and be it further

Resolved, That we urge His Honor, the mayor and the board of harbor commissioners to continue the official effort of the city of Milwaukee to bring this great project to realization; that we urge all civic groups, labor organizations and industrial enterprises to lend their full support to this great cause; and that we urge all Senators and Representatives from Wisconsin to exert their best efforts in the Congress to assure authorization of the seaway project at the earliest possible date; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States and the Governor of the State of Wisconsin, and to Senators and Representatives in Congress from the State of Wisconsin, and Senators TAFT and BRICKER.

Racial Relations in the South

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a letter which I received from a prominent citizen, Rev. C. A. Schultz, of Forest, Miss. It relates a human-interest story which occurred in that little south Mississippi town. At a time when racial controversy is raging and politicians are fanning the flames of racial misunderstanding, this letter might prove of interest. Particularly, should it prove interesting to that large class of unbiased citizens of that section generally referred to as the North. Many of this class of people have never been south and are, therefore, unfamiliar with the true conditions in that section of our great and beloved common country. Incidents, such as that referred to in Reverend Schultz' letter are not uncommon in the South, but the flannel-mouthed politicians, who, for personal political advancement, are continuously harping upon the alleged abuse of the Negroes of my section, would have you believe otherwise.

I wish it were possible for this substantial unbiased and otherwise intelligent class of our citizens, north of the Mason and Dixon's line, to visit the South and learn first-hand the true harmonious racial conditions which exist there.

Reverend Schultz' letter was accompanied by a photograph showing both white and colored children clinging to ole' Santa's costume—a picture of happy, harmonious, racial relations in the South. This, incidentally, is nothing new. It is substantiated by the Joe Louis story which appeared in Life magazine, recently. It will be recalled that Joe Louis stated in that article, when asked about race relations in Alabama, when he was a small boy there, that, in effect, he was not conscious of any racial discrimination.

Reverend Schultz' letter follows:

FOREST, MISS., *January 24, 1949.*
Hon. WILLIAM COLMER,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE: Enclosed herewith is a photograph. There is an interesting true story connected with this photograph, which I thought possibly you would like to know about.

During Christmas week the citizens of Forest erected a large Christmas tree on the courthouse square, decorating it with the usual trimmings. The Merchants Association, Lions, and Rotary Club were the main sponsors; however, some 500 citizens, both colored and white, were in attendance and took part in the program. The high-school band led the parade, this group was followed by an automobile decorated suitably to the occasion, in which sat the former mayor, present mayor, and mayor-elect. Immediately followed a car in which Santa Claus was riding and it was filled to the overflowing with fruits and candies, and many other things which were distributed to Negro and white children alike. On a large platform a Negro quartet sang three numbers of Christmas carols, after which Dr. Joe Lee Smith, present mayor, took over as master of ceremonies. I was called on to give the invocation. Then presents were given to all the children present. Santa Claus was indeed the man of the hour, Negro and white children clinging to his garments to tell him what they wanted him to bring them on Christmas eve night. At this time the enclosed photograph was taken.

The above enjoyable occasion took place in the deep South, the grand old State of Mississippi, where both races believe in the practice of segregation, and whose citizenry voted 85 percent for States' rights. You can't help loving a people like this.

Sincerely,

Rev. C. A. SCHULTZ.

Voluntary Controls and Allocations

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. McCARTHY. Mr. Speaker, insofar as my opponent in the campaign of last November was one of the majority party which supported this measure, H. R. 1660, in the Eightieth Congress, and insofar as his failure to support controls was an issue in the campaign, I feel obliged to include these remarks in the RECORD in justification of my support and my party's support of this measure today, at least to the extent of extending it for 7 months. The passage of the voluntary measure in the Eightieth Congress implied an admission that those in control of major industries, producing or distributing essential materials and goods, were not acting in the public good. The measure calling for voluntary action on their part was to serve as a warning, to be followed by positive control if necessary. The need for such control did arise, but the Eightieth Congress failed to act. Now the conditions of our economy are different. Profiteering has all but exhausted the savings which the advocates of price and material controls sought to save. Proper prices and allocations now become almost a matter of economic necessity. I see a great similarity between the situation and one relating to bounties on predatory animals. The time to put a bounty on foxes is the time at which the farmers do have chickens which the foxes are preying upon. The fox does not respond to voluntary controls. After the chickens have all been eaten there is little need for a bounty on foxes to the end of protecting the farmer's chickens.

Potential Capacity To Quickly Mobilize for Total War Is Best Interim Peace Insurance

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. JOHNSON. Mr. Speaker, from the last two wars we have learned that any future war will be total war. The entire resources of our Nation, military, industrial, and agricultural will be harnessed together to repel any assault, in the event we are attacked, and bring the victory that will permit us to survive.

To understand how total war is becoming more total, all we need to do is make a comparison between the war of 1917–18 and the Second World War. By every yardstick, we can see how tremendously increased in intensity and how much more modern war affects the civilian persons and economy. The debt in the first war was roughly $25,000,000,000; in the second war it was over $250,000,000,000. The first war did touch the civilian economy, but not to a very great degree. In the Second World War, war activities penetrated every county in the United States in some way, via agriculture, industry, transportation, communications, science, and so forth. Practically every human activity was directly affected by the second war.

Bearing this in mind, I wish to call to the attention of my colleagues a very interesting article by Maj. Gen. A. W.

Vanaman, on the Industrial College of the Armed Forces. General Vanaman is the commandant of this school. He has had a varied experience as an Air Force officer, having served as a military attaché, been commandant of McClellan Field, a large technical Air Force installation in Sacramento, and in various other assignments. He served in both world wars. His duty is to train military and civilian personnel how to harness the industrial forces of the Nation rapidly in the event of an emergency. The course would be profitable to every Member of Congress, if we had the time to pursue it.

I have not consulted him, but I am sure that he feels as I do, that this is a very essential activity in our prodigious effort toward a peaceful world. To show that we are prepared for any emergency, not only on land, on sea, and in the air, but in the factory and the farm, and the shop and the laboratory, will make any potential aggressor pause before he decides to attack us. The symbol of might evidenced by a prepared nation that can quickly and effectively throw its full power into a state of war, in my opinion, is the best interim peace insurance that we can have. During that peaceful period, perhaps we can lay solid foundations for the eternal peace that all of us are hoping and praying for. Following is the article taken from the Army and Navy journal, which was prepared by General Vanaman:

THE INDUSTRIAL COLLEGE OF THE ARMED FORCES

(By Maj. Gen. A. W. Vanaman, USAF, commandant)

In his classic On War, Clausewitz pointed out that the conduct of war is, of necessity, removed from the realm of exact theory and based upon a calculation of probabilities. For a generation, the history of our troubled world has been a living embodiment of the truth of this assertion. Historically each of the great nations has its characteristic sources of military strength and weakness which, under various circumstances, may bring victory or defeat. Germany, traditionally strong in its disciplined masses of well equipped troops, its efficient general staff, and its arms factories in the Ruhr, has faced the liability of two-front attack and possesses manpower reserves much smaller than those of the nations almost certain to oppose Germanic aggression. England has long possessed the advantages of great sea power, the moat formed by the English Channel, and the resources of a vast empire to supplement its own efforts. At the same time England has suffered from its lack of manpower and the extremely vulnerable nature of its far-flung supply lines. The United States, industrially the colossus among nations, and with a huge reservoir of manpower, has proved itself to be the most powerful of military nations, but under circumstances in which its weaknesses were minimized. The Achilles' heel of American military power is time. Napoleon said, Ask me for anything but time. In World War I and World War II the required time was bought by the blood and sacrifice of our allies. Should an aggressor again destroy the peace of the world the margin of available time may be far briefer.

Since the conclusion of World War I, intelligent Americans have realized the importance of this time element. It was clear to them that, unless means could be devised to reduce the time required to mobilize the American economy for war, it would be necessary for the Nation to maintain constantly a vast military organization. Since the American tradition has always favored dependence on the citizen soldier supplied with material produced by converted civilian industry, unceasing effort has been devoted, not only by the armed forces but by many segments of the public, to the development of effective measures for a prompt economic mobilization. For 25 years the industrial college has operated as the only institution in the world dedicated entirely to the problems of economic mobilization, procurement, and procurement planning. On September 3, 1948, the college was reconstituted under the direction of the Joint Chiefs of Staff and assigned the mission of preparing selected senior officers of the armed forces for important command, staff, and planning assignments in the National Military Establishment, and preparing selected civilians for important industrial mobilization planning assignments in any Government agency. This mission requires the presentation of specialized courses in all phases of the national economy with emphasis on the interrelationship of economic factors with the political, military, and psychological factors. Instruction in all aspects of joint logistic planning and the interrelation of such planning with general strategic planning and national policy planning is contemplated. Finally, the mission provides for the conducting of courses relating to peacetime and potential wartime governmental organizations and the determination of the most effective wartime controls.

The economic mobilization course of the industrial college requires 10 months, and deals with such subjects as the economic potential of the United States and other nations, American and world progress in science and technology related to military needs, the computation of requirements for the military and civilian sectors of our economy during war or a national emergency, and problems of production to meet military and civilian demands under emergency conditions, the procurement of supplies for the armed forces, the factors that contribute indirectly to the arming of the Nation (transportation, communications, fuel, power, distribution, and civil defense), manpower, and the mobilization of the Government for efficient functioning under war or emergency conditions.

The instructional methods of the college have, through an evolutionary process, come to include a balanced combination of lectures by staff members and leading authorities in the various fields relating to the mission of the college, case problems, seminars and round-table discussions, committee studies, oral presentations, and individual and group written reports and staff memoranda. In addition to the theoretical and classroom work at the college, the students make field trips to military installations and industrial establishments, observing at first hand the actual organizations and operations which will form the backbone of American economic mobilization.

The facilities of the industrial college limit classes to approximately 120 officers and civilians. Since it is obvious that the tremendous requirements of economic mobilization in the United States call for a far larger group of trained men than the college can graduate in any reasonable period of time, the industrial college has established an economic mobilization course for Reserve officers. Acting under the concept that many of the men most likely to occupy responsible positions in any future economic mobilization could not be released from their civilian pursuits to attend a course in Washington, the college decided to take its courses directly to leading American industrial centers. Thus, under this program, some 23 major cities have been visited by the instructional teams of the industrial college in the academic years 1947–48 and 1948–49. In each city a condensed course in economic mobilization of 2 weeks' duration has been held. The classes in attendance at these courses are composed of Reserve officers of the Army, Navy, Air Force, and Marine Corps; officers of the National Guard; and selected civilians, and have averaged about 250 members.

In the world today there is nothing but change—change in the political relationships of nations, change in the weapons of war, change in the technologies of production, change in the material and manpower requirements of national defense, and change in the body of scientific knowledge upon which all military and industrial technology must rest. The Nation, the economy, or the Military Establishment which does not accept this condition of change and adjust itself accordingly is destined for oblivion. It is the determination of the industrial college that, in its own modest sector of responsibility, it will meet change with adjustment, and always guide itself by the facts of the current situation.

On its twenty-fifth anniversary, the industrial college feels that it has made a very definite contribution not only to the national security, but also toward the solution of that most difficult problem—the combining of an adequate system of military preparedness with the traditional American concepts of personal freedom and free enterprise economy.

The President Pays a Debt

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Washington Evening Star of January 31, 1949. It is a clear and concise statement of the provisions of the President's new labor bill, drafted by union lawyers. It could not be expected to be of service to the Nation.

It is worse than a hollow mockery for the President to speak about the terror of world communism in other lands and then disarm his own country from legal authority to cope with communism at home.

No attempt is made to equalize the rights of employer and employee under his bill. We shall go back to conditions of confusion and industrial war under the Wagner Act, if the President's bill becomes law.

I urge every Member of the House to read this clear-cut statement from the Evening Star. It is an awakening by that great paper to the danger with which our country is threatened.

The editorial follows:

MR. TRUMAN PAYS A DEBT

The President's version of a new labor law, drafted in consultation with union lawyers, reveals a distressing willingness to bow to the demands of the labor bosses.

This bill makes a mockery of any rights which employers might be supposed to have. Except in one tiny area, it gives the green light to unions to take whatever they can get by the use of economic force, and, finally, it does not protect the public against strikes designed to attain a union objective by depriving the Nation of some essential commodity or service. Small wonder that the

administration men in the Senate are trying to railroad the bill through without adequate hearings, for it is not a measure which can meet the test of full and honest scrutiny.

The Taft-Hartley Act which has been condemned in emotional terms because it cannot be substantially discredited by any factual showing, tried to bring about some balance between unions and industry. It sought to equalize the one-sided relationship that grew out of the original Wagner Act. This new bill repeals the Taft-Hartley Act and revives the Wagner Act in an amended form which promises to be more unjust to industry than was the original law. The Taft-Hartley Act assumed that employers and employees were entitled to equality under the law. The President's bill clearly repudiates that assumption, and stands on the premise that unions should have special and favored treatment. As an illustration, the President would lift all restraints on political spending by his union political allies. But the ban on political contributions by corporations and banks would be continued in effect.

The President's bill recognizes only two improper union practices. These are certain types of jurisdictional strikes and secondary boycotts designed to maintain a proscribed jurisdictional strike. And even in this drastically limited area the remedies proposed are so time-consuming that, for practical purposes, they are apt to prove ineffective.

On the larger issue of strikes which threaten the life of the Nation, the President's bill is deplorably inadequate. In this respect the Taft-Hartley law offered little enough—at best, an 80-day stay of a crippling strike through resort to the injunction process. The President's bill knocks out any appeal to the courts. It provides only that when a dispute threatens the national health or safety, the President may issue a proclamation calling upon the parties to stay on the job for 30 days. It says that the parties shall observe this proclamation, but there is nothing which requires them to do so. It is further provided that the President appoint a fact-finding board which would investigate the dispute and make recommendations for settlement. The bill does not require either party to accept the recommendations.

In practical effect this would mean that the White House would be back in the business of mediating major labor disputes. We have had unhappy experience with that procedure in the past, and if this bill becomes law, we will have more unhappy experiences in the future. Presumably the Government could bring enough pressure to bear to compel an employer to accept a fact-finding body's recommendation. But it has been amply demonstrated that the Government, without the aid of the Federal courts, cannot similarly coerce a strong union. So as a practical matter what Mr. Truman proposes is that the Government be disarmed as the representative of all the people when their welfare is threatened by a strike.

There are a variety of other things wrong with the President's bill. Among these are the devices to return the Conciliation Service to the Labor Department, to knock out State bans on the closed shop, to cut down the general counsel of the Labor Board, and to lift the curbs on Communist domination of unions. Fortunately, however, the bill cannot be fastened on the country without Senate approval. As it stands, it represents a handsome payment by the President of his political debt to organized labor. But the Members of the Senate are not under the same political obligation. They are free to examine all of the provisions of the measure and to debate them fully. This will be done, and that debate will be one which the people of this country would be well advised to follow with close attention.

Federal Grants

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. LeCOMPTE. Mr. Speaker, we hear a great deal about Federal aid and Federal grants to the several States. Many of our newspapers are looking at this program and wondering if the tendency should not be slowed down a little. Under leave to extend my remarks, I enclose a well-written editorial from the Ottumwa (Iowa) Daily Courier of January 31, 1949, which reads as follows:

FEDERAL GRANTS

Many Federal and State government leaders don't like the steady increase in grants of Federal money to the States. They say the grants-in-aid gradually subtract from the independence of the States.

The joint conference of State governors and Congressmen, in Chicago several months ago, resolved that the grants should be cut at least 20 percent in the 1950 fiscal year. However, President Truman has proposed in his 1950 budget substantial raises, rather than reductions, in the total of grants.

Even without the new programs, the 1950 total of grants was bound to go higher, says Clarke Beach in an AP story from Washington. James E. Webb, then Budget Director and now Under Secretary of State, said in a speech in December that the Federal Government is already committed to supply increased funds in grants, in accordance with past acts of Congress.

The practice of giving the States grants-in-aid is as old as the Nation, but only in recent years has it taken on major importance. The big boom came in the 1930's when the States and cities were unable to cope with the need for work projects and other relief for the unemployed. The peak came in 1939, when $2,908,999,000 was spent in Federal grants.

Since 1946 they have been rising again: $1,622,068,338 in 1948; $1,941,784,566 estimated for 1949; and $2,458,202,454 in 1950 if the President's proposed new legislation is approved. This would not include $100,000,000 in contract authorizations for the new housing program which Mr. Truman has recommended as another grant measure.

The general idea behind grants is that the Federal Government should pay part of the bill to enable the States to conduct certain programs in the interest of the Nation as a whole. The States administer the grants. The programs chiefly concern health, education, and social welfare.

Grants are supposed to do two things: First, to stimulate the States to conduct programs they might not undertake if they had to depend entirely on their own funds. The Federal Government dangles large sums of money in front of them. It is theirs to use if they match it, usually putting up from about 25 to 50 percent of the total sum to be spent.

Secondly, the grants are supposed to equalize the burden between the rich and poor States. That's where the critics begin to differ with the advocates of the grants. They claim there is very little equalization of the burden. Some experts in the Federal Budget Bureau agree with them.

In fact, the critics declare, the grants discriminate against the poor States. To get the large sums of Federal money, they obligate themselves to put up matching funds, which leave holes in their small treasuries. To engage in the Federal program they have to neglect some local cases which might be more important to them.

The Federal Government moreover, must necessarily establish certain minimum standards for the programs it helps to finance. This means a measure of control over local administration. Representatives of the Council of State Governments feel that the whole program tends to violate the well-accepted political principle that the unit of government which spends money should be responsible for collecting it.

Neither the council nor the governors, however, want the grants program abandoned. They only want it minimized. They want the Federal Government to withdraw from tax collections in certain fields where States can step in and raise money to conduct their own social welfare programs. But the Federal experts, and even the council representatives, admit that this probably would not be the answer. Localities hate to tax their own people, and States try to keep down their taxes because of interstate competition—the effort to provide tax havens.

The programs now financed by grants-in-aid might lag or be abandoned. Even if States and localities impose taxes as heavy as their people can afford, the States in poorer financial condition will end up with revenue which is inadequate for such purposes as those now in effect.

None of the critics seem seriously to expect any development except a gradually expanded program of grants-in-aid.

Mass Picketing of Federal Courts

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

NEW ORLEANS, LA., *January 25, 1949.*

It having been brought to the attention of the board of governors of the Louisiana State Bar Association that several instances of mass picketing of Federal district and/or circuit courts in New York City, San Francisco, and Los Angeles have recently taken place, the following resolution was unanimously adopted:

"That the board of governors of the Louisiana State Bar Association, condemns the picketing of courts, Federal and State, as an interference with and obstruction of the administration of justice, the purpose of which can only be to influence, intimidate, and coerce the courts in connection with matters, prospective or pending, before them.

"That ours is a nation of laws and not of men, and that in the orderly administration of justice it is necessary that our courts be impartial and independent in the application and construction of the laws and thus free from any interference or acts which will result in a disrespect for law and constitutional government under law; that such picketing constitutes a clear and present danger as well as a major threat to the integrity and independence of the judiciary and our form of government.

"That a copy of this resolution be forwarded to Mr. Henry P. Chandler, Director of the Administrative Office of the United States Courts, with the request that this matter be brought to the attention of the Judicial Conference of the United States; and that copies of this resolution be sent to the

Representatives of this State in Congress so that should additional legislation become necessary in order to protect the integrity of our Federal courts such Representatives will know the attitude of the bar of Louisiana with respect thereto."

I, the undersigned assistant secretary of the Louisiana State Bar Association, do hereby certify that the above and foregoing is a true and correct copy of a resolution which was unanimously adopted by the board of governors of the association on January 25, 1949.

In witness whereof I have hereto affixed my signature and the seal of said association on this the 28th day of January 1949.

[SEAL] STEPHEN A. MASCARO,
Assistant Secretary.

Gen. Courtney H. Hodges

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. LYNCH. Mr. Speaker, in New York City on last Monday, January 31, the Army, Navy, Marines, Air Force, Coast Guard, and the citizens of New York joined together to pay homage to Gen. Courtney H. Hodges on his retirement from active duty with the Army of the United States—a tribute to a great soldier and to a great leader on our team for national defense.

When General Hodges departed from First Army headquarters at Fort Jay, Governor's Island, N. Y., there were representative units from each of our armed services to pay tribute as a gun salute was given from a Navy destroyer in the harbor. Here we saw a cooperation between the services indicative not only of their mutual admiration for this great leader, but beyond this, a splendid example of the existing interservice harmony leading toward true unification which he has so wholeheartedly supported.

Despite the snow, sleet, and slush downtown Broadway was lined with people as General Hodges was escorted to the City Hall. Mayor O'Dwyer presented a special medal and a scroll to General Hodges and proclaimed him an honorary citizen of New York City. Here was a heartwarming indication of the good relations and mutual understanding between the citizens and their Army—a condition which General Hodges so earnestly endeavored to promote and maintain.

General Hodges was the man who commanded during World War II the largest Army ever to be organized in American history. He ends today 43 years of outstanding service to his country as a soldier of the United States Army. He terminates his active service with the Army today under the operation of regulations governing age of general officers and thus closes a career that began in 1906 as a private in the United States Army. He rose through all the ranks to the highest position in the Army, except for the World War II created rank of General of the Armies.

The story behind the achievement of the four stars General Hodges wears is one of the stirring and exemplary pages of American military history. Spanning an almost unprecedented 43 years of Army life, the general has filled a variety of assignments from 3 years of enlisted service to commissioned assignments with Gen. John J. Pershing in Mexico to regimental commander in Lorraine, the Meuse Argonne and the St. Mihiel offensives in World War I. For his performance of duty in the First World War he won the Distinguished Service Cross and the Silver Star.

After the war he was given assignments calculated to further develop his extraordinary abilities. He instructed in tactics at West Point, studied at the Command and General Staff School at Fort Leavenworth, was a member of the Infantry Board, and spent 2 years on the General Staff of the Philippine Department.

Later, as commandant of the Infantry School at Fort Benning, Ga., he laid the foundation for the infantry training and instruction of officers and men which was followed through the rapid wartime expansion of the school. In 1941, as a brigadier general, he was made Acting Chief, then Chief of Infantry of the Army.

The climax of this distinguished soldier's career came with the advent of World War II. First as deputy commander to General Omar N. Bradley, then as commanding general of the First Army, from the time of its training period in England through the extraordinary exploits of this organization to the conclusion of the Army, General Hodges displayed with increasing spectacularism and effect the brilliant qualities of a fighting soldier of the greatest stature.

As long as such names as Normandy D-day, Huertgen Forest, the Battle of the Bulge, Remagen Bridge, and the Ruhr claim meaning in the history of America, so will the name of the man who contributed so significantly to the victory of the American armies be respected.

In December of 1944, the beginning of the great march of the allied armies of the Rhine, there were, in the First United States Army, under the command of General Hodges, 19 divisions, totaling a force unequaled in size in the history of United States armies.

The statistics of this unparalleled organization are breath taking, even to those unschooled in military operations. At various times, through the European war, First Army controlled a total of 40 divisions. It experienced 337 days of continental operation on an average front of 102 miles. At one time, in April of 1945, the front extended to 287 miles—the maximum front attained during the war. In ground covered, the First Army advanced 866 miles in 337 days, from Utah Beach across the Cherbourg Peninsula, north to Cherbourg, and then from Omaha Beach across the Continent to Grimma, on the Mulde River.

The greatest advance of any corps under First Army during the amphibious assault on the Omaha beachhead was made by the V Corps on the 9th and 10th of June 1944. First Army bore the brunt of the severe fighting in the attack on the Normandy beaches, behind which General Hodges landed while the fighting was fiercest and success still in doubt.

During the entire European operation, First Army was on the defense for only 2 weeks. This was in the terrible days of December 1944 when the Germans launched their counteroffensive in the Ardennes. At this crucial time General Hodges delayed moving his headquarters until the last possible minute so that he could exercise control during the withdrawal stage, and to prevent, if possible, the capture of a main gasoline dump to his rear. Capture of this dump would have been invaluable to the Germans in supplying fuel to maintain their mighty offensive. Both the orderly withdrawal and saving of the gas dump were accomplished, but so close was the enemy that General Hodges had to use the headquarters guard to repulse advancing enemy patrols driving in toward the dump. The dump was successfully moved and only then did the general begin the withdrawal of his own headquarters.

As General Hodges took leave of the Army that had become so completely identified with him, he might well have remembered his intelligence summary to the field on May 7, 1945:

> For the first time in 11 months there is no contact with the enemy. The victory which was won on Omaha and Utah Beaches has reached its climax. Today belongs to the men of this Army who fought and conquered the enemy from Normandy to the Elbe. There is no enemy situation to report, for there is no longer an enemy to defeat.

May the general have many years of health and happiness.

Educational Privileges of Veterans of World War II

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial from the Veterans' Report of February 1949, and letters from readers referring to the same subject.

These all refer to a plan for passing on the educational privileges of veterans of World War II to their children. Unbeknownst to the editors and evidently the readers of Veterans' Report, legislation on this subject is already before Congress.

During the second session of the Eightieth Congress, I introduced H. R. 5043, which received no committee consideration. This bill has been reintroduced this session, and now bears the number H. R. 1556.

Spontaneous interest in legislation of this type is now evident among greater numbers of ex-service men and women.

It is my hope that the Veterans' Affairs Committee will consider the merits of this proposition in the near future.

The matter follows:

OUR CHILDREN

A recent proposal by a Veterans' Report reader has captured the imagination of many others, and with good reason; for it is concerned with the schooling of our young. Mr. William Kyzer urged that the vet who did not make use of his educational privileges under the GI bill of rights should be allowed to pass those privileges on to his children.

Certainly the additional expense which such a program would incur must be considered in these days when so many monetary pressures are being asserted upon the Federal income. But the justice of the proposal is beyond argument.

Some vets could not avail themselves of the educational rights because the subsistence payments were inadequate; other ex-GIs, with college degrees, do not have great need for the privileges. But, having earned the right to the free higher education, the vet should be permitted to pass on that right—just as he may, if he wishes, pass on the monetary results of the GI loans—to his offspring.

SUPPORT KYZER

To the EDITOR:

I have been getting your Veterans' Report for about 3 months, and like it very much. But I sure have some real gripes, such as that fellow who signed his name, "A Veteran, a Republican, and above all an American."

It seems to me like the fellow is a little scared to sign his name or is very much ashamed of himself for writing such a silly article and daring an editor to print it.

I don't care who pays for the printing of the Veterans' Report, because I think it is a damn good up-to-date paper on veterans' affairs.

I think William K. Kyzer has a very good point to send our children to college and help them get an education from our GI bill. I also think, if a vet takes a course under the GI bill from 6 months to a year and has a total of 3 years or more coming, it would be nice if our children could take the remaining years or time for a trade or schooling. Good luck to the Veterans' Report in the coming year.

GERALD P. DUFT.

SPOKANE, WASH.

SANE PLAN

To the EDITOR:

This is the first time I have ever been compelled to write a letter to such a column as this, but after reading the note by William K. Kyzer, of Gaffney, S. C., I feel I have to put in my 2 cents worth.

I believe his is the most sane, sound, and reasonable proposition yet. There are many, including myself, who for some reason or another are unable to take advantage of the educational benefits, or any other GI benefits. Under such conditions, why shouldn't the benefits be passed on to the children of the veterans. Even heaping honors, money, and benefits on me couldn't please me more than knowing my child could take advantage of what I missed.

I hope a real storm is raised on this subject.

HERMAN G. MILLER.

HARLAN, KY.

APPRECIATE OPPORTUNITY

To the EDITOR:

I'd like to commend William K. Kyzer, of Gaffney, S. C., on his suggestion in Sound Off to give the veteran's child the education he himself was entitled to and did not use.

I'm sure the great majority of veterans, if not all, would more than appreciate the opportunity of being able to give their beloved offspring what they would find ordinarily impossible—that is, the kind of education a father would want to give his child.

MRS. MORRIS ACKERMAN.

BRONX, N. Y.

IN AGREEMENT

To the EDITOR:

I, too, am one of the thousands who are eligible for education under the GI bill and will not be able to take advantage of it because the subsistence allowance would not be sufficient income.

I am very much in agreement with Mr. William K. Kyzer.

WESLEY A. RICE.

HOUSTON, TEX.

Council of Europe

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Times-Picayune of January 31, 1948:

COUNCIL OF EUROPE

The project for a Council of Europe, agreed upon last week by the foreign ministers of five west European nations, is hailed in London dispatches as a major step toward a full-fledged western European union. The governments committed to it are those of Britain, France, Belgium, the Netherlands, and Luxemburg. The three last named have been working closely together under the Benelux customs union established January 1, 1948. That pact was preceded by a customs union between Belgium and Luxemburg which came into existence in May 1922. These earlier experiments with federation have conditioned all three for the broader federation now projected. The enlistment of Britain and France after months of study and negotiation strengthens the plan enormously. Foreign Minister Sforza of Italy announces that country's readiness to join as one of the founding states.

Thus the centuries-old dream of European federation, whose postwar revival was forced by Communist aggression and intrigue, has a better prospect of realization than ever before. But it cannot yet be taken for granted.

Under the new five-nation agreement as outlined from London, the Council will be composed of a committee of ministers representing the member governments, which will meet in secret and be vested with power to make binding decisions, and an advisory consultative body representing the national parliaments, which will hold public meetings. Many of the details, we read, remain secret and others have still to be worked out. Meanwhile other European nations will be invited to become members.

Correctly termed a "major step toward full-fledged European union," there are, of course, many other steps that must be taken and the outcome of this brave new venture remains uncertain. Doubtless it will be as strongly opposed by Moscow as the Marshall plan and every other postwar effort to restore European economy on the democratic basis is opposed by the Politburo. At first, and probably for long to come, it will have to function as a council of non-Communist European states and under the Communist curse launched by the Kremlin. The nations invited to join must accordingly overcome their fears of Communist reprisal and some part of their selfish nationalistic aims and traditions before they accept.

But the imperative need of their cooperation and cohesion for their common good grows plainer every day. The immediate assurance that Italy is willing to come in at once invites hope that enlistments may be prompt and the set-up of a fully representative Council of Western Europe be accomplished within the year.

Excise Taxes on Clocks and Watches

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. PATTERSON. Mr. Speaker, I have introduced today a bill to amend the Internal Revenue Code with respect to excise taxes on watches and clocks. The purport of the bill is the repeal of all excises on clocks, and on watches selling for less than $65.

There currently exists a serious inequity, in that clocks selling for more than $5, and watches retailing for more than $65 are subject to 20-percent taxation as compared to 10 percent for those selling under the above figures.

Excise taxes were originally levied against consumer goods considered to be luxuries. These were doubled during the war to counteract inflation during a shortage of durable consumer necessities.

Congress originally erred in considering watches and clocks in the category of luxuries. They are a necessary item in our everyday life. The Internal Revenue Code lists these products under the jewelry classification when, in effect, they bear but faint resemblance to any definition of jewelry. Ninety percent of sales of clocks and clock-type watches are made in establishments other than jewelry stores.

The report of the Subcommittee on Intergovernmental Relations of the Senate Committee on Expenditures states "that the Federal Government should reduce Federal excise taxes as soon as practicable." There is no valid objection raised by any source to this reasoning.

The Treasury Department, in 1947, concluded a study of Federal retail excise taxes, and stated:

> The tax may have adverse competitive effect on producers in certain price areas. This is especially noticeable in the case of clocks and watches, since the tax rate for alarm clocks selling for over $5 and watches selling for over $65 is twice as high as the tax on articles selling below these prices. A larger proportion of domestic than imported watches probably sells for over $65, and the differential tax, therefore, tends to discriminate against the domestic producer.

More pertinent, however, than any or all of the preceding arguments for repeal is the present situation of our domestic watch and clock industry. Bufeted in the postwar years by rising costs

and absorption of the market by Swiss imports, this most necessary industry is threatened with extinction by Federal fiat. Swiss watches, through favorable tariff imports, have captured approximately 80 percent of the market potential here in America. The added imposition of excise taxes has almost priced our domestic products out of the market. Curtailed production and, consequently, curtailed employment have been the twin results of these actions. The Waltham Watch Co. in Massachusetts is tottering on the edge of bankruptcy; Connecticut factories are facing a crisis in this same respect. The President is unwilling to invoke the section of the reciprocal-trade agreement referring to protection of domestic industry, so the remedy is incumbent upon Congress. Having lost our authority in tariff matters, we must take economic measures to safeguard the continued employment of our citizens.

The industry which contributed so materially to war production through the period of 1942–46 must be maintained. Practically every type of timing device used by our military forces was supplied by the watch and clock industry. Should the threat of war become more intense there will be even greater need for the products and services of this skilled labor force.

Congress can, by its speedy actions, demonstrate its concern for the continuance of the watch and clock industry in the United States.

Protection and Development of Alluvial Valley Lands

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to me under date of January 29, 1949, by the St. Francis Levee District of Missouri, at Caruthersville:

MY DEAR SIR: We people along the Mississippi River are alarmed at that part of the administration plan to reorganize the various departments of our National Government that will eliminate the United States engineers from the planning and construction of the necessary works to protect and develop the alluvial valley lands.

Army engineers have been active in planning and constructing the protective work of our great rivers for a hundred years. No more capable men can be found. The engineers are a select top 10 percent of the annually graduating classes from the West Point Military Academy. The schooling and training of these men is done at the expense of our National Government, and after graduation are salaried men of the Army, a Government function.

For all this time they have had charge of our rivers and harbors, and it is only fair to say these engineers have done a wonderfully good job. It is also pertinent to admit and say that carrying on such work has proven to be splendid practical experience for these young engineers during peacetime, preparing them for emergencies arising when war overtakes us. Time and time again these engineering military graduates, trained in construction and management of peacetime projects, have shown remarkable ability to meet emergency requirements of military action and procedure.

Last of all, why should we change a policy of the Government that has proven so satisfactory for more than a century? Why should our Government abandon the method of educating and giving practical experience to men it is paying a salary in order to place the management of certain public works under a civil-works department, when it has been done for all these years so satisfactorily by the War Department, producing such men as Generals Summerville, Noce, Reybold, Donald, Connolly, Hcgue, Tyler, Crawford, and Lee, who did inestimable service during World War II in the present decade, all of whom have been in the Memphis United States engineers' district, guiding the work along the river.

Handling the Mississippi and the necessary improving works of the same is in a way actual war experience; the fighting of the floods of the Mississippi is actual war with inanimate forces, continually wearing away the banks of the stream on its meandering way to the Gulf, which forces us to continually build new levees to replace those caving into the river, and which at times during the winter and spring reaches heights of from 5 to 30 feet overbank flow.

At present a committee of the House is giving earnest consideration to the Hoover report on general reorganization of our Government's activities, with the idea of omitting or removing overlapping functions. We understand that this report proposes a Department of Public Works to take over the work being done on harbors and rivers of the United States by the United States engineers.

We, along these rivers, are actively opposed to taking river improvement away from the United States engineers, who have cooperated with us for 70 or more years to protect and build our levees. Ninety-odd years ago, soon after they started to make studies of the Mississippi River for the protection of the settlers on its alluvial lands, which have been rapidly improved under the excellent protections now afforded, to 600,000 people living on 3,500,000 acres of drained swampland between Cape Girardeau, Mo., and Helena, Ark., that is being done by the United States engineers building levees along the banks of the Mississippi River.

We are asking you to endeavor to get an amendment to the report of the Commission as outlined in two editorials in the Commercial Appeal of Memphis, which outlines what is desired by people of the valley, including cities on the high land adjacent to the reclaimed area. Attached are the two editorials.

We, a million people living in the alluvial valley of the Mississippi River between Cape Girardeau, Mo., and Helena, Ark., are begging you to take necessary steps to have the management of this levee-protected area all along the lower Mississippi to the Gulf of Mexico left in the hands of the United States engineers. These engineers are noted over the world for their intelligence, ability, credibility, and trustworthiness. Over all these years of origination and supervision of improvements costing billions of dollars, never has any scandal arisen in the management of these expenditures.

We, of the St. Francis Levee District of Missouri, are asking you, our Missouri Senators and Congressmen, to step in and help to so amend the reorganization plan by excluding its application to the United States engineers.

In the reorganization bill of 1945, a clause exempted the United States engineers specifically from this plan. We are including the exempting paragraph to use in the present reorganization report.

Respectfully submitted.

St. Francis Levee District of Missouri; C. F. Bloker, President; T. P. Russell, Vice President; S. C. Reynolds, Wayne DeLisle, T. A. Haggard, Board of Supervisors; S. P. Reynolds, Chief Engineer; George T. Glozier, Assistant Engineer.

EXEMPTING PARAGRAPH

"(c) No reorganization plan shall provide for any reorganization affecting any civil functions of the Corps of Engineers of the United States Army, or of its head, or affecting such Corps of Engineers or its head with respect to any such civil function. No reorganization contained in any organization plan shall take effect if the reorganization plan is in violation of this subsection."

Chinese Communists Exploding Hope They'd Seek Favor of West

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown:

CHINESE COMMUNISTS EXPLODING HOPE THEY'D SEEK FAVOR OF WEST

(By Constantine Brown)

Some wishful thinkers both in and out of the administration, who believed that the Chinese Communists would pay lip service, at least, to the western democracies for a few months after Generalissimo Chiang Kai-shek's defeat, now are being disillusioned.

The blunt statement last Friday by Mao Tse-tung, Moscow's puppet, accusing the Nanking government of selling out to the United States, has dispelled their hopes.

The Chinese Nationalist forces now have disintegrated. There is hardly an army left which is loyal either to General Chiang or the Kuomintang. Within the organization itself there have been many defections. Members are running for cover, either getting on Mao's bandwagon as quickly as possible or, if they have funds in the Hong Kong banks, fleeing to temporarily safe areas.

NOT MUCH TO DO

Some of General Chiang's generals who still command organized forces are thinking of establishing themselves as local war lords in areas not yet affected by the civil war. The disintegration of China is more nearly complete than it was a few weeks ago.

Some high officials in Washington who realize that this disaster soon will affect the security of the United States and who deplore our short-sighted policy toward the Nationalists since 1946, agree that there is not much we can do at the present time.

American "do nothing" advocates, who claimed in the past that the Chinese Communists were not Moscow's satellites but only agrarian reformers, anxious to establish a real democratic government, used to explain that after Mao and his followers took over from the Kuomintang they would be anxious to preserve normal relations with the United States. The lure of the Marshall plan's billions could not be overlooked, even by hard-boiled Communists, they said.

American businessmen in Shanghai and other Chinese centers seemed to share this

belief, too. They pointed out that after General Chiang disappeared from the political stage the new rulers, although directed politically from Moscow, would have to seek supplies from the United States, which now has become the world's provider. They scoffed at the idea that a Communist regime would rather see its subjects starve than make any kind of compromise with America.

SEVERE STAND SEEN

Mao's severe indictment of the Chiang regime should dispel any illusions that he is considering following any amicable policies toward this country. In his demand for what amounts to unconditional surrender of the Nanking government, Mao accuses it of having "betrayed national rights wholesale to the American Government" and having obtained several billion dollars in loans from Washington.

Mao, of course, overlooks the fact that most of these billions were loaned to China at a time when she was at war with Japan and he himself benefited to some extent from the American bonanza.

Mao further accuses General Chiang of having "concluded treaties of betrayal with the American Government and accepted the American military advisory group's participation in the civil war." Mao also announced that these betrayal treaties would be abrogated, although he did not mention the treaties he himself had signed with Moscow turning over Manchuria to the U. S. S. R.

These formal statements by Mao are taken lightly by some old China hands, who say that there is a great deal of difference between what a Chinese says and what he actually does. This may have been true in the past, when the Chinese were their own masters. But today, when every one of Mao's moves is dictated from Moscow and supervised by Moscow's agents, his words of antagonism toward the United States are as good as coming from the Kremlin.

In spite of these obvious facts, some officials in Washington are advising their supervisors to continue the flow of Marshall plan goods to China, in the belief that we must keep a toehold in the country and help the Communists organize their newly acquired possessions.

This theory is advanced by those who firmly believed that by continuing UNRRA support to the countries behind the iron curtain we eventually would be able to detach them from their Moscow masters.

Olympic National Park

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks, I include an editorial from a recent edition of the Yakima (Wash.) Republic regarding the Olympia National Park.

Since the area represented by this paper is primarily agricultural, I feel that their views on the subject matter will be of interest to the Members of Congress.

The editorial follows:

HELPFUL MOVE

It is pleasing to note that three sterling Democrats with seats in the State house of representatives have joined Senator HARRY CAIN and Congressman RUSSELL MACK in calling for a new deal on the Olympic National Park.

The action of the three lends a bipartisan aspect to the hitherto Republican efforts to cut the park to reasonable size so that some of the big timber stands in the people's playground may be excluded and sold to the mills. The State legislators, who are residents of the Olympic Peninsula, appreciate as well as do the hard-headed Republicans, CAIN and MACK, the importance of utilizing some of the sequestered timber instead of leaving it to decay. Their joint memorial asking the Federal Government to designate a disinterested and qualified board to make a survey of the park and hold hearings on the question of boundary revision is in line with the Cain-Mack resolution for the authorizing of a survey and the holding of hearings by a congressional committee.

As stated in the memorial offered by the State representatives, the inclusion of certain lands valuable only for timber culture is detrimental to the timber and agricultural industries and is depriving certain municipalities and school districts of vital tax revenue.

Russia Plans To Secure American Dollars and Scarce American Goods

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. GOLDEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article from the February 4, 1949, edition of the United States News and World Report:

RUSSIA'S SECRET SOURCE OF DOLLARS

(Reported from Vienna)

Russia is siphoning millions of American dollars and tons of critical materials out of western Europe through pipe lines of underground trade. Deals are small but numerous. Net result is to give Russia a steady flow of things the United States is trying to keep out of Russian hands.

Headquarters of the Russian combine directing these operations is in Vienna, where the Russians sit at the head of a corporation that cannot be touched by Austrian law. They have agents throughout the non-Communist world. They use trading methods that involve smuggling, hijacking, and gangster tactics.

So far, American trade experts are blocking Russian efforts to execute big deals through underground channels. But the Soviet combine is expanding its activities. Small leaks of dollars and goods from the west are likely to go to Russia through Vienna as long as the Soviet traders guarantee big profits. This is how the Russians operate, as traced by a staff correspondent of United States News and World Report in Vienna:

Underground trade, Russian style, starts with orders from Moscow to Soviet trade experts in Vienna. They are told to get, for example, American high-frequency melting equipment, Italian machine tools, western German ball bearings, Dutch optical instruments, or Malayan rubber. American agents in Europe are trying to keep all these things out of Russian hands.

The front for the Russians in Vienna is a corporation called USIA, a name formed of initials that in Russian stand for Administration of Soviet Enterprises in Austria. In reality, the corporation is a trade combine of Russia and satellite states, a combine staffed by Russians working for the Soviet Government.

Inside Austria, the Russian traders enjoy extraterritorial rights, Austria's non-Communist government, lacking a peace treaty, cannot control Russian business within Austria as it controls Austrian business. As a result, the Russian traders are able to ignore Austrian customs and trade regulations and to engage in all sorts of underground deals with traders in western Europe.

Go-betweens for the Russians in western Europe, traders willing to risk under-the-counter deals for big profits, are advised promptly from Vienna of the things Russia needs. Sometimes they know that the Russians are the buyers, sometimes the orders are placed through independent firms in Austria. Each intermediary trader is asked to get only small quantities of the items desired. Large orders of strategic materials and machinery are checked carefully by United States officials in Europe.

Russian agents in the west work directly with manufacturers. The agent puts up the cash, supplied by Russia, the manufacturer puts his request through the legal channels for such materials as Russia wants but states he needs them to produce goods vital to western Europe's economy. The order may go directly to the United States or to the western European exporter; it may also be routed through two or three other traders who have no way of knowing that the Russians are involved.

Agents for the Russians sometimes approach a western manufacturer directly, offering to put up the dollars to buy machinery he needs if he doubles his order, giving half to the Russians. The Soviet combine has obtained ball bearings from western Germany by this method.

Industrial black markets in western Europe are a main source of Russian purchases. In Italy there is a black market in machine tools. Dutch optical instruments can be bought under the counters in Antwerp and in Paris. Malayan rubber, sold by the British to French importers, is reaching the Russians in Vienna through French black markets.

An underground railway, set up by the Russians in Vienna to get goods through western-border controls, is operating smoothly. Railway workers who are members of the Communist parties of western Europe help by switching way bills in transit. Machinery made in Germany and sold to Italian buyers acting for the Russians never reaches Italy. It leaves Germany as transit trade for Italy, but leaves Switzerland at the Austrian frontier marked as transit trade for Vienna.

Hijackers sometimes cut into the operations for the Russian combine. In Austria, for example, hijackers recently seized a number of truckloads of American cigarettes smuggled into Austria on Russia's orders. But the Russians also use strong-arm methods to seize the goods they want. Gun battles between truckers and hijackers are frequent in Austria.

From Vienna, however, goods are simply sent to Moscow by rail. Precision instruments, and sometimes packets of United States currency purchased on the French black market, are dispatched by air from Vienna to Moscow by Russian planes.

Payment for Russian purchases in the west is no problem for the Soviet combine. Satellite countries in the Russian sphere pay most of the bill.

United States dollars, the currency preferred by all traders in Europe, are obtained by the combine in many ways. Russians in

Vienna act as agents for the satellite countries, selling Polish coke, Czechoslovakian beet sugar, Rumanian oil, Hungarian pigs and Bulgarian tobacco to western Europe for dollars, taking a big commission. In addition, Russia sells steel scrap seized by the Soviet Army in Austria after World War II, selling to the West only for dollars. The Austrian Government also is forced to give the combine American dollars for the oil from wells in eastern Austria that were taken over by the Russians as German assets.

Banking and clearing arrangements to finance underground trade deals are centered in Switzerland. There, both the Soviet combine in Vienna and the western traders engaged in such trade maintain hidden dollar accounts in Swiss banks. Dollars are simply transferred from one account to the other inside Switzerland.

Russia also finances its combine in Vienna by handling deals between the countries of eastern Europe. All the satellite countries have trade agreements with one another, many of them signed on Russia's orders. But sellers refuse to deliver on the prices fixed by treaty and sell through the Russians in Vienna for higher prices. Buyers must pay or do without; the Russians get commissions.

Profits for the Russians are large—300 percent in the case of American cigarettes smuggled into Austria by the Hungarian Communist Party at the rate of 25,000 cartons a day. The Soviet combine doubled its money by handling the sale of paper to an Argentine buyer for an Austrian exporter who thus avoided Austrian currency controls. Such profits are not unusual in underground trade.

Nobody but the Russians know just how high the Russian dollar profits run, or how much rubber, chemicals, tools, precision instruments, machinery, and other scarce or strategic commodities from the west go through Vienna to Moscow.

Loss to the west, however, is considerable. Dollars sent by the United States to aid western European recovery are going into Russian bank accounts; materials and goods needed to help European countries to defend themselves against Russian expansion are leaking into Soviet hands.

United States policy, set in Washington, is to police American aid to Europe straight down to the ultimate consumer wherever possible. American experts in Vienna, however, admit that it is virtually impossible to shut off all underground trade between the Russians in Vienna and the west. Direct trade with the Russian sphere is vital to the economy of western Europe. And the United States is not prepared to halt Russian shipments through Austria by dividing the little country as Germany is divided.

Outlook, thus, is for continued leaks of American dollars and scarce goods into Russia's underground trade net. Countries receiving United States aid will be asked by the United States Government to clamp down on the illegal practices of their own traders. Otherwise the United States can do little to stop the Russians from getting the things they want from the west through Vienna.

Mr. Speaker, I think this article ought to be called to the attention of the Members of the House. I further believe that if this practice is not stopped more vital scarce goods may reach Russia, and our aid to Europe may cause more harm than good.

While this article states that the United States has not been able to completely solve this problem, it is my belief that there is enough wisdom and ingenuity in this great country to stop Russia from obtaining any appreciable amount of our scarce goods or our money. I recommend the article to each Member of the House and to the administrators of our aid to Europe program. It is my opinion that we ought to demand and receive of every European country that we aid their full wholehearted cooperation to stop the leaks that enable Russia to get our dollars and goods.

Work for the UN

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the January 30, 1949, edition of the Chicago Sun-Times relative to the need for strengthening the United Nations. I think this is a most timely article, and merits reading by the entire membership.

The article follows:

WORK FOR THE UN

In proposing a bold new program to build up underdeveloped areas of the world, President Truman took pains in his inaugural address to distinguish his concept from old-line imperialism.

The technical and scientific aid which Mr. Truman urged for backward regions should be, he said, "a cooperative enterprise in which all nations work together through the United Nations and its specialized agencies wherever practicable."

The extent to which our Government finds it practicable to work through the UN may go far to determine the success and scope of this new program.

We did not find it practicable to guarantee the security of Greece and Turkey through the UN. We did not find it practicable to sponsor European economic recovery within the UN. We did not find it practicable to continue relief through the United Nations Relief and Rehabilitation Administration.

Now Mr. Truman ranks foremost among the aims of our foreign policy the support and strengthening of the UN. If he is to achieve that aim, his administration must bend every effort to use the UN agencies as they were meant to be used—as instruments of international cooperation, not weapons of national competition.

Secretary of State Dean Acheson, in a press conference last week, said the bold new program is not intended to endow all the world with modern plumbing. But our Government wants to do all it can, he said, to help people raise their living standards in the backward areas of the Far East, southeast Asia, Africa, and South America.

We intend to make available our scientific and industrial skills in order to create the conditions under which capital—not necessarily Government capital—may flow into those countries.

At home and abroad, said Secretary Acheson, our purpose is "to enable the individual to attain the freedom and dignity and fullness of life which should be the purpose of all government."

As one way of achieving that purpose, we propose to work with other countries—"with every country that wishes to really enter into a cooperative system"—to increase the general prosperity of the world. Secretary Acheson went on:

"It is not that we believe that other people need or wish things for their own purpose merely to have these material things. It is not that material objects in and of themselves make a better or fuller life. But they are the means by which people can obtain freedom—not only freedom from the pressure of those other human beings who would restrict their freedom, but help in the ancient struggle of man to earn his living and get his bread from the soil.

"That is the purpose; that is the objective of this program."

This was an eloquent statement of goals. As we seek to translate them into practical achievement, we must keep in mind that all past ventures in colonial or imperial development have also claimed noble and humanitarian objectives.

Too often, however, the development of backward areas for the natives' own good turned out to be exploitation for somebody else's good. The natives of the world are getting a little tired of that.

If Mr. Truman's bold, new program is to work, if it is to command wide support and cooperation, it must, as he says, break cleanly with the imperialism of the past. The best way to make sure of that is to divorce it from national ambitions by developing it under the United Nations.

We must offer the underdeveloped areas our aid, not on condition that they adopt our way of life, but in the faith that increased material prosperity will buttress their freedom. We must remember that the goal is not to Americanize the world, but to give the world a chance for freedom.

According to James Reston, writing in the New York Times, UN officials believe the organization can gain much and can contribute much to Mr. Truman's program—but only if technical aid to underdeveloped areas is kept strictly nonpolitical, strictly divorced from the East-West propaganda duel.

Britain offered technical aid to Burma, but Burma preferred to get it from the UN in order to avoid contracting obligations to London. Many nations would hesitate to take such aid from the United States if it meant involvement in the cold war.

When the UN was founded, great hopes were placed in its Economic and Social Council. Even if political disputes embroiled the other agencies, it was felt, here was one field where nations might work together and so gradually build up a spirit of world unity.

Unfortunately ECOSOC has become as involved as the other organs in the East-West struggle. Mr. Truman's plan offers a chance for a fresh start. Putting aside past disappointments, we should strive to strengthen the UN by giving it work to do.

Excerpts From Report of Joint Committee on Labor-Management Relations

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from the report of the Joint Committee on Labor-Management Relations on Benefits for Supervisors, Federal Mediation and Conciliation Service, Administrative Im-

provements, and Financial Accountability. The excerpts follow:

EXCERPTS FROM REPORT OF THE JOINT COMMITTEE ON LABOR-MANAGEMENT RELATIONS

BENEFITS FOR SUPERVISORS

The withdrawal of the Government's encouragement of organization of supervisory personnel has served to promote the establishment by employers of plans creating many new benefits for supervisory employees. The prediction that this class of employees would strike for recognition and bargaining rights for their unions has utterly failed to materialize.

By redefining the term "employee" to exclude any individual employed as a supervisor, and defining the term "supervisor" to include only employees who actually supervise work of other employees, the act withdrew the Government's encouragement of organizations of supervisory personnel. This was a highly controversial provision and the prediction was frequently made that it would encourage strife. The committee has closely followed court and Board tests of the provision and its practical effects to date.

The committee has observed a growing trend of employer attempts to make their foremen a part of management. In many of the plants visited we found new programs designed to give more responsibilities to the lower ranks of supervision and to acquaint them not only with the policies of management but the reasons therefor. Not only has the exclusion of supervisory employees from the benefits of the act failed to produce the work stoppages predicted by opponents of the provision, but it has served to promote the establishment by employers of plans creating many new benefits for supervisory employees.

It was also predicted that many employers would deny the benefits of the act to rank-and-file employees by designating them as minor supervisory personnel. A check of the Board decisions indicates that such practices cannot be carried out. The Board has in all cases examined closely the actual status of the employee alleged to be a supervisor. It has been the employee's duties rather than his title that the Board has looked to in deciding supervisory status.

Labor organizations which have confined their membership to supervisory employees have continued to urge an amendment which would give the act's protection to the organization of supervisory employees by labor organizations which do not accept rank-and-file employees to membership. The labor committees of both Houses of Congress gave exhaustive consideration to such suggestions and concluded that as a practical matter such a labor organization could never be truly independent. The committee has discovered no evidence to indicate that the exclusion was not a wise one, both as a matter of public policy and in the interest of the individual supervisory employee.

FEDERAL MEDIATION AND CONCILIATION SERVICE

The new status of the Mediation and Conciliation Service as an independent agency has enabled its conciliators to gain and maintain the confidence of both parties to a dispute and greatly enhanced their effectiveness in the prevention and settlement of strikes. Further, this has been accomplished with a personnel and an overall budget smaller than this agency had when a part of the Department of Labor.

Great credit should be given to the Service for its efforts in bringing about the settlement of strikes and threatened strikes which assumed national importance. Director Ching has personally intervened in all of the disputes in which the national emergency sections of the act were invoked. His efforts had much to do with the early settlement of the 1948 east-coast shipping strike as well as in the prevention of the strikes in atomic energy plants and the nationwide operations of Western Union Telegraph Co.

It has been the policy of the Service to stay out of disputes which do not affect the public interest or substantially affect interstate commerce. It has declined to conciliate any representation question, acting on the concept that determination of bargaining representatives has been given exclusively to the NLRB. There has been an increasing delegation of responsibility and discretion to the regional offices by the Washington office of the Service. The committee believes that in each of these policies the Service has carried out the congressional intent of the act.

The committee has noted some expression of opinion for the return of the Service to the Department of Labor. We have evaluated the reasons given for such a move and have been unable to discover any merit in the suggestion. The Service has operated as an independent agency with less personnel than it maintained when a part of the Labor Department. During 1946 its over-all personnel was 488 employees; in 1947, 449 employees; in 1948, 442 employees; and in 1949 its program calls for 388 employees. Nor has its budget been increased as an independent agency.

The Department of Labor is required by its organic act to foster the interests of labor. It has come to be regarded as the driving political arm of the labor-union movement. The Secretary recently expressed that concept in his address to the National Conference on State Labor Legislation, when he stated, "I want a Department in which all Federal labor laws are administered. I want a Department that will be what Sam Gompers wanted it to be—'labor's voice in the President's council.' "

The Department of Labor is obliged to issue orders and spearhead programs which necessarily are opposed by and alienate a large portion of the employer group. Its Assistant Secretaries are drawn directly from the ranks of organized labor. It has thus disqualified itself for the impartial attitude so necessary for the successful mediation of labor-management disputes. All agree that the greatest asset of the successful conciliator is his ability to gain and maintain the confidence of both parties to a dispute. It is idle to argue that the Service actually operated on an impartial basis while a part of the Department of Labor. Many employers regarded it as not impartial, and complaints of partiality were frequent. The committee has heard no complaints of bias applied to the new independent agency by either labor or employer groups. Its return now to its former position as an arm of the Labor Department would destroy much of that new-found confidence of the employer group, and would completely close the doors of many employers to its efforts to conciliate disputes.

ADMINISTRATIVE IMPROVEMENTS

The separation of the prosecution and judicial functions of the NLRB has promoted more public confidence in that agency and enabled it to carry out its duties with greater cooperation from the litigants who appear before it.

The committee has found that the separation of the prosecution and judicial functions of the Board has accomplished many desirable results. Under the Wagner Act the Board had delegated general supervision over field offices and their nonlegal personnel to its director of the field division. Field attorneys were directed by a regional attorney who reported to the general counsel, who also had general supervision over attorneys in the Washington office. This divided line of authority was frequently a source of friction, both in the field offices and in the higher levels of Washington supervision. The placing of all such personnel under one directing head, the general counsel, has eliminated the possibility of the divided loyalties that the old system produced.

The good results of the separation are the most noticeable in the field offices. Almost without exception, the field office personnel have expressed unqualified satisfaction with the status given them by the act. Their contact with the union representatives, employers, and the general public, is a daily one. Most of them served the agency under the Wagner Act, when all of their activities were in the behalf of labor organizations. They investigated and processed cases knowing that if they incurred the disfavor of the unions in their region they might expect a transfer. In the eyes of most employers, some union representatives and a large part of the general public, NLRB employees operated as an adjunct of the labor-union movement; servants of an agency which was grand jury, prosecutor, and judge of an employer's relations with his employees.

Under the Taft-Hartley Act they serve on the staff of the general counsel investigating and prosecuting a case against an employer on behalf of a union one day, while the next day may find them just as actively processing a case against that same union on behalf of an employer or an employee. They have found that they can do so without incurring the enmity of either group. They are now public servants.

FINANCIAL ACCOUNTABILITY

The filing of financial statements of labor unions covering receipts and expenditures, reserves, and other data has been productive of improved and standardized practice in accounting for such funds and put added emphasis on the responsibility of union officers for their safekeeping.

As a condition precedent to its use of the services of the National Labor Relations Board, a labor organization and its parent international must file the financial and other information concerning the conduct of its affairs required by section 9 (f) of the act. The Secretary of Labor, with whom such information is required to be filed, has established a new office within the Department of Labor known as the Office for the Registration of Labor Organizations.

As of February 1, 1948, a total of 10,796 labor organizations had filed the required statements. On November 12, 1948, a total of 18,614 labor organizations had filed the required information with the Department of Labor. Seventy-two percent of the unions filing on the latter date are affiliated with the American Federation of Labor, 14 percent with the Congress of Industrial Organizations, and 14 percent are independent unions.

There are 105 national and international unions affiliated with the American Federation of Labor, and of these, 81 have registered; 32 of the 39 internationals affiliated with the Congress of Industrial Organizations have registered, as have 32 independent national and international unions.

Unquestionably the filing of financial statements of labor unions with the Secretary of Labor, covering receipts and expenditures, reserves, and other sums of the unions, has been productive of improved and standardized practices in accounting for such funds and put added emphasis on the responsibility of union officers for their safekeeping. The statements as filed with the Secretary of Labor, must set forth the manner in which the accounting is made known to the membership of the union.

Union members are now certain to know how the funds of their union are being spent.

Work Stoppages Prior to and Since the Effective Date of the Labor-Management Relations Act

EXTENSION OF REMARKS
OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. McCONNELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from the general counsel of the National Labor Relations Board to Hon. RALPH W. GWINN, and excerpts from the report of the Joint Committee on Labor-Management Relations on wage gains under Taft-Hartley, injunctions, and anti-Communist affidavits:

JANUARY 11, 1949.

Hon. RALPH W. GWINN,
House of Representatives,
Washington, D. C.

DEAR MR. GWINN: I am enclosing a copy of the material which I furnished to Senator WILEY and which you have requested in your letter of January 7, 1949. I hope it serves its purpose.

If there is anything further you would like to have from my office or me personally, please do not hesitate to let me know.

Sincerely,

ROBERT N. DENHAM,
General Counsel.

WORK STOPPAGES PRIOR TO AND SINCE THE EFFECTIVE DATE OF THE LABOR-MANAGEMENT RELATIONS ACT

The Labor-Management Relations Act became effective on August 22, 1947. The latest figures on work stoppages are for October 1948. Thus, there has been a 14-month period (September 1947 to October 1948, inclusive) during which the act has been effective. This period can be compared with the 14 months prior to the effective date, to wit, July 1946 to August 1947, inclusive.[1]

The upper half of the attached table covers the pre-Labor-Management Relations Act period, while the lower half covers the Labor-Management Relations Act period to October 1948. The averages and total figures for each half make for a quick comparison which can be summarized as follows:

1. Average number of stoppages in effect per month: Pre-Labor-Management Relations Act, 683; post-Labor-Management Relations Act, 394.

2. Average number of workers involved in stoppages in effect per month: Pre-Labor-Management Relations Act, 452,500; post-Labor-Management Relations Act, 252,064.

3. Average number of man-days idle per month: Pre-Labor-Management Relations Act, 4,033,571; post-Labor-Management Relations Act, 2,524,571.

4. Total number of man-days idle: Pre-Labor-Management Relations Act, 56,470,000; post-Labor-Management Relations Act, 35,344,000.

5. Percent of estimated working time idle per month: Pre-Labor-Management Relations Act, 0.58; post-Labor-Management Relations Act, 0.34.

Thus, comparing the 14 months prior to the Labor-Management Relations Act with the 14 months since the Labor-Management Relations Act, there was a 42-percent reduction in average number of stoppages in effect per month, a 44-percent reduction in average number of workers involved in stoppages in effect per month, a 37-percent reduction in average number of man-days idle per month, a 37-percent reduction in total number of man-days idle, and a 41-percent reduction in percent of estimated working time idle per month.

[1] Since figures are collected only on a monthly basis, the whole of August 1947 has been put in the pre-Labor-Management Relations Act period.

EXCERPTS FROM REPORT OF THE JOINT COMMITTEE ON LABOR-MANAGEMENT RELATIONS

WAGE GAINS UNDER TAFT-HARTLEY LAW

Wages, either in average hourly earnings or in over-all take-home pay, have not suffered through operation of any of the law's provisions. The Bureau of Labor Statistics reveals that average hourly earnings of all industrial workers increased in monthly progression from $1.236 in August 1947 to $1.363 in September 1948. Increase in union membership since passage of the act has also been constant with unions other than those of the left-wing group whose officers have not made the non-Communist affidavit.

The Bureau of Labor Statistics has supplied the following figures showing the average hourly earnings of industrial employees for 1947 and the first 9 months of 1948:

	Rate
1947:	
January	$1.161
February	1.170
March	1.180
April	1.186
May	1.207
June	1.226
July	1.230
August	1.236
September	1.249
October	1.258
November	1.268
December	1.279
1948:	
January	1.285
February	1.287
March	1.289
April	1.292
May	1.301
June	1.316
July	1.333
August	1.349
September	1.363

INJUNCTIONS

The injunction remedy has been rarely used and then only when the public health or safety was threatened, the public welfare vitally affected, or when an employer's business was about to be ruined by a secondary boycott. The Board has obtained two injunctions against labor organizations and one against an employer under the discretionary power given it by section 10 (j). The President has used the national emergency injunction to prevent or stop six strikes vitally affecting health and safety. Fifteen strikes in support of secondary boycotts have been enjoined. In each instance the injunction has issued upon the application of the Attorney General or the General Counsel of the NLRB after full and impartial investigation of the facts. The act makes no provision for injunctions on the application of private parties.

If the era of government by injunction is being revived in labor disputes, the committee would be among the first to do something about it, for we are unanimous in not wanting to return to that period of our history which preceded the enactment of the Norris-LaGuardia Act in 1932. Since such statement has frequently been made by labor leaders, was made in a minority report of this committee last March, and has been asserted by officials of the executive department, we have painstakingly reviewed every case in which an injunction has been sought.

Injunctions may be issued pursuant to three different provisions of the statute. Section 10 (j) gives the Board discretionary power to seek appropriate temporary relief, or a restraining order, upon its issuance of a complaint charging that any person has committed an unfair labor practice. Under the Wagner Act, the Board had such power only after it had petitioned the United States courts of appeals for enforcement of its order. The new section merely accelerated the time in which such relief might be sought.

Section 10 (l) requires the Board to seek injunctive relief in secondary boycott cases when there is reasonable cause to believe the charge is true and that a complaint will issue.

Section 208 (national emergencies) authorizes such relief upon the petition of the Attorney General when a strike or lock-out is one which affects an entire industry or substantial part thereof, and if permitted to continue will imperil the national health or safety.

The record on injunctions sought and obtained completely refutes the statement that the era of government by injunction has been revived in labor disputes. Injunctions have been granted in 3 cases pursuant to section 10 (j), in 15 cases pursuant to section 10 (l), and in 6 cases pursuant to section 208.

ANTI-COMMUNIST AFFIDAVITS

Elimination of Communist partisans and adherents from official posts and positions of responsibility in both national and local unions is one of the most pronounced and significant effects of the Labor Management Relations Act, 1947. There are still unions, in a steadily declining number, however, whose officials have not filed non-Communist affidavits in compliance with the law. A number of unions have fully met this provision with the ouster of officials who have failed to meet this statutory requirement. It has been demonstrated that the American workingman will take steps to rid his union of communistic leadership when the character of that leadership has been identified to his satisfaction.

On September 27, 1948, the Atomic Energy Commission directed one of its contractors, the General Electric Co., not to recognize the United Electrical, Radio, and Machine Workers, UE–CIO, as the bargaining representative of its employees at the New Knolls Atomic Power Laboratory, Schenectady, N. Y. The Commission justified its action upon information concerning alleged Communist affiliation or association of various officers of UE, and the failure of such officers to file non-Communist affidavits under the act.

On the same date, the Atomic Energy Commission also directed the University of Chicago to refrain from recognition of the United Public Workers of America, CIO, at the Argonne National Laboratory in Chicago. Again the Commission justified its action upon general information and failure of the union officers to make the non-Communist oath. The Commission stated that some of the suspected officers were in positions where they exercise administrative, negotiating, or disciplinary authority over the local union active at the contractor's plant. The committee commends the action of the Atomic Energy Commission. In an industry so vital to our national security, it is imperative that every precaution be taken, not only that the employees themselves be loyal beyond reasonable doubt but also that they not be subject to the disciplinary authority of men whose loyalty may be seriously questioned. Union membership does and should involve a close association between the rank-and-file member and the leaders of his union.

The National Labor Relations Board reported that, as of November 1, 1948, 176 international and national unions had com-

plied with the non-Communist affidavit requirement. Included among these were 95 of the AFL's 105 internationals, and 31 of the CIO's 39 international or national organizations. In addition, there were 50 unaffiliated labor organizations which had complied.

The committee is pleased to note that there has been an increase in the number of international and national unions in compliance since our March 15 report, and hopes that all labor organizations in the United States will take all steps necessary to avail themselves of the benefits and peaceful procedures offered by the law.

Excerpts From Report of Joint Committee on Labor-Management Relations

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. SMITH of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from the report of the Joint Committee on Labor-Management Relations on the following: Compilations of collective bargaining agreements, jurisdictional disputes, damage suits under Taft-Hartley, and unfair labor-practices complaints:

EXCERPTS FROM REPORT OF THE JOINT COMMITTEE ON LABOR-MANAGEMENT RELATIONS

COMPILATIONS OF COLLECTIVE-BARGAINING AGREEMENTS

The compilation and assembly of labor-management contracts in a central agency in the Department of Labor has already demonstrated its value and merit. As it has been developed and expanded, this collection of contracts affords a beneficial and well worth-while service for labor organizations, employers, and the public.

Under the terms of section 211 of the act, the Bureau of Labor Statistics is directed to maintain copies of all available collective-bargaining agreements, to make such file open to public inspection, and to furnish upon request "all available data and factual information which may aid in the settlement of any labor dispute."

During 1948 the Bureau received, on the average, over 1,000 new agreements each month. The total number of agreements on file at the year's end approximated 15,000, all of which were in effect during all or part of 1948. These agreements, although representing but a fraction of the 100,000 or more agreements estimated to be in existence in the United States, nevertheless, included from the standpoint of coverage the great majority of all workers employed under the terms of labor-management contracts.

The agreements constitute a basic source of much of the data compiled by the Bureau in the field of industrial relations. Their various provisions are analyzed and coded in detail for use in connection with reports on collective-bargaining trends and practices.

Each new agreement is examined, for example, for provisions relating to the establishment of health, welfare, and retirement programs. Thousands of sample clauses have been selected from agreements for analysis in the Bureau's published series, Collective Bargaining Provisions.

The committee is persuaded that the compilation and assembly of labor-management contracts in a central agency in the Department of Labor, as provided for in the act, has demonstrated its value and merit. As it has been developed and expanded, this collection of contracts affords a beneficial and well worth-while service for labor organizations, employers, and the public.

As an authoritative source of information, the contracts on file may be consulted in the interests of standardizing the scope and provisions of wage contracts and of bringing into general usage provisions and procedures that are deemed desirable.

JURISDICTIONAL DISPUTES

Jurisdictional disputes which have plagued the building and construction industry for years are being settled without strikes and consequent losses to the workers involved and the general public. The act's restrictions were the impetus for the assumption of the responsibility for the adjustment of the disputes by the parent unions involved, and are necessary to insure the continuation of such assumption of responsibility. Such cases are now being determined, without recourse to the NLRB, by the joint board for the settlement of jurisdictional disputes created by the building-trades unions and various contractor associations for their final and binding settlement.

The committee is happy to report that the history of this section during its 17 months' existence has not been one of Board hearings and orders. The Board has yet to decide a jurisdictional dispute.

The absence of Board cases does not mean that jurisdictional disputes have ceased to occur in the construction industry. They are being settled without strikes and without Board intervention pursuant to an agreement creating a national joint board for settlement of jurisdictional disputes. The law's restrictions were the impetus for this action wherein the labor organizations agreed to a plan to decide their own disputes.

The agreement entered into on May 1, 1948, by the building and construction trades department of the AFL, the Associated General Contractors of America, and various employer associations creates a board of trustees and a joint board with the unions and the employers accorded equal representation on each. Jurisdictional disputes may be referred to the joint board by any of the unions involved in the dispute, the employer directly affected, or by the organization representing that employer.

On September 1, 1948, the joint board informed the committee that it had received some 40 disputes and had disposed of approximately 50 percent of them. The committee commends the building-trades unions and the contractor associations for their efforts, which have already been well rewarded. They have demonstrated that in the field of labor-management relations it is the function of the law to define the boundaries and the responsibility of the parties to reach agreement within those boundaries.

DAMAGE SUITS UNDER TAFT-HARTLEY

The number and disposition of the suits brought by and against labor organizations under the act demonstrate that neither unions nor employers desire to recover money damages from the other, but that the availability of the remedy has encouraged each to act with a deeper sense of responsibility. In 37 cases employers have been plaintiffs against unions, and labor organizations have brought 19 actions against employers. It has been general practice for these suits to be dismissed by agreement of the parties after agreement has been reached in contract negotiation or strike settlement. In no case to date has either obtained a judgment for damages against the other.

It should be pointed out that labor organizations might sue and be sued as an entity in many State courts. In others each individual member of the union must be named and made a party to the suit. There has been little uniformity among the various States in the procedure for collection of a judgment once it is rendered. The act merely opened the Federal courts to permit uniformity in the enforcement of collective-bargaining agreements.

Because it was frequently predicted that these sections would subject labor organizations to a multiplicity of suits with resultant drains on their treasuries, the committee has made a painstaking effort to keep itself informed on all pending litigation. We have communicated from time to time with the clerks of all the United States district courts, requested copies of all formal papers of the litigants, and studied all reported court decisions. Our findings refute all of the unfavorable predictions.

Since the effective date of the act a total of approximately 57 suits has been brought under sections 301 and 303 in all of the United States; 37 were brought by employers against unions, 19 by unions against employers, and 1 by an employee against an employer.

We have discovered no case to date in which either an employer or a union recovered damages from the other.

Whether instituted by employers or unions, the great majority of these suits have been brought under section 301, seeking damages for breaches of collective-bargaining agreements. In many cases a strike has been involved. In the typical case the strike is settled and the suit is dismissed by agreement of the parties. The committee believes that the suits reported to date show that neither party desires to recover money damages from the other, but that the very presence of this remedy has encouraged employees and the unions alike to act with a deeper sense of responsibility. In support of this, statistics of the Ford Motor Co. show that man-days lost at its plants because of wildcat stoppages dropped 90 percent during the first 8 months of 1948, as compared to the same period in 1947.

Charges of secondary boycotts or other violations of section 303 figured in only 12 of the 57 cases reported. Many of these were settled by agreement of the parties, and in none did the plaintiff recover damages. The small number of these cases plus the relatively small number of complaints filed with the NLRB charging violations of corresponding section 8 (b) (4) indicate that the most pronounced effect of the two sections has been restraint.

UNFAIR LABOR PRACTICES COMPLAINTS

Unfair labor practices complaints against employers filed with NLRB under the Labor-Management Act are still far in excess of similar complaints filed against unions. In the first 15 months of the law's operation 4,136 charges of this nature were filed against employers, 1,188 charges against unions; 660 of the charges against unions were filed by employers, the remainder being filed by individuals and other unions.

Much publicity has been given to the act's restrictions on unfair labor practices of unions. Little attention has been paid to the fact that the Wagner Act's prohibitions still apply to the employer in his relation with his employees. Employers must bargain in good faith with the union which is the choice of the majority of his employees in an appropriate unit; he may not discharge or otherwise discriminate against an employee for the purpose of discouraging or encouraging membership in a union; he may not form or dominate a union of his employees; and he is prohibited from restraining or coercing his employees in their right to freely choose their representative.

Board statistics on complaint cases filed since the passage of the act demonstrate clearly that the majority of its time will continue to be spent in preventing employer

unfair labor practices. Board records on unfair labor practices charges filed since the effective date of the act show:

	Charges filed against employers	Charges filed against unions
1947—September	336	73
October	351	91
November	197	59
December	180	61
1948—January	252	71
February	232	71
March	322	95
April	246	69
May	194	79
June	243	80
July	241	80
August	276	97
September	[1] 453	108
October	297	76
November	316	78
15-month total	4,136	1,188

[1] Includes 210 cases filed by a single individual against insurance companies.

Will a Minimum-Wage Law Decrease Unemployment?

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

WILL A MINIMUM-WAGE LAW DECREASE UNEMPLOYMENT?

(By Thomas Nixon Carver, emeritus professor of political economy in Harvard University)

It will not. If the legal minimum wage is the same as the actual wage would otherwise be, the minimum wage law will have no effect. If the legal minimum wage is higher than the actual wage would otherwise be, it will decrease employment and increase unemployment. It will be a good thing for those workers who are fortunate enough to get jobs, but not for those who fail to get jobs. Every minimum-wage law and every other attempt to force higher wages should therefore be accompanied by adequate provision for those whom it forces into unemployment.

Every employer who knows his own interest will increase the number of his employees up to the point where additional workers will fail to add to his product as much as they add to his cost. If, by taking on a few more workers, the total value produced in his establishment would increase more than the total cost of running it would increase, he would be foolish not to employ them. If, for example, an additional hired man would cost a farmer $1,000 a year but would add $1,100 to the cash value of his crop, the farmer would make $100 less if he did not hire the extra man than he might make if he did hire him. If an extra clerk would cost a merchant $2,000 a year but would enable the store to earn $2,100 more, the merchant would lose a hundred dollars by not hiring an extra clerk. Repeat the illustration with respect to the manufacturer and you get the same result.

If, however, a minimum wage law, or any other form of coercion, compelled that farmer to pay each hired man $1,200 a year, that farmer would not hire an extra hand even if the labor of that hand would add $1,100 to the total crop. He would even get along with one less hand if, by firing one, the total value of the crop were reduced by less than $1,200. He would save $1,200 in wages and lose less than $1,200 in the value of the crop. If a minimum wage law, or any coercive regulation, compelled the merchant to pay each clerk $2,400 per year, that merchant would not take on an extra clerk, even if an extra clerk would enable the store to earn $2,300 more. He would even fire one clerk if it would reduce the earning of the store by less than the minimum wage of $2,400. The manufacturer would do the same under the same circumstances. The same is true of the builder, the restaurateur, the barber, the publisher, and everyone else who hires workers.

Even a cooperative creamery, store, shoe factory, or fruit-packing establishment will act on the same principle. Suppose that a cooperative creamery is handling the milk for a large group of farmers. The cooperating farmers hire workers to operate the creamery for them, paying salaries or wages to those who work in the establishment. The cooperating farmers will have to decide how many workers to hire. They will try to hire as many as it will pay them to hire and no more. Suppose they have been operating with a force of 20 workers. They figure that an additional worker, making a total of 21, would cost them $2,000 a year and would add $2,100 to the earnings of the creamery. The creamery would then, operating with 21 workers, return to the cooperating farmers a hundred dollars net over what it would return when operating with 20 workers. It would pay the cooperators to hire the extra man.

But suppose a minimum-wage law, or any form of coercion, compelled the cooperative creamery to pay a minimum of $2,400. The cooperating farmers would, if they knew their own interests, refuse to hire the extra man. They would even fire one man and get along with a force of 19 if they figured that it would reduce the earnings by less than $2,400. They would save $2,400 in total labor cost and lose something less than $2,400 in earnings. This would leave more for the cooperating farmers than they would get if they continued to operate with a force of 20 workers.

This principle will apply to cooperative stores, shoe factories, fruit-packing establishments, or any other form of voluntary cooperation. It is not peculiar to capitalism or to the profit system. Everywhere the results are the same. The higher you try to force wages by minimum-wage laws or any other form of coercion the more people you will force into unemployment. This principle applies to farms as well as factories, to small as well as to large factories, to cooperative establishments as well as to privately owned establishments, to monopolies as well as to competing establishments.

Take the case of a monopoly operating with a force of 10,000 workers. If the management figures that an addition of a hundred workers to the total force will add $200,000 to the total cost of operation and $201,000 to the total market value of the products, it would add $1,000 to its profits by hiring the extra men. The management would probably hire them. But if a minimum-wage law raised the cost of those extra men to $240,000, the management would certainly not hire them. It might even fire 100 men if it figured that by so doing it would save $240,000 on the total cost of operation and reduce the market value of the product by something less than $240,000.

It is argued, however, that a minimum-wage law would "promote business recovery by increasing labor's purchasing power and the demand for goods." There is, however, no reason whatever for believing that it would increase labor's purchasing power in any degree. It might, it is true, increase the purchasing power of those workers who were fortunate to get or retain jobs, though that is not certain. It would definitely decrease the purchasing power of those who were forced into unemployment by the minimum-wage law. The higher labor cost of all products would necessitate a rise in many prices. Even the workers who held jobs at the increased money wages might not be able to purchase any more goods than before. The vast majority of consumers whose incomes are not increased by the minimum-wage law would purchase less. The net result would be a decrease rather than an increase in the total ability to purchase products.

A minimum wage law, or any attempt to force wages above the market rate, may be supported on various other grounds, but not on the ground that it would decrease unemployment. It will do the exact opposite.

The way to raise wages is to improve the market for labor. The way to improve the market for labor is, first to increase the demand for labor and, second, to decrease the supply of it.

The way to increase the demand for labor is to encourage enterprise and invention. The enterprisers and inventors, working together, will find ways of producing new things to satisfy new desires. The way to decrease the supply of labor is, first, to stop importing it, and, second, train the rising generations for those occupations in which workers are scarce. This will relieve the congested occupations.

The enemies of labor are those who discourage enterprise and invention on the one hand, and, on the other, fight against the exclusion of immigrant workers, against universal education, and against any other humane method of decreasing the supply of unskilled labor.

Deflation in Britain

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Economic Trend Line Studies of December 27, 1948:

DEFLATION IN BRITAIN

Since the beginning of 1948, the postwar inflation in Britain has shown signs of subsiding. This inflation had caused wages and prices to increase faster than during the war itself. Many factors contributed to a great excess of demand in the immediate postwar period—backlog of physical demand, wartime savings, postwar gratuities, restricted imports and boosted exports. The supply of goods was also retarded by a demobilization from the armed forces that was much slower than in the United States of America, owing to Britain's commitments at that time in India, Palestine, the former Italian colonies, Germany, and the traditional Empire garrisons. In addition, the first Chancellor of the Exchequer in the Labor Government elected in 1945, Dr. Hugh Dalton, was an academic economist with a prejudice in favor of very cheap money.

His successor, Sir Stafford Cripps, has now been in office for a year, and his policies

have transformed the economic scene. His record has earned him in the country a stature second only to Mr. Churchill's. Though he has the reputation, and certainly the past, of a doctrinaire Socialist, his achievement in office has brought him the respect of much of the business community.

The first step that he took was to allow the interest rate on Government long-term securities to rise from 2½ percent to 3 percent or slightly above. At the same time, he showed himself fully aware that Britain's two fundamental economic problems were, first, the balance of external trade and, second, the availability on the domestic market of an adequate quantity of goods to match demand.

The British economy, as it emerged from the war, was in a condition inherently inflationary. The pressure was held in check only by an elaborate and expensive mechanism of allocation and price control, and then only partially. Cripps' experience in the trade ministry since 1945 seems to have convinced him, in spite of his Socialist intellectual background, that a resolute policy of disinflation, making possible a reduction in controls, was essential for the country; and he has pursued this against the suspicions of many of his colleagues and supporters, particularly those in the trade union movement. His methods have been of two kinds—budgetary and the general exertion of government powers on controls and propaganda.

As far as budgetary policy has been concerned, Cripps has aimed to produce a considerable budget surplus. On capital and revenue account put together, his budget of last spring planned to collect £318,000,000 more than was to be spent. Very high taxation rates were already in force and their crippling effects upon incentive were certainly underrated. Cripps gave some reliefs but offset them by new taxation in order to withdraw a substantial amount of purchasing power from the public.

Apart from this budgetary policy, Cripps has tried, partly by government regulation and partly by persuasion, to freeze prices, wages, and profits, and also to arrive at a better distribution of manpower so that key industries—coal, textile, agriculture, for example—will receive more labor.

These policies have had only a limited measure of success. On the budgetary side, the half-yearly figures show that revenue will probably be up to the original plan, but there is likely to be higher expenditure than was originally intended. Profits have been voluntarily and almost universally frozen—very few dividend rates have been higher than in 1947. On the other hand, prices in general have not held at all well. High taxation itself has contributed to this: Both in the fall of 1947 and the spring of 1948, purchase tax upon several types of goods was increased. Both imported raw materials and domestic coal have risen in price and these increases have been passed on to finished products. Wages, too, have not held by any means completely, but it is probably true that Cripps' policy exercised a good deal of restraint upon the unions in this respect. Prices are currently rising faster than wages, and this must mean that inflationary pressure is being reduced.

Certainly the policy, as a whole, has not been by any means a complete failure. Prices of some goods have been checked and even lowered. There has been extremely little industrial strife. Above all, there is a state in the market of consumers' goods which may justly be described as inflation come to a halt.

The public is spending its money with new care and discrimination. Shops are offering to it a wider variety and increased supply of goods. The passage from shortage to glut has been extremely rapid in many lines. It was first felt in certain household goods—ironmongery and radios, for example, which became heavy on the market last fall. Quite suddenly, householders appeared to have filled up their wartime accumulated shortages in these goods and held off.

The position in clothing has changed radically in the last few months. Until June the British public was living on a small clothing ration—a man, for example, had sufficient coupons in 1 year for a suit of clothes, but very little beyond that for shirts, socks, shoes, etc. In the spring of this year large stocks began to build up. The black market, both in clothes and in coupons, developed to a greater size than ever before. Early in June more coupons were issued to the public, and, at the same time, the number of coupons to be given up for many types of clothing was reduced. Important lines, including shoes, were taken off rationing altogether.

The public's response was extremely mild. It became immediately clear that it had not the money for substantial purchases of clothing. Stores which had stocked up soon began to hold sales to get rid of slow-moving goods and these sales themselves were a comparative failure.

Shopping has assumed a changed aspect in a matter of months. The stores have had to adopt competitive methods—price reductions, services, etc.—and the public has become far more sensitive both to price and to quality. It is turning from higher-class stores, where it used to obtain expensive but longer-lasting clothes and household goods, to cheaper stores which are now better stocked. The supply of clothes which are cheap in style but of sound material is not nearly meeting public demand at the same time as there are ample higher-priced, higher-taxed lines which are selling very slowly.

What is true of clothes also applies to many other goods. There is far more confidence in the buying public that the goods are there. It is not nearly so necessary as it has been for years to queue or to search. The public is buying with a deliberation which comes of scarcer money and an ampler stock of things to buy.

There are many other signs of shortage of cash. Theaters and concerts are slumping after several easy years. Restaurant sales are falling off in spite of the lack of improvement in the domestic food ration. Hairdressers have been taking considerably less custom. Railway passenger traffic receipts have fallen off to more than 10 percent below last year's. The value of real estate is also declining. There has been, over-all, a falling stock market for more than 12 months. At the beginning of the year there was a reduction in bank circulation of £150,000,000. Check clearings, after allowing for higher prices, are lower than a year ago. Against this, a fall in bank deposits, which seemed likely during the middle of 1948, has not materialized.

The modest amount of deflation that has so far been accomplished by Cripps' policy has been beneficial to the British economy. In several industries, competition is becoming far tougher, a good thing for the consumer and for efficiency. In the inflation of the war and postwar years, many companies had to resort to huge bank loans, mortgages, etc., in order to cover the increasing money value of their stock and work in progress. A few firms have recently had to cut their activities severely and one or two have found themselves in serious difficulties.

Britain needs a further turn of the deflationary screw. At present, the process of freeing labor by the failure of less essential and less efficient firms has begun but not gone nearly far enough. Unemployment is still at an insignificant rate. It is a situation not merely of full employment but of overemployment. Further deflation is required to shift more labor to the key industries. The need is generally admitted, but progress toward it has so far been insignificant.

Some more deflation would also drive home to management and workers the need for competitive efficiency. For years, inefficiency has been little handicapped. There are astonishing variations of efficiency between firms within single industries. Price-controls, allocations of raw materials, and very high taxation of profits deny the efficient their due reward, and prevent them from expanding and displacing less competent rivals. The Labor Government has, under Cripps' influence, made admirable efforts to increase production and, above all, exports—and these were recently warmly praised by ECA Administrator Hoffman—but it has not done nearly enough to lower costs and to prepare for a buyers' market in the world.

Unfortunately, there is little prospect of the further deflation which is required. Cripps is aware of the need for it and he will probably have at least another year in office. But his main instrument—a budget surplus—is already weakening. The expense of higher food subsidies to meet increased prices of nondollar food, the unforeseen costs of the revolt in Malay, of the Berlin airlift, of lengthened periods of compulsory military service and, above all, of rearmament—all these are likely to use up much of the budget surplus and only a magic termination of the cold war would make substantial budget surpluses possible in the immediate future. In addition, large-scale capital expenditure—amounting to about one-fifth of the national income—is proceeding all the time both on industrial re-equipment and upon housing. The first is a vital need for the country's economy so long starved of technical equipment, but it has a pronounced inflationary effect.

The British are certainly realizing that their condition is unlikely to improve for 4 or 5 years at least. Though they may next year export 50 percent above the 1938 level, besides receiving Marshall aid, imports will remain 20 percent below the 1938 level, which means that imported supplies of food, newsprint, gasoline, and other scarce goods will not improve. The continuing struggle to balance overseas payments is likely to last for many years. It will compel the Government, whatever party is in power, to control a great deal of economic life.

But, for the time being, every measure of deflation makes possible a new stage of economic liberation both for the consumer and for business. Unfortunately, the main instrument of deflation, which is at hand, is that of taxation, and that is already at such a high level that the least increase of it would have a serious effect upon incentive, and therefore upon output. It might well even turn out to be inflationary by diminishing the amount of goods to be bought further than the amount of money with which to buy them.

But the chief obstacles to further deflation are not technical; they are political. However much good it may be doing to the economy, deflation is difficult to make popular. The complaints against it in Britain are increasing. They come, in different forms, from many sources, and are often very plausible. Some call for reduced taxation; others cite the rising cost of living while wage rates are stabilized; the public clamor for more, and subsidized, houses will be insatiable for years; management and workers alike in unessential occupations are doing their utmost to resist the needed diversion of effort to key industries. All these have their political weight, particularly as an election is expected in little over a year.

Inflation in Britain has received a wholesome check, but it is far from fully dispelled.

Indonesia—United States Has a Responsibility

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH
OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the situation in Indonesia deserves our attention. If we fail in our duty to this Republic, we shall witness its fall to the Communists.

Mr. Garland Evans Hopkins, associate secretary for the division of foreign missions of the Methodist Church, is well acquainted with the situation in Indonesia. In the October issue of the Christian Century appeared an article by him entitled "Last Chance in Indonesia."

Mr. Speaker, under leave to extend my remarks, I include the article in question, together with a copy of a resolution adopted by the Foreign Missions Conference of North America, representing 102 Protestant denominations, at Buck Hill Falls, Pa., January 4–7, 1949:

[From the Christian Century of October 13, 1948]

LAST CHANCE IN INDONESIA

(By Garland Evans Hopkins)

I have just come from an interview with Derk Strikker, the Foreign Minister of the Netherlands, and I am discouraged over the prospects in Indonesia. "We will make no concessions that will strengthen the Communists," said Mr. Stikker to a small group composed largely of newsmen. "Premier Hatta's government will have to cope with the new Communist threat to the Republic. If it does not, other measures will have to be taken." But when Mr. Stikker was asked if the concessions about which he was speaking included measures aimed at strengthening the hand of the republican government as it attempts to deal with the Communists, he evaded the questions.

I came away from the conference convinced that the new government in Holland is no more in earnest in its protestations favoring a sovereign Indonesia united under the Dutch Crown than have been previous Dutch Governments. It would prefer that the Communists, now starting military action, should defeat the Republic, thereby giving the Dutch long-sought grounds for military conquest of republican areas. The test of Dutch sincerity will be whether or not the present air-naval blockade is lifted. In no other way can the Republic obtain the arms and ammunition necessary if its forces are to defeat the coup which Musso, a Russian-trained Indonesian, is attempting.

WHAT IS UNITED STATES POLICY?

The course which the Dutch Government will follow in connection with this new crisis in Indonesia is not hard to predict. More important to the cause of Indonesian independence just now, but not so easily predictable, is the course which the United States will pursue. In my February 18, 1948, article in these columns I pointed out that step by step in its struggle for independence Indonesia had encountered a hostile, or at best unhelpful, attitude on the part of the United States Government. At that time the American postwar policy of buttressing colonial powers had just resulted in the Renville Agreement, which Indonesia had accepted at the behest of Frank Porter Graham, a recognized liberal and this country's representative on the good offices committee established by the United Nations. No one has doubted Graham's sincerity, the general belief being that his hands were tied by his State Department advisers.

In the months since then there have been indications that the United States was at long last ready to line up behind Dutch liberals like Queen Wilhelmina rather than behind the Netherlands Indies administration. Graham's successor in Indonesia, Coert duBois, joined with his fellow committeeman from Australia, Thomas Critchley, in genuine attempts to give the United Nations the full truth of the Indonesian situation and to encourage amicable settlement between the disputants. DuBois' recent recall raised questions which the State Department quieted by announcing that his return had nothing to do with his attitude concerning the Indonesian situation, but was for reasons of health. It began to look as though the United States, even if at the eleventh hour, had decided on a more constructive policy toward Indonesia and that there was hope for settlement in the not too distant future.

CHRISTIAN PREMIER SWINGS TO COMMUNISTS

I would not for 1 minute minimize the gravity of the situation in Indonesia today. When the former premier, Batak Christian Sjarifoeddin, turned to the Communists he delivered a serious blow not only to Indonesian nationalists but to the Christian movement. Sjarifoeddin has long been a devout Christian and he had just been nominated to represent the Batak Christian League of Sumatra at the World Council of Churches. He and Soetan Sjahrir have been considered the leading Indonesian liberals, though their prestige has been in eclipse since their failure to obtain western cooperation in attaining freedom and economic stability. Disillusioned by the attitude of the Christian west, Sjarifoeddin has announced that he now turns to Russia as the only hope for Indonesian independence. Some dispatches state that he claims membership in the Communist Party dating from as early as 1935. On the other hand, an Associated Press dispatch from Batavia on September 19 quoted John Coast, British adviser to the Republic's Foreign Office, as saying that Sjarifoeddin told him at the time he went over to the Communists: "I am still a left-wing Socialist, not a Communist. But I do not think the Americans have any intention of supporting a just solution [of the Dutch-Indonesian controversy]. The Russians are our only hope." The same dispatch quoted Mr. Coast as saying that the upsurge of communism in Indonesia is the result of popular disillusionment with United States policy toward the Republic.

Conditions in Indonesia have rapidly deteriorated since the signing of the Renville Agreement. In accepting the agreement the Indonesians compromised as much as possible without surrendering every semblance of control over their territory. Sjarifoeddin's government fell because of these compromises, but the new government organized by Mohammed Hatta accepted the agreement and took every step toward its implementation. The Dutch, on the other hand, have consistently failed to carry out either the letter or the spirit of the agreement despite its bias in their favor.

DUTCH SABOTAGE AGREEMENTS

One clause of the agreement provided that plebiscites should be held in the disputed areas not less than 6 months and not more than 1 year after the final political settlement which would come with the formation of the United States of Indonesia. Hardly had the Renville Agreement been signed when the Dutch sponsored a plebiscite in Madoera and shortly thereafter proclaimed the creation of a new state for inclusion in the United States of Indonesia. When the Dutch asserted that the voting had shown a 90-percent antirepublican attitude in Madoera, the Republic answered that not one-half of the qualified voters had taken part. It is a matter of record that 2 months later 30 of the 40 members of the Madoera council were prorepublicans.

Shortly after the Madoera plebiscite the Dutch called a West Java conference from which, after several sessions, there emerged a sort of political organization for a West Java state. Later the state of East Sumatra was established. The pattern of Dutch tactics in the political battle for the control of Indonesia became obvious—the Republic was being "cut down to size."

At the same time that the Republic was being subjected to this type of political attack it was also suffering from an economic blockade. The Dutch have thrown a naval-air blockade around the Republic despite the de facto authority invested in the Republic by the Linggadjati agreement. This blockade cuts off completely any foreign trade with the Republic, thereby causing extreme suffering for want of necessary medical and health supplies as well as of certain items of food and clothing usually imported. The purpose seems to be to stir up discontent with the republican administration among the people by making their living conditions as bad as possible.

WILL BLOCKADE BE LIFTED?

The blockade assumes greater significance in the light of the present Communist uprising. If it is continued, the Indonesians will find it impossible to import supplies and arms with which to put down the uprising. If the Dutch truly desired a union with Indonesia and if they honestly wanted to see communism wiped out, they would now lift the blockade and allow the Indonesians to demonstrate whether or not a southeast Asian country upon its own responsibility can and will handle the Communist threat. Should the Republic then find itself unable to cope with the situation, it would undoubtedly ask the Dutch to assist. The present untenable position of the Dutch not only embarrasses the republican government but plays directly into the hands of the Communists.

Do the Dutch really want to make it possible for the Indonesian Republic to settle the Communist uprising? One prominently placed Indonesian leader has expressed grave doubts. Dr. Mohammed Roem, Minister of the Interior, was quoted in August 30 dispatches from Batavia to the Washington Post as stating that "the Dutch cooperate with the ultraleftist groups in the Republic" to bring about the downfall of the Hatta cabinet.

Indonesia has also objected to the ex parte blue-printing of the new United States of Indonesia. The Republic rejects the idea that there can be "a free and sovereign United States of Indonesia on an equal footing with the Netherlands" on the basis of plans drawn up by the Dutch Cabinet. Indonesians appreciate the Dutch decision that they are to be "free to realize their own interests independently" but they are wary of the Dutch dominated planning conferences which have been taking place in the Indies.

PART PLAYED BY UNITED NATIONS

It has previously been said in these columns that Indonesia offers the best opportunity for the United Nations to demonstrate to the world that it can function successfully in the settling of disputes between nations. This is particularly true because both the Dutch and the Indonesians profess to have the same end in view. The Dutch are historically a peace-loving people and, on a comparative basis, have done a good job in colonial administration. They have always been strong supporters of international organization and peaceful settlement. Indo-

nesia, too, has shown a desire for peace rather than war. Its Government appealed for Security Council intervention in the present dispute and it has never questioned the Council's jurisdiction, accepting all suggestions of the good offices committee, even to the distasteful Renville Agreement.

The good offices committee, composed of Australia, Belgium, and the United States, has provided able representatives to observe the Indonesian situation and to make reports to the United Nations. Their reports have been full and they have been quick to assess blame impartially. While they have blamed the Indonesians for minor infractions and incidents, their factual reporting has shown the Dutch at fault in every major contention brought before the Security Council by Christian Lambertus Palar, the Indonesian delegate. They confirmed that the Dutch were conducting a blockade, although the Dutch representative at an earlier session had called that term a mere propaganda slogan of the Republic. They confirmed the establishment of the puppet states.

LATEST REPORT TO SECURITY COUNCIL

The committee members have finally been forced to report to the Security Council that further United Nations conciliation efforts must await "substantial concessions by one side or the other." Since the only concession remaining for the Republic is to give up all claims to sovereignty and to allow the Dutch to proceed as they desire in the formation of a United States of Indonesia without nationalist participation, it would seem that the last chance for peace in Indonesia depends on the United Nations persuading the Dutch that the next concessions must be made by them.

The hard reality of the situation, however, is that Lake Success is impotent to act until Washington changes its policy. So long as the United States continues to support colonial powers in their suppression of the freedom of indigenous peoples, there is little that the UN can do. The temptation, now that the Communist angle has entered the Indonesian situation, will be for the United States to back away from what had seemed its promising favorable trend toward Indonesian aspirations and to return to issuing meaningless statements of policy in an attempt to please Indonesia without alienating the Netherlands.

Our last official statement of policy was outlined on June 26, 1948, by H. Merrell Benninghoff, of the State Department. He said that first and foremost, the United States is determined to do everything it can to bring peace, prosperity, and the freedoms of the democratic system to the peoples of Indonesia; further, that it will seek to assist the Indonesians and Dutch to rediscover their dependence on each other because the world desperately needs what the two of them working together can provide; and, finally, that the United States is determined that the efforts of totalitarianism to defeat these purposes shall not succeed. This is double talk of the first order. It is the type of statement our Government has been making for 3 years. It would better have been left unsaid, especially in view of continued loans to the Dutch Government, without which they would be unable to raise the more than $1,000,000 a day which it costs to maintain their military establishment in Indonesia. Such words ring hollow against a background of whistling American-made bullets and exploding American-made bombs.

There is no question that the Communist threat in southeast Asia is growing. In Indonesia it can be met and defeated by indigenous democrats, but only if the Dutch and the United States are willing realistically to face facts. The Republic may fall; the Dutch may be able for a time to continue their colonial rule; but it is a fair prediction that within 10 years the Indonesians will be their own masters. Dutch sovereignty is no longer the question. The question is whether Indonesia shall be a stronghold of democracy in southeastern Asia or a stepping stone in Moscow's onward march to control Asia and the Pacific. The decision now in the making in Washington may well be democracy's last chance in Indonesia.

RESOLUTION OF THE FOREIGN MISSIONS CONFERENCE OF NORTH AMERICA CONCERNING THE NETHERLANDS GOVERNMENT'S ACTION IN INDONESIA

All peoples have become geographical, economic, and spiritual neighbors, and their interests are inseparable. The eyes of Asia are particularly directed to the policy of the United States. It is, therefore, urgent that American citizens and Christian agencies strive to understand the major problems and pressures faced by nations emerging from long periods of imperialistic colonialism and foreign domination. Such understanding is necessary if democratic and Christian principles are to be applied in world relations.

The present situation in Indonesia involves more than success or failure of the Indonesian Republic. A European nation of democratic traditions and outstanding devotion to the Christian faith has, by sudden attack upon the Indonesian Republic and imprisonment of its leaders, violated the letter and the spirit both of its profession in these matters and of directives of the United Nations. This unjustifiable resort to arms is a denial of human brotherhood and of the basic Christian principles that men everywhere have the right of self-determination.

These acts have already met with the disapproval, publicly expressed, of many Christian leaders in the Netherlands. Leaders of government in free nations of Asia have been alarmed and resentful because of this unwarranted invasion which has only served to create disunity among nations and tends to foster an Asian bloc in world affairs.

Furthermore, with the Netherlands Government benefiting from European recovery program aid on the one hand, while pursuing a policy of aggression in Indonesia on the other, the basic purposes of the European recovery program are in effect defeated: Therefore be it

Resolved—

1. That the Foreign Missions Conference of North America, representing 102 Protestant boards and agencies, commend the Government of the United States for its stated policy during the period of the present emergency in Indonesia. We respectfully urge that the United States continue unwaveringly in this attitude even though it may have to stand alone among the great powers in refusing to buttress colonialism in Indonesia;

2. That we specifically urge the United States representative in the Security Council be instructed by the United States Government:

(a) To continue to demand withdrawal of the Netherlands Army to its lines as of December 19, 1948, and the release of the leaders of the Republic, without reservation or restriction, to take up again the governing of their territory;

(b) To press for renewed negotiations through the good offices committee until such time as a conciliation or arbitration commission may be established, with insistence upon due respect for basic legal and human rights of all persons who have been involved in the struggle, whatever may have been the convictions to which they gave support; and

3. That we call upon the United States Government to hold in abeyance any further European recovery program aid to the Netherlands Government until the latter fully complies with all demands made by the Security Council.

The Third Commonwealth

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. MULTER. Mr. Speaker, herewith is an eloquent historical survey and forecast of the spiritual potentials of progressive Judaism in the evolving life of the third commonwealth—the new state of Israel. It was delivered by Dr. Abba Hillel Silver, chairman, American section of the Jewish Agency for Palestine, before the delegates to the fortieth biennial assembly of the Union of American Hebrew Congregations in Boston, Mass. Other principal speakers were Archbishop Richard J. Cushing, of the Catholic archdiocese of Boston, and Charles P. Taft, president of the Federal Council of Churches. A beautiful message from our President, Harry S. Truman, was read at the opening of the convention.

I commend the following to the attention of my colleagues:

LIBERAL JUDAISM AND ISRAEL

(By Dr. Abba Hillel Silver)

The establishment of the state of Israel is bound to have an effect upon the future course of the Jewish people throughout the world, and upon Judaism resembling analogous events in the history of our people in the past.

The destruction and the restoration of the state in the sixth century before the Common Era, and again the destruction in the year 70 of the Common Era, are milestones in Jewish history as well as turning points. They forced political, social, and spiritual adjustments on the people, and framed a new way of life for them. The reestablishment of the Jewish state is destined to become just such a milestone and turning point.

The year 1948 will take its place among the three or four most important dates in Jewish history. We are too close to the event to evaluate it properly, but we can begin to discern some of its vast implications.

The first is a psychological one. After 19 centuries the Jewish people have regained national status. It has rebuilt its national center in its ancestral home. The reconstruction of the state of Israel has received the sanction of the United Nations. Its Government has been recognized by many countries, including the two most powerful—the United States and the Soviet Union. While its exact boundaries are still under dispute, the fact of its independent and sovereign existence is generally acknowledged, and its own military prowess has fortified it. The third commonwealth of the Jewish nation is thus an accomplished fact. The state of Israel exists.

JEWS NO LONGER IN EXILE

As a result, the concept of the wandering Jew is bound eventually to disappear along with the term galut—exile. When people can of their own free will return to their ancestral home, they are not in exile. Only compulsory banishment spells exile. All nations send forth immigrants to all parts of the world. People are continually moving from one country to another, and change their citizenship, but they are not regarded as exiles.

This fact alone—the end of national exile for the Jewish people, as such—is destined to affect favorably the psyche of the Jew throughout the world. It will endow the Jew, wherever he lives, with a self-respect and a

sense of security, a normal tone, long wanting in Jewish experience. For the curse of Cain, the curse of being an outcast and a wanderer over the face of the earth, has been removed. Whatever the Jew is destined to create anywhere in art or in literature will, I believe, come to reflect this new attitude of dignity and confidence.

There will be much less of the strain and the tension in his creative work, less of the spirit of dejection or of rebellion. There will be less obsession with anti-Semitism and with apologetics. This is not to suggest that, as a member of a minority group, the Jew will no longer be subject to those discriminations which, to varying degrees, are visited upon most minority groups in most parts of the world. But in this regard he will share an identical but not a unique or aggravated lot. It was always the double liability of his predicament—that of being a minority group everywhere and possessed of a national center nowhere, which doubly exacerbated his position.

He will fight for his full and equal rights everywhere, more confidently and more resolutely, enheartened by the fact of the new status and dignity which have come to his people through the re-creation of the State of Israel.

FORESEES MILLIONS IN ISRAEL

Another important consequence of the epochal event which has taken place so recently is the emergence of a major Jewish population center in the east and the regrouping of the world Jewish population. It is quite possible that if the present rate of immigration continues, the Jewish population of Israel by 1960 will be 2,000,000 or more. It might substantially increase in subsequent years. Three to four million is not an excessive figure. So that, outside of the United States and the Soviet Union, the population of Israel will be the largest Jewish population in the world.

Thus, a great concentration of our people will again take place in the east, the cradle of our people and of our faith, and the east rather than the west will again become the decisive cultural milieu of the creative Jewish life of tomorrow. An interesting blending of the east and the west will take place in that corner of the world which time and again has served both as an entrepot and crucible of cultures and religions. An imposing new synthesis might conceivably result when Jews bring into that land which in the past was the natural home of seers, prophets, and mystics the science, technology, and the political and economic conceptions of the west.

Jews will come to Israel from all parts of the world just as peoples have come to the United States from all parts of the world, and just as this country became a melting-pot of peoples, so Israel is destined to become a melting-pot of world Jewry. In a sense, it is that already. American life richly profited from the manifold gifts and talents which many peoples brought to it, so Israel is likewise destined to profit from the skills, cultures, and enthusiasms which Jews the world over will bring to it.

The dynamism, the amazing outpouring of creative energy which is already in evidence in Israel, will increase in the years to come. Life in Israel will be characterized, I believe, by that same energy, initiative, and inventiveness which have characterized American life. So that a very exciting and promising new chapter in Jewish history is beginning.

NO DUAL ALLEGIANCE

Two questions present themselves, among others, as we study the possible implications of what has taken place. What effect will the establishment of the state of Israel have on the Jews throughout the world, and what effect will it have on Judaism?

One important fact must be borne in mind. The majority of the Jewish people will live outside of Israel. The idea of the ultimate disappearance of the Diaspora may be theoretically held or even justified. It is not practically valid. Assuming that Israel will, in the course of time, come to contain three or four million Jews, the majority of the Jewish people will nevertheless still reside outside its borders.

This was the case also during the Second Commonwealth, especially in the centuries immediately preceding the destruction in 70. It has been estimated that in the closing centuries of the Second Commonwealth about two and one-half million Jews lived in Palestine and about five and one-half million lived outside. There was a considerable dispersion of our people in the six centuries before the Common Era which extended from the borders of Persia in the east to Spain in the west, and from Ethiopia clear to the Black Sea.

Important centers of Jewish life existed, simultaneously, with the Jewish state, in Babylon, Egypt, Syria, and Asia Minor, in the islands of the Mediterranean, in Greece and in Italy. It has been estimated that every tenth person living in the Roman Empire in the first century of the Common Era was a Jew, and every fifth person living in the eastern Mediterranean world was a Jew. The great dispersion was not always the result of expulsions. It was not always involuntary. Jews emigrated from Palestine for reasons also of trade and commerce, of economic opportunities elsewhere, perhaps also because of crowded conditions in the homeland.

What was the relationship of the Jews who lived outside of Palestine to the Jewish state? They owed no political allegiance to the Jewish state, and the Jewish state exercised no political control over them. We have the testimony of the Jewish philosopher, Philo, who lived in Egypt in the first century, who writes:

"No one country can contain the whole Jewish nation, by reason of its populousness; on which account they frequent all the most prosperous and fertile countries of Europe and Asia, whether islands or continents, looking indeed upon the holy city as their metropolis in which is erected the sacred temple of the most high God, but accounting those regions which have been occupied by their fathers and grandfathers and great-grandfathers and still more remote ancestors, in which they have been born and brought up, as their country."

The country in which they lived was their country. The existence of a Jewish state did not diminish by an iota their loyalty to the countries in which they lived and in which they and their children were born. Theirs was no dual allegiance. Dual allegiance was never a fact in Jewish experience. It is the frightened and the insecure Jew, the one who is generally unhappy about his Jewish lineage who tries to curry favor with the non-Jewish world on the basis of self-effacement and spreads the charge of dual allegiance against those fellow Jews who are not so frightened and servile.

PALESTINE WAS UNIFYING CENTER

The Jews who lived outside of Palestine in those days nevertheless recognized Palestine as the nonpolitical center of world Jewry, especially because it was the center of their religion. It was the holy land. In Jerusalem was the Temple dedicated to the God of Israel. They were mindful of the prophecy: "Out of Zion shall go forth the law, and the word of the Lord from Jerusalem." Palestine was their ancestral home and the center of Jewish religious worship. They made frequent pilgrimages to Palestine. On the festivals of the pilgrimage, thousands of Jews from all parts of the world poured into Jerusalem.

It was a revered custom of Jews everywhere to contribute annually a half-shekel which at stated periods was collected and carried to Jerusalem as their voluntary contribution toward the maintenance of their central religious institutions. They helped the nation to defend itself when Rome attacked it, and they supported the rebellion of Bar Kochba against Rome in the second century when the Jews of Palestine attempted to regain their independence. They wanted the Jewish state to survive.

Even after the destruction of the Temple, they continued to recognize the authority of the religious and spiritual leaders of Palestine, of the Sanhedrin and of the great religious academies, and to send their self-imposed tax for the support of the office of the Nasi and of scholars. The Jewish communities in other parts of the world, which later on established their own academies and produced their own illustrious religious leaders, nevertheless accepted the superior authority of the religious leaders and centers in Palestine.

The authority of the partriarchate which existed to the fifth century and of the Palestinian academies and their prerogatives in such matters as the fixing of the calendar for world Jewry and the ordination of rabbis was, with but occasional exceptions, accepted by all. The Jews fully understood the importance of maintaining a center, a unifying and organizing center of Jewish life, especially after the destruction both of the state and the Temple. They felt the need of some visible authority to hold them together against the forces which threatened to disintegrate them. They knew themselves to be, and they wished to remain, one people, one historic community, united by common sympathies, inspired by common memories, sharing many likenesses, and cooperating with each other for common purposes and against common enemies.

Rome destroyed Carthage. It destroyed also the Carthaginian nation. Rome destroyed Judea. It could not destroy the Jewish nation. It only disrupted its political center and added to the dispersion of the people.

To sum up: there persisted throughout the centuries the liveliest interaction between Palestine and the Jews of the Diaspora which was a boon to both and which safeguarded the integrity of the people and the character of its faith. When the center in Palestine had become totally disrupted, and the Jews of the Diaspora were forced to turn to other centers for spiritual guidance—to Babylonia, northern Africa, Spain, and elsewhere—they nevertheless kept alive in their strong Messianic faith the hope of the return of the nation to Palestine and the restoration of its religious center there.

AMERICAN JEWS REMAIN CITIZENS OF THE UNITED STATES

If history is any guide, the Jews of today who will continue to live in other lands will, by and large, maintain the same attitude toward the state of Israel as their forefathers did. Theirs will be a most sympathetic relationship toward that land. They will materially help it to absorb as many Jews as will wish to go there or may have to go there. They will help to build up its cultural, scientific, and spiritual institutions, as well as its economic life so that it may become a land of which Jews everywhere can be proud. For the eyes of the world will be on the land of Israel to see what Jews, as a people, can accomplish on their own.

Israel will come to be again the nonpolitical center of world Jewry. Pilgrims will go there as of old—and not merely the pious. There will be a free flow of manifold communications, of mutual stimulation, of give and take. Israel will again come to exercise a unifying and sustaining influence in Jewish life everywhere.

We shall remain one people, one historic community, as of old. But the Jews of Israel will be Israeli citizens and the Jews of the United States will be citizens of the United States, and similarly with Jews in other lands.

They will owe undivided allegiance to their respective countries and they will discharge loyally their full duties as citizens, as Jews have always done. But they will retain a special attachment to the land of Israel which will in no way interfere with their duties and obligations as citizens of their respective countries.

It was Voltaire who said that every cultured man should have two fatherlands—his own and France. In an even more profound sense, but equally nonpolitical, it may be applied to the Jew and Israel. Israel will be the Sabbath in the life of our people when, according to a beautiful tradition, an additional soul is vouchsafed unto man.

The more Orthodox may seek to establish again a central religious authority in Israel as in the days of old, with the chief rabbinate of Israel at its head, in the same manner as the international Catholic community has its religious center in Rome. If such a center is ever reestablished, it will, of course, have authority only over those who will voluntarily recognize its authority, either in Israel or outside.

Israel will not be a theocratic state, but for all Jews—that is, for all those who wish to remain Jews—Israel will continue to be the land of treasured memories as well as of unfolding social and cultural realities, which, if nobly conceived and achieved, will be eagerly welcomed as stimulating influences in their lives. Is not this expressed in the ancient prayer of our people: "Oh, cause Thou a new light to shine over Zion, and may we all be worthy to enjoy its light speedily."

FOR SHEATHING OF SWORDS

One of the welcome byproducts of the establishment of the state of Israel will be the end of that long debate which has for generations now filled the household of Israel with clamor and confusion—the debate between Zionists and anti-Zionists. The long contention may now cease. The swords may be sheathed. The argument is over. Life has finally composed our quarrel. The state of Israel is here.

The anti-Zionist, if he persists in his agitation, will no longer be fighting an idea or a movement, but an established state. He will be endangering the security of a legally constituted state which is recognized by his own country. His obsession with hyphenated loyalties is a confession of insecurity and, if publicly charged against fellow Jews, is a libel against loyal and patriotic citizens, one which plays directly into the hands of anti-Semites to whom all Jews, including the superpatriots, are anathema.

The right of Jews everywhere to have a share in the upbuilding of Palestine was clearly acknowledged in the Balfour Declaration and in the Palestine mandate and is implied in the recognition which the United Nations gave to the reconstitution of the Jewish State. No free and democratic state wishes to monopolize all the loyalties of its citizens.

Liberal Judaism has slowly disentangled itself from the meshes of an antinationalist dogma in which it was caught in the early years of its development and which was never really an essential part of its teaching any more than the materialist conception of history is an essential part of socialism, though it looms large in its Marxian formulation. Both borrowed doctrines from the philosophic climate of their day (in the case of Reform Judaism, also from the political climate) and wedded them to their basic ideas. Subsequent generations and new conceptions in philosophy and government have revealed their accidental connection.

It became clear that liberal Judaism has a mission to perform in Jewish religious life whether a Jewish state exists or not. Accordingly, some years before the establishment of the Jewish state and while the Zionist-anti-Zionist debate was still raging, the central bodies of American Reform Judaism declared that they discern no essential incompatibility between Reform Judaism and Zionism, no reason why those of their members who give allegiance to Zionism should not have the right to regard themselves as fully within the spirit and purpose of Reform Judaism.

The great debate having been ended by a fiat of history, all erstwhile antagonists may now join in amity in the common and interfused task to make Israel secure to defend Jewish rights everywhere and to make Judaism strong and vital in the world.

FEAR OF "NEW LOOK"

What effect will the establishment of the state of Israel have on Judaism—on liberal Judaism? I have heard voices prophesying doom. The establishment of the state, it is argued, will be seized upon by many Jews as an excuse to assimilate, now that they can no longer be accused or need no longer to accuse themselves of cowardice in running away from a homeless and persecuted people. Since the Jewish nation is now secure in Israel, they no longer need to remain Jews in the Diaspora. Some fear that this is likely to be the "new look" in assimilationist apologetics.

I choose to go back to history again to gain some insight into the probable reaction of our people. What was the status of the religious life of our people in the Diaspora in olden times, at the time when the Jewish state existed? The Jews who lived outside of Palestine were loyal to their faith and quite active religiously—not everywhere to the same degree nor equally among all sections of the population.

There were Jews in those days, too, who were religiously indifferent, who practiced a minimal Judaic ritual or none at all. There were also those who abandoned their faith altogether.

Wealth in the Alexandrian Jewish community (writes Professor Wolfson) was derived from the non-Jewish environment through contacts with heathens. Such contacts with heathens thus became financial assets, and financial assets naturally became marks of a delusive social distinction, and the delusion of social distinction, in turn, led to snobbishness, obsequiousness, self-effacement, aping, simulation, pretense, and ultimately to a begging for permission to join whatever one had to join in order to become a heathen. This, we imagine, was the progressive pilgrimage of certain Alexandrian Jews from a seat in the front row of the synagogue to a place at the tail end of the mystery processions of the heathen.

PROSELYTIZING OF YORE

All this has a very contemporary ring. But these apostates and assimilationists were the exception. Overwhelmingly the Jews remained warmly loyal to the religious traditions of their people. Sometimes, and especially in the centuries following the Maccabean victory, they carried on a vigorous proselytizing activity to convert the heathen world to Judaism, and with considerable success. They were not always the anvil for other cultural influences. In matters of religion and ethics they were often the strong hammer.

There is abundant evidence in pagan writings and a considerable Jewish propaganda literature to testify to the zeal and effectiveness of the proselytizing efforts of the Jews. They were not aware of any irreconcilable conflict between their ethnic allegiance, their love and reverence for Palestine, their Pharisaic religious discipline, and the universal, missionary aspirations of Judaism which they sought to realize. "Woe unto you, scribes and Pharisees," we read in the unfriendly source of Matthew, "ye scour land and sea to make one convert."

The intellectual development of the ancient world had far outdistanced its polytheism, mythology, and idolatry. It was ripe for a new religion, and the Jews of the Diaspora, the covenanted people of a pure monotheistic faith and an exalted code of morality which had challenged and defied the polytheism and immorality of the heathen world for a thousand years, were eager to bring their faith to the Gentile world and to convert it to the Kingdom of God. This missionary activity reached large proportions, provoked strong opposition and, at times, violent persecution. But it testifies to the religious vitality of the Jewish communities outside of Palestine.

The degree of their vitality reflected their cultural environment. In the Hellenistic cultural complex they were less creative and less original than, say, in Babylonia. The Jews of Babylon produced the Babylonian Talmud and established great rabbinic academies such as Sura, Nehardia, and Pumbeditha, just as centuries before they had created the synagogue. We find no corresponding achievements among the Jews in the Græco-Roman world.

RELIGION CITADEL OF STRENGTH

But the Jewish people amply demonstrated that they and their faith could survive almost everywhere in the Diaspora. They were undoubtedly strengthened by the influences which came to them from Palestine, but the greatest source of their strength was their own religion: the divine Torah which was the common possession of Jews the world over, and which was a tree of life to them; the precious and beloved institution of the synagogue, which was their spiritual home and which existed in every town and village; and all the dear traditions of a proud and spiritually contented people.

They wanted to remain Jews and to live the Jewish way of life. They were not unacquainted with periodic persecutions and virulent anti-Jewish propaganda. They were also subjected to the disruptive influences and blandishments of pagan society and attractive alien cultures and philosophies. They were not isolated or ghettotized. They could assimilate if they wished to, much easier than in our day, and the rewards were inviting.

But overwhelmingly they chose to remain Jews. Presumably many fell away. Many fell away throughout the centuries of our dispersion both in times of persecution and in times of freedom and enlightenment. But many more did not. Those who did not are responsible for our survival, and those who do not make up the strength of the Jewish people today. Their kind will constitute the strength of the Jewish people tomorrow. The existence of a Jewish state can only add strength to their strength, and confidence and dignity to their lives. It cannot undermine their Jewish faith and allegiance.

Whenever I am confronted with the question: Will Judaism survive in the Diaspora? I am tempted to counter with another question: Will democracy survive? Who can say? When we believe in and defend democracy it is not because we are sure that it will survive, but because it presently satisfies our deepest needs, and, therefore, notwithstanding its patent shortcomings and the many serious set-backs which it has received, and is receiving, in many parts of the world, it still remains for us the desirable way of life. The American people have lived with it for 150 years and they are satisfied to carry on the same way into the indefinite and uncertain future.

It is so with Judaism. We believe in it and wish to transmit it, not because we are sure that it will survive but because it presently satisfies our deepest spiritual needs, as it did those of our ancestors in the long past. We are satisfied to carry on the same way into an indefinite and uncertain future, despite apparent difficulties and evidences here and there of falling away and collapse.

The quality of our devotion to Judaism today and the means which we will employ to strengthen it may make that future less indefinite and less uncertain.

RIPE FOR NATIVE SPIRITUAL MOVEMENT

There will be need for a vital liberal Judaism within the state of Israel itself. One should bear in mind that most of the great prophets of Israel preached religion—God and the law of God—in Palestine and to the Jews of Palestine at a time when they were not lacking a land, a language, and a government of their own. Clearly, these by themselves were not enough.

In the days of the Maccabees a violent religious reformation had to be launched in Palestine to save the Jews of Palestine from the corruptive spiritual influences of a brilliant but decadent pseudo-Hellenic culture to which they had succumbed. At the time of the first restoration in the sixth century it was fully grasped by the great rebuilders of the state that political and physical restoration was not enough.

Nehemiah, therefore, set himself the task of rebuilding the state physically. Ezra set himself the task of rebuilding the faith of Israel. All the prophets of the restoration linked up the national regeneration of the people with moral and spiritual regeneration, and with the regeneration of the whole of mankind. At the beginning of the second restoration Theodor Herzl declared that a return to Judaism must precede a return to the Jewish land. Three months before he died he wrote: "In Zionism, as I understand it, there is not only the striving for a legally secured soil for our poor people; there is the striving for moral and spiritual perfection."

The Jews of Israel will require religion just as the Jews outside of Israel. The youth in Israel, which at the moment finds spiritual discipline and challenge in the struggle to build the new state and defend it, will be in need, after this period has passed, of a sustaining spiritual morale which can only come from religion.

Liberal Judaism, in an Israeli not a Germanic setting, will appeal to them, I believe. Palestine Jewry generally is seeking new forms for its religious life. I believe that it is ripe for a great new spiritual movement which will be native to the soil, responsive to the demands of modern life; one which will lay emphasis not so much upon ritual and tradition as upon the prophetic, social, and spiritual ideals of Judaism.

JUDAISM WILL FLOURISH IN ISRAEL

I am inclined to believe that even Orthodox Judaism in Israel will undergo a considerable change. Jewish religious law in its creative periods was always evolutionary. The law was always adapted to the needs of the times through a carefully elaborated system of interpretation which preserved the spirit of the law while the law itself was adjusted to new circumstances and times. The destruction of the state, to quote Chief Rabbi Herzog, "checked the process of natural growth and development inherent in Israel's legal system." In a renascent Jewish state, Jewish religious law will again have the opportunity to develop organically.

Judaism will survive and flourish in Israel. It will survive and flourish also in the Diaspora, if the faithful and devoted among us will nurture and replenish it. The time will soon come when we shall be free to divert our energies largely to our synagogues, our schools, and our academies, whereas for a very long time now our energies and resources have been dedicated largely to the compelling emergencies of life saving and state building. We shall soon be able to put the emphasis in Jewish community life upon religion—if we wish it. We should most earnestly wish it if we desire to give significance, content, and dignity to our own lives and the lives of our children.

The United States, with the largest Jewish population in the world, and one which is basically loyal and generously responsive to Jewish needs and aspirations, can become a great creative center of Jewish spiritual life. "Can," I say; not "will" or "must." We are constrained to acknowledge that the thin wafer, the melba-toast type of Jewish education which our children receive in our Sunday schools, is not the kind of a spiritual and cultural diet which can nourish and sustain a vigorous Jewish life, and is one which does not promise well for the future.

LIBERAL-MISSION IDEAL VALID

Some 10 years ago I had occasion to write: "To the thoughtful Jews it is becoming increasingly clear that there are no substitutes in Jewish life for religion. Neither philanthropy nor culture nor nationalism is adequate for the stress and challenge of our lives. All these interests can and must find their rightful place within the general pattern of Judaism. But the pattern must be Judaism, the Judaism of the Torah, the synagogue and the prayer book; the Judaism of the priest, the prophet, the saint, the mystic, and the rabbi; the Judaism which speaks of God, and the worship of God, and the commandments of God and the quest of God.

"There have been many false prophets of ersatz Judaism in our midst who have frequently misled our people. There were professional social workers, for example, who announced that a full complement of scientifically administered hospitals and orphanages and other social agencies was a sufficient vade mecum for the Jewish people, and that the synagogue and religious schools were quite unnecessary. At best, they were to be tolerated only as a concession to those who still take such things seriously, and in order not to create unpleasant friction in the community.

"There were certain educators who resented the intrusion of religion in their ultrascientific curricula. Judaism, they said, was not a religion, but a way of life—that is to say, their way of life, which, of course, was nonreligious or antireligious. Jewish education should, according to them, not be religious at all, only nationalistic and linguistic. At best, the religious note might be smuggled in, but only as a concession to old-timers and cranks who do not know any better.

"There were those Jewish spokesmen who offered Jewish nationalism as a substitute for Judaism, forgetting that nationalism as such, unredeemed by a moral vision and responsibility, had sadly fragmentized our world, provincialized its peoples, and is driving nations madly from one disaster to another; forgetting, further, that there is a widely felt and widely answered need for religion and religious institutions even among peoples whose national life is already fully established, who are in their own lands, and who are possessed of a rich national culture.

"The upbuilding of a Jewish national home in Palestine is one great, urgent, and historically inescapable task of Jewry. The upbuilding of Jewish religious life in America and elsewhere throughout the world, inclusive of Palestine, is another. One is no substitute for the other. One is not opposed to the other."

Whether Jews will live as citizens of Israel or as citizens of the United States or of other lands, they should not evade the great mandate of their prophetic religion and their history, which is to serve God and man, to strive for the establishment of His Kingdom, and, by the practice and the propaganda of their faith, to be a light unto the nations. The mission ideal which liberal Judaism has stressed is historically valid. It is of the very warp and woof of prophetic Judasim. It is valid today. It is the burden of our destiny. God has permitted us to renew our days as of old. Let us, in gratitude, renew our faith as of old.

Losing Our Independence, Says Country Editor

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, from the Allegan Gazette of January 27, 1949, published at Allegan, Mich., comes an expression of confidence in the sound thinking of the average American, which is encouraging to many a vote-hungry Congressman who wishes to follow a course which he is thoroughly convinced will promote the national welfare and preserve the independence of the average citizen.

The editor may be right in his contention that the overwhelming number of citizens desire to be independent and have the Congress always, when legislation is up, adopt that which will best promote the Nation's good.

But, if he would sit in a Congressman's office for a few weeks, he would discover that, whatever the people as a whole might want, they are strangely silent, and that it is the special interest groups which put on the heat for this, that, and the other.

Perhaps the failure of the average citizen to write his Congressman is due to the fact that he has confidence in his chosen representative. But Mr. Average Citizen should remember that his Congressman is just an average citizen too and that, when incessantly pounded by first one group and then another and finally, if he refuses to go along with extravagant spending schemes for first this group, then that, soon becomes known as a reactionary, as one who has no regard for the misfortune of others; a mossback who is not willing to go along with modern-day progress—a progress and a program which completely ignore natural and economic laws.

The Gazette editorial gives some of the reasons why a Congressman, when pressed to vote for a gratuity to a class, should think of his duty to the Nation, to all the people of his district, as well as to the one who at the moment is making a plea for preferential consideration.

The editorial reads as follows:

THE EDITOR'S NOTEBOOK—NOT OUR VIEWS

In Monday's Gazette we printed an article entitled, "Government Economy No Longer Popular." This article quoted a State official as saying that "The people want more spending for Government benefits. Economy is no longer popular. I don't believe a man could be elected dog catcher today on a platform of thrift in Government." The article closes by saying that "To oppose this trend (Government spending for social reforms) is to invite the label of being a 'reactionary,' one who is opposed to social progress."

We hasten to say that the views of the State official who evidently desires to remain unnamed are not our views.

The voters of this country have not had the opportunity to vote for economy in Government. There have been no candidates either on the Democratic or Republican ticket who are willing to make an honest ef-

fort to debunk the so-called social progress. The taxpayers have never been represented by any organization or lobby. The issue has never been properly presented. Office seekers have been persuaded by minority groups, each with their pet scheme.

The term "social progress" is much misused.

Social progress as outlined by Truman and Williams means that the individual's work, his earnings and his time, and indeed his very life, no longer belong to him, but belong to the Government. From every dollar that he earns the Government plans to take anywhere from 20 to 28 cents. The more the Government takes, the less he will have to support himself and his family. He will no longer be able to pay for his own medical bills, his own insurance; the education of his children, or to save for old age, but will be forced to rely upon Government charity.

Before he can receive any Government charity, whether it is unemployment compensation or social security, or medical benefits, he will have to satisfy some local bureaucrat that he is entitled to them. If he is honest he may not get them; if he is dishonest he probably will. Truman's social progress places a premium on not working. It takes all the incentive out of working and saving. It is not social progress but pure socialism. If being opposed to this social progress is being reactionary, then we are reactionary.

We believe that the average American family wants to be independent. The head of a family wants merely the opportunity to work, make his own way in life, and handle his own money. He does not want to be forced to give his money to the Government and then to depend upon Government charity in the end for his bread and butter. The average American does not want the Government to be his father, his mother, and his school teacher. He doesn't want his standard of living reduced. He is tired of being taxed for the benefit of someone else. If he is ever given the opportunity to vote for someone who advocates a return to pre-New Deal government—a thrifty government, a government that preserves and protects individual liberty, a government that permits each individual to work and save without bureaucratic interference, then Truman's social progress wouldn't have a chance.

The individual should be permitted to enjoy the fruits of his own labor, he should not be forced to become a ward of the state.

Those in public office had better wake up and realize that you can't tax the American market out of existence and still expect to collect taxes to support every dependent in the United States. By the very act of taxing in the hope of increasing Government revenue you decrease Government revenue. New and higher taxes threaten to unbalance the budget of every family in this country, and when the ordinary citizen can't balance his own budget, then you have wrecked the economic life of this country.

We advise every legislator to think it over before he casts his vote for the so-called social program.

L. W. H.

An Answer to the "Gimme" People

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an editorial which appeared in the Olean (N. Y.) Times-Herald under date of January 26, 1949. I believe that my constituent has sounded a clarion call that it might be well for the New Deal internationalist, interventionist, and the generous-minded persons who wish to give away the taxpayers' money should heed and take to heart.

The editorial follows:

We have received a communication from a woman reader who lives in a community within easy reach of Olean.

"Now I've written this," she says as a footnote, "I'm in doubt if I should mail it.

"But I feel so much better after I have exploded, I'm going to, anyway.

"No doubt you wouldn't dare to print it; but if you should please don't put my name on it, as I wouldn't want my neighbors to know how I feel about second-hand dresses I am so lucky to receive.

"I feel though that there must be a lot of people who are feeling the same as I do, and wondering how in the world one is going to pay bills and get the children's teeth and eyes taken care of.

"I've needed my glasses changed for three years, and can't get enough money to have them fixed. But maybe we are a lot better off than some families; but which ones I can't think of right now."

And why wouldn't we dare to print your letter, lady? Do you think we're afraid of the big, bad wolf—or anything or anybody else?

Here's your letter; it's "down to earth," and we know our readers in general will be interested in reading it.

"I'm tired of helping feed and clothe the world.

"All I want to do is to be able to feed my own family of six. As I sit here trying to keep warm, I wonder if the President realizes that here in our country there is a class of people who have a yearly income of less than $3,000?

"Newspapers print the budget of an English middle-class man with a wife and two children. Why don't they print one of an American family of six on the same wages of about $50 per week?

"The Englishman was lucky. He could go to the movies once a week and take a week's vacation at the seashore. I can't even manage the movies.

"I'm so tired of hearing the figures the Government is always coming out with when I know some of them are taking food and clothing away from my family.

"It's getting so I can't even read the figures any more.

"It's taxes, taxes, and more taxes every time a Government official speaks. I wish each of us could get Congress to vote us a tax-free gift of money. Maybe I could buy some warm clothing for my children.

"I myself haven't had a new dress in 5 years. I wonder if any Government officials have had to wear second-hand clothes for 4 or 5 years while someone higher up thought up ways to steal their money with new taxes.

"The only way I can see that a person can have any security is to get on the Government pay roll. Once there, you're set, for I don't believe a person is ever fired from a position—just transferred to another department.

"The American people are slaves to the world—not just to America.

"The country was started because our people were tired of taxation. Now we can't buy anything that doesn't have a hidden tax that we don't know what it's for. Did the Federal or State Government ask the people if they wanted it? I have never been asked; have you? I'm disgusted with it all, and I imagine hundreds of thousands more are.

"The Englishman I was referring to earlier couldn't have a glass of sherry before dinner.

"All I want is good food, not liquor, that will keep my family healthy and that will let me serve meals that mean a balanced diet.

"It must be nice to have enough money to buy brand-new clothes, a dress, coat, undies (and don't forget a hat), or a warm coat for my husband who works outdoors in all kinds of weather, and new clothes for the children. How they would love some new snow suits—and how they need them.

"But who has money to buy them with? Not I; I'm paying taxes to keep Europe warm and well fed."

Well, there it is, friends and neighbors.

And make your own comment. What, for instance, is your idea of a solution to such a situation—a situation in which a man earning $50 a week in this land of prosperity can barely keep himself and his family "above water."

We would just express a wonderment as to how many people in this country are beginning to think along the lines of this harassed mother.

Hon. Edwin J. Kyle, Former Ambassador to Guatemala

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. TEAGUE. Mr. Speaker, the United States of America has been very ably represented in Guatemala for the past few years by Dean Edwin J. Kyle, our Ambassador, who has recently resigned to enjoy a well-earned retirement. Texans will long remember Dean Kyle for his accomplishments in the School of Agriculture at Texas A. & M. College; the people of Guatemala will remember him for his work in their country which has brought them improved agricultural methods and techniques.

Dean Kyle will go to Guatemala for a visit in February, at which time he will receive that country's highest decoration, the Order of Quetzal. We are proud of his accomplishments there and wish him good health and happiness in his retirement.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter received by Dean Kyle from the President of Guatemala, Juan Jose Arevalo:

DR. EDWIN J. KYLE,

Guatemala.

MY DEAR AND ILLUSTRIOUS FRIEND: On the occasion of the termination of your diplomatic mission in Guatemala and your departure from the country I am happy to send you these lines of farewell.

I have always said, and I repeat now, that you were in reality the first United States Ambassador to Guatemala. All virtues which characterize the North American people are represented in your high, righteous personality. The Guatemalan people had never known what an ambassador from the United States really was, and your arrival in the country 3 years ago was a complete revelation. Your ever-present Rooseveltian spirit, the delicacy and decency in your treatment of Guatemalans, your wise counsel and friendly stimulus to our emerging democracy, the creation of new economic bonds between

Guatemala and the United States—these are only a few of your superior personal endowments which have left in our diplomatic circle an imprint of a lofty, fraternal spirit. The Government and the people, therefore, have availed themselves of this spirit to receive with the highest esteem Dr. Kyle and his incomparable wife as genuine representatives of a great friendly people.

Since you have chosen to terminate your diplomatic mission we shall feel closely bound in the future by the most intimate friendship.

I assure you, Dr. Kyle, and your most excellent wife, that whenever you return to Guatemala you will find that the friendship of the Guatemalans toward yourself is unchanging and profound. As the political representative of this affectionate people I assure you both that everyone here hopes you will return to make your home with us. If that is not possible, we hope at least that you will visit Guatemala at every possible opportunity. Mrs. Arevalo shares with me these ideas and sentiments, and includes in this letter her personal affection toward you and Mrs. Kyle, with all best wishes for your future happiness.

With sincere renewed esteem I bid you and your wife this temporary farewell.

JUAN JOSE AREVALO,
President of Republic of Guatemala.

The United States and China

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. VORYS. Mr. Speaker, if we are to act wisely and promptly in this critical period, we must understand the real nature of the relations between the United States and China and between Russia and China. One reason for the unique friendship between our country and China is that so many Chinese Nationalist leaders have been educated in America. Such a leader is Chen Chih-mai, who received his bachelor of arts degree at Ohio State University in 1929, where he was a member of Phi Beta Kappa, and his doctor of philosophy degree at Columbia University in 1932. He was a professor of government and a government official in China. He was a member of the Chinese delegation at the San Francisco Conference in 1945, has served in many important posts, and is counselor of the Chinese Embassy in Washington. He spoke at a luncheon of the Ohio State Alumni Club of Washington, D. C., on January 18, 1949, at the Sheraton Hotel. His speech points out fundamental facts we should all consider:

Mr. Chairman, Congressman VORYS, fellow alumni, ladies and gentlemen, the relations between the United States and China have always been close and cordial. This is by no means a historical accident.

China and the United States were allies both in the First and the Second World Wars.

While European and Asiatic powers were engaged in imperialist wars of aggression against China, the United States, through the proclamation of the open-door doctrine in 1899, sought to maintain the territorial and administrative integrity of China. Since then, the United States has time and again helped China to arrest those forces seeking to dismember or to dominate China. The substantial aid which you have extended to us was deeply appreciated and acknowledged with thanks. It has helped to win the war and to alleviate the sufferings of millions of people. Among the powers of the world, the United States alone has never entertained any aggressive or imperialist designs upon us.

American missionaries have gone to China, not only to preach the gospel, but also to help us in modern medicine, modern education, rural welfare, and industrial and agricultural development.

During the past decades, thousands of Chinese young men and women, like myself, have come to these shores to receive training in American colleges and institutions of learning.

At the present time, 2,500 Chinese young men and women are enrolled in American institutions of learning, the second largest national group besides the Canadians.

The present government of China is composed of a large number of these American-educated leaders. The Prime Minister was a graduate student at Columbia. His predecessors are products of Oberlin, Yale, and Harvard. So are many others of our leaders.

I have no doubt that you have heard of the severe criticisms of this Government. One journalist recently stated that "the Chinese Government today is the worst government in modern times, one of the worst in the world today." Were such a blanket condemnation true, would it not be proper to say that the United States, through opening the doors of American colleges to Chinese youths, has rendered a disservice to the Chinese people?

I have no doubt that you have also heard of unqualified praise being showered upon the leaders of the Communist Party in China. They are said to be the liberals, progressives, and democrats as contrasted with the Fascists and reactionaries who make up the Chinese Government. And yet, it is a well-known fact that, among the leaders of the Communists in China, let us say, the members of the Politburo, not one single person has been educated in American schools. Very many of them were trained in the Sun Yat-sen University in Moscow, established for the express purpose of training party workers for the Far East, or in the Marx-Lenin Institute. They are the masters of the dialectic, and the technique of insurrection and revolution, one basic tenet of which is the motto "the end justifies the means."

It is of the utmost importance, I submit, that we should labor hard fully to understand the basic meaning of the challenge of world communism to the free world. Almost exactly 100 years ago, Karl Marx and Friedrich Engels proclaimed the Communist Manifesto, which concluded with this slogan: "Workers of the world unite." (Parenthetically, the Communist Manifesto, I recall, was assigned reading material at Ohio State, as it was in all American universities, in courses on the social sciences. It would be amazing if one found a copy of the Declaration of Independence in the libraries of the Communist-ruled countries.)

The Communist movement, as Marx and Engels so clearly pointed out, is a world movement. It transcends all national boundaries. It is interesting to note that, in all official Communist documents, the party in China is always known as the Communist Party in China, rather than the Chinese Communist Party. The Communist movement operates on the theory of a global class war, the world proletariat insurrecting against and expropriating the capitalists in all lands.

As such, the Communist movement is global in concept and manifestation. The class war is conducted on a world front. The issue of communism has split all nations into rival camps, the Communists owing allegiance to one single shrine of power—the Communist Internationale or the Cominform.

This is the case in China as it is in any other country of the world.

Some months ago, I read in a Communist newspaper an article written by the leading theoreticians of the Communist Party in China, what they call "collectivist ideological creation," meaning creative writing by groups instead of individuals. The writers pointed out that the coming Communist struggle for power would not assume the form of international wars or conflicts, like the two world wars, which they characterized as "imperialist wars" until the Soviet Union was attacked. They stated in no unmistakable terms that the Communist fight for world domination would henceforth assume the form of a chain of civil wars in many lands, in succession or simultaneously. Each one of these civil wars, however, was to be a link of the whole chain of a global class struggle, which they regarded as "inevitable" and in which the proletariat was sure to come out on top.

It will be seen that this concept is highly important in our attempt to appraise the present situation in China and in many other parts of the world. Technically, these are civil wars, and therefore it would be improper for any outsider to intervene. Since civil wars are domestic affairs the United Nations, according to its Charter, would have no jurisdiction. So the civil wars would be allowed to go on and nothing will be done about them. This is the value of this novel concept to those who foment these civil wars in various parts of the world.

At the close of the First World War, there were a number of such civil wars in the defeated countries, in Germany, Austria, Hungary, etc. Also in the 1920's, Communist-fomented civil war began in China. The Communist revolts in the 1920's were thwarted by the Chinese Government, under the leadership of Chiang Kai-shek. Chiang remains today the Communists' public enemy No. 1. They are determined to bring about his complete collapse.

Later on, in the 1930's, there was civil war in Spain. Following the chaos and misery of the Second World War, civil wars broke out again in China and also in Greece. In many other lands, they are fomenting political strikes and creating civic disorders. The form may be different in different lands. The essence, however, remains everywhere the same. The 3 years following the Second World War find the international Communists attaining more ideological and material power than ever before.

The Truman doctrine and the Marshall plan, in effect, are measures of their success in Europe. At the present time, they are engulfing China, and Communist infiltration is evident in southeast Asia, in India, Pakistan, Siam, Burma, Indonesia, Ceylon, Malaya, Japan, Korea, the Philippines. One billion people in Asia, half of the human race, are now threatened with Communist conquest, not to mention the countries already behind the iron curtain in eastern Europe.

The technique of the chain of interlocking civil wars is a new concept, at least to many of us. Like the terms "democracy," "liberalism," and "peace," the term "civil war" has also acquired a new meaning when it is employed with reference to current developments.

The struggle in China today, as it has been for many years, is not a civil strife like the War Between the States in America. It is a phase of a world-wide movement, an aspect of a universal class war.

The Chinese people are highly individualist by tradition and nature. Although our historical heritages are almost entirely different, the Chinese and the American peoples share a fierce dislike of totalitarian regimentation. We were taught to love our neighbors, not to hate them. We were taught to respect the sanctity of the family, and we do not destroy our fathers and brothers, or husbands and wives, on the basis of ideological differences.

And yet the Communists in China today are teaching us precisely this. In the areas in which the Communists win control, rigid regimentation and mass trials are imposed, in which every party member is ordered to help the process of liquidation, by spying on the members of your families, or those with whom you are associated. Thirty-three million refugees fled from this form of life.

Time and again in the past, the Chinese Government has attempted to resolve the issue by political and peaceful means. For the sake of national unity, agreement with the Communists was sought after with complete sincerity and at great sacrifices. For 13 months General Marshall was in China trying to work out some sort of compromise.

When I first revisited the United States in 1944 I told my friends here that the importance of the Chinese Communist problem was exaggerated. I still hold that that view, stated at the time, was essentially correct. What makes the Communists in China strong today, as compared to 1944, is due to two lines of development, which, of course, I was unable to foresee.

One factor is the Soviet participation in the Japanese war in Manchuria a few days before the Japanese collapse. On VJ-day there were no Communists in the vast and rich area of Manchuria. When the Soviet Army evacuated several months later, the area was completely under Communist control, fully armed with the products of Japanese arsenals. The Yalta agreement and the Chinese-Soviet treaty of 1945 gave them a great advantage, which they have exploited to the fullest.

Another factor is the lull of cease-fire orders in 1946-47, under the protection of which the Communists very substantially augmented their fighting power. At the time of the Japanese surrender, the Communists were in control of 60 out of 2,000 counties of China. By the time the mediation effort was given up, early in 1947, they were in control of 300 counties, an increase of five times. In January 1946 the Communists themselves admitted that the ratio between their army and that of the Government was 1 to 6. Now, they are outnumbering the Government forces at points, even as much as 2 to 1.

This is the price which the Chinese people are called upon to pay for believing that the Communists in China are not real Communists, but a group of peaceful agrarian reformers, in spite of the emphatic protests of the Communists themselves. The alarming Communist expansion today is the result of our repeated refusal to treat them as international conspirators, but to attribute to them nothing but the best of intentions, and our persistence that someway, somehow, we can come to a meeting of minds with them. We thought we could seek agreement with them, and that they, like us, would observe the agreement which we have so painfully concluded. The tragedy of our ignorance is indeed colossal, and the hour is very late.

I cannot help feeling that this situation is as much of concern to you as it is to us.

One aspect of the question is of special significance—the anti-American and anti-foreign policy of the Chinese Communists.

As far back as 1928, the Sixth World Congress of the Communist International decreed that the Communist Party in China, after its seizure of power, would start the expulsion of the foreign imperialists and the confiscation of their property. It went on to state that the fundamental slogans with which the party must seek to win over the masses were, among others, overthrow of imperialist domination, confiscation of foreign enterprises and banks, and alliance with the U. S. S. R. and the world proletarian movement.

On November 18, 1945, Mr. William Z. Foster, the head of the Communist Party in America, enjoined his followers in these words:

"We must, as Lenin taught us, seize the key links which will enable us to move the whole chain. On the domestic field * * * the key problem * * * is the fight for wage increases * * * On the internanional scale, the key task * * * is to stop American intervention in China * * * The war in China is the key of all problems on the international front and it is here, above all else, where we have to deal the hardest blow to reaction."

A few days ago, the Communist radio broadcast a statement by the leader of the Chinese Communist Party, Mao Tse-tung, in which he specifically stated that one of their political principles is the abolition of treaties of betrayal concluded by the Chinese Government which enslave the Chinese people.

It will be recalled that, on November 4, 1946, our two Governments concluded a treaty of friendship, commerce, and navigation. It was a treaty based upon mutuality and reciprocity. A few days after its conclusion, the Communist Party in China issued a directive calling upon all party members to denounce the treaty. Among other things, it was said that "the treaty will make the Chinese financial system a satellite of America, and, within 3 to 5 years, the Chinese people will all become the slaves of American capitalists." The purpose of the United States in making this treaty with China was to use China as a base to foment a third world war. The Communist high command designated November 4, the date of the signing of the treaty, as a National Humiliation Day, to be observed in mourning Parades were organized denouncing it. In November 1948 the United States ratified the treaty and President Truman signed it.

All these are by way of illustration to show the tremendous gulf between the Communists and ourselves, and how utterly futile and senseless it is to expect to do business as usual if and when the Communists assume power in China.

Your revolutionary struggle to free yourselves from outside domination, your pride in your own way of life, your disdain of alien ideologies, your spirit of democratic government, and your remarkable achievements in industries and agriculture, have always been a source of inspiration to us. We would like to continue to learn from you, and we hope that you will continue to give us the benefit of your seasoned experience. The Chinese people are fundamentally friendly to America. You have a truly rich reservoir of good will among us. Let us only hope that we may be given the wisdom and courage to build upon this foundation, and to combine our efforts to combat those forces which seek to make of our people the enemies of what they choose to call the American imperialists. Let us at least guard ourselves against the Communist propaganda directed at the American people which General Marshall characterized as being "without regard for the truth, without any regard whatsoever for the facts, and has given plain evidence of a determined purpose to mislead the Chinese people and the world and to arouse a bitter hatred of Americans." The cause of Sino-American friendship will be nobly served when we take adequate precautions against such vicious propaganda.

Keep Corps of Engineers Intact

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. DAVIS of Georgia. Mr. Speaker, the proposed change which would take all civil-functions work of the Federal Government from the Army engineers and place it under the jurisdiction of a new Cabinet officer, to be called the Secretary of Department of Public Works, has aroused much protest where knowledge of this proposal has been received. I have received a number of letters and telegrams objecting to this proposal. These protests come from people who want these important functions to remain free from politics and from political influence of any kind.

In the Atlanta Constitution for Monday, January 31, 1949, appears an article by Wellington Wright on this subject. It contains valuable facts and information, and, under leave previously granted, I am inserting this article herewith for the information of Members:

KEEP CORPS OF UNITED STATES ENGINEERS INTACT, IS PLEA HERE OF RIVERS-HARBORS OFFICIAL

(By Wellington Wright)

In an effort to prevent the disruption of the Corps of Engineers by the executive reorganization bill now pending in Congress, James W. Woodruff, Sr., of Columbus, vice president of the National Rivers and Harbors Congress, yesterday undertook to organize the Southeast against this proposed change.

Woodruff said that national interest, both in war and in peace, requires that the Corps of Engineers be specifically exempted from the scope of the proposed reorganization. This is the same exemption which Congress put into the reorganization bill of 1945.

Under the present plan, the result of one of the recommendations of the Hoover committee, all civil-function work of the Federal Government would be vested in a new Cabinet officer, the Secretary of the Department of Public Works. For the past 176 years, the Corps of Engineers has performed this type of work for the Federal Government.

In a statement issued here yesterday, Woodruff stressed that it is not to the interest of the Southeast to take the civil-function work away from the Corps of Engineers and vest it in the hands of "a politically minded Cabinet officer." He said:

"In our area alone, the Corps of Engineers, through its plans for the development of our inland waterways, has under way a $250,000,000 program. This program meets a great public need, and the type of reorganization now proposed would certainly delay the completion of this program. The program has already been delayed too long, and further delay which this reorganization would inevitably cause would be had for the economic future of our area."

Woodruff stressed that the Corps of Engineers is a nonpolitical arm of the Government with an unbroken record of honesty and efficiency. To carry out the proposed reorganization plan as it affects civil functions, Woodruff insists, would completely disrupt the Corps of Engineers.

"George Washington first assigned civil functions to the Corps of Engineers," continued Woodruff. "As a result of its work in

peacetime, this is the one agency of the Government that is always ready in case of national emergency. It would be a tremendous loss to national defense to have these civil functions taken away from the Corps of Engineers. And, in view of the efficient record of the corps, it is hardly likely that reorganization in the manner proposed would save the Federal Government a single penny."

Hearings on this bill will go on before the Senate Committee on Expenditures on Tuesday. Woodruff asks that the people of the Southeast send telegrams and air-mail letters to Senator JOHN L. MCCLELLAN, chairman of the committee, to urge the exemption of the Corps of Engineers from the operation of the proposed bill. MCCLELLAN'S address is the Senate Office Building, Washington.

Lester Moody, secretary of the Augusta Chamber of Commerce, and Carl Pearson, executive director of the Chattahoochee Valley Chamber of Commerce, have joined Woodruff in his fight to save the Corps of Engineers.

Young Republican National Federation

EXTENSION OF REMARKS
OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. LEONARD W. HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable JOHN DAVIS LODGE, Member of Congress, Fourth District, Fairfield County, Conn., to the Convention of the Westchester County Young Republicans at White Plains, N. Y., January 29, 1949:

Mr. Chairman, members of the Westchester County Young Men's Republican Clubs, ladies and gentlemen: This is my first opportunity since the election last November to address a gathering of Young Republicans. It is an opportunity which I welcome. I am delighted to be here with you all this afternoon. I know what a splendid job the Young Republican National Federation has done. Its participation in the formulation of policies and programs should be commensurate with its ever growing strength.

During the weeks preceding election day I spent much of my time with the Young Republicans of my district. It seemed to me urgent and vital that young men and women should come into the Republican Party in large numbers and that they should be induced to play a significant part in Republican activities. It is hardly necessary for me to point out that unless the Republican Party continues to receive substantial infusions of young blood, it cannot survive. It is important not only to the Republicans but also to the Democrats that the Republican Party should survive. It is important to the Nation. It is important for the survival of our two-party system.

In order for the Republican Party to remain an effective political instrumentality, it is imperative that it should, at the next presidential election, gain control of the executive branch of our government. We have endured and survived 5 successive defeats. A Republican victory in 1952 is not only essential to our national political health, it is also vital to the effective functioning of the two-party system.

How is this to be done?

Surely the last election has convinced us that no one individual or group of individuals is wise enough to know exactly what plan and what program will receive the support of the electorate. Perhaps this is just as well. It means that our elections are so fraught with imponderables that the pollsters and professional prognosticators cannot make a cut-and-dried affair out of this great expression of the American franchise. Furthermore, it engenders a spirit of healthy and vital political competition, which is one of the greatest safeguards that our free institutions will endure.

No one can outline a sure-fire blueprint for an electoral victory. But there is always room for aggressive and sustained political action. There is always need for the expression of deep convictions based on tested principles.

It is important, I think, to bear in mind that the United States is becoming increasingly a country of independent voters. More and more Americans feel less and less bound by party affiliations. The main problem then is to secure the support of this large mass of independent electors.

Although it is futile to cry over spilled milk, it is useful to examine the results of the past election in order to attempt to assess the reasons for our defeat and take action to eliminate these errors in the future.

Historians will for many years attempt to evaluate the reasons for the Republican defeat in 1948. Although the election is, at the present writing, a matter of recent history, we have nevertheless enough perspective to come to some tentative conclusions.

While the Presidential election was very close from the point of view of the electoral vote, and while it was not a landslide from the point of view of the popular vote, the election for Senators and Congressmen certainly indicated a decided trend. In the Senate 8 Republican Senators and 1 Republican candidate were defeated, and in the House 69 Republican Congressmen and 8 Republican candidates for Congress were defeated. These are facts. They are food for thought.

On the other hand, it must be remembered that the fortunes of the Republican Party have been far lower than they are now. In 1936 there were only 17 Republican Senators and 89 Republican Congressmen. Furthermore, Thomas E. Dewey, the Republican standard bearer, did poll nearly 22,000,000 votes, as against slightly more than 24,000,000 who voted Democrat. This indicates that there are substantial divisions of thought among the people of our country. It indicates that the Republican Party has a numerous and forceful following.

It is important that differences of opinion among the American people should be reflected in the platforms and in the actions of the Republican and Democratic Parties. The American people want a choice. They want to be faced with constructive, with feasible alternatives. This does not mean disagreement for the sake of disagreement. It does mean, however, that what has been referred to as the "me-too" policy is apt to reduce the Republican Party to innocuous desuetude. The role of the Republican Party must be to seek to represent the basic needs and aspirations of the people and to convince the people that they are able to translate these needs and aspirations into effective action.

That the Eightieth Congress made a good record is corroborated by the remarks of President Truman in his state of the union message early this month. President Truman, having repeatedly declared in the heat of the campaign, that the Eightieth Congress was the worst Congress in history, announced to the Eighty-first Congress: "I am happy to report to this Eighty-first Congress that the state of the Nation is good. Our Nation is better able than ever before to meet the needs of the American people and to give them their fair chance in the pursuit of happiness."

Could this be true if, as President Truman implied, the Eightieth Congress all but destroyed the fabric of our country? Could this be true if the Eightieth Congress was the worst Congress in history?

The President also said: "Our private enterprise system has reached new heights of production. Since the boom year of 1929, while our population has increased by only 20 percent, our agricultural production has increased by 45 percent and our industrial production has increased by 75 percent. We are turning out far more goods and more wealth per worker than we have ever done before."

Is not this in itself a great tribute to the essential wisdom of much of the legislation passed by the Eightieth Congress? Is it proper to censure the Republicans of the Eightieth Congress in such brutal terms when, according to the testimony of none other than the President of the United States, the American people are enjoying the greatest peacetime production ever achieved and the highest national income? Is it responsible so to attack the representatives of the people when we know that in 1948 there were more people employed in the United States than ever before in our history?

When the President addressed the joint session of the Eightieth Congress last July he stated that his entire program could be enacted in 15 days. Yet the Democrat-controlled Eighty-first Congress has now been in session for 4 weeks and the only laws which have been passed have been the law raising the President's salary and the law giving the Federal employees in Washington a four-day holiday during the inaugural festivities.

Oh, I could give you a list of criticisms of the Eightieth Congress. I could tell you of many pieces of legislation which I think could have been improved. I could mention laws which I wish had been passed and others which might better have been dropped overboard. It is very rare, indeed, that a Congressman finds before him a bill which he approves in its entirety. Our system of government, our political concept, rests upon the science of compromise. It is the art of alternatives. There were occasions when I strayed from the fold and voted differently from the majority of the members of my party.

And yet I say to you that it is not primarily in the actual record of the Eightieth Congress that we can look for the principal cause of our defeat. It is rather in our failure to explain that record and to expose it to public view; it is in our failure to make a stand on principle; it is in our failure to state in contagious and forceful terms a Republican program based upon the forward-looking platform adopted in Philadelphia; it is in our failure to confront the people with a constructive choice.

The Republican Party has been as inept, as faltering in conveying its message to the people of our land, as we Americans have been in carrying the message of freedom to those parts of the world where we are fighting with the agents of Communist tyranny in a grim battle for men's minds.

Furthermore, although the record of the Republican Party contains errors of action as well as of inaction, there is no question that this record has been, to a considerable extent, misrepresented by its detractors. Many Americans are unfamiliar with the facts of Republican accomplishments.

As I have said, our mission must be to provide the American people with a choice and to indicate by our actions in Congress and in the other political offices which we hold that the Republican Party has understood the principles which brought it to life 95 years ago at Ripon, Wisconsin.

The Republican Party was founded in 1854 to fight intolerance and slavery. The great-

est American of us all was its greatest statesman and prime inspiration. Abraham Lincoln, whose birthday we shall soon celebrate, believed profoundly in the dignity of the individual man, in the brotherhood of man under the Fatherhood of God. Above all else, he believed in freedom. In freedom, not merely of workers, or farmers, or managers, but in the freedom of the individual. He believed that the individual is the complex heart of society.

To that individual must be given two things: The greatest possible degree of political and economic freedom consistent with the freedoms of other individuals, and equality of opportunity for every individual before fate and before law. Lincoln believed in the human soul.

Those are the principles upon which the Republican Party was founded and those are the principles upon which it has always acted in its moments of greatness. Under Lincoln, it fought and saved the Nation and gave a new birth of freedom to an enslaved people. Under the rallying cry of freedom, it made the Nation a kindly refuge for hundreds of peoples of many foreign lands. Under Theodore Roosevelt, it curbed the excesses of powerful men who threatened to destroy the freedom of the people. Under its great Chief Justices, it evolved a system of law designed to safeguard those freedoms.

It has been the fashion for some years now to forget these achievements of the Republican Party. It is fashionable to picture the elephant as a corpulent old gentleman with a cigar in his mouth and a roll of bills protruding out of his hip pocket.

Fully as important as our failure to familiarize the American people with the record of the Eightieth Congress and with the principles and objectives of the Republican Party was the impression created in certain quarters that the Republican Party is the party of special interests. There are some who apparently visualize Republican Congressmen as receiving voting instructions by long-distance telephone from the big business interests, which, according to the Democrats, are still in the saddle in spite of 16 years of Democrat rule.

The fact of the matter is that if Wall Street and cartels and monoply interests are sitting astride of the American people, as the Democrats say they are, surely it must be the fault of the Democrats since they have had complete control of the executive, the administrative, and the legislative branches, and virtual control of the judicial branch, of the government for a great many years. Surely one is entitled to wonder at the wide gap which separates Democratic protestations of concern for the common man and the appalling conditions which the Democrats decry and for which they must assume responsibility.

If the people in this country are still ill-housed, ill-fed, and improperly clothed, this can hardly be blamed on the Republicans. The fact of the matter is that while the Democrats have been talking loud and fast about the underprivileged, they failed in the 14 years preceding the Eightieth Congress to provide the very legislation for which they have made such an outcry.

Actually then, the Republican Party, being the party of freedom, has been, and is today, the party of the people in their eternal fight against vested interest, whether that interest be centered in business, finance, or government. It has no room in it for anyone who will put the welfare of any organized group, no matter how large or powerful, ahead of the welfare of the people. The Republican Party has no place for complacent reactionaries, for purveyors of intolerance, for sowers of confusion and discord. The Republican Party is the party of insurgents, of liberals; it is the party of progress, of intellectual ferment—the party of Lincoln; the party of freedom.

The true definition of a liberal, it seems to me, is that a liberal believes with Lincoln in freedom for the individual. That, I know, is what the Republican Party does, and will, stand for.

One result of being a liberal is that you must be constantly on guard against tyranny and authoritarianism wherever they show their heads. There is no compromise in the age-old struggle between tyranny and human freedom.

It is not an easy fight. The individual, being without spokesmen, often seems at a loss in the face of the howling propaganda enthusiastically hurled by the proprietors of vested interest. It is difficult to fight the battle for the individual. It is even difficult sometimes to see wherein his freedom lies. It is often easier to listen to the blandishments of the propaganda Lorelei.

We must penetrate through the web of vested interest to the freedom of the individual. We must be steadfast in our adherence to the principles of Lincoln. We must not lose contact with the human soul.

Let us bear in mind the words of lofty counsel which were uttered by our only living ex-President, Herbert Hoover, when he spoke at the Republican Convention in Philadelphia last summer. I remember well my feeling of elation when, out of the oppressive heat, the glare, and the noise of the convention, Mr. Hoover approached the microphone.

Here was a man who had been assailed as violently as any President in our country's history and who somehow had found the resourcefulness to grow in stature and wisdom under these attacks. He said in part:

"Great as your problems are, they are no greater than Americans have met before your time. You are no less able or courageous than they were. Therefore, I repeat, what you say and do here is of transcendent importance. If you produce nothing but improvised platitudes, you will give no hope. If you produce no leadership here—no virile fighter for the right—you will have done nothing of historic significance. If you follow the counsel of those who believe that politics is only a game to be played for personal advantage, you are wasting your time and effort. If here, or in this campaign, you calculate what will please this or that little segment of our population, and satisfy this or that pressure group or sectional interest, you will be betraying your opportunity, and tragically missing the call of your time. If, on the other hand, in this campaign, as a mature and inspired political party, you face the truth that we are in a critical battle to safeguard our Nation and civilization, which under God have brought to us a life of liberty, then you will be guided step by step to restore the foundations of right thinking, or morals, and of faith. If you choose your leadership with full recognition that only those can lead you who believe in your ideals, who seek not only victory but the opportunity to serve in this fight, then you will issue from this hall a clarion call in as pure a note—in as full a tone—as that call to arms which your political ancestors issued at Ripon, Wisconsin, when this party was born to make all men free."

This historic statement can serve us well. Let us take it to heart. Our mission is not to be slick political tacticians attempting to attract votes by sly maneuvers and cynical tricks and trades. Our mission is to place the national welfare above special interests and local pressures. Let us shun the calm, shallow, tepid waters of evasion and opportunism and instead sail boldly out to the deep ocean where great gusts of action can truly test our political mettle. Let us, indeed, sound the clarion call of which Herbert Hoover spoke. Let us tell the truth about the Republican Party. Let us base our objectives upon the timeless traditions which brought it into being. Let us tell the truth about the dangers which beset us on every side while America is lulled into a false sense of security by demagogic appeals to our love of comfort and peace. Let us conduct a mighty crusade for these tested tenets of our faith. Let us tell the truth passionately, persistently. Then, at least, if we fail, we shall go down fighting—fighting for what we believe is right. Then, at least, the issue will have been drawn, the alternatives underscored, the choice crystal clear, the challenge unmistakable.

What is the choice? What is the challenge?

Is it merely that it is time for a change; that bureaucrats get tired and lazy and should be given a rest? This would, of course, be healthy for the country. But this is not the main challenge.

Is it that we can do the same things better? Are we just "me-too" boys? No; although we must furnish impressive evidence that a new administration could execute more effectively the programs on which there is no partisan disagreement.

Is it that we Republicans are old-fashioned, stuffy reactionaries, hide-bound Tories, bloated plutocrats, bourbons, princes of privilege, economic royalists, labor-baiters, and all the other raucous and abusive epithets which have been hurled at us by certain reckless demagogs in their insane desire for the privileges and prerogatives, the perquisites and the power, of public office? No; yet even in this field we must be quick with effective rebuttal.

Is it that we are followers of Adam Smith, that we believe in unrestricted private enterprise, in laissez faire? No. There are fresh vital elements in the Republican Party who understand that we must be modern-minded, that there are accommodations which government can and must make to the needs of our time, accommodations which do not alter the essential structure of our free institutions, accommodations which result in quantitative rather than in qualitative changes. I believe that there are many instances where the government should step in, not in order to take possession, but in order to regulate. I believe that the government must in certain instances fill in the chinks where our private property system does not reach; I believe that the less fortunate in our community should be assisted by the more fortunate. The government can run the traffic signals without operating the automobiles. I believe that there are many instances where the public interest is clear.

We can be guided by the precept of Abraham Lincoln: "The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all, or so well do, for themselves, in their separate and individual capacities."

This is the traditional Republican attitude and it is timely. Indeed, it is timeless in its validity.

There is a large middle ground for effective action, for needed reform, and for constructive opposition.

The essential choice, the basic challenge, the fundamental issue, is whether our Government is to remain the servant of the people; whether individual freedom is to remain the cornerstone of the American political philosophy; whether America is to remain the land of opportunity; whether Americans are to exchange the freedom, the dignity, and the high standard of living, which have brought us so far in our pursuit of happiness, for an adventure in statism which has behind it only a record of frustration and failure.

The basic challenge is whether the American people are still ready, willing, and anxious to assume the duties and risks of being free, to discharge the responsibilities which are inseparable from freedom.

I believe that they are. I believe that that is the issue which the Republican Party must bring before the people in concrete understandable terms.

While the health of our Nation and the education of its citizens, old-age pensions and social security, minimum wages and unemployment compensation, large-scale production and full employment, rural electrification and flood control, are all desirable objectives and all involve the people's welfare, the ultimate, the essential welfare of the American people depends upon the continuation and increase of the vital opportunities inherent in our free system. These legislative goals require money. Our problem is to achieve these worthy objectives without raising the cost of living by taxation which is almost confiscatory, without obliterating the very sources which produce the taxes. These objectives will lose their validity; they will become purely illusory, if, in our efforts to reach them, we destroy the free society which is the source of our greatest strength. There lies the basic public interest. It is there that the Republican Party must make a stand. It is there that it must provide effective and constructive opposition.

The Republican Party is the only political force standing between the American people and one-party government.

This is a formidable challenge; it is a challenge worthy of our mettle.

This is a good time to be alive—to be a Republican—to be an American.

The Show-Down on the Colorado

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. POULSON. Mr. Speaker, the weirdest piece of economics ever brought to my attention is now before the Congress in the form of H. R. 934. This bill calls for a billion-dollar reclamation project that is totally infeasible and would have to be paid for by the taxpayers of the entire United States.

In connection with my opposition to this measure, I wish to introduce here the following editorial from the Los Angeles Times of January 27, 1949, which clearly sets forth the dangers of this proposed raid on the Treasury of this country:

THE SHOW-DOWN ON THE COLORADO

Precisely as forecast in the recent Colorado River series in the Times, Arizona is attempting today to rush through Congress a bill authorizing a fantastic billion-dollar water project for which the taxpayers of the United States would have to pay.

The bill seeks to take water from the Colorado to which California claims title. It seeks to lift the water 1,000 feet, at enormous expenditure of electrical energy, and then run it 235 miles by canal to the Phoenix region. It means that the water delivered to the acreage in central Arizona would cost 10 times or more what the farmers could pay for it and stay in business; so it is proposed that the cost be saddled onto the unlucky American taxpayer.

This undoubtedly is one of the boldest attempts ever made to disguise an uneconomic and discredited irrigation vision as a feasible engineering project.

It is made doubly dangerous by the fact that it seeks to evade the fundamental issue of who owns the water which it is proposed to divert and use. For 26 years, either by refusing to enter the compact signed by the other States, or by declining to join in judicial proceedings for a settlement, Arizona has balked a fair determination of the perplexing questions surrounding Colorado River water. Now, apparently, she is seeking from a Congress reputed to be politically friendly to her and hostile to California a hand-out based solely on political opportunism.

The pressing practical need at the moment from California's standpoint is to acquaint eastern Congressmen with the truth of the situation. The simple truth is all that is needed. It is inconceivable that Senators and Representatives from Middle Western, Eastern, and Southern States, no matter what party label they wear, will toss overboard every business principle which hitherto has guided reclamation projects and put upon the taxpayers of the country $1,000,000,000 in taxes merely because Arizona bears a grudge against California. It should be hammered home that this is no ordinary reclamation project which Arizona seeks. It is not to be guaranteed and underwritten by the beneficiaries as has been the policy so far. It is not similar to the Hoover Dam project, for which southern California is paying in full, within a reasonable time, with interest.

Instead, Arizona seeks a free ride on a $250,000,000 dam with a $700,000,000 (or more) water project attached. There is not even any pretense that central Arizona users could even begin to defray the cost.

All this should be pointed out, in detail, by southern Californians in letters back home to residents of other States all over the Nation.

Arizona, of course, is seeking by sympathy for her farmers who have been the victims of drought, to put over a scheme which cannot be defended on grounds of reason or economics.

All California asks is that the disputed issues be submitted to the one recognized American agency qualified to make a final decision—the United States Supreme Court. After a decision in the Court as to the ownership of the water, California, of course, is willing that Arizona shall utilize its legal share of the water in any way the Congress determines is sound and reasonable. But until the ownership of the water is decided, California insists that no further diversions be authorized.

California is even anxious to go ahead with the $250,000,000 Bridge Canyon Dam project for power, divorced from the extravagant and unsound Parker Lift and central Arizona riders. Bridge Canyon Dam and Glen Canyon Dam, farther upstream, both are needed immediately not only for power but for silt control in Lake Mead. Both can be underwritten in southern California on the same sound business principles which were used in the construction and payment on Hoover Dam.

Why not proceed at once in Congress to build these two dams, with the taxpayers of the United States receiving interest on the investment, as is proper and justified, and while they are building, let the Supreme Court decide the water issues.

Why, instead, demand that the taxpayers fork over a billion dollars as a gift to Arizona to proceed on a bad debt basis, with water to which title is in dispute?

The issue is clear and simple.

The problem is to present it to the American people quickly.

An Epic of American Self-Reliance

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. CRAWFORD. Mr. Speaker, you and other Members of this House have, in days gone by, been an eyewitness to life as so entrancingly described by E. M. Biggers, of Houston, Tex., in a letter which he forwarded to the gentleman from Georgia [Mr. Cox]. In the early days of Texas and in the formative period of that great State which was once an independent republic, great individuals were produced. The very pressure of life, with all of its responsibilities, forced men to rely upon themselves as an individual. In those days there were few, if any, collectivist approaches thought of by our people. From Mr. Biggers' letter it would appear that he is a firm believer in the philosophy to the effect that you "cannot protect all people against all the ups and downs of life without undermining their moral strength and independence." Collectivism for the so-called protection of the individual from the cradle to the grave—whether emanating from Moscow or from Washington—will eventually have its disastrous effect on our people. The more the Federal Government promises, the less thrift will be exercised by the masses of our people. The more the individual depends upon Government and the flow of checks from the Federal Treasury, the more the tax burdens will increase, the less goods will be produced, and the greater will be the unfilled wants of the people. Government cannot distribute until it first takes away from the people that which is to be distributed. Placing more and more stress on the "equal distribution of that which is now" will lead to less production in the future and eventually force the citizen to be substantially satisfied with that which the Government hands to the citizen. By permission of the House, I submit for the RECORD the remarks of Mr. Biggers:

HOUSTON, TEX., *October 16, 1948.*

Mr. W. M. COX,
Lebanon, Ga.

DEAR SIR: Back in May, this year, I received a letter rather critical from you, and have wanted to reply, but more important things prevented earlier attention.

Usually I pay no attention to such letters, most of them being anonymous and very obscene, abusive, and threatening. It was a relief to get your signed letter, and in a more courteous manner.

In the first paragraph you refer to me as "one who never had a hard time" and "do not know what it is to be up against it." I hope you will pardon me for writing in such a personal way, but that statement requires a very personal answer.

First, Mr. Cox, I was born on a farm. Never left one until I was 16, then got a job in a printing office. I had no schooling, did get out of the first grade and attended only one session. No boy ever had a harder time. I know every part of every farm implement or harness, from nose bag to crupper, Georgia stock, bull tongue, middle buster, soldshut,

single and double tree, bellyband, hamestring, clevis, trace chain—you just can't stump me.

I have split rails, using home-made mauls and wooden wedges; cut cordwood at 50 cents a cord, trimming and burning tops. Picked cotton at 38 cents and keep. Then we weighed it on the old stilliards, hung in the end of the wagon tongue, which was propped up by the breast yoke. We always hung the peg in the hook so as to keep the stilliards pointing up. If you are an old-timer, these things will be familiar to you.

I am not yet sure that hard times—yes, even a bit of poverty—is not a blessing in many ways. At least it helps us to appreciate what we have, and someone asked, "If you can't appreciate what you got now, how can you appreciate more?"

In those days farmers believed in God. Though they were poor, every night after supper we gathered around the table, verse from the Bible was read, and then a prayer was offered for the blessings we had. Our light was a tallow dip, later a small brass lamp with a round wick and no chimney, and do you remember the paper lighters that were kept by the fireplace, because we had no matches?

It was good for those who could take it, and I think those trying times made for more happy homes, brought more families closer together, and did more for real Christian religion than wealth and luxury have ever done. Yes, I am proud of what I went through, though I do not want others to be forced through the same.

The first cultivator I used was a walking one, and at night we cut a supply of wooden pegs to fill the bag carried on the handle. Next day when the plow hit a stump, and there were many of them, it would break the peg. Later we had the riding cultivators with the spring which allowed the plow to trip. I rode cultivators when my tiny legs were too short to reach the stirrups.

My mother died when I was 4, the youngest child, leaving father with four to bring up. We scattered out, living with anyone willing to take us. Two years later, father rented a small place, borrowed a yoke of oxen, and assembled his little brood. With a sister, then 15 years old, as our housekeeper, he tried to make a home for us. I was too small to do much of the field work, but I did cut sprouts and hoe. My main job was to provide meat. This I did by trapping quail and rabbits. In those days we ate the rabbits, rather than just pulling them out of a hat for exhibition purposes, as the New Deal became so proficient in later.

We had neither flour nor meal, our bread being made from grated sweet potatoes, and it was good and wholesome, too. In addition to a bountiful supply of game, our food was black-eyed peas, sow belly, and the sweetpotato bread. Any sugar we had was from evaporated sorghum. It was very dark, but it was sweet, and we gulped it down. Dad's coffee was parched corn.

Before a year, sister died. She was not only our housekeeper, but a mother to the two younger brothers. She was buried out in the woods under a large tree near Ranger, Tex. Today, if I could have just one wish fulfilled, it would be to locate where that little girl lies, so that I could erect to her memory a monument she so deserves.

My father was a carpenter (and I recall there was once another poor but honest character who was both a carpenter and a shepherd). Father made her coffin out in the back yard. I can see him working on it this very minute. It impressed my young mind. After cutting the boards correct length, he sawed several cuts for the bends on each side, then poured hot water on them, which caused them to bend properly without breaking. I had never seen such a beautiful thing as that coffin with its black plush covering and shiny brass tacks. That's what I saw then. In later years, and after father passed on, I saw the tragedy and the suffering he went through to bury his only little girl.

Please, Mr. Cox, do not say I am a stranger to hard times, for I have lived them. Never had a real home until I was married, but bummed all over the Nation, acquiring a self-confidence and a faith that has stood me well in later life; faith in my ability to take care of myself, and not look to the Government for a dole, as is so popular of late.

Blessed with a healthy body and devoid of laziness, I have by hard work (and I am 71 and working hard) managed to accumulate something for the rainy days I was brought up to believe surely come to all.

E. M. BIGGERS.

A Living War Memorial to Our Honored Dead

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. McDONOUGH. Mr. Speaker, in Tuolumne County, Calif., the great sugar pines and sequoias still stand in their natural state, a forest primeval. But these giant trees, among the last of their kind in the Nation, are already marked for early felling by the woodsman's ax unless immediate steps are taken to prevent their destruction.

Civic and patriotic organizations throughout the State of California have been aroused by this imminent and irreparable loss to our Nation, and under the leadership of John B. Elliott, chairman of the Organization Committee of the California War Memorial Park Association, are working for the preservation of these trees, among which are some of the world's finest sugar pines and sequoias, and have proposed that the trees in Tuolumne County be preserved as a living memorial in honor of those who sacrificed their lives in the last great war in the cause of human freedom.

If steps are not taken to save this magnificent stand of timber, the Nation will lose a forest that has taken nature 600 to 800 years to produce.

No memorial could be more fitting than this living tribute to the men and women who perished in the defense of this country. The War Memorial Park would stand a permanent reminder to all who visit it and marvel at its scenic wonders of the courage and patriotic devotion of those who died to preserve our Nation.

The following is a resolution adopted by the American Legion Executive Council, Department of California, on January 16, at Marysville, Calif., urging the integration of the primeval forests of big trees and Beaver Creek, Tuolumne County, into a memorial park dedicated to those who gave their lives for us in the world wars:

Whereas the giant Sequoias and sugar pine trees of Calaveras and Toulumne Counties, in California, comprise one of the oldest and most sublime forests in the entire world; and

Whereas the preservation of this great primeval area, particularly in the regions of Big Trees Creek and Beaver Creek, is a matter of real concern to present and future generations; and

Whereas inconceivable as it may seem, there presently exists a real and immediate danger of the complete destruction of hundreds of these age-old trees through commercial logging by a private lumber corporation; and

Whereas all State conservation groups and such nationally known authorities as Mr. Frederick Law Olmsted, Mr. Williard G. Van Name, curator emeritus of the American Museum of Natural History, New York City, and, when Secretary of the Interior, the Honorable Harold L. Ickes, among others, have urged the preservation of these trees by official act: Therefore be it

Resolved, That we deeply deplore the threatened wholesale cutting of these great virgin forests for any purpose whatsoever.

And that we extend our unqualified endorsement of the activities of the California War Memorial Park Association, Save-the-Redwoods League, Sierra Club, Izaak Walton League, and other public and private organizations and individuals seeking to save these irreplaceable trees, hundreds of years of age and of great height and beauty, to be established as a permanent recreational area and lasting memorial to our veterans of the world wars to whom those of us living owe so much.

Tobacco Growers

EXTENSION OF REMARKS
OF
HON. JOHN A. WHITAKER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. WHITAKER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Tobacco Growers Know Their Business Best," which appeared in the Courier-Journal, Louisville, Ky., under date of January 29, 1949:

TOBACCO GROWERS KNOW THEIR BUSINESS BEST

Kentucky tobacco growers have won a high degree of independence for themselves and stability for their crop. They did it by learning from bitter experience the benefits of working together. Cooperative associations of both burley and dark tobacco growers, diligent and efficient, have come of age, and are helpful in keeping tobacco in the hands of those who really known tobacco best.

Because of all this, tobacco growers and their representatives have a right to be startled by a move in the Production and Marketing Association to take over the tobacco loan program. They see this proposal as threatening a backward step, not to speak of its unworkability and expense.

The most charitable among them see the new idea as a result of ignorance of the problems of tobacco culture. Those who are disposed to let their indignation have its head would say that it is a fine example of the bureaucratic mind at work. To be sure, the protest which will go to Congress from the Burley and Dark Leaf Tobacco Export Association, which met here Thursday, will be more temperate than that. But it doubtless will express the same thought, even if only roughly.

The objectionable proposal seeks to make loans, as a basis for price supports, direct to growers and not to cooperative associations.

It came out of a meeting of PMA representatives in St. Louis last December to talk over a new farm program. The thought was advanced there that since the direct-loan plan was working as to crops like corn and wheat, it ought to work for tobacco. The aim seemed to be uniformity.

But what was missed is that tobacco is not a crop like corn or wheat. The preparation of the product is a complicated business. As any tobacco grower might have informed the experts, it involves something more than simple storage. It calls for steps like redrying after it leaves the auction, then first careful assortment and afterward commingling. It calls for care and knowledge in handling, both of which are applied under the present system by persons who know what they are doing.

Thus the cooperative association serves both the grower and the trade. It performs a number of indispensable functions and technical services. And for these to be taken over by Government agencies, as the PMA plan would require, means that an intricate, costly, remote organization of Government would be needed. The PMA could be biting off more than it can chew.

Union of American Hebrew Congregations

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. MULTER. Mr. Speaker, I am making the following letter from our President, Harry S. Truman, a part of the CONGRESSIONAL RECORD because in my opinion it constitutes one of the great historical documents of our time:

THE WHITE HOUSE,
Washington, October 9, 1948.

Mr. JACOB ARONSON,
Chairman, Executive Board,
Union of American Hebrew
Congregations, New York, N. Y.

DEAR MR. ARONSON: The commemoration of the founding of the Union of American Hebrew Congregations 75 years ago by the late Dr. Isaac M. Wise is a happy event for all Americans, be they Christian or Jew. The vision that led Dr. Wise to found your great organization, a pioneer national Jewish religious organization in the United States, has borne rich fruits. American Jewry, like all other segments of the American population, has played its important role in the growth and development of this great country of ours.

No one, I am sure, will dispute the fact that the American formula of religious liberty and freedom for persons of all faiths has been a contributing factor in the development of the American way of life that we call democracy. Separation of church and state on the one hand, and the encouragement and support of religious organizations by individuals on the other hand, has successfully answered a problem that in other countries, and in other times, has plagued humanity.

Strong, voluntary religious organizations, such as the Union of American Hebrew Congregations, are a distinctive aspect of American life. I am happy, through you, to convey my congratulations and best wishes to the delegates attending your convention, the representatives of a large and influential section of American Jewry.

Very sincerely yours,

HARRY S. TRUMAN.

Whither Are We Drifting?

EXTENSION OF REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from a small weekly newspaper in my native State of Wisconsin, the Vilas County News-Review, Eagle River, Wis. The article appeared in the issue of January 20, 1949:

WHITHER ARE WE DRIFTING?

The fact that some people read this column was brought home to the writer when several letters were received commenting on the final line of a recent column, "Are we Americans or are we mice?"

Most of the writers were pleased to have one voice lifted against the present administration's attempt to reduce all Americans to a common level, take their money away from them, and kill all their initiative by making it almost criminal to earn more than $6,000 a year.

One letter, however, asked, "How do you know socialism is so dangerous? How does it happen you are so sure that this trend is a bad thing? Personally, I do not think it too bad to have a government that will take care of me and give me things. I don't mind the Government telling me where I have to work, or for how much. However, I would not like to be separated from my family."

A mouse, if there ever was one.

How do we know this trend is dangerous? By a very plain example, the example of what has happened to people in England. They are having a very dim time of it, and they are having it under a socialistic government. They have sacrificed their freedom for two ounces of butter a week.

This is the austerity program, and it certainly is austere. The tight little island is a beautiful one, but the people of England will never see the beauties of their countryside and the loveliness of their lakes district. They can't get gasoline.

I once heard a man talk about how a government could enslave its people by taking away wheels. The British, under their labor government, which is definitely socialistic, have voted for a government which has made it impossible to drive a motorcar. If you are driving one, you are practically a criminal and will have a tough time explaining why you are out in your own car unless you have a series of permits.

With this socialistic government has come a swarm of bureaus. With the bureaus there has descended upon the British a horde of snobbish, important, small-minded bureaucrats who, aware of their own inferiority, take a sadistic pleasure in lording it over the poor people who have to come to them for practically everything.

Of course there's rationing. No one knows why there is still rationing, for everyone agrees the necessity for it is all over. The British are lost in a snarl of red tape that strangles them when they want to get food or clothing.

Imagine an American willing to fill out blanks to get food when there is no necessity for this supervision. Imagine an American willing to limit his clothing allowance to coupons and wearing what the government says he can wear. Imagine an American sitting at home while his car is stored in a garage and he is not allowed to use it to run to the corner store, dash off to play golf, take his family for a ride in the country, or whirl off on a 2 weeks' vacation that means a tour of several States.

Of course, Americans wouldn't stand for such enslavement, but this enslavement doesn't come all at once.

First, there's the sales talk. The people are sold the many benefits of a certain type of government. Then they are bribed or lulled into a feeling of security by a government that promises them protection from the cradle to the grave.

In England a man can't repair his home or change it, can't sell it, can't buy anything from another country to improve it, nor can he send anything to another country without a license. If he leaves his home for a summer at the lakes, the government can take his home, pay him a nominal rent, and he can't get it back.

Under the present socialistic form of government, where the government takes care of everything, the Briton is a slave. He must stay at home, or keep someone in it so the government won't take it. He can't use his car. He has to beg for food and clothing. He has to run to the government for everything. He is even put on an allowance and can't spend any more than a certain sum.

Can you imagine an independent, liberty-loving American submitting to that kind of government?

In England, under the socialistic government, the people are prisoners of the government, unable to move without a government permit. This may kill the spirit of the English and make them dull, disinterested clods. All this will happen, unless the British free themselves from the slavery now foisted upon them. And if they don't they'll not win another war, for wars are won by men who have a country for which they are willing to fight and die.

And in America? We are gayly dancing down the road to socialism, willing to accept without question a message filled with socialistic theories, from a man who has somehow become a national hero because he won an election. We seem unaware of the terrible darkness that lies ahead of us.

Why Not Federal Breakfast in Bed?

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Cincinnati Enquirer of January 18, 1949:

WHY NOT FEDERAL BREAKFAST IN BED?

In bygone years politicians invariably were against sin, waste, and corruption; they were for right living, efficiency, and economy. The modern lexicon of the politician has taken on new terms, however, and he finds himself forced to take a stand on such nebulous issues as social gains, health insurance, and social security. Quite often these general terms, so praiseworthy in obvious intent, cover a multitude of sins.

There can be little quarrel with the principle of social security as undertaken in the last decade. Its net effect has been beneficial, despite the loafing it has encouraged among some individuals and the general attitude of Government paternalism it has fostered. But in any program which seeks to guarantee benefits to a great mass of people, somewhere a point is reached at which

the expense and bureaucratic administration begin to weigh too heavily for the benefits secured.

It would be quite practicable to set up an agency of the Federal Government to serve everyone breakfast in bed every morning. In fact, a very persuasive case could be made in behalf of a new Federal agency to do just that. It could be cited that the physical energy of most of us is at a very low ebb upon awakening. If our breakfast were served in bed, it would enable us to face the day nourished, with our awakening energy conserved for the tasks ahead. We don't doubt that a good orator could show that in a few years' time the general health level of the Nation would be increased immeasurably.

But, naturally, it would cost something for us to be fed in bed. It would cost frightfully. And even if we attempted to restrict the number of citizens to be fed in bed each morning merely to those who signed a statement saying that they didn't feel well when they got up and ate or fixed their own breakfast, there still would be countless millions of people who would avail themselves of this free service. Only, of course, it wouldn't be free. We don't know what percentage would have to be added to the worker's and employer's taxes to take care of this new social-health service, but it would be a sizable sum.

And then, mind you, this breakfasting in bed would have to conform with certain rules and regulations of the "Federal Bed Breakfast Administration." There would have to be a standard menu. It would have to be served at the convenience of the Federal agency—in some instances as early as 5:30 a. m. and in others as late as 11:30 a. m. The times would not be fixed to suit the convenience of the beneficiaries but, rather, the bureau's.

Your imagination can take you on from there. The point is that a certain amount of social security can be a very desirable thing. But when political temptation is yielded to, it can be expanded into very monstrous proportions—with results not agreeable to any of us except possibly the folk who want everything done for them anyhow.

Tariffs

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following statement which I delivered before the Ways and Means Committee on Thursday, January 27, 1949, in connection with hearings before that committee on H. R. 1211, to extend the Reciprocal Trade Act:

Chairman DOUGHTON and members of the House Ways and Means Committee; Greater Lawrence in Massachusetts is the nerve center of our Nation's woolen and worsted industry.

It may be paralyzed beyond recovery if this committee approves of rush legislation without fully considering the harmful effect on our own economy.

We are here to protest against any concessions which would sacrifice American textiles in the name of free trade.

This is the bread-and-butter industry of New England. Once it was among the lowest-paid groups in the Nation. Thanks to the fine understanding between labor and management, wage-scales have steadily improved and the industry has prospered.

After meeting war needs, and then the pent-up consumer backlog, woolens and worsteds are now under highly competitive pressures. They could not survive if low tariffs permit an influx of foreign textiles produced at slave-labor wages.

Think of this fact. The present Congress will undoubtedly raise the minimum wage of American workers from 40 cents per hour up to 70 or 75 cents per hour. Most of us will heartily support such a move. As President Truman said, as early as September 6, 1945, and I quote: "I believe that the goal of a 40-cent minimum was inadequate when established. It has now become obsolete. Increases in the cost of living since 1938 and changes in our national wage structure require an immediate and upward revision of this minimum."

But what is going to happen to American business, which provides jobs for our people, if it must pay wages far higher than foreign competitors whose goods are allowed to come into this country and undersell American producers?

I tell you, gentlemen, that our woolen and worsted industry cannot stand up to this unfair competition without the compensation of tariff protection.

There are those who say that we must help other nations to get on their feet again by providing them with an American market for their goods. But shall this be done at the expense of an existing American industry which manufactures the same type of goods? The inevitable result of such a policy would be to force our own wage rates downward to save such an industry from bankruptcy. Is there anyone in this room who would advocate such a betrayal of American industry and labor? Hardly.

Or, to put the situation in another perspective, must we forfeit all our gains and move our economy backward just to be on even terms with depressed nations which are trying to improve their standard of living?

It seems to me, gentlemen, that we are doing quite enough for the world at large. It would serve no useful purpose to ourselves or to others if, as the center of world stability we overextend ourselves. If we jeopardize our own domestic security, all will be lost.

Certainly there are goods which we need from them and they need from us without undercutting United States products for foreign imports in the same category.

Average hourly earnings of $1.32 in the United States compare with a real wage cost of 42 cents an hour in England. The disparity is even greater with other European countries which seek to market their woolen and worsted fabrics in this country.

Even before this threat develops, we are troubled by the recession which has hit our textile industry.

Bear in mind that this is January and not the last few days preceding the Federal income-tax dead line of March 15. Already long lines are forming before the office of the Department of Internal Revenue in Lawrence. This is because so many people are out of work and are filing their returns earlier than usual in order to get their refunds from the Government as soon as they can. Those same lines then move onto the employment-security office to sign up for unemployment-compensation checks.

In an area where 120,000 people live nearly 10,000 are out of work. Normally, 25,000 are employed in the woolen and worsted mills which comprise the dominant industry of greater Lawrence. Similar conditions prevail throughout New England.

The present schedules of United States tariffs impose double penalties on this enterprise. Not only are foreign goods permitted to enter at prices which are dangerously low, but the American manufacturer is obliged to pay high prices for the raw materials he needs.

To protect the domestic grower of fine wool, who cannot produce in quality and in quantity for our textile manufacturers, a heavy duty is placed on the import of raw wool.

The American producer must therefore pay high prices for wool in the face of a world shortage plus a duty of 25 cents a pound to pass customs.

Also inflating the cost of raw wool to the American processor, is the handicap suffered by our buyers in the South African and Australian markets.

We pay at the exchange rate of $4.03 to the English pound. All other countries get convertible sterling at rates ranging from $3 to $3.80. This is because we recognize the exchange value of the pound at $4.03 which is considerably above its real value.

This combination of a high import duty on raw wool and the false exchange rate puts our manufacturers under a decided disadvantage even before we consider the wage differential between United States and foreign producers of finished fabrics.

The present tariff offers no genuine protection. The fixed rate of 37½ cents on each pound of finished cloth merely cancels out the duty which the American manufacturer pays on grease wool at 25 cents a pound. This is because the shrinkage on scouring raises the duty to 37½ cents on the raw imported wool.

This ad valorum rate of 25 percent is figured on the foreign price and does not afford sufficient protection to make up the 90 cents to $1 difference in labor costs.

Should England revalue the pound at a realistic figure of $3, her finished fabrics would cost 35 percent less. Under these circumstances, and with full production, she could undersell every American mill right here in the domestic market. This would completely ruin our woolen and worsted industry.

These are the dangers which loom in the immediate future, aided and abetted not only by appeasement tariffs but by another aspect of our foreign policy.

The British Board of Trade states that shipments of worsted piece goods to the United States in 1948, were 2½ times the volume of 1947. Furthermore, England confidently announces that she expects to up these exports in 1949 by 60 to 80 percent.

How is this possible in a country whose plant and equipment were severely damaged by the Nazi blitz? The answer lies in the Marshall plan, which has provided them with the funds to buy the finest of new machinery, much better in fact than the machinery now used in many American mills.

And this competition is being subsidized with American dollars, collected from American manufacturers and American textile workers. Now I believe in the broad objectives of the Marshall plan, but not to the point where it would sell out our own industries in our home markets. Just because we buy Australian wool is no reason why we should start playing with a boomerang. The effects can be disastrous. It is well to put certain nations on their feet again; but not at our throats, competitively speaking.

France has asked for $1,500,000 from Marshall-plan funds for the most modern wool-textile machinery. An Italian mission has just visited this country for the same purpose. The Japanese wool textile industry is being rehabilitated with our help, and Japanese worsted products have been offered in this country. These countries pay even lower wages than the manufacturers in England. We are happy to put them in a position where they can produce for their own needs and for a share of the trade in those areas of the world which need textile products, but let's stop them from invading the

United States and turning American mill cities into ghost towns.

The skill and ability of our textile workers cannot offset the burden placed upon them by their own Government.

But these workers, side by side with management, do vigorously protest against any reenactment of the old Trade Agreement Act, under which the State Department would have a free hand in negotiating reciprocal-trade arrangements. The present act, due to expire on June 30, is a far better approach. It gives to the Tariff Commission the power to review the duties imposed on imports to this country. Under the present law the Tariff Commission is required to hold public hearings and to determine the peril points below which contemplated tariff reductions under the reciprocal trade program should not go. Under Public Law 792, it must submit its recommendations to the Chief Executive. The President, if he disregards such recommendations, must tell Congress his reasons.

We submit that this is a more democratic and practical procedure. Rather than leave such matters without recourse to the State Department we must have a flexible system that will provide protection whenever any industry is threatened in the home market.

The peril point in the woolen and worsted industry is a fact. It is here.

Representatives from New England insist that this peril be removed by an amendment which will raise the tariff on imports of woolens and worsteds.

Before that can be done, however, the new legislation being considered by this committee, and which seeks to eliminate the peril point reporting function, should be rejected.

If not, our textile industry is doomed.

We are here to see that this does not happen.

Gentlemen, don't sell our woolen and worsted industry down the river of free trade.

Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. ADDONIZIO. Mr. Speaker, I believe that the Senators and Representatives from New Jersey received copies of the resolution adopted by the Essex County division of the Federation of Holy Name Societies, condemning the acts of the Hungarian Government in arresting and imprisoning His Eminence Josef Cardinal Mindszenty and urging that the United States Government exert every effort to obtain the cardinal's release.

On January 27, 1949, I asked and obtained unanimous consent to include that resolution in my remarks as part of the Appendix of the CONGRESSIONAL RECORD.

I am pleased to note that my distinguished colleague from New Jersey [Mr. RODINO] also obtained leave that date to accomplish the same purpose.

I wish to state that I am in complete agreement with the sentiments expressed in the resolution, and I earnestly hope and pray that the cardinal's release can be secured.

The Freedom Train

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. COOLEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include two brief editorials, both of which emphasize the importance of the Freedom Train.

Our majority leader, Mr. MCCORMACK, on January 10, 1949, introduced House Joint Resolution 84, to provide for the acquisition and operation of the Freedom Train by the Archivist of the United States. I hope that the resolution may be considered by the House at an early date, to the end that this very worthwhile and history-making enterprise may be continued.

The editorials follow:

[From the Washington (D. C.) Star of January 21, 1949]

SAVING THE FREEDOM TRAIN

The Freedom Train, back in Washington after visiting 325 cities in 48 States, has been inspected by hundreds of citizens of the Nation's Capital and its environs. Still other crowds will make pilgrimage to it before 11 p. m. tomorrow. Then, unless present decisions are altered, it will be disassembled, its documents dispersed, its personnel disbanded.

But the purpose of the Freedom Train cannot be said to have been fulfilled completely. True, more than 3,500,000 people have passed through its cars and briefly viewed its displays. This number, however, is small in comparison with that of the Americans who have not been aboard and therefore have not seen the exhibition of its assembled historical material.

Meanwhile, need for effective dramatization of the grand traditions of the United States has grown rather than diminished. If the Freedom Train was called for 13 months ago, it certainly is wanted now.

Possibly there is some compelling reason why the Freedom Train must cease to exist as an instrument of embattled democracy. If so, it is a matter of regret; if not, there certainly will be many Americans of every class, creed, and condition who will rejoice to learn that it has been decided to carry on, to make another tour of the Nation, to stay on the job as long as prevailing turmoil in the world continues.

[From the Washington (D. C.) Post of January 23, 1949]

UNFINISHED TOUR

The Freedom Train came to the end of its tour last night. Originally brought together as a 1-year exhibit, this traveling shrine for documents recording the birth and growth of our liberties has been on the road 16 months. It has visited 324 cities and towns, a few of them twice. Hundreds of towns have asked in vain for it to come their way. In its more than 400 days on display, over 3,500,000 men, women, and children have reverently and excitedly seen with their own eyes the cornerstone writings of American freedom. Ten times as many have been turned away because the crowds were too great. Millions of Americans have not had a chance to grasp their heritage, as it were, in the close and tangible way the Freedom Train permits.

They never will have the chance—unless further tours of the Freedom Train can be arranged. The American Heritage Foundation, whose magnificent service it has been to assemble the Freedom Train and keep it going until now, is a private organization. The country owes to its sponsors—and to the railroads—a considerable debt of gratitude for the effort and money they have put into this project. But they cannot be asked to carry the load indefinitely. Fortunately, bipartisan resolutions have been introduced in both Houses of Congress providing for the Government to acquire and operate the Freedom Train. The cost is roughly estimated at $2,500,000. We can think of few if any projects where so small an expenditure of public funds would pay such great dividends in citizenship education. The unsatisfied desire of people all over the country to visit the exhibit is a measure of what remains to be done before the Freedom Train's tour is really finished and its purpose adequately accomplished. We urge Congress to consider the question with due promptness and hope the train and its contents can be held undismantled until Congress can act.

United States Coast Guard Auxiliary

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. MULTER. Mr. Speaker, the following is an address delivered by me at the annual convention of the United States Coast Guard Auxiliary, held in the Hotel Astor on Sunday, January 30, 1949, which I believe may be of interest to my colleagues. The convention was presided over by Commodore William A. Smith, and among the guests were Admiral Edward H. Smith, commandant of the Third Coast Guard District, Capt. Chester A. A. Anderson, chief of the Reserve and Auxiliary Division, and Lt. Comdr. Keith W. Thompson, district director of the Reserve and Auxiliary Division:

Commodore Smith, Admiral Smith, officers of the Coast Guard, officers of the Coast Guard Auxiliary, and fellow auxiliarists: Never before was the saying brought home so forcefully to me that "but for the grace of God there go I." Little did I dream when I signed up with the Coast Guard during the war as seaman second class that some day I would outrank an admiral. By the simple expedient of an American election here I am as your guest of honor. I remember well how you and I worried about the promotion exams and how proud we were when we received those promotion certificates.

I often think that the Japanese spy system must have bogged down terribly. I am sure that if they knew that some of us like myself were climbing the ladder so fast they would never have thrown in the sponge.

I do appreciate the honor you have accorded me in inviting me to talk to you today.

Without in any way detracting from the importance or the dignity of the Reserve Corps of the Army, the Navy, or the Air Force, I venture the opinion that the United States Coast Guard Auxiliary is the most effective civilian organization affiliated with any branch of our Government.

Primarily our armed services perform police duty and their Reserve corps are intended to keep always ready a reservoir from which

can be quickly recruited men prepared to serve the Nation in that capacity. Our National Guard units are maintained for the same purpose, plus that of a more localized nature, that is, as a State militia which can be called upon to maintain order in times of emergency or civil commotion.

The Coast Guard Auxiliary does all of that and more.

I am pleased to convey to you the personal greetings of Admiral Joseph F. Farley, Commandant of the United States Coast Guard and to assure you for him that he is deeply and sincerely interested in the expansion and improvement of the auxiliary. He, like all who know about you, appreciates your splendid peacetime record made more resplendent by your unexcelled recent wartime record.

The auxiliary is unique in many respects. It is an active civilian adjunct of a full-time military service. Few people realize that long before we had any agitation to combine the Army, the Navy, and the Air Force into a single unit, our country had a unified military service which at all times constituted a branch of the land, naval, and air forces of the Nation.

By virtue of law, the Coast Guard has been just that since 1915. In peacetime it acts under the sole jurisdiction of the Treasury Department. As you know, the Treasury Department is outranked only by the State Department. You may, therefore, proudly assert that your service outranks the Army and the Navy.

Let me take a moment to give you the evidence to sustain my statement about the tremendous importance of your service.

Capt. Chester A. Anderson, chief of the Auxiliary of the United States Coast Guard, summarizes your activities as authorized by law as follows:

"The Coast Guard Auxiliary is a civilian organization composed of boats, radio stations, and airplanes, and sponsored by the Coast Guard. It is organized to (1) promote safety and to effect rescues on and over the high seas and on navigable waters; (2) to promote efficiency in the operation of motorboats and yachts; (3) to foster a wider knowledge of, and better compliance with, the laws, rules, and regulations governing the operation of motorboats and yachts; and (4) to facilitate other operations of the Coast Guard."

You men will always exercise your best efforts to accomplish those high purposes.

You devote yourselves to constant year-round training programs in order to educate yourselves not solely for your own benefit but so that you may disseminate this information on a wide scale. You are not satisfied merely to better learn navigation, piloting, and the more important features of good seamanship for the sake of knowing these things. You equip yourselves so as to be better able to teach these things to others and so as to facilitate the maximum of cooperation with the Coast Guard.

The service you render by practicing and teaching efficiency and safety on the sea by your courtesy inspections is invaluable. The number of lives saved, the bodily harm lessened, and the property damage prevented will never be known. Nevertheless, the satisfaction is yours in knowing that your contribution of time, energy, and intelligent application is responsible for incalculable good.

There is no other group that can be called upon in time of emergent flood, hurricane, or marine disaster to come to the rescue in a manner that will be helpful. Only you can properly complement the Coast Guard in its work.

The communications group in this district are doing excellent work in training personnel in actual field exercises for these purposes. In connection with its work the auxiliary has had and will continue to have the need for boats and men to assist in the patrol of marine regattas such as the gold cup race, the national sweepstakes, the Albany-New York outboard races, the around-Manhattan Island race, and others. Some flotillas are doing fine work on safety patrol during the boating season, using either a boat acquired for that purpose or that of a member. Regular patrol areas are set up expediting assistance when needed. That is indeed a significant program, challenging the best in every person interested in pleasure boating, adding to his hobby, a high and important purpose.

There is another vast group who should be induced to join the auxiliary. They are the boat owners who can be made to recognize that the only civilian boating symbol that stands for everything worth while on the water is the auxiliary flag, the blue ensign. All the others, about which I know anything, merely signify membership in an organization. They have no meaning except to identify the owner with that organization.

The blue ensign goes far beyond any such meaning. The owner cannot fly it until he has demonstrated that he is a "well-found" boatman and that his boat has passed a rigorous annual inspection as to its condition and equipment. The owner therefore has a right to be justifiably proud of the privilege of flying the blue ensign. He is identified with an organization which not only proclaims but which actually maintains through self-regulation the very high standards of which its flag is the visible symbol. Although it is desirable, it is not necessary that he take an active part in the operation or administration of his flotilla. His fulfillment of his obligation as an auxiliarist enhances our capacity to serve. That is why it is incumbent upon all of you to try to enroll an ever increasing percentage of the more than 400,000 motorboat owners in the United States in order to assist the Coast Guard in its effort to raise the standard of boating.

I am hopeful that the Eighty-first Congress will be more responsive to your needs and desires. You have a responsible and a favorably disposed echelon of command. They have urged upon a reluctant Eightieth Congress the granting of permission to various governmental agencies to make available to the auxiliary, without cost to it, vessels and other equipment which can be used by it for training and for patrol. I am confident that the same recommendations will be made to the Eighty-first Congress. I intend to introduce legislation to that effect. At this time I can do no more than to assure you that I will enlist as much support as possible to bring about its enactment.

I list as one of my proudest accomplishments admission to membership in the United States Coast Guard Auxiliary. I will always cherish it. In the days ahead I hope to find more time for it.

One final word. You and I are interested in this work because of a deep-seated desire to do good. That desire, in turn, is borne of our religion. Religious tenets and practices, in monotheism, regardless of any distinctions or differences in the various sects thereof, are the fountain of all good. One of the major derelictions of our Congress is its failure to erect a chapel as a part of the United States Coast Guard Academy. It has, however, in a moment of graciousness, permitted the raising of private funds to construct that piece of Government property.

A universal belief in God hurdles all obstacles. You and I, as individuals, will give our own funds and get more from our friends in order to erect as a part of the academy a house of worship, of interdenominational worship. It will be a memorial in honor of the Coast Guard dead. It will consecrate them by teaching the living the word of God. It will bring together under one roof, Christians and Jews, who each in his own way, will pray God for guidance along the paths of peace.

Let Us Take Serious and Sober Thought of the Future—Mr. Manchester Boddy Sounds a Warning

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. McDONOUGH. Mr. Speaker, shutting our eyes as a nation to hard, cold facts, and trying to carry out a foreign program of staggering proportions without understanding exactly what we can expect to accomplish by such a global program and how long our efforts must be directed toward financial and material aid to most of the countries of the world can only lead to confusion, misunderstanding, and bitterness at home.

Manchester Boddy, editor and publisher of the Los Angeles Daily News, has recognized the essential need for a true appraisal of our role in world affairs, and the need for a clarification of our aims and motives for our own good. His recent editorial on this subject which appeared in the January 26 edition of the Los Angeles Daily News follows:

(By Manchester Boddy)

Many who read the facts and figures about how world population has zoomed in the course of a little more than three generations to a point where there is not half enough food being produced to support it, write: "I don't know enough to argue against the logical case you present, so I conclude that the Creator has made a terrible mistake."

There is no justification for such a conclusion. No one can pass sound judgment on "the scheme of things entire" until he knows what the scheme is.

You and I live for a fleeting instant. We know not whence came our life or whither it goes. If there were a beginning—and an end—and we could understand both and all that happens in between, then and only then could we presume to pass judgment.

Suppose we were to judge man—as a mechanical and mental being—by what we see in the form of a 2-year-old child. The defects would be glaring indeed. His mind, his muscles, his teeth, his bones—all would seem inadequate to meet the demands of life. But we would not judge him as a mature man. We would judge him for what he is—a child of 2. We would not say the Creator had made a terrible mistake.

I do not know the age of humanity. I do not know what it will be like 10,000 or 1,000,000 years hence. Perhaps humanity as we see it today is the 2-year-old child. Perhaps it is much older—or even younger.

My concern with the current problem of overpopulation in a limited world is exceedingly realistic, practical, and down-to-earth. I don't want our readers to assume that aid to China, to the tune of a hundred million tons of food will solve the Chinese problem. I want to correct the notion that India's freedom from Great Britain means the end of trouble in India; that Marshall plan aid and ERP in general mean a peaceful, rehabilitated Europe.

What I am trying to point out is that world problems as they exist today are fundamental. They have their origin in a special set of facts and figures that are utterly different from the so-called facts and figures

sometimes used as a basis for popularizing our foreign policy.

Science may know how to deal with the world population-hunger problem. There may, indeed, very shortly be some exciting and interesting news on this very subject in the Daily News.

As of this moment, however, our foreign policy and, in turn, our domestic policy, is being sold to the American public on the false assumption that world stability, peace and security can be achieved if what we are doing is carried on to a conclusion.

Suppose we were engaged in carrying water from the ocean and dumping it in a river, which, in the course of its meanderings emptied into the same ocean from which we carried the water. Would I be justified in saying that if we stuck to our job—determined at all costs to reduce the content of the ocean by a tenth or a third or a half—we would reach our objective?

There may be some special reason for doing the work involved in carrying the water. If the reason were a good one, I would not quarrel with it. But I would state the reason, and I would not try to justify the operation on the grounds that we could reduce the size of the ocean.

That is how I feel about our current efforts at saving the world. I think there are good and substantial reasons why we do what we are doing. But we are not going to solve the basic problems of Europe and/or Asia.

If that is true, it means we are going to have a continuation of world problems; insofar as our generation is concerned, such problems will be standard equipment for a long time.

We are dealing, I think, not with the threat of another over-all world war, but with a continuous succession of local rebellions, famines, civil wars, massacres, and pestilences.

Our foreign policy should be geared to an open acknowledgment of that fact and not to the wishy-washy but lovely belief that the Four Freedoms are just around the corner—and will be reached as soon as man throws off his oppressor and becomes free or democratic.

Veterans of Foreign Wars Legislative Program

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. TEAGUE. Mr. Speaker, as a veteran of World War II and as a member of the Veterans' Affairs Committee of the House of Representatives, I am very interested in the welfare of our former service personnel and their dependents. It is my belief that we are now enjoying the benefits of our great form of government because this way of life was fought for and defended, and to those who did not return from battle we owe a tremendous obligation to their dependents as well as to those who carry the scars of battle.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the legislative program of the Veterans of Foreign Wars which has been presented to the Veterans' Affairs Committee by Omar B. Ketchum, director of the VFW national legislative service:

STATEMENT OF OMAR B. KETCHUM, DIRECTOR, NATIONAL LEGISLATIVE SERVICE, VETERANS OF FOREIGN WARS, JANUARY 27, 1949

Mr. Chairman and members of the committee, I am grateful for the privilege and opportunity to appear before this committee as the legislative spokesman for the Veterans of Foreign Wars in presenting our current legislative program based on the resolution adopted at the forty-ninth national convention held on August 29, 1948.

This presentation of our 1949 program is a significant one in that this year marks our golden jubilee. The Veterans of Foreign Wars was founded in 1899 by a group of young men recently returned from foreign service in the Spanish-American War. We are proud of our record of 50 years of service to the disabled veteran and the widows and orphans of our honored dead, and the millions of young men who suffered the dislocation of war.

The membership of the Veterans of Foreign Wars is composed of men who have served on foreign soil or in hostile waters in the armed forces during some war, campaign, or expedition in which the United States has been engaged and for which service a campaign medal or ribbon has been authorized. The membership records at the close of the 1948 calendar year reveal that approximately one million and one-half men are bona fide members. Of this total membership approximately one million three hundred thousand are overseas veterans of World War II.

The legislative program of the Veterans of Foreign Wars, which I am presenting to you this morning, is not the program of one person or a few persons purporting to speak for millions. Nor is it a program of a few persons seeking to identify the veterans' needs and problems with a particular ideology. This program had its inception in the thousands of posts in the cities and towns of this Nation and is adopted through democratic procedure of thousands of duly elected delegates at our national convention.

At the close of this statement I have listed that part of the VFW legislative program which has been referred to this committee. It is by no means our complete program. We are concerned, as we have a right to be concerned, in matters such as housing, national security, the welfare of the personnel of our armed services, the integrity of our immigration and naturalization laws, the strengthening of the concept of Americanism, Federal aid to education, etc. However, I would like to take the opportunity of discussing briefly a few of the major objectives of our organization which are now in legislative form pending before this committee.

COST-OF-LIVING INCREASE IN DISABILITY COMPENSATION AND PENSION

Our organization is seeking from the Eighty-first Congress a 25-percent increase in disability compensation and pensions payable to World War I and World War II veterans pursuant to laws administered by the Veterans' Administration. The Congress has been generous in the past in the matter of adjusting these rates but, unfortunately, this generosity has not kept pace with the rise in the cost of living. For example, in 1939 a veteran totally disabled, service-connected, received $100 per month. Today he receives $138 per month. But the totally disabled veteran does not have the same dollar purchasing power that he enjoyed in 1939. In order to provide a purchasing power for today's totally disabled veteran equal to 1939 dollars the compensation for total disability should be approximately $160. We are asking for a 25-percent increase which would bring the rate for a 100-percent disabled veteran, service-connected, to $172. We believe the $12 differential to be justified by the insufficiency of the basic rates which we believe were never sufficient to provide a totally disabled veteran the standard of living enjoyed by the average American. It is our hope that some day the Congress will reconsider the soundness of the basic disability rates formulated in 1933 on which percentage increases have been based for several years. We would like the Congress to put the totally disabled veteran in such a position as to afford him a standard of living comparable to that enjoyed by the citizen making an average wage in industry today. However, we are content at this time to ask the Congress for this second round of postwar increases in disability compensation and pensions by 25 percent over existing rates.

REVISION OF INCOME LIMITATIONS

The members who served on the committee in the last Congress recall the extensive hearings devoted to this question. This matter has been presented by the Veterans of Foreign Wars for several years and we were pleased that this committee last year favorably reported the bill. Unfortunately, it failed of further consideration by the Congress.

Existing income limitations governing eligibility for the veterans' part III non-service-connected disability pension and widows non-service-connected death pension, are $1,000 where the veteran or the widow has no dependents, and $2,500 where the widow or veteran has dependents. These income limitations were written into the law in 1934 and the figures applied were those used for personal exemption for income-tax purposes. The original law provided that eligibility would be based on whether or not a veteran had paid income tax during the preceding year. When the personal exemptions were lowered this criterion for pension eligibility was retained and the figures were written into the law.

Fourteen years have elapsed since the fixing of these limitations and for the past several years they have become very arbitrary and lost their meaning. We believe, as this committee did last year, that these figures should be increased in order for the law governing eligibility for these pensions to have the same meaning that they had in 1934. We ask this committee to again consider this matter and to increase the limitations to $2,000 for the veteran and widow without dependents, and $3,000 for the veteran and widow with dependents.

SERVICE PENSION PROGRAM

Since 1939 the national legislative service of the Veterans of Foreign Wars has been mandated by our national conventions to seek legislation which would provide for World War I veterans a service pension in the same amounts and on the same basis as provided veterans of the Spanish-American War. For many years our organization has sought this objective, and our last national convention reiterated its endorsement of such service-pension legislation.

The service pension for veterans of our Nation's wars is a tradition in this country. Approximately 20 to 25 years after each war the Congress has enacted a service-pension law for the veterans of that war. And so the veterans of the Revolutionary War, the War of 1812, down through the Spanish-American War were remembered in their declining years by a grateful Congress. The last service-pension law enacted was in 1921 for the benefit of the veterans of the Spanish-American War, Philippine Insurrection, and the Boxer Rebellion. Thirty years have now elapsed since the close of World War I and the average age of the World War I veteran is approximately 55 years. We strongly feel that the Congress should write into the law this traditional service pension. And

we feel that it should be worded so that the service pension would apply not only to veterans of World War I but to veterans of World War II when they meet the requirements of age or disability.

I urge this committee to give serious consideration to the holding of early hearings on this vital measure and that such legislation be expedited through the Congress. We must not permit for too long a situation whereby we make fish of one group of veterans and fowl of another.

ADJUSTED-SERVICE COMPENSATION

Since the close of World War II the national conventions of the Veterans of Foreign Wars have adopted resolutions calling upon the Congress to enact adjusted-service-compensation legislation which would tend to alleviate the economic disparity as between the young man who spent the war years in the military or naval services and the young man who remained at home as part of the civilian war effort. Such legislation in the form of readjustment insurance was introduced in the Eightieth Congress and in this Congress by your chairman at the request of our organization. This legislation is so framed as to provide this adjusted-service compensation in the form of readjustment insurance so that this committee could take jurisdiction. We feel that this legislation is essentially a veterans' measure and should not be considered by some other committee because of any relation such legislation might have to the subjects normally considered by that committee.

Another objective of this legislation would be to place the veteran who, because of age, family commitments, or economic reasons, was unable to participate substantially in any of the benefits of the GI bill of rights on a par with the veteran who did participate in the benefits of that bill. We do not believe, for example, that the veteran who had to go out and make a living for his family should be denied a benefit comparable to those received by veterans drawing readjustment allowances or who were able to go to school for several years. I am not in any way attempting to disparage the GI bill of rights. Our organization played a prominent role in the development and subsequent enactment of that worthy legislation. However, we strongly feel that provision must be made for this other group of veterans. Accordingly, in the legislation we seek we are asking the Congress to deduct from this readjustment insurance the tangible monetary benefits received by any veteran through the operation of the GI bill of rights.

Mr. Chairman, in closing, I am presenting for insertion in the RECORD at this point a list of the legislative objectives of our organization which would normally be referred to this committee.

LEGISLATIVE OBJECTIVES OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES SUBMITTED TO THE HOUSE VETERANS' COMMITTEE, EIGHTY-FIRST CONGRESS, JANUARY 27, 1949

1. To increase disability compensation and pensions for World War I and World War II veterans and widows and orphans by 25 percent. (Res. 54. H. R. 908, by Mr. RANKIN.)

2. To enact legislation which would provide service pensions for veterans of all wars, including World War I, on the same basis and in the same amounts as those now accorded veterans of the Spanish-American War. (Res. 440. H. R. 897, by Mr. RANKIN; H R. 8, by Mr. VAN ZANDT.)

3. To increase the income limitations governing eligibility for widows' and veterans' non-service-connected death pension to $2,000 for those with no children, and $3,000 for those with children. (Res. 400. H. R. 921, by Mrs. ROGERS.)

4. To enact legislation which would provide an equitable adjusted service compensation for veterans of World War II of $3 per day for home service (maximum $3,500), $4 per day for overseas service (maximum $4,500), plus an additional $500 for a wound or wounds received in combat; and that all tangible monetary benefits received by any veteran pursuant to the Servicemen's Readjustment Act of 1944, as amended, be deducted from such adjusted service pay. (Resolution 444—H. R. 914 by Mr. RANKIN.)

5. To enact legislation amending part III, Veterans Regulation 1 (a) to provide:

(a) That constitutional defects and developmental abnormalities shall be treated as disabilities for this purpose;

(b) That the existing age requirements be reduced to 55, 60, and 65 years, respectively;

(c) That the disability percentages now in effect be reduced to 50, 30, and 60 percent, respectively;

(d) That present income limitations be increased to $2,000 and $3,000, respectively;

(e) That the rates of pension therein be increased to $90 per month for permanent and total disability and $120 per month for the need of the regular aid and attendance of another person. (Resolution 495—H. R. 899 by Mr. RANKIN.)

6. To enact legislation extending to orphans of World War II veterans educational benefits under the GI bill of rights to which the deceased serviceman would have been ensitled. (Resolution 76—H. R. 148 by Mr. BECKWORTH.)

7. To provide minimum ratings for arrested tuberculosis, service-connected, for World War I and World War II veterans. (H. R. 923 by Mr. TEAGUE.)

8. To enact legislation providing that all honorably discharged veterans who have served in any and all past armed expeditions on foreign soil and in which the United States took part, be entitled to receive the same medical aid and hospitalization as is extended to veterans of war service. (Resolution 278.)

9. To permit a disabled veteran (amputee) to obtain an automobile costing in excess of $1,600 and to pay the difference out of his own funds. (Resolution 53—H. R. 1435 by Mr. TEAGUE.)

10. To provide automobiles for disabled veterans who have suffered the loss or loss of use of an arm. (Resolution 463—H. R. 283 by Mrs. ROGERS.)

11. To enact legislation providing for stenographic assistance to accredited representatives of congressionally chartered organizations on duty facilities of the Veterans' Administration. (Resolution 493—H. R. 912 by Mr. RANKIN.)

12. To enact legislation which would provide pension and disability compensation benefits in cases now disallowed as misconduct, which are meritorious and in which injury or disease was caused. (Resolution 38—H. R. 1157 by Mr. RANKIN.)

13. That Congress enact legislation awarding World War II veterans the same statutory award for loss of a lung or a generative organ that is now restricted to World War I veterans. (Resolution 133.)

14. To amend Public Law 866, Seventy-sixth Congress, by providing that no pension or compensation shall be apportioned to the wife of the veteran unless there was continuous cohabitation with the veteran from date of marriage except if the separation was due to the misconduct of the veteran. (Resolution 201—H. R. 1776 by Mr. RANKIN.)

15. To amend the World War Veterans Act of 1924, so as to permit the payment for total disability as of the dates such disability in fact existed. (Resolution 246—H. R. 896 by Mr. RANKIN.)

16. To amend Public Law 144, Seventy-eighth Congress, to allow payment of all accrued compensation due the veteran at the time of death even though recovery would exceed 1 year and that such payments be made to the widow if living, otherwise to the estate of the said veteran. (Resolution 248.)

17. To amend existing laws and regulations so that all reasonable doubt be resolved in favor of the veteran when the veteran submits competent medical evidence based upon the clinical and physical findings by medical specialists and that rating be assigned upon such diagnosis of the physician even though the latter is not connected with the Veterans' Administration. (Resolution 252.)

18. To enact legislation providing veterans of the Cuban Pacification all of the rights and privileges now enjoyed by the veterans of the Spanish-American War. (Resolution 279.)

19. To enact legislation providing for a rating of total disability for any veteran who suffered the loss of one eye and one extremity. (Resolution 420—H. R. 899 by Mr. RANKIN.)

20. To enact legislation extending the presumptive period of both T. B. and neuropsychiatric disorders to 5 years after discharge or the end of the war, whichever is the later date. (Resolution 421—H. R. 1248 by Mr. PATTERSON.)

21. To amend Public Law 483, Seventy-eighth Congress, to provide that benefits thereunder shall be available where the service person incurred permanent disability in line of duty, notwithstanding the fact that death during the same contract of service was not in line of duty. (Resolution 496.)

22. To amend Public Law 439, Seventy-eighth Congress, so as to provide that death compensation or pension shall not be denied because at the time of death the service person was under sentence of a civil or military court for an offense which ordinarily would not result in a dishonorable discharge. (Resolution 499.)

23. To amend existing law making applicable to Indian war veterans the regulations with respect to fraudulent enlistment by reason of minority, now applicable in determining benefits for the Spanish-American War, World War I, and World War II veterans. (Resolution 536.)

24. To provide Spanish-American War benefits to veterans who participated in hostilities against the Moros in the Philippines prior to January 1, 1913. (H. R. 1652 by Mr. LESINSKI.)

25. To enact legislation recognizing osteopathic and chiropractic treatment in VA hospitals by registered doctors of osteopathy and chiropractic. (Resolution 537—H. R. 1513 by Mr. HUBER.)

26. To enact legislation authorizing the transfer of a veteran's educational benefits under the GI Bill of Rights to his child or children to the extent of the veteran's entitlement. (Resolution 158—H. R. 287 by Mrs. ROGERS.)

27. To enact legislation which would protect the pension rights of widows and orphans in those cases where the veteran's death, although due to misconduct, is such misconduct as would not have resulted in a dishonorable discharge. (Resolution 253.)

28. To enact legislation granting equal privileges to the dependents of deceased World War II veterans, to wit: that the widows and/or children of deceased veterans of World War II be given the same benefits presently enjoyed by dependents of deceased veterans of World War I upon the death of the said veteran whether or not the deceased veteran would have been entitled to draw pension, compensation, or retirement pay because of service-connected disability. (Resolution 453—H. R. 295 by Mrs. ROGERS; H. R. 567 by Mr. WHITTEN.)

29. To enact legislation to provide lump sum settlement to NSLI beneficiaries of all men killed in World War II. (Resolution 172—H. R. 60 by Mr. FULTON.)

30. To amend section 602 (m) (2) of the NSLI Act of 1940 by adding the words "or forfeited" after the word "lapsed" in order that the insurance of those veterans killed or totally disabled in combat after being restored to duty following a conviction for desertion may not be forfeited as required under section 612. (Resolution 472.)

31. To amend section 602 (d) (2) (C) of the NSLI Act of 1940 by striking the word "dependent" in order that parents of deceased veterans may be spared the embarrassment incident to the establishment of dependency on the date of death of their son. (Resolution 473.)

32. To amend section 602 (v) (1) of the NSLI Act of 1940 by striking out the words "an actually service incurred", delete the comma after the word "injury" and add the words "for which compensation is payable", following the word "disability." (Resolution 474.)

33. To amend section 602 (c) (2) of the NSLI Act of 1940 by striking the words "resulting from or aggravated by such active service" and substituting in lieu thereof the words "for which compensation is payable." This amendment will nullify VA TB9–44, which holds that disability must have been actually service incurred to be waived in applications for reinstatement or new insurance prior to January 1, 1950. (Resolution 475.)

34. To amend section 602 (m) (2) (C) of the NSLI Act of 1940 to be further amended by adding the words "became permanently and totally disabled" following the comma after the word "combat" in order that those totally disabled as well as those killed in combat will not be deprived of insurance benefits. (Resolution 476.)

35. To amend section 602 (n) of the NSLI Act of 1940 as provided in H. R. 4160, Eightieth Congress, liberalizing requirements for waiver of premiums in the event of continuous total disability. (Resolution 534.)

Small Companies Feel Export Curb

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a clipping from the New York Times of January 24, 1949, which was brought to my attention by the firm of Coolig & Gottlieb, Inc., importers and exporters, Gloversville, N. Y., who, as a small-business firm are experiencing the same difficulties as brought out in the clipping:

SMALL COMPANIES FEEL EXPORT CURB—CHICAGO FOREIGN TRADERS SAY 50 TO 60 PERCENT OF SUCH CONCERNS WILL BE FORCED TO CLOSE—BUREAUCRACY IS BLAMED—OIT TAKES 6 WEEKS TO 90 DAYS TO ISSUE LICENSE, MEANWHILE BUYER ORDERS ELSEWHERE

CHICAGO, January 23.—Executives of two import-export companies in Chicago charged today that small firms engaged in foreign trade were being ruined by Washington bureaucracy coupled with an allegedly obvious inclination on the part of Marshall plan officials to favor big business.

They asserted that 50 to 60 percent of the smaller import-export houses which have sprung up throughout the United States since the war soon will be forced to close unless the Truman administration abandons its "unfair attitude" toward their activities. Many such concerns are operated by war veterans, a survey shows.

The condemnations of Washington policy were made by Christopher G. Janus, president of the General Works Corporation, 141 West Jackson Boulevard, and Richard M. Jordan, president of Jordan-Benson & Co., 68 West Washington Street.

Mr. Janus charged that small firms such as his are being "controlled out of business."

"To export practically anything to a foreign buyer I must apply to the Commerce Department's Office of International Trade for an export license," he explained. "In my application I must give the name of the foreign buyer, the price at which I bought the goods, the price at which I am going to sell them, and finally the use to which they will be put.

SIX-WEEK WAIT FOLLOWS

"After this comes a wait of 6 weeks to 90 days," he said. "Then, generally, the OIT notifies me tersely that instead of the 500 tons I wanted to export, I will be allowed to ship only 20 tons. It's just like operating under socialism."

Mr. Jordan said many of his foreign trade contracts had fallen through because of the Government's harsh and unwieldy licensing policy.

"When I get a request for, say, steel wire from a foreign buyer, my first step must be to obtain a written commitment from a wire manufacturer here that he will make the wire available to me," Mr. Jordan said. "Such a commitment usually is good for only 30 days. It takes 60 to 90 days to get a license, so more often than not my seller's commitment is no good by the time I am able to buy and export the wire."

Large companies can afford to buy goods for export outright before obtaining the license, Mr. Jordan explained, but small ones such as his own find it difficult to have their funds tied up awaiting OIT action.

Another annoyance is the OIT scarce-item list of products in short supply in the United States, which are subject to severe export limitations.

SCARCE LISTING LAGS

Mr. Jordan asserted the list lagged 3 to 4 months behind actual conditions in American markets and exporters often were prevented from shipping articles which are plentiful here.

"For example, it is almost impossible to obtain a license to export nails today," he said. "The market is jammed with them, but because they have not been removed from a list prepared months ago, when they were scarce, OIT still is tough about an export license."

Both Mr. Janus and Mr. Jordan said such intermediary companies as theirs had been shut out completely from any business created by Marshall plan spending because of the Economic Cooperation Administration's policy of urging foreign governments to deal directly with American manufacturers and big brokerage houses.

Our Reparations Experts

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. SADOWSKI. Mr. Speaker, at Potsdam we agreed on a reparation program whereby Germany would compensate our allies for the terrific destruction that she inflicted upon their industries by giving up a small portion of her factories. This program of reparations was not at all compensatory for the damage and destruction that Germany had committed, and it was so planned that it would not seriously hurt Germany's industrial program. Since that time we have heard many grunts, squeals, and protests, and the program of reparations has been successfully sabotaged.

In this connection, I wish to include a most interesting and illuminating article that appeared in the January publication of the Society for the Prevention of World War III. The article follows:

OUR REPARATIONS EXPERTS

The American people may well ask Mr. Paul G. Hoffman, ECA Administrator, why out of 147,000,000 people he chose Mr. George Humphrey of the Mark Hanna Co. and four other prominent industrialists to study the German reparations program. Just why these men are best qualified for the task is something which remains unanswered. We know of many individuals who are well acquainted with the economics of Germany, who could do a very good job and render a real service to the security and future well-being of our country. This does not mean, of course, that the 5 members who compose the Humphrey Committee are not good Americans, but is it not logical to assume that the tie-ups of their businesses with German industry reduce the possibilities of objectivity on their part?

Mr. George Humphrey, who is the chairman of the commission, is the president of the Mark Hanna Co., of Cleveland. The Mark Hanna Co. has very close connections with the heavy steel industry and the machine tool industry of the United States. It is also fair to assume that Mr. Humphrey would follow closely the reasoning of the United States Steel Co. Moreover, the Mark Hanna Co. is reportedly connected with the Standard Oil Co. of New Jersey—I. G. Farben's old partner.

Another gentleman on this important committee is Charles E. Wilson, president of General Motors. The history of General Motors' activities in Germany is indeed a book in itself. We do not intend to go into all of its ramifications, but as far back as 1945, when the Foreign Economic Administration was working on the problem of Germany, the man who fought most vigorously on behalf of the German industrialists was Graeme Howard, General Motors representative in Germany during the Hitler regime.

Most Americans are not aware of Howard's pro-German activities, but the FEA was, and it was only through constant pressure on the White House and the Army that Mr. Howard was finally relieved of his position. General Motors, however, has more than nine lives and immediately after the war, Howard's closest collaborator in Germany during the Nazi regime, Peter Hoagland, another General Motors executive, was sent to Germany ostensibly as an American military government official.

After the downfall of Germany, Hoagland joined company with General Draper of Dillon, Read & Co., Calvin Hoover, Don Humphrey, Maurice Scharff, and Clifford Strike to defeat Joint Concurrent Resolution 1067. This Government directive called for adequate economic controls over German industrial capacity. Hoagland and others had no use for it. The scheme to allow Germany a level of industry exceeding her peacetime requirements was credited to Peter Hoagland. Mr. Hoagland never ceased his activities on behalf of those who want to see the preservation of Germany's industrial preponderance regardless of its consequences.

Hoagland's activities are relevant to this article because he was an outstanding opponent of the original reparations program. He called it unrealistic. As early as July 1945, he came out flatly against the reparations program, alleging that Germany needed all her machine tools and steel capacity. Mr. Hoagland's spade work apparently has been paying dividends.

Incidentally, Hoagland's closest collaborator in those days was Clifford Strike, a top official of the McGraw Engineering Co. Strike, as deputy director of the Reparations Commission, did everything possible to undermine the Washington directives on reparations. After having performed a hatchet job on the reparations program in Germany, Strike's engineering outfit, together with some others, were paid $650,000 by the Department of the Army to go to Japan, where they emasculated the Japanese reparations program which had been previously agreed to by all members of the Far East Commission.

Mr. Charles E. Wilson, of General Motors, may have been ignorant of Mr. Hoagland's activities, but this pro-German orientation of General Motors executives was not unusual. One of their former vice presidents, James D. Mooney, was an active collaborator of top Nazis before the war, including Goering and Schacht. Mooney was a close friend of Gerhardt Westrick, Hitler's chief spy in the United States, and it was Mooney who introduced Westrick to powerful business leaders upon his arrival here in 1940. Mooney left no stone unturned prior to Pearl Harbor to convince important groups and individuals in this country that the America First Committee had the right idea about Germany. He tried to prove to the American people that Hitler loved the United States and that he had no intention of attacking us. Mooney advocated these policies in a series of articles which he wrote for the Saturday Evening Post.

This is the record of some of the executives of General Motors. But General Motors has good reason to be interested in maintaining German power. Its interests in Germany are extensive. Way back in 1929, General Motors purchased the Auto Opel Works. The reported price of this huge automobile plant was $30,000,000 in cold cash. The Opel factories were supposed to produce Hitler's much advertised people's car. Actually very little of that kind of production was done. But the Opel Works was right up in front when it came to producing the tanks for the German rearmament program.

In 1941, General Motors reported the value of the Opel Works at $52,000,000. German rearmament was paying off. In addition to the Opel Works, General Motors is reported as controlling the following companies:

1. Frigidaire G. m. b. H.
2. Gemeinnuetzige Opel-Wohnbau G. m. b. H.
3. General Motors G. m. b. H.
4. Opel automobile Versicherungs AG.

However, it is not known, nor did General Motors state, how much these companies were worth.

It can be seen from these vast interests of General Motors that they would be opposed to any limitations of German industrial potential. The original level-of-industry plan of 1946, for instance, granted Germany an annual production of 40,000 cars and trucks to be produced by Ford and General Motors. Through such men as Peter Hoagland, General Motors was able to raise the quota of automobile production in Germany to 160,000 cars annually. General Motors' subsidiary got the right to manufacture 80,000 cars instead of 20,000.

To obtain this increase, the general level of industry in Germany has to be raised first. That is why, since the end of the war, General Motors has performed yeoman work to scuttle the level-of-industry plan of 1946, of which the reparations program was a part. One and a half years ago General Motors came out with sharp criticism against military interference with economic affairs in Germany. According to General Motors, the true function of the military occupation should be that of policing the occupied country. General Motors resented military interference in economic problems. It was at that time that General Motors also attacked the decartelization policies for Germany. The company pointed out that this cartel policy was faulty because it would affect the operations of its Opel Co., which was producing 53 percent of Germany's automobiles and trucks before the war.

In an effort to scuttle reparations and decartelization, the company made a strong appeal to the American taxpayers. They cited the Opel case wherein General Motors deducted no less than $35,000,000 from its taxes in 1941 to compensate for alleged war losses in Germany. Then the company announced that it was very anxious to help the American taxpayers, that it would be willing to pay its taxes for 1941 provided that it would be given a chance to recover its losses. Thus, decartelization and reparations would have to go by the board, so that General Motors could resume full operations. The result—Germany got a higher level of industry and the cartel policy was abolished.

Another very important member of the Commission is John L. McCaffrey, president of International Harvester Co. in Chicago. International Harvester also has a large subsidiary in Germany which produced a huge quantity of farm machinery for Germany in the prewar years. The total value of this subsidiary, as of 1941, was $15,000,000. Needless to say, it did not produce many plowshares during the war.

The fourth member of the Commission is Mr. Frederick V. Geier, who is a director of Procter & Gamble. It has been reported that Procter & Gamble in turn had an interest in the I. G. Farben-Standard Oil synthetic fat development. Thus, one might be justified in stating that Procter & Gamble would be concerned regarding the future of I. G. Farben.

The fifth member of this Commission is Mr. Price of the American electrical firm, Westinghouse. It has extensive cartel tieups with German concerns, particularly the electric trust.

This is a brief outline of the backgrounds of the men who were appointed to investigate the German reparations program. Could they be expected to be objective in their findings? We will let the reader form his own conclusions.

Praise for President Truman on Israel

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. CELLER. Mr. Speaker, everyone applauds a man who keeps his word. President Truman has kept his campaign pledge on Israel and is entitled to unstinted praise for de jure recognition.

The loan and expressed determination that Israel's boundaries will not be changed without Israel's consent. Our national self-interest requires closest relations and ties with Israel. Future possibilities for trade are enormous.

Israel is the spark plug in the Near and Middle East machinery and will revitalize an area which civilization has too long passed by and forgotten.

The new State of Israel has succeeded in its election, held under trying conditions, in again proving its democratic maturity to the world. Arab women, for the first time in history voted. The democratic balloting was a gain for all democratic people everywhere. Happily here is another ally dedicated to the principle of political freedom.

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include a very interesting letter sent by Eugene Bertram Willard to the editor of the Chelsea Record, Chelsea, Mass., on January 31, 1949. I offer this letter to Members of Congress for study and consideration since I personally feel it is a very worthwhile suggestion:

ADVOCATES FEDERAL OLD-AGE ASSISTANCE FOR ELDERLY PEOPLE

EDITOR, CHELSEA RECORD:

Within recent weeks there was published a very interesting article relating to the rise and progress of old-age assistance in the Commonwealth with special reference to the work being done by the Chelsea Bureau of Old Age Assistance. It gave the people of the community a clearer understanding of OAA.

Of more than 750 OAA cases in the local case files less than 10 percent are entitled to Federal old-age and survivors insurance by having worked in covered employment prior to being placed on the old-age assistance rolls. Of course, there is a difference between Federal old-age and survivors insurance and OAA; the former is granted as a right whereas the applicant for OAA has to undergo a means test with all its embarrassing requirements. This is a very good reason why many elderly persons in actual need hesitate to ask for OAA which demands that an applicant be on the verge of actual pauperism before granting the small assistance allowed by the commonwealth and most of this assistance is made possible by taxes on racing, liquor, and other things a lot of elderly folks frown upon. When a man or woman retires from covered employment at age 65 he or she can have $50,000 in the bank and even a regular income and still be eligible for Federal old-age and survivors insurance. No case workers snoop around the homes of the beneficiaries as is the case with OAA.

Regardless of the fact that the Chelsea Bureau of Old-Age Assistance is staffed by kindly workers it still holds true that many old timers hesitate to ask for OAA because of the feeling in every community that there is a sort of stigma to receiving such aid. Only a habitual "souse" ever brags about being on OAA and as the Chelsea Record article already referred to pointed out, the records are kept confidential and even a nosy politician does not have access to the information locked in the files at city hall. However, we are not so sure that it is always possible to keep such information from the prying eyes and inquisitive minds of at least our so-called "big-shot pols." Politicians generally find a way to learn what they want to know.

We want to reemphasize what we have said before; namely, that this country needs a system of old-age pensions paid out of the Treasury at Washington. This would be what the old folks are entitled to and now that the country has billions for reclaiming the backward peoples of the universe and seemingly plenty of money to admit hordes of so-called DP's to grab up housing and jobs so badly needed by our own displaced Americans, granting funds for a national old-age pension should not be too much to expect. Charity begins at home, so they tell us, but we have little evidence of it in America today. Instead of weakening communism abroad, this country is making it stronger by spending billions abroad most of which probably falls into the hands of the Commies, anyway.

Underlying this whole issue of old age in America is the screwball idea that we must make Europe strong while making America weaker; of strengthening damnable communism at the expense of the needs of our own neglected Americans, especially those in life's sunset who are not wanted by industry any longer; so, why not a dignified national old-age pension in place of the meager OAA allowance made possible by racing and booze? Under a national old-age pension, when a Chelsean sits down at a restaurant table to enjoy a substantial meal, it will not be with the thought that he is helping support some old fogey with a meal tax. Let America put this aid to our aged fellow Americans on a dignified basis through a national old-age pension and if certain politicians still feel that aliens should have OAA, then these can be cared for by the present State system, which is good enough for these foreigners, but certainly not truly American enough for worthy American oldsters who helped to make this country the great and prosperous land it is today.

EUGENE BERTRAM WILLARD.

Red Reasoning

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. MEYER. Mr. Speaker, like the great majority of my colleagues, I say a hearty "Amen" to the recent tribute paid by the gentleman from Louisiana [Mr. HÉBERT] to the president of the University of Washington for firing three professors who are purported to be members of the Communist Party. I join the gentleman from Louisiana in the hope that this action on the part of this great State university may be a beacon light upon the highways of this country to pursue further the intrigues and infiltration of communism into the universities of America.

This hope has been eloquently echoed in the Fredonia (Kans.) Daily Herald, whose editor, Ben S. Hudson, has a Statewide reputation for pungently reflecting the grass-roots viewpoint.

Under leave to extend my remarks in the RECORD, I include Mr. Hudson's comments so that my colleagues may have the privilege of reading them:

RED REASONING

Three professors of Washington State University have been dismissed due to Communist membership, or activity, within that party. The three have protested their dismissals as a grotesque infringement on "academic freedom and civil rights."

Now get those words, "freedom and rights."

In the first place, it is fundamental in communism that there shall be no academic freedom, and no civil rights, and no freedom of thought, or speech, or worship, or of the family, or the individual. The individual in communism is purely a creature of the state, a slave of its dictates, of its laws, forbidden to express an opinion, forbidden to say, or to act, in any way except according to what the Reds glibly speak of as the party line.

The party line is issued by a small group, more powerful in its actions than was Napoleon, or Nero, or Ivan the Terrible, or any ruler who has trod this globe in history. The members of this group eat the best, sleep the best, ride the best, dress the best, and enjoy every privilege except that of transgression from the line of thought prescribed by the group itself. To transgress is to invite instant liquidation.

Of its members the party makes mental and physical slaves. The party says that American democracy shall be destroyed, that America shall be governed, as well as the rest of the world by this small group of Slavic degenerates in Moscow.

Those who adhere to communism agree. They are directed and they agree to follow directions to use every means, every wile, every method to further the teachings of Lenin and Stalin in our schools, among our people, that freedom, as we know it, shall be destroyed from the face of the earth.

When a professor admits he is a Communist, do you think he should be discharged, or given a raise in salary?

Washington University action was not taken without long investigation. The proofs were conclusive, there was no defense by the three, nor was any offered except that denying a man the right to exploit the teachings of a foreign power that would destroy all of us, is an infringement on academic freedom and civil rights.

And the university in Washington is not the only institution of learning in which there is a tinge of communism. We Kansans might start sniffing the odor here at home.

Americans All

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Post of Monday, January 31, 1949, is indicative of the fact that there is much that this country must do in every nook and cranny thereof to improve our democratic way of life:

AMERICANS ALL

(By Dr. Daniel A. Poling)

I am an American citizen belonging to one of the great majority groups. If I really believe in the equality of all men before God and that the real worth of a man is not determined by color or speech or religion but by his character and actions, I should express my faith by practicing it.

Years ago I knew a preacher who was eloquent and dramatic in describing the streets of the New Jerusalem and the perfections of heaven, but he never got down to the streets and imperfections of his own community. But there is compensation and great delight in demonstrating equal rights at home and in your own office where you have direct responsibility. I know.

Here is an example in kind: Paul Genge, a 35-year-old Air Force veteran, was making a hurried search for an apartment. His wife, Jeanne, was expecting their first child, and then he found a house, only to lose it—a modern $65-a-month dwelling in an 8,000-unit veterans' project near Hempstead, Long Island.

Why? Because he discovered in the lease "an attempt to prohibit the use of the premises by any persons other than members of the Caucasian race." Paul Genge believes that the clause is illegal, but in the meantime, even in dire necessity, he refused to enter an open door that was slammed in the face of his buddy, who is of another color and racial strain. It should be noted that this incident occurred not in the South but in the North. Always it is easier to produce piety and virtue for export than for home consumption.

Catholics and UN Palestine Relief

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article appearing in America, national Catholic weekly, entitled "Catholics and UN Palestine Relief":

CATHOLICS AND UN PALESTINE RELIEF

Winter has come to Palestine, but very little aid to the 550,000 Arab refugees from the Israeli-Arab battlegrounds. As long ago as November 19, 1948, the UN General Assembly recommended that $29,500,000 be spent for their relief from December 1, 1948, to August 31, 1949, and that an additional $2,500,000 be allocated for administration and local operational expenses.

With commendable promptness, President Truman announced on December 7, 1948, that he would ask Congress for $16,000,000 "in the earnest hope that other countries will meet the remainder of the total required." The British have promised $5,000,000. The President's recommendation is now being considered by the Senate Foreign Relations Committee.

Voluntary agencies, principally Catholic, Quaker, and Lutheran, are meanwhile bearing the brunt of the burden of feeding, clothing, and resettling the refugees. His Holiness Pope Pius XII has sent hundreds of thousands of dollars. United States Catholics have sent other hundreds of thousands to support the relief work of the Catholic Near East Welfare Association and War Relief Services-NCWC. A Belgian Catholic mission has been providing 6,000 meals a day.

But the most valuable Catholic contribution has been the devoted service of more than 2,000 priests, brothers, sisters, and lay workers. A first-hand account of their heroic charity has just reached this country from Msgr. Thomas J. McMahon, United States national secretary of the CNEWA, who has been surveying the refugee situation for the past 2 months. Reports Monsignor McMahon through the NC News Service January 24, 1949:

"Since the program of the UN has not yet been completely organized, the hundreds of religious institutions packed with refugees and the thousands of priests and sisters who

serve them must continue our own program of feeding and clothing and sheltering all who come to us in their misery, without question as to their religion * * * With the money made available by the American bishops, I have been able to bring relief to whole groups of refugees who hitherto had been entirely neglected * * * Even the mission funds given during the past year by American Catholics for these Near East missions have been enlisted in this campaign of mercy, for the religious who needed them so badly have impoverished and deprived themselves in order to help these poor people.

The vision of those priests and religious using their precious mission funds for the refugees and serving them gratis, regardless of their race or religion, raises an interesting question. On December 9, 1948 Stanton Griffis, United States Ambassador to Egypt and head of the UN relief for Palestine, announced that he had made arrangements for distribution of supplies on the spot through four international organizations, the Friends Society, the League of Red Cross Societies, the Council of the International Red Cross, and the Children's Fund, to avoid the necessity of establishing his own machinery.

Our question: Will the same four organizations be given exclusive control of the $16,000,000 which our Congress may confidently be expected to appropriate?

Will the Congress be content to have one-sixth of its appropriation drained off for administrative and local operational expenses?

There is an international organization very much on the spot—the charitable arm of the Catholic Church, which would use any share of funds directly allotted to it entirely for the refugees, and none for salaries and other administrative and operational expenses. It might be good business for the Congress to look into the matter before turning over the taxpayers' money to the UN with no strings attached.

A Plea for Tenants—Concerning Rent Controls

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. GWINN. Mr. Speaker, why does this ever-expanding all-powerful Central Government propose to extend rent-control laws for an additional 27 months? That is a longer period than ever proposed in wartime. Rent control was a wartime measure. We are in the fifth year of peace. Yet Government proposes to extend rent controls even further than last year. Is that because the shortage of rental housing is growing worse under rent control? We are reminded that price control did make beef and butter scarce and that black markets flourished. There must be a compelling reason in logic and morals, or else the representatives of the American people cannot support these proposals for rent control even to benefit tenants any more than they could extend OPA in 1947 to benefit consumers.

It has been alleged that Congress favors the tenants because there are more tenants than home owners. This accusation is very questionable on two counts: First, it implies that Members of Congress put partisan politics and exploitation of owners of private property in favor of tenants above personal honor and the welfare of the country. Our method of representative government has not degenerated into a fraud upon one group in favor of another; secondly, even if a Congressman were inclined to favor either the tenants or the home owners for political reasons, he would have to flip a coin to make his decision. This is because, contrary to belief, the number of home owners and tenants in America is almost equally divided. Thus, Congressmen are free from the temptation of any political expediency.

The very first question is—what causes the present shortage of rental properties? If the cause can be abolished, the present shortage of apartments and houses for rent will cease.

A survey made in 1947 by the Bureau of Census covered the rental situation in 34 of our large metropolitan districts. First, the number of dwelling units occupied by tenants in 1940 was determined. Then the same procedure was used for 1947. The resulting comparison is almost unbelievable. In every case total housing units had increased, but the total number of dwelling units for rent had steadily declined in spite of an unprecedented demand for rentals. The most thought-provoking picture was found in the Scranton-Wilkes-Barre area. During this same period, there was a 15-percent decrease in population in that section. Yet the shortage of dwelling units for rent in the Scranton-Wilkes Barre area seems to be generally as acute as in most of the other metropolitan districts surveyed by the Bureau of Census. Thus there must be a truly vicious conspiracy in operation where, in spite of an increase in total dwelling units, there is a decrease in dwellings for rent in a city where the population is substantially decreasing, and where the demand for rentals is now greater than ever. Clearly, there is no housing shortage in the Scranton-Wilkes-Barre area. Likewise, there is no real shortage anywhere. What we have is an artificial, bad Government-created housing-for-rent shortage in this country. The proof of this is most dramatically illustrated by comparing the real-estate advertisements found in our newspapers in 1940 and 1948. There was a surplus of housing in 1940. Vacancies ran about 7 percent. There was an alleged shortage in 1948. Thus one would expect to find many for-sale advertisements in 1940, and practically none in 1948. Here are the facts: In August 1940, the New York Times carried 6,322 advertisements of houses, apartments, and apartment houses for sale in its classified section; in August 1948, it carried 23,036. The Chicago Tribune went up from 11,303 to 32,045 in the same period. The Los Angeles Times showed an increase from 18,930 to 78,925. This fantastic increase in houses, apartment, and apartment buildings for sale was found in the Pittsburgh Press, the Atlanta Journal, the Cleveland Press, the San Francisco Examiner, the Baltimore Sun, and almost any other newspaper that you may wish to consult.

Now how can there be a housing shortage when a person has hundreds of thousands of desirable dwellings to choose from? They are not offered to him. They are literally thrown on the market at low prices compared to costs. Can it truthfully be claimed that there is a housing shortage when there are more houses, according to the census, than ever before; when the newspapers are doing a land-office business in selling houses but not in renting them?

No; there is no shortage of houses—only a shortage of dwellings for rent. The dwelling units that were formerly found in the for-rent columns are now found in the for-sale columns. That is not because people want to sell but they are forced to sell rather than rent for less than costs. In other words, they are being liquidated—American style.

What evil act or law is driving the landowners to dump their property? Why do people want to sell and become renters themselves? What makes home owners want to sell at a sacrifice instead of rent below cost? What diabolical conspiracy in restraint of trade is forcing persons to buy homes when they much prefer to rent them? Is it the evil inherent in free men, their selfishness and greed, or is it the obvious and inevitable result that comes from all Government schemes of price controls?

The Bureau of Census furnishes more evidence of the cause of this shortage in rental units. In April 1940 the Federal census showed that 7 percent of all urban housing units were vacant. Additional units were vacated by persons going into service. In November 1945 the United States Census again surveyed the field. For all practical purposes, there were no vacancies in rental properties. It showed a 30-percent increase in the number of dwelling units occupied by only one person. Prior to 1940 they were occupied by two persons or more. There was a 22-percent increase in the number of units occupied by two persons. Prior to 1940 they were occupied by three or more occupants. At the same time, the dwelling units occupied by seven, six, and five persons rapidly decreased. In other words, tenants in all categories were spreading out and using much more room than ever before. Under rent control, if the husband or wife dies, the survivor stays on. If children marry or leave home for school or work, parents stay in possession of the unneeded and unused space vacated by them. Space is cheap. Those outside get no vacancies that would have normally appeared in a free economy. Besides, nobody can move because all space is artificially frozen, making no vacancies possible. The October 1 moving date for all manner of adjustments to needs and pocketbook is prohibited by law.

Now, why is this so? Why are people being forced to buy houses when they prefer to rent them? Why are tenants complaining about a shortage of rental space even while they are now occupying more space per person than they have ever occupied before?

One would ordinarily expect to find persons in these times buying less rental space instead of more—when the value

of the dollar has dropped to about 50 cents. This drop in the purchasing power of the dollar holds true for all goods and services except one. This one major exception is dwelling units under rent control. There our present inflated dollar is still worth almost its prewar value to the tenants. Thus, rental properties under rent control are the best bargains in America today for persons who wish to rent instead of to buy or to build. Since most people know a good bargain when they see one, this demand for rental space at about half its real value has increased abnormally. It is still increasing.

That is the reason why tenants are spreading out and demanding more space per person than ever before. That is the reason why the number of apartments occupied by one or two persons has increased so rapidly. That is the reason why the number of rental houses occupied by six or seven persons has decreased. That is the reason why home owners had rather sell their homes than to rent them. That is the reason why there is a shortage of units for rent. That is the reason why people must purchase houses that they would rather rent. Thus it can be accurately stated that rent control itself is the sole reason why prospective tenants cannot find apartments and houses for rent. And the longer that this restriction on freedom—rent control—is continued, the worse this shortage will become.

Now it is claimed that most tenants would not be able to pay the increased rents that would result if we returned to freedom. It is charged that there would be mass evictions and millions of homeless people. These are utterly false and irresponsible statements for this reason. In the first place it is obvious that homeowners could not charge more than the tenants could afford to pay. More than they might wish to pay—yes—but not more than they could pay. If the homeowners tried it, their rental units would be vacant. Does anyone claim that homeowners would deliberately keep their rentals vacant in a free market? Did they do it before rent controls? The price for free-market rent will always automatically be within the means of the tenants. It is admitted that legal rents on most dwellings now under Government price controls would rise if Congress returned control of these buildings to the homeowners. But it is doubtful that rents would rise as much as prices have increased for food, clothing, fuel, and all the other necessary goods and services that are referred to as essential for living. Since the space is available if made available for rent our experience should be better than that after removing OPA from food. OPA had created a serious actual shortage of food that kept prices high until a free market produced more.

It is further admitted that the abolition of special privileges in housing would inconvenience many persons who are now occupying apartments that are underpriced by Government decree. Many of these tenants might find it necessary to seek smaller and lower-priced quarters. Many of the persons who now live alone might find it necessary to share their apartments—or to give up the apartments for rooms—in order to pay the increased rents. The trend toward expansion under controlled rents would stop. As a result, the persons who could afford only $40 quarters would move there instead of staying in their present $65 quarters that they are appropriating for $40. The persons who could afford the more desirable—and higher priced—locations would then move into them.

Is there anything unjust or un-American in this arrangement? Is this not the same principle of freedom that we follow in determining all other human wants and desires? If housing is not to be distributed in the same manner as food, clothing, and cigarettes, how is it to be distributed according to peoples' needs? By special privilege and political favoritism? Does anyone dare call that method American?

Now let us see how a return to freedom—the abolition of political special privileges and discrimination—will increase rental space and end the present alleged housing shortage. First of all, for every tenant who may find it financially necessary to double up under private control of housing, an extra rental unit will thereby become available for another tenant who is now seeking such a place. This will automatically result in housing for more tenants. In addition, many of the dwelling units now for sale will return to the rental market. There will be far more dwellings for rent—and far more tenants—under private control than under Government control. Can this result accurately be called bad for tenants as a whole?

Conversely, if Government control of housing continues to increase, this present demand for rental units at a price below their true value will multiply. The shortage will increase because tenants can afford to buy more space at this bargain rate. In fact, many present homeowners will sell their homes and try to become tenants at the bargain prices arbitrarily set by Government. They have stopped building for rent. Tenants in presently free-market-rental properties will soon insist that in all fairness Government should also reduce their comparatively high rents. And indeed if it is fair for the one group of tenants, why is it not also fair for the other group of tenants? As all Congressmen know, that question is being asked by an increasing number of persons. So far, a satisfactory answer has not been advanced.

Because of rent controls, prospective tenants are no longer free to get an apartment that they want at a price that they are able and willing to pay. They are out of luck unless they can find a dead tenant.

Rent control stops tenants from advancing to new jobs in other cities. If you doubt this, read the apartment-for-exchange columns in the New York Times or any other metropolitan newspaper. Many thousands of tenants wish to move to new locations for various reasons. The reason may be a new and better job. It may be a desire for larger quarters or a change in scenery or new neighbors or any other good and valid reason. But unfortunately for the tenants, they are caught in the trap of rent controls. They are well aware that they cannot hope to duplicate their Government rents in a free market. So they advertise in a pitiful—and usually unsuccessful—effort to find someone else under Government control who also wishes to move. Then the Government-controlled tenants usually forget the new job, the larger quarters, and the better opportunities. They remain rooted in their Government-controlled dwellings to continue their bitter arguments with the homeowners about needed painting, repairs, and services. Does any Congressman honestly believe that a continuation of this situation is in the best interests of the tenants? Does any Congressman dare use the word "American" to describe this degrading favoritism?

Probably the most unfortunate result of rent control is the resulting discrimination against would-be tenants with children. Now there have always been apartments reserved for persons without children. This is because the tenants themselves demand it. But before rent controls were imposed upon the home owners and the tenants, there were always plenty of desirable rentals available for persons with children, any number of children. The home owners provided facilities for children and made them welcome. Under freedom, most home owners with dwellings for rent had to do this in order to keep their buildings occupied. But all of this changed when the Government moved in. Under Government-imposed rents, the single persons and the childless couples had an advantage in bargaining for the space usually reserved for families. And usually they took advantage of the opportunity. Similarly, the home owners felt that they could make up a part of their lost rent by decreasing the number of occupants per unit. They felt obliged to try to balance their increased fuel, service, and repair bills by avoiding the increased fuel, service, depreciation, and repair bills that come with children. And as the Government tightens its control over the price of rent, this discrimination against children will increase. Thus the persons who own property for rent—and 80 percent of all rents collected go to home owners whose incomes are less than $5,000 a year—use one of the few legal methods left to them whereby they can attempt to balance their depressed rental incomes against their inflated costs.

Now, Congress can condemn the home owners and the tenants by passing another law against them. This law could take the form of the recent French decree that forbids each person from occupying more than the Government-decreed amount of rental space. Or Congress might decree that hereafter no person may sell a dwelling unit above 60 percent of value. That would make more rental units by making the loss on sales about the same as the loss on rentals. Does any sane American advocate that solution? The only permanent solution to this desperate situation is for Congress to reject these rent-control

laws that are directly responsible for denying many of our citizens the freedom and responsibility to which they are entitled. A return to freedom would mean that rental space, prices, number of occupants, location, and services would, in a matter of weeks, adjust themselves to the relative needs, desires, and abilities of all concerned. This is the American way. It can work only to the extent that the Government leaves the people free to handle their own problems as responsible persons.

It is noted that this proposed rent-control measure has a time limit of 27 months. As was to be expected by any student of the history of rent control in other countries, this time limit is longer than the limits set in the previous extensions. And it can be safely predicted that the next extension will have a still longer time limit. The same thing happened in England, France, Austria, Germany and all other countries that tried rent control. They too kept temporary rent controls after World War I for exactly the same reasons that we have kept rent controls after World War II. They too extended those measures temporarily from time to time. They too once removed rent controls from new construction in order to induce persons to build new dwellings for rent. Finally the clamor of the tenants in those newer and higher-priced units caused the governments to bring them also under government control—temporarily, of course. Next the word temporary was dropped forever from the rent-control laws. Now those tenants are necessarily forced to remain permanently in their rapidly deteriorating government-controlled dwelling units. Those are the lucky tenants who have apartments. The would-be tenants cannot find a vacant house for rent at a legal price. There just are not any. Yet, both the tenants and the would-be tenants in all European countries look to their governments to remedy this situation through more government controls. They are unable to grasp the hard fact that the rent-control laws imposed on them by their governments are solely responsible for reducing their housing to its present low and shoddy level. In spite of the destruction that rent control has brought to housing in these European countries, the tenants and the government officials still seem to believe in the myth that government rent controls were and are in the best interest of the tenants.

We Americans are following this same path. So far, we have not deviated in any respect from the European pattern of government-controlled housing after World War I. It is as though we had taken their blueprint for the destruction of housing and decided to follow it line by line. This present proposed extension of rent controls in America is in exact agreement with the old European timetable. The proposal to bring certain presently uncontrolled housing back under Government control fits the pattern perfectly. The reasons offered are the same. The time and extent are identical. And the inevitable results cannot vary in any respect. We too are approaching the place where the greatest fear is freedom.

Yes, each Congressman is morally and legally obligated to vote his honest convictions on this rent-control measure. If any Congressman sincerely believes that Government control of housing is in the best interests of the tenants and the home owners, then indeed he is justified in voting for a continuation of rent controls. But if he believes that Government control of housing is contrary to freedom, to justice, to progress, and to the best interests of the American people, including tenants, then he must summarily reject this monstrous evil of rent control while it is still possible; before it grows into a vested interest that will forever defeat a return to freedom.

An Appeal to the President of the United States

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an appeal addressed to the President of the United States, by the Society for the Prevention of World War III. This article appeared in the January publication of this organization, as follows:

AN APPEAL TO THE PRESIDENT OF THE UNITED STATES

For the past 4 years a clique of willful men has betrayed our hopes for peace and security. With cunning and deceit they thwarted your efforts to create stability in a war-torn world. They are brimming over with solicitude and love for Germany and the Nazi industrialists. They want no real peace, but a weak and helpless Europe in vassalage to a powerful Germany. Their profession of loyalty to you is a smoke screen, hiding this conspiracy.

They have constantly reassured you that all was well in Germany. They have tried to impress you with the urgency of a "Germany first" policy, as though this were the key to a lasting peace. Their efforts will result in separating you and the American people from our wartime friends—the victims of German aggression. The bitter fruits of their plans are becoming more evident every day.

Mr. President, there is no peace. Our wartime friendships are being squandered. America is being accused of consorting with the former enemy at the expense of her victims.

Building up Germany has been imposed on the American people as an obligation, while the Germans are permitted to sabotage and hoard their coal and food production. Germany is rising again—like the monster of Frankenstein—and is already outproducing her neighbors.

This was never your program. This was not the American people's program. This is the German program fo ra quick come-back to dominate Europe again—as advocated in the Halls of Congress and by some key officials.

The Eightieth Congress was a sounding board for some of these gentlemen. They distorted the facts about the real situation in Germany. They vied with each other in their indecent bidding for the friendship (sic) of the former enemy. But they were not alone. They received their support and inspiration from high Government officials who pretend that they carry out your program.

Mr. President, how long will you permit these same men and same ideas, which gave German militarism new life after World War I, to gamble once more with the security of our people? How long will you permit these men to undermine your policies worked out at Potsdam? You have publicly declared your opposition to the German cartels, but those cartels are thriving under the protection of these willful men; they made a farce out of denazification and the war crimes trials; they put back into power Germany's industrial war lords and Hitler supporters; they protect Germany's industrial war potential; they sabotage the reparations program so essential to European recovery. These are some of the death-breeding facts which the Germany-Firsters conceal from you and the American people. They fear exposure lest their nefarious activities be terminated once and for all.

Some months ago you stated that you would rather have peace than be President. The people answered your courageous challenge at the polls. You now have the grand opportunity to put an end to the betrayal of the peace and to reestablish the prestige and influence of our country throughout the world. We were the arsenal of democracy against the aggressive designs of German militarism. We must now be the spearhead for peace and security.

Mr. President, house cleaning is the order of the day. We call upon you to remove from positions of influence all individuals who have had business or sentimental ties with the former enemy. Our policy on Germany can only be carried out successfully by objective and realistic Americans, faithful to the principles for which we fought.

We call upon you to request that the Eighty-first Congress cooperate in a full dress reexamination of our German policy. This would herald the rebirth of the principles which guided Franklin Delano Roosevelt in his fight against war and tyranny.

By launching such a crusade to revitalize your original program for Germany, you, Mr. President, will have earned the gratitude of all simple folk who yearn for a just and lasting peace.

THE SOCIETY FOR THE PREVENTION OF WORLD WAR III.

Publicity Concerning Certain Phases of Atomic Energy

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Thursday, February 3, 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the RECORD an address I delivered before the Economic Club of Detroit on Monday, January 31, 1949, on what I regard as a very important subject concerning the publication of certain information pertaining to atomic energy. There has been some misrepresentation—I am sure not purposeful—of the position that I have taken in this address, and I think it would be well if it were printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I can think of no better place than before this thoughtful audience to discuss a problem which has weighed heavily on my mind for many months. This problem, I believe, may well cause the Joint Congressional Committee on Atomic Energy more anxious concern than any other. I cannot suggest an answer to the problem, for I have not yet arrived at a conclusion myself. I only know that the issue is tremendously important both from the viewpoint of democratic government and from the viewpoint of national defense.

I refer to the question of whether or not the American people and the world should be told how many atomic bombs and atomic weapons we possess and how fast we are producing them.

Make no mistake. I am not talking about the design of an atomic bomb or the way it is made or how it works. No patriotic American would so much as dream of permitting that information to be made public.

By the same token, no patriotic American would so much as dream of permitting the exact design of a B–36 very heavy bomber to be made public. But the number of B–36's we are building today has, in fact, been disclosed in the newspapers.

Those of you who are familiar with my record as a Senator know that I believe we live in an era of danger—an era in which national safety yields precedence to no other consideration. The act which I had the honor of sponsoring for the domestic control of atomic energy subjects our entire policy in this field "to the paramount objective of securing the common defense and security."

Perhaps our military needs absolutely dictate that atomic production figures be kept secret.

But if such is the case—as it may be—we are taking a calculated risk. We are risking the tested, traditional principles of free and constitutional government. In my opinion, we must be sure that the risk really is calculated, that we take the risk with our eyes open.

The Constitution of the United States vests in Congress the power to provide for the common defense, to raise and support armies, to provide and maintain a navy, and to make rules for the government and regulation of the land and naval forces. In other words, it is the solemn duty and responsibility of the people's congressional representatives to arrange for our military security.

But in the case of atomic energy, Congress has purchased a defense package sight unseen. Congress has only a most general idea of what the atomic package contains.

This package may be equivalent to a huge army or a huge navy; or it may be equivalent only to a small army or a small navy. Congress, whose constitutional business it is to raise armies and navies, does not know which. So far as atomic energy is concerned, Congress simply lacks sufficient knowledge upon which to discharge its own constitutional duties.

Do we possess 5 bombs, or 50 bombs, or 500 bombs? Are we strong or weak in the field of atomic weapons? Only the Atomic Energy Commissioners, high-ranking military men, and a few others know the correct answer to these vital questions. Though I have been a member of the Joint Congressional Committee on Atomic Energy since its inception, and though I have just been elected its chairman, I do not myself know how many bombs we possess or how rapidly we are making new ones.

The American people, who elect and ultimately control Congress, have entered the atomic energy business. They have invested more than three thousand million dollars on atomic weapons. What returns are the American people receiving from this huge defense investment? What have the gigantic plants at Hanford and Oak Ridge accomplished? The American people do not know, and the Congress does not know.

Here is an extraordinary state of affairs.

Of course, I hardly need say that the split atom is itself extraordinary—so extraordinary as perhaps to justify the iron veil of secrecy which covers production figures. But let me mention several more of the paradoxes which this secrecy creates in our democratic society.

The 1949 defense budget calls for the expenditure of $15,600,000,000 on the armed forces. It may be that even this staggering sum is too small. I favor spending whatever amount is necessary to bring reasonable security.

But regardless of the sum decided upon, can we accept it on blind faith? How can Congress and the American people judge American defense needs unless they know the size of our atomic stock pile? Perhaps, if that stock pile is large, we do not need to spend as much as we had supposed. On the other hand, if that stock pile is small, we may need to spend more than we had supposed.

Today we are like a general who must train his troops without knowing how many rounds of ammunition they will be issued.

When we debate the necessity of a 65,000-ton aircraft carrier or a 70-group air force, or universal military training, I fear that we quite literally do not know what we are talking about. We do not know how many atomic weapons we possess, and therefore, I fear that we lack perspective to pass upon any major defense issue.

Consider, too, the question of taxes. It may be that we must raise additional taxes in order to provide the funds needed for our Army, Navy, and Air Force. But this step might not impress us as necessary if we knew for a fact that we are strong in atomic weapons. Do we dare either raise taxes or leave them where they stand—without knowledge of the atomic production figures upon which these decisions may hinge?

The problem of reconciling democratic government with the secrecy which covers bomb production comes to a head in the joint committee of which I am chairman. The law of the land requires this committee to make continuing studies of the activities of the Atomic Energy Commission and of problems relating to the development, use, and control of atomic energy. The law of the land further states that the Atomic Energy Commission "shall keep the joint committee fully and currently informed with respect to the Commission's activities."

We all know that the Commission devotes itself, in large measure, to making weapons. If weapons is the heart of its activity, how can the Senators and Representatives on my committee decide whether the Commission is doing a good job—unless they know how many weapons have actually been produced? How can my committee serve as the eyes and ears of Congress and the American people, as the law intends, so long as atomic production data are kept hidden?

How can the public decide whether I am doing a good job in helping to keep tabs on the Commission—unless they know the number of atomic weapons being manufactured? How can the Commissioners themselves, able and patriotic as I believe them to be, reach sound decisions without the benefit of advice, comment, and criticism from the public? And how can the public praise or condemn without knowing the key production facts on which to base a judgment?

Consider still another aspect of the existing secrecy. We have gone before the United Nations and earnestly proposed an effective plan for the international control of atomic energy. Our diplomats ask that every country yield sufficient sovereignty so that one and all may be safe from the awful threat of surprise atomic attack. We hold that the alternative to atomic peace may be annihilation.

But how can we expect mankind to believe us unless all the world knows that atomic weapons are capable of being produced in quantity? Perhaps the world thinks that we only possess a handful of bombs. Perhaps the world thinks that if we only possess a few bombs, no other country could make more than a few bombs. Perhaps the world concludes that the peril may not be so great after all.

Are we not obligated to tell mankind just what this elemental force means—in terms of production facts and figures?

Then, too, you and I are naturally curious to know whether we and our children live in mortal danger from atomic weapons. If, with our tremendous project, we only produce the merest trickle of bombs, we might reasonably hope and expect that no other country could produce a greater number. But if our output is large, then we must fear that the output of other countries may also become large some day. How can we begin to estimate the potential capacity of foreign powers unless we know our own capacity?

It is interesting to note that concealment of atomic production rates is secrecy of a scope which has never been attempted before during peacetime in the United States.

The most valuable type of secret is the fact that a weapon exists at all. If a potential enemy does not even suspect that a certain weapon has come into being, he may never try to make a like weapon himself. But we have already lost this kind of secret as regards the atomic bomb. The entire world knows that the bomb does exist.

A less valuable class of secret is the specifications and the exact design of a weapon. Of course, as regards the specifications and exact design of the atomic bomb, I need not repeat that we must unquestionably preserve the most complete and absolute secrecy.

But the number of bombs we possess is not even distantly connected with the accepted and time-honored secret categories. Concealment of production figures extends secrecy over a vast and unprecedented area.

Jim Parker's industrial advisory committee was asked to write a report on business and the atom. His committee faced the problem of disclosure as it affects a democratic economic system. After a year of hard thinking the industrial advisory committee came out with the conclusion that more information should be revealed.

I am raising the problem of disclosure as it affects a democratic political system. I have not yet formed an opinion, as I say, whether this problem should be answered in the same way as Jim Parker's group answered a somewhat similar problem.

But if the Industrial Advisory Committee felt that businessmen have been denied the knowledge necessary to encourage their entry into the atomic-energy field, consider how the poor Congressmen feel. How can Congressmen who lack essential information make wise decisions regarding defense and taxes and foreign policy?

But so far, I have only tried to present a few thoughts on one side of the case. Do not think for a moment that the opposite side of the case is weak.

If bomb production data were made public, for instance, other nations would gain a clearer idea of the money, men, and resources which they must pour into their own atomic projects in order to rival our American progress.

If the world knew how many bombs we possess, the world would also gain valuable insight into our over-all military strength, our potentialities, and capabilities. Likewise, if the catastrophe of another war should ever overtake us, the enemy would know about how much atomic punishment to anticipate from us. A known quantity,

no matter how terrible, would be psychologically and militarily easier for the enemy to face than an unknown quantity.

It could be argued that until and unless a bomb stock pile of such prodigious proportions is achieved as to be capable of destroying every resource of any possible opponent, no divulgement should be made. Persons holding this view might claim that divulgement of any lesser number would encourage a state bent on aggression.

But there is an opposing possibility to be considered. Perhaps our rivals underestimate the destructive power of the atomic weapons we possess. Perhaps they will miscalculate and precipitate a disastrous war, believing us to be weak in the atomic-energy field, when actually we are strong. Perhaps if we disclosed the facts, we would prevent a disastrous war started because of the aggressor's mistaken estimate as to our atomic status.

I might add that we publicly debated the wisdom of a 70-group air force—data of great value to foreign powers. The world knows that we possess around 20 aircraft carriers ready for active service and that about 1,400,000 Americans serve in our armed forces. The world knows that we plan building a new 65,000-ton carrier and that we expect to own about 90 B–36's by the end of 1950. All this information has great value to foreign powers.

But neither the world nor the American people knows how many atomic weapons we possess.

Of course, you may say, "The Joint Congressional Committee on Atomic Energy should be informed of production data, but the information should not be circulated outside this committee." If you made such an argument, I might reply as follows:

True, the joint committee is indisputably entitled to know bomb figures under the law. But how would it materially help the committee members to have the information unless they could use it in reporting to Congress as a whole and to the people?

If the information means that we need smaller armed forces or bigger armed forces; if the information means that we can afford to leave taxes as they are or that we must raise taxes; if the information means any of these things, could Congress as a whole and could the American people rely solely on the judgment of the few committee members entrusted with production figures?

Take the two distinguished Senators from your own State of Michigan as an example. Senator VANDENBERG is a member of the joint committee; Senator FERGUSON is not a member. Do you think that Senator FERGUSON would be justified in voting to raise or lower taxes, to increase or decrease the size of our armed forces, or to censure or praise the Atomic Energy Commission—do you think that Senator FERGUSON would be justified in doing these things purely on the say-so of Senator VANDENBERG, who is a member of the joint committee? Would not Senator FERGUSON be obligated to arrive at an independent judgment of his own? If so, how could he arrive at such a judgment unless he also knew atomic production data?

Furthermore, if we assume that this information must be kept a supreme secret, should even the 18 members of the joint committee ask to be told? I am proud to say that, to date, there never has been a security leak from the committee. But obviously the chance that production figures would become publicly known increases with each additional individual who is given the facts.

This much we do know—the question propounded here goes to the very heart of our democratic system of government. It goes to the very heart of national defense and to the future security and existence of the United States.

There is a natural inclination in all of us, in Congress as well as out, to shy away from the implications of this problem. No individual willingly assumes the responsibility which it entails. But no matter how awesome the responsibility, we are not justified in evading it.

The experience of a century and a half has demonstrated that our system of free government functions best when the maximum degree of information is made available to our people. In fact, free and candid discussion of vexing problems is the bedrock of democracy and it may be our surest safeguard for peace.

At least, we know that the question will never be solved by ignoring it. If a policy of drift and evasion brings the world to the brink of ultimate disaster, we should condemn such a policy as reckless folly and the American people may rightly hold responsible its representatives in Congress for neglect of a fundamental duty.

I can only end this discussion at the place it began—by saying that I have not yet arrived at a conclusion in my own mind. In the final analysis, the American Congress and the American people will settle the issue. May they decide wisely and well. They could hardly face a more momentous decision.

Olympic National Park and Olympic National Forest, Wash.

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 3, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two related impartial reports I made recently to the citizens of the State of Washington on the Olympic National Park and the Olympic National Forest. Because a resolution is pending before the Congress in connection with the park, I think Members of the Congress will be interested in these studies of the Nation's most magnificent wilderness area.

There being no objection, the reports were ordered to be printed in the RECORD, as follows:

THE GREAT RAIN FORESTS OF WASHINGTON STATE

One of the great natural wonders of the world and the Nation's most spectacular wilderness empire—located in Washington State—will receive attention in the National Congress this year.

This natural wonder of unspoiled primeval wilderness is the Olympic National Park.

It is probably the most magnificent forest of its kind in the world.

There are many persons, even in Washington State, who do not realize the magnitude of this forest park, or know that, with the exception of the trees on the Olympic Peninsula, virgin timber in such large quantities has almost disappeared in the United States.

The Olympic National Park's outstanding features consist of a unique mountain mass of rugged, snow-capped peaks and ridges, with many glaciers and trout-filled streams, as well as a vast expanse of meadows, small azure lakes, alpine forests, and many types of wildlife.

Among the wildlife found on the Olympic Peninsula, inside this national park, are herds of Olympic or Roosevelt elk, native to that area only.

Most important of all is the unusual forest of big trees, likewise native to the Pacific Northwest, especially Douglas fir, red cedar, Sitka spruce and hemlock, western white pine, and white fir.

Many persons are confused by the two separate and distinct Government-owned areas on the Olympic Peninsula.

The Olympic National Park itself is roughly surrounded by the Olympic National Forest.

The forest and park are separate and distinct as to administration.

The national forest is governed by the Forest Service of the Department of Agriculture.

The national park is run by the National Park Service of the Department of the Interior.

The colossal forests on the Olympic Peninsula have no counterpart anywhere in the world. There are trees 300 feet in height, and 10 feet or more in diameter. There you will find the tallest evergreens anywhere on earth. Some of the trees were there at the time Jesus Christ was born.

A single tree on the Olympic Peninsula often contains 40,000 board feet of lumber—about the same amount of lumber cut from 3 acres of so-called forests in the Eastern States.

The Olympic National Park comprises more than 848,000 acres, of which more than 700,000 acres are in forest. There is enough commercial timber in the park to build 2,000,000 two-bedroom homes.

The Olympic National Forest contains 705,000 acres, and together the Olympic National Park and Forest total more than a million and a half acres, or 2,440 square miles, in our State of Washington.

This forest-park is twice the size of the entire State of Rhode Island.

Although this is a large amount of land in the evergreen State, Washingtonians must remember that this forest-park belongs to all the people of the Nation, not just to us, even though it seems to me that we should have a more natural particular interest and say so in matters affecting this area than do others in the Nation.

The Congress is being called upon to adopt a resolution to appoint a committee of Senators and Congressmen to determine whether or not part of the forests in the national park should be transferred to the jurisdiction of the national forest.

For many years this has been the subject of a controversy because nothing can be touched in the national park, whereas in a national forest the Department of Agriculture can allow its timber to be cut under a highly selective logging program.

In any event, land in the Olympic National Park, or Forest, would remain the property of the United States Government. The question is whether some of the forest locked up in the park can be cut and sold, the money going to the National Treasury and county governments, and the timber cut into the construction of homes and industry.

I myself, as a Senator, take no stand on the matter except that the controversy should be settled by a Nation-wide board of representatives of the people—because the citizens of the entire Nation own the area. In another weekly report I hope to give both sides of the argument in a nonpartisan manner.

The chief economic values of the Olympic Forest are its enormous stand of commercial saw timber and its timber-growing possibilities.

The standing timber of commercial size in the forest alone is estimated to be around 25,000,000,000 board feet, or close to 10 percent of all the commercial timber in the State. Even more timber is untouched in the Olympic Park.

Nature has taken advantage of the temperate climate in the lower valleys of this forest to create what are known as the rain forests of Washington State. There is nothing else like it anywhere on the face of the earth.

Rain falls almost entirely during the winter months, averaging 142 inches a year,

and the soil is favorable to produce these unique stands of timber. They are almost tropical in luxuriance, with an undergrowth of vine maple, big-leaf maple, ferns, and other junglelike foliage.

Mosses drape the branches and trunks of trees in fantastic patterns. Seedlings, in ancient succession, take root on fallen tree trunks, which through the centuries rot away, furnishing food for new trees that in turn become forest monarchs.

The ground is carpeted with moss in many places 3 to 6 inches deep.

The heavy rainfall on the western slopes is the result of warm Pacific air currents striking against the Olympic Mountains, which soar nearly 8,000 feet above the sea. This high country affords a paradise for the hiker, mountaineer, or casual vacationer.

The high peaks are decorated by numerous glaciers, some of which are several miles long.

All of this provides a proper setting for a distinctive community of animals, the peer of which is the Olympic elk. These roam during the summer along the river bars and in the high, open country, particularly on the western slopes. There are also cougar, coyote, black-tailed deer, black bear, squirrels, raccoons, marmots, mink, otter, beaver, mountain goats, and many birds—including eagles, ravens, and grouse.

The Olympic Peninsula and its mountains are generally believed to have been discovered in 1774 by a Spanish sea captain named Juan Perez.

In 1788 the British Capt. John Meares named the peak of the mountains, Mount Olympus, after the mountain in Macedonia called Olympus by the ancient Greeks. The name Olympus means heavenly, or celestial.

The first expedition to cross the Olympic Mountains—from Port Angeles to Quinault, via the Low Divide, was financed by a Seattle newspaper, the Seattle Press. This was in the winter of 1889–90.

Exactly who climbed Mount Olympus first is the subject of controversy, but in 1899 a survey party reached the top and left a Shelton newspaper under a rock as proof. This newspaper was found by another party in 1907. Since then, many mountaineers and others have explored the high country of the Olympics, but even today there are areas in the national forest and national park that have never been visited, much less explored, and some parts of the park have never yet been surveyed.

In 1890, the Olympic Peninsula was declared by Government officials to be the greatest area still unexplored in the United States. In 1896, President Cleveland, by proclamation on George Washington's birthday, created the Olympic Forest Reserve, or National Forest, and in 1938, the Olympic National Park was created. Since that time there have been arguments over whether or not too much timber was being preserved and its benefits withheld from the people. And, it is because of this, that legislation to create a board to settle the issue has been presented to the Congress.

BOTH SIDES OF THE QUESTION ON WHAT THE SIZE OF THE OLYMPIC NATIONAL PARK SHOULD BE

As we promised you recently in a report on the great Olympic National Park and National Forest in our State, where trees a thousand years old and 300 feet tall still stand, we will conduct a one-person debate on arguments for and against changing the boundaries of the Olympic National Park.

Acting first as the moderator, we caution everyone to bear in mind that the Olympic National Park and the Olympic National Forest are separate and distinct areas. The park is run by the National Park Service of the Department of the Interior; the forest is operated by the National Forest Service under the Department of Agriculture.

The national park itself cannot now be touched—it is for beauty and pleasure only; the national forest has been and is being used carefully and scientifically for commercial purposes under strict Government supervision.

Both the national forest and the national park are located on the Olympic Peninsula. Combined, their areas are twice the size of the State of Rhode Island. The national forest, roughly, encompasses the national park.

For the past 25 years many forms of legislation have been introduced in the Congress relating to the park and forest. Some persons believe the park, which contains millions of board feet of timber, should be preserved and never touched, no matter what happens. Others believe a part, but by no means all, of the park should be transferred to the national forest so the timber can be thinned out, cut, and used. It is estimated that there is enough timber in the park to build 2,000,000 two-bedroom houses.

But remember that, no matter what happens in the Congress, the land and forest would always remain in Government hands.

Because the Olympic National Park and Forest are national in scope they are owned by all the people of the Nation, not just the citizens of Washington State, although we have a great deal more interest in them than persons, say, living in New Hampshire.

The legislation recently introduced in both the Senate and House of Representatives is an attempt to settle the matter once and for all. The legislation merely calls for the setting up of a board of Senators and Representatives to investigate and recommend what, if anything, should be done.

In the debate my personal opinion will not enter into the discussion. I propose to give each side about the same time for argument.

There is one comment, however, that I would like to make:

It appears to me that the controversy over the boundaries of the Olympic National Park is not a question of whether the park is too big, or too little, but whether or not the park encompasses more of the economic resource than is necessary for park purposes.

If more of the economic resource is within the park than is justified in the interests of the people of the United States for park purposes, then the boundaries might be adjusted accordingly; otherwise, let the park alone.

So with that, let's get started.

The question is: Should we change the boundaries of the Olympic National Park. We'll call on those in favor of the proposition.

Those in favor of changing the boundaries, argue that, first.

The area of the park is a mature forest and if no cutting is permitted, the only result will be a gradual deterioration of the forest itself. If some of the park were transferred to the forest, selective cutting would preserve the forest and permit better development, while at the same time producing a sustained yield of good timber, thus benefiting local industry.

Those in favor of this change also declare that natural growth would be improved by selective cutting. Lumber of high grade is urgently needed at the present time, particularly by the housing industry. There will be no net loss to the Nation if this timber is cut. Normal growth of a healthy forest will soon replace the two to three million board feet which some authorities have suggested be cut in the area.

Another strong argument is that the area is not serving any useful purpose at present, and that correction of the boundaries of the national park would eliminate considerable private-land holdings which interfere with proper administration and protection. A very difficult road-maintenance situation likewise would be improved and much cut-over land would be eliminated.

While these eliminations are of assistance to better administration, it is fortunate that the particular lands involved contain considerable merchantable timber.

In the past, legislation proposing transfer to the national forest of certain areas of the park has had the approval of the National Park Service, which has declared that the park's scenic values would not be destroyed if careful selection was made of the land that might be transferred.

Nearly 100,000 persons are dependent upon the forests of the Olympic Peninsula for a livelihood. Their homes, businesses, and property all depend on maintaining a steady and perpetual supply of timber. Their case—according to proponents of this transfer plan—is worthy of consideration, especially because a relatively small forest area out of the whole would greatly assist them in solving their problems.

The present area of the national park is far greater than that contemplated by reports of various Washington State agencies and by studies of the National Park Service preceding the establishment of the national park in 1938. These studies contemplated no more than a park area of 509,000 acres, instead of the more than 800,000 acres of today.

And, finally, too much of one of the Nation's great natural resources—timber—is locked up in public ownership. The lumber industry cannot continue cutting at the present rate on privately owned lands, except with a constantly decreasing amount of raw material.

Release of some of these public lands to orderly, sustained-yield methods of cutting will ensure for a long time, a healthy lumber industry. The proposed elimination areas have only a minor value for recreational purposes. Most of the timber is on benches and slopes, difficult to traverse, and is visited by few, if any, persons. On the other hand, opening of this area to logging, under Government control, would give permanent employment to from twelve to fifteen thousand workers.

That completes the general argument for those who favor curtailing acreage in the Olympic National Park.

Now, we turn around and argue the negative side of the issue which is: Why we should not transfer any forest land from the Olympic National Park to the Olympic National Forest.

First, those against the plan maintain that the decision of Congress in creating the Olympic National Park in 1938 is evidence of the desire of the people to preserve the unique rain forests of the peninsula as they are. Full expression of opinion was had on both sides of the question at that time and the result was the considered judgment of Congress.

The second argument, often used by opponents of the plan, is that lumber interests, exerting the pressure to transfer this land to the national forest, in order to secure the timber, would not be satisfied after they did get part of the forest. When that area was exhausted, so the argument goes, they would demand more and more land to be released. In the end the result would be utter exhaustion of some of the last remaining stands of virgin timber in the Nation. The amount of timber cut, also it is argued, would have little effect on the lumber industry.

Some of the forest area under consideration is not duplicated anywhere in the world. It would be a shame to spoil this wilderness for the sake of a small amount of merchantable timber.

In addition, the hazard of fire damage to the remaining portions of the park would be tremendous, due to the great amount of slashings which would remain after cutting. Another point often made is that the nature of the terrain and the size of the trees make selective cutting impossible.

Another strong point is that the areas in the park do not consist of over-ripe forests, but virgin forests, and to permit selective logging bypasses the main point of national-park philosophy: that in a national park—a natural spectacle—in this case superla-

tively beautiful virgin forest—is by law held inviolate for the enjoyment and inspiration of future generations. Cutting down to any extent will upset the delicate balance that exists among all the elements of the forest.

Cutting-off of these areas will create a new problem, it is maintained by those on this side of the argument.

Since selective cutting in forests of this type is impossible, according to opponents of the idea, the resulting clear cutting will remove ground cover which protects the watershed of the streams in that area. Soil erosion will be an inevitable result and the natural reseeding would be largely in alder, maple, and other types, not fir, which would completely change the character of the region.

And last, those on this side of the debate maintain that parks are big business and that the whole area benefits from the fact of the existence of a park nearby and that decreasing the size of a park, even one of this gigantic size, would not attract the vast number of visitors who wish to see the rain forests of the Pacific Northwest.

This report has been an experiment to briefly present, in a nonpartisan manner, both sides of a public question for the benefit of everyone listening. I, myself, have taken no part in the argument; I am satisfied to leave it in the hands of a competent congressional committee composed of representatives of all the people, to hear, discuss, and investigate, in order that the controversy can be settled for all time to come. But I would be delighted to hear from you—the judges—at any time, and what you think will be passed along to those in the Congress who must decide the question: How large should the Olympic National Park be in the future?

Address by Dr. Joseph F. Thorning Before the International Relations Club of Hood College

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, February 3, 1949

Mr. TYDINGS. Mr. President, I ask unanimous consent to include in the RECORD the address delivered by my friend, Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, before the International Relations Club of Hood College. In this connection, it is important to note that, for 20 years, Dr. Thorning, a devoted apostle of the good-neighbor policy, has dedicated himself to a study of Iberian culture. Not only was he an eyewitness of events in the Iberian Peninsula; he also studied the principles of international law which should govern our conduct of foreign affairs. From the ethical and moral point of view what Dr. Thorning holds is right and noble.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Prior to the last meeting of the United Nations General Assembly in Paris, the chief delegates of 15 American Republics entreated the Honorable George C. Marshall, at that time the United States Secretary of State, to use his good offices with Secretary Ernest Bevin, of the United Kingdom, and Foreign Minister Robert Schuman, of France, in order to pave the way for the entrance of Spain into the United Nations. Furthermore, these representatives of our good neighbors in Central and South America made clear their conviction that full, normal diplomatic relations with Spain would be a benefit for the people of the world. An overwhelming majority of the American Republics want to have chiefs of diplomatic mission in Madrid, just as they welcome Ambassadors or Ministers of Spain to their own capitals. This represents the sentiment in Lima, Peru; in La Paz, Bolivia; in Asuncion, Paraguay; in Buenos Aires, Argentina; in San Jose, Costa Rica; in Managua, Nicaragua; in Ciudad Trujillio, the Dominican Republic; and in San Salvador, El Salvador. Moreover, it is an open secret that, at the earliest possible moment, Colombia, Brazil, Ecuador, Cuba, and Venezuela will do everything to arrange an exchange of chiefs of mission with Madrid. In other words, the ties of culture, language, blood, and religion are factors which exert a profound spiritual influence between the other American Republics and the mother country. People of the Hispanic-American world cherish their traditions; they love the art and the literature of the Iberian Peninsula. Although completely sovereign and independent, the countries of South and Central America respect the genius of Portugal and Spain. Throughout the Western Hemisphere, in universities and colleges, a sense of appreciation is growing with respect to the role Francisco de Vitoria and Francisco Suarez, two Spaniards, played in the origin and development of international law. Long before Hugo Grotius, Vitoria, and Suarez, at the Universities of Salamanca and Coimbra, outlined the legal principles which established the prime distinctions with respect to the natural law, the law of nations, and the positive civil law. Moreover, these two Iberian scholars provided the ground work for a true society of states. In short, Vitoria and Suarez, taking the best elements of our Judaeo-Christian heritage, produced the juridical image of the United Nations, or one world. Their vision was as broad as humanity. And the modern world, more than ever, needs the nobility of outlook as well as the ethical ethos of contemporaneous Iberia.

The United Nations need the inter-American system, while the good-neighbor policy depends upon most cordial friendship and economic collaboration with the mother countries. Every worker for the cause of hemisphere unity should be an advocate of sincere friendship with Spain, just as every supporter of the United Nations should appreciate the value of the Hispanic contribution to world order.

For those who wish to make a more extensive study of this subject I can recommend The Spanish Origin of International Law, a book written by Dr. James Brown Scott and published by the School of Foreign Service, Georgetown University, Washington, D. C.

The Inauguration of President Truman

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 3, 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD the minutes of the municipal court of Philadelphia, Judge Adrian Bonnelly presiding, as of 12 o'clock noon, January 20, 1949.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

IN THE MUNICIPAL COURT OF PHILADELPHIA, CRIMINAL DIVISION, PHILADELPHIA, PA., JANUARY 20, 1949, BEFORE HON. ADRIAN BONNELLY, J.

The COURT. As I look at the clock on the wall, and at my calendar, I see it is 12 o'clock, on the 20th of January 1949, and in the Nation's Capitol a new President of the United States is taking his oath of office to uphold the Constitution of the United States, and to defend it against all enemies, foreign and domestic; and to so conduct himself in office as to merit the approbation and commendation of the entire Nation.

We are divided during a campaign in this country. Some people follow one ideology, or principle, and some another. Because we have that difference of opinion, we are misunderstood by other people in other hemispheres. Those who have for centuries warred with each other cannot understand how, we, in America, can differ in our opinions, ideals, and philosophies, and yet at the end, when the vote is counted, shake hands and congratulate the winner.

I don't know how many of you voted for President Truman, but I do know every person in America who prides himself in being a true American today will pray to Almighty God to give our President the wisdom, the understanding, and the strength to lead us that peace may reign for us and all humanity throughout the world.

Now, therefore, let us pause for a few moments and, in our own way, offer a prayer to Almighty God for the safety and good health of our President.

A Taft-Hartley Mandate?

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, February 3, 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter entitled "A Taft-Hartley Mandate?" written by Thomas W. Parry to the St. Louis Post-Dispatch, and reprinted from that newspaper.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A TAFT-HARTLEY MANDATE?

Do results of the national election constitute a mandate by the people for repeal of the Taft-Hartley law, as labor leaders are claiming? I think not. Let's take a look at the record:

1. Although the race was close—for President, Senators, and Representatives—the fact remains that those elected received a majority, however small, of votes cast. Any majority must be recognized as a mandate by a majority of the American people.

2. In considering results of the election, too many persons—labor leaders particularly—are inclined to consider only the Presidential contest. Results of contests for the Senate and House of Representatives are perhaps even more valid criteria in terms of a mandate.

3. While the Democratic platform on which President Truman was elected contained a plank advocating repeal of the Taft-Hartley law, this was but one of the many recommendations in that platform. It is reasonable to assume that many persons who voted for President Truman favor the fundamental principle of the Taft-Hartley law and that many others are opposed to it.

It must be agreed, then, by labor and management alike, that results of the national election constitute a mandate by the people, but that election results must reasonably be viewed in terms of contests for all three major offices—President, Senate, and House of Representatives.

Results of both the Senate and House are overwhelmingly in favor of the Taft-Hartley law, according to figures released by the Bureau of National Affairs.

1. Eight Senators (or Congressmen who were running for the Senate) who voted for the Taft-Hartley Act were defeated. Labor has made a great point of this.

2. Labor overlooks the fact that 15 Senators (or Congressmen who were running for the Senate) who voted for the Taft-Hartley Act were reelected or elected. Actually two of the new Senators—Mrs. MARGARET CHASE SMITH, Republican, of Maine, and VIRGIL CHAPMAN, Democrat, of Kentucky—were supported by the CIO Political Action Committee. When they were Representatives in the House, however, they voted in favor of the Taft-Hartley Act.

3. In the House, 227 Representatives who voted for the Taft-Hartley Act were reelected, while 66 who voted against the act were defeated. Only 73 who voted against the act were reelected while 135 who were elected either had not served before or had not voted either way on the act.

The score, as indicated by the people's mandate in the national election:

Senate: Virtually 2 to 1 in favor of the Taft-Hartley law.

House: 227 to 139 in favor of the law, a majority of 88. (The figure 139 is computed by adding the 66 Representatives who voted for the act and were defeated, to the 73 who voted against the act and were reelected. The 227, of course, are Representatives who voted for the act and who were reelected).

President Truman, his advisers, and the Members of Congress will represent the will of the people if they seriously consider this mandate in their deliberations on the Taft-Hartley law.

Clearly, the people want the principles set forth in the Taft-Hartley law. Just as unquestionably, some provisions of the law should be extended or altered. Management should be—and undoubtedly is—quite willing, for example, to extend the "no-Communist" affidavit to include the executive heads of industry as well as the leaders of unions which represent their employees.

THOMAS W. PARRY.

A Landlord Lock-Out

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, February 3, 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Landlord Lock-Out," published in the Pittsburgh Post-Gazette of January 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LANDLORD LOCK-OUT

A group of Tulsa, Okla., property owners have struck a blow for tyranny by threatening to evict some 600 families in protest to pending rent-control bills. Apart from shocking the Nation with a novel lock-out, their rash action could undermine that right to private ownership of property which is the fountainhead of all our personal liberties.

Of course, they don't see it that way. In fact, one of their leaders, Rev. Wallace J. Murphy—incredibly enough, a retired minister—declared: "We don't intend to serve under a slavery (rent curbs) which would take away our right to control our property." Reverend Murphy's organization, the National Association of Property Owners, is asking landlords in other cities to follow the Tulsa example.

There's nothing illegal in such action, as the stunned Federal rent director, Tighe E. Woods, has already pointed out. But it is certainly impractical, and dramatically self-defeating. Tenants vastly outnumber landlords. Even if local courts upheld mass evictions, which is highly unlikely, an attempted Nation-wide lock-out by landlords would simply result in a Nation-wide sit-down strike by tenants. And, for the duration, the right to own rental property would in effect no longer be recognized by society, the final source of individual rights.

We admit the landlords have some reason to complain that, unlike other elements in our economy, they are still under wartime regulations. Unfortunately, though, they happen to be dealing in a short-supply commodity which is susceptible to effective control and which cannot yet be restored to a free market. It's just impossible to condemn families to go roofless while supply and demand work themselves into balance.

The new Congress, we think, intends to solve this problem in the most sensible way. It will undertake a broad public housing program in order to relieve the emergency for the lowest income group. At the same time, it will control rents until the worst of the shortage has been met.

The rent laws have always provided for rent increases in cases where landlords can prove hardship, although many property owners complain that these provisions are meaningless. If that is true, they should prove their case to Congress and the public so that such injustices may be remedied in the new control bill being drafted. It is to these reasonable ends that the Tulsa landlords should direct their energies instead of vainly striking against the whole of society—and imperiling all property rights in the bargain.

Israel Is No Theocracy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. MULTER. Mr. Speaker, so much misunderstanding concerning alleged theocracy in Israel exists in this country that the editor of the National Jewish Monthly asked an outstanding Israeli author to give the plain, unvarnished facts. Prof. Joseph Patai was born in Hungary, where he was reared in a Jewish literary environment. A graduate of Budapest University, where he taught Hungarian and German literature, he founded the Zionist monthly, Past and Future, which he edited for 33 years. Since 1924 he had made annual visits to Palestine, and finally setled there, becoming a guest lecturer at the Hebrew University. He is the author of many books in Hungarian and Hebrew, for which he received the Nordau and Jerusalem literary prizes. His volume, Star Over Jordan, an English translation of his life of Herzl, was recently published in the United States.

The following article written by Dr. Patai, which appeared in the January, 1949 issue of the National Jewish Monthly, is an excellent exposition of the subject:

ISRAEL IS NO THEOCRACY—CHURCH AND STATE STRICTLY SEPARATED; MINISTRY OF RELIGION PERFORMS MANY FUNCTIONS REQUIRED BY CIRCUMSTANCES

(By Dr. Joseph Patai)

JERUSALEM.—The establishment of a Ministry of Religion—headed by Rabbi J. L. Fishman—in the Israeli Government has stirred world-wide discussion on the subject of whether the new state, forged and fashioned on democratic principles, will ultimately pattern itself along the lines of theocratic government so common in lands of the Middle East. In Israel, this problem is less real in fact than in theory. Debates crop up from time to time in letters to the press, and the topic of the division of church and state seems to provide good mental food. However, perhaps because the public is so immersed in the war and in the establishment of the state, concern on this subject is not generally felt. Maybe because most Jews in Israel are products of the education of the Western World, the general approach to the subject is that no matter how good the law of a religion is, though its jurisprudence be permeated with right and justice, its place lies in the realm of conscience and not in civil law. This does not mean that religious principles which inspired the world will be ignored in the making of Israel's laws.

GROUPS DIFFER WIDELY

Apart from this general attitude, there are important sections of the population who take firm and opposing stands on this issue. There are some irreligious people in the country whose opposition to religious law, even in the matter of personal status such as marriage and divorce (for which there was no lay law under the Mandatory regime) drove them to common-law marriages without benefit of clergy. This, in fact, was very common in the collective settlements until recent years, when it was largely abandoned because it offended the rest of the community.

On the other hand, there are extremely devout sections of the population to whom no law in Israel would be acceptable if it in any way conflicted with the 613 duties which centuries of compiled Jewish law have imposed upon the true follower. Chief among these is the Agudath Israel, a religious body so extreme as to have made political Zionism itself a heresy. Between these extremes are those of much or little faith, but whose religion or lack thereof is a personal concern which in no way affects community life.

SOME INTERNAL PROBLEMS

The internal Jewish question is but one aspect of the problem of religion in Israel. What other country, except the Holy Land, gives rise to so much religious fervor, gave birth to so many religions and sects? Even during the British Mandatory regime, differences constantly arose concerning the Holy Places. The haggling over a window pane or a foot of holy earth, if not authoritatively handled, grew into quarrels that shook Rome and Mecca and caused riots in Jerusalem. No other land has these problems and no other land therefore requires a competent authority to deal with them. No other democratic land therefore has the equivalent of our Ministry of Religion. Yet the establishment of this obviously necessary office has conjured up the bogey man. Hardly a press conference passes without this question being raised.

On the other hand, there are reports abroad which sound surprising if not alarming to people in Israel who know better. One of

these, for instance, was that because of the religious prohibition concerning the dissection of corpses, there is today no medical school in Israel! As a matter of fact the Hebrew University has been working toward this goal for many years and the medical school—all plans now having been completed—will probably open within the next year or two, on Mount Scopus in Jerusalem.

Another fear—though pure stuff and nonsense—which is expressed in some circles abroad is that one's citizenship is endangered if one does not observe Orthodox Jewish law. Perhaps assurance to these doubters can be given through a matter of far less importance: the Government's Food Control Department, while making every effort to obtain kosher products, has not hesitated also to import nonkosher frozen beef and poultry in large quantities to alleviate the protein shortage and bring down the cost of living in Israel at one stroke.

Democratic rule and the division of church and state are such accepted facts in Israel, and so subject to doubt in some quarters abroad, that I determined to interview the Minister of Religion, other ministers, and leading rabbis to discover to what extent these fears were based on reality and to hear them refuted or defended.

Rabbi Fishman, veteran Zionist who was imprisoned by the Turks during World War I for being pro-British, and jailed again by the English just after World War II for being anti-British, is a fighting rabbi with an unusually calm and moderate manner. He was probably neither pro- nor anti-British from his point of view, but his approach was actuated by Zionist welfare. Though he has battled foreign tyranny in Palestine, he has worked for the creation of the state in close cooperation with all Zionist factions since his youth. Having fought for liberty most of his life, his personal history itself is a negation of the very dangers feared in the establishment of a theocratic state. True, Rabbi Fishman would be overjoyed to see all his people faithfully in the religious fold, and he may be counted upon to do his utmost to foster this through persuasion and education. He can equally be relied upon not to force his faith upon the Jewish nonconformists.

WANT SURVIVAL OF JUDAISM

His interview left me more with a feeling that Judaism, far from being on the offensive for the creation of a theocratic state, was on the defensive to maintain its rightful place in Israel. With true rabbinical flavor he outlined this place in Jewish history and thought, in the return to Zion, and its place in a practical modern democratic state. Rabbi Fishman drew my attention to the statement which he had made to UNSCOP over a year ago. He had then emphasized the eternal tie between the people of Israel, the land of Israel, and the Torah of Israel, which were inseparable and had withstood the vicissitudes of centuries. Since the days of Joshua—3,300 years ago—the Jewish spirit had been bound to the land ordained by God. Since the Babylonian exile—2,300 years ago—Jews have prayed with their faces turned toward the light of hope that was Jerusalem. Today, with the nation on the threshold of national revival, Jewry longs for independence and liberty, free of outside pressure, within a framework of natural Jewish life and Jewish spirit. Theodore Herzl, the founder of political Zionism, though himself an assimilationist, appreciated this great religious force and put great faith in it. The Mizrachi (Orthodox Zionist) Party, which was later established, has always fully cooperated with the other parties of the Zionist organization for the achievement of the Jewish state based on traditions of high ideals.

Said Rabbi Fishman: "I wish to make it clear that there is nothing in our religion which strives to impose theocratic rule on the state of Israel. There is nothing to justify any fear of casuistry. Our scholars have always explained the duty to safeguard independent thought by the maxim—

> "Though my brother sin
> Still he is a Jew.
> Though he sin
> Yet is he a man in Israel."

I was indeed glad to hear the minister express himself in this way and thus to still the doubts which have arisen abroad.

"There is no ground whatsoever for these fears," he repeated. We will not rule the state with the power of religion, but we will use the spirit of religion to uplift our people and our land and to raise its place as a moral force among the nations of the world. We will not force our way into the private life of the individual, either by religious law or religious taxation; but we do want to see to it that the taxpayers' money will not be used against religion, or against its guardians, or keep those who so wish from fulfilling their religious duties. Our religion is replete with examples of how our fathers stood guard over the spirit of freedom, liberalism, and tolerance in every sense. What other ancient law gives a bastard full inheritance rights with legal offspring? What law places the worth of the scholar above that of kings? Even the stupid claim, bruited about abroad, that the irreligious in Israel would be deprived of citizenship has its reply in the Gemara itself, wherein it says that even if a Jew changes his religion he still remains a man of Israel."

SEEK MODERN HEBREW LAW

The minister recalled his recent statement before the state council that there was no intention to interfere with the individual but that there was definitely a wish that the state bear the character of Jewish tradition.

"We do not seek the imposition of the 613 commandants," he said; "we request that only three be recognized. The first of these is that the state shall not oblige a person to break religious law against his will, such as he might be forced to do in maintaining public services. Are not observant Jews taxpayers, too, and are they not therefore fully entitled to their freedom of conscience? Above all, therefore, we demand that the Sabbath be the official day of rest for the Jewish people in Israel. English law defines Sunday as a day of rest in 30 paragraphs. We have defined our day of rest in 10, guided by the injunction that the Sabbath law may be lifted if it involves the saving of life.

"When we demand kashrut we do not intend to snoop into the housewife's kitchen, but we do feel that state institutions should consider the feelings of the observant Jew, so that he may sit at the table, too.

"The third point concerns Jewish jurisprudence. Every nation has its typical law and we too have ours—a body of righteous and just law, compiled for us through the study of many generations. For 2,000 years we have prayed, 'Return our judges to us as in former days.' Why, then, must we now particularly hanker for British or French law? Hebrew law possesses the greatest wealth of literature in the world: over 2,000 questions and answers lay down the basis for everlasting honest judgment. Why, then, should we now follow a path paved by foreigners? I do not recommend the rejection of international law, but the source of our jurisprudence should derive from Jewish law."

It may be pertinent to remark here that the law in effect today in Israel is chiefly British law, with religious law which varies for the different religious communities applicable for personal status. While the feeling that new civil law should be based on the spirit of wise Jewish law has much to recommend it, there is considerable question of the practicability of applying laws created for needs so long ago, to conditions today. For instance, the rights of women in personal status before such law are not equal to those of men. Women's emancipation movements in Israel have long clamored for reform along these lines and undoubtedly civil laws will be enacted to give woman the equality promised in Israel's declaration of independence, so that she will enjoy rights which were not hers under the British regime in Palestine.

The Minister of the Interior, Mr. Yitzhak Greenbaum, said to me on the point of ancient law and modern needs: "Indeed, Israel's sages have always interpreted the letter of the law to the spirit of the times and to conditions prevailing in their day." As an example, he mentioned the interpretation of the injunction: "This is the Torah which men shall observe, and live because of doing so." The phrase "Live by doing so" was explained as "Will not die by doing so." In other words, life must be preserved above the observance of the law. Therefore in time of danger (illness, war, etc.) the Sabbath (or other relevant) laws may be dispensed with.

The declaration of independence of Israel stated, inter alia: "The state of Israel shall be based on the principles of liberty, justice, and peace, as conceived by the prophets of Israel; it will uphold the full social and political equality of all its citizens without distinction of religion, race, or sex; it will guarantee freedom of religion, conscience, language, education, and culture.

To this official program must be added the proposal forwarded to the Constitutional Committee of the Provisional State Council, which contains the following five paragraphs: "(a) there shall be one law for all citizens of Israel; no discrimination on grounds of race, sex, religion, or language will be allowed; (b) civil rights and equal political rights shall be given to all Israel citizens; no Israel citizens shall be discriminated against with regard to appointments to a public office or promotion; (c) the Sabbath and the Jewish festivals shall be official days of rest; the festivals of the other communities shall be recognized as days of rest for the members of the community concerned; (d) the state shall enable Jew and Arab to receive elementary and secondary instruction, each group in its own tongue and culture; no community will be impeded in its right to establish its own schools, in accordance with the general instruction regarding education which will be issued by the state."

WHAT RELIGION MINISTRY DOES

What are the present tasks of the Ministry of Religion? Three of its subdepartments deal with religious affairs within Israel; one deals with maintaining contact with Jewish religious communities abroad; two with religious affairs of the non-Jewish communities—Moslem, Christian, etc.—in Israel.

Sabbath and Jewish festivals are already the official days of rest; the feasts of other religions are already observed in Jewish occupied territory. Indeed, in Jaffa, Arabs employed by the Jewish Government enjoy two days of rest—Friday, the Moslem day, and Saturday, the official rest day.

The Ministry of Religion at present deals with the affairs of personal status such as marriages, divorce, guardianship, and inheritance, and with the reform of the laws of the Jewish community, in accordance with the moral and traditional precepts of Judaism. It sees to it that religious observance is not impaired by public services. It is engaged in giving guidance with regard to the observation of the Sabbath, the supervision of the Holy Places, the establishment of buildings for religious institutions, and it even takes an interest in liturgical music. Its tasks will be to direct and to reprove in the name of ethics, truth, and justice, and to prevent vain hatred such as caused the destruction of the Second Temple.

I called upon the Chief Rabbi of Tel Aviv and district, Rabbi A. J. Untermann, who expressed views similar to those of the Minister of Religion. "In creating new conceptions and in safeguarding the values of our Nation," he said, "it is unthinkable that the religious commandments of Israel would be imposed upon those of other faiths." And among those of other faiths Rabbi Untermann included Jewish atheists.

The Chief Rabbi of the Sephardic (oriental) community in Tel Aviv and district, took the same line of argument, pointing out also that in the affairs of his community no differentiation is made between the religious and nonreligious, both of whom lend support and give respect to their rabbi, scholars, and leaders.

Freedom of conscience, as guaranteed in the state of Israel, by its very nature obviates the possibility of a theocracy.

"The future of the Jewish people," said Mr. David Ben Burion, Prime Minister and Minister of Defense, in addressing a gathering of young army officers, "will not be based upon strength of arms, but upon development and work. We must look to the vision of our prophets of Israel, the vision of righteousness and peace, of brotherhood and brotherly love—of loving one's neighbor as oneself—for this is the precious inheritance left us by thousands of years of Jewish culture. * * * Our secret weapon is the lofty spirit of our people."

It is in that spirit that the modern democratic state of Israel has been reborn, and will grow.

Bevin Beats a Strategic Retreat on Palestine Issue

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 3, 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bevin Beats a Strategic Retreat on Palestine Issue," published in a recent issue of the Philadelphia Inquirer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEVIN BEATS A STRATEGIC RETREAT ON PALESTINE ISSUE

In his softly worded talk on the Palestine situation in Parliament on Tuesday, Foreign Secretary Bevin was engaging in what looks like a strategic retreat to prepare new positions for his anti-Israel policy.

Dispatches from London remarked upon Mr. Bevin's conciliatory attitude toward Israel and virtually had him holding out olive branches.

But his mildness may have been caused, not by any change in sentiment toward the new state, but by a desire to escape a bitter heckling from members, including many from his own party, who disagree with his Palestine policy.

Mr. Bevin adroitly averted a full-dress debate on Palestine, which probably would have caused him a great deal of embarrassment. Yet his so-called conciliatory statements were made up mostly of double talk and vague hints.

He gave the impression that British recognition of Israel was under serious discussion, but when pinned down by Winston Churchill he quickly took refuge in evasion.

What may have been a feeler in this connection was the report, denied both by Acting Secretary of State Lovett and the British Embassy in Washington, that British recognition would be tied to a new plan calling for joint United States-British policing of Palestine to guarantee agreed-upon borders.

Under such an arrangement, Britain, purporting to act impartially, would continue to be linked by treaty to the Arab states, tying our hands. Britain would be in the position of a cashier acting also as his own auditor.

The most helpful development on Palestine is not to be found in Bevin's strategic maneuvers to gain time, but in the day-to-day negotiations which the Israelis are carrying on individually with Egypt, Lebanon, and Transjordan.

The most disturbing factor, despite Mr. Bevin's polite words, remains the anti-Israeli position of the British Government, reflected in the massing of British military forces at Israel's borders at a time when peaceable agreement between Jews and Arabs, if left to themselves, seems closer than ever.

Meeting of American and Russian Officials Appears Inevitable—United States Has Muffed Chances To Negotiate End of Cold War, Says Writer

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by David Lawrence that appeared in the Washington Evening Star of February 2, 1949:

MEETING OF AMERICAN AND RUSSIAN OFFICIALS APPEARS INEVITABLE—UNITED STATES HAS MUFFED CHANCES TO NEGOTIATE END OF COLD WAR, SAYS WRITER

(By David Lawrence)

Russia wants a peace negotiation; America cannot be placed in the position before the world of refusing to talk peace. A meeting between representatives of the Soviet and American Governments at or near the top level appears inevitable.

The United States Government has muffed several opportunities to negotiate an end of the cold war, mostly because of suspicion of bad faith or propaganda tricks. The fact that a Presidential campaign was in the offing or in progress prevented any definitive conferences from being held in 1948, though President Truman did reveal his desire in that direction—namely, to get together in a conference with Stalin—when the suggestion was made that Chief Justice Vinson be sent to Moscow on a special mission.

As pointed out in these dispatches at the time, the idea was logical but the moment inopportune.

Now, however, that Mr. Truman has been elected and has a majority in both houses of Congress, the Russians know there is nobody else to deal with for another 4 years and that they had better indicate their desire for an over-all settlement before lines become further drawn and cleavages intensified to the point where negotiation to retrace already accomplished steps would be impracticable.

CUSTOMARY LINE

Those officials here and abroad or their spokesmen who put out suggestions that Russia is merely bluffing and that the Soviets do not really intend to do anything but talk are already falling back on the customary line—concrete action must be taken by Russia first to indicate a change of heart before there is a conference.

This is not only unrealistic but reveals the very blindness that has preceded the outbreak of wars in history. It ignores entirely that inside each nation there is a pride of nationalism. Under the law of nations, there is no rule requiring a sovereign power to retreat or offer a concession before entering into a negotiation.

Stalin has brought into the open the real question at issue for several months. It really never was the Berlin blockade or the currency problem. All this was simply a phase of Russian reprisal against the determination of the Western Allies, with their three-zone economy, to go ahead without waiting for Russia to come to an over-all agreement on major problems with them.

Now Stalin says everything can be settled amicably and the blockade lifted if the Western Powers will agree to a big conference looking toward an over-all settlement of the whole German problem. This, of course, is not enough. There must be a settlement of issues in the Far East, too, and an assurance of cooperation in working out the many residual problems growing out of the war and which may take many years to solve.

It would be oversimplifying the situation to assume that a mere talk by the two heads of state would settle everything. Stalin knows this as well as do those Americans who discount the value of a meeting. A conference between Stalin and Mr. Truman would merely be window dressing for a real negotiation by their respective subordinates, but it's window dressing of the highest importance.

If Russia really wants to make progress toward a settlement, the thing to do is to set a date 6 months hence for a Truman-Stalin meeting, with Russia authorizing her deputies and ambassadors or special envoys to meet with similar representatives from the United States, Great Britain, and France to do the exploratory and preparatory work so that clear-cut statements of the respective positions can be drawn up in the meantime.

COULD CONFER IN ALASKA

By July the weather in the north Pacific will be pleasant. A conference somewhere in Alaska could be the mutually acceptable place to which Stalin referred in his published statement this week. Stalin could come to the edge of Siberia and Truman to the edge of Alaska. Huge airplanes could transport the participants and their staffs back and forth to their respective bases, and some conferences could be held on Russian soil and some on American territory.

There would then be no humiliation or appearance of overstepping the amenities such as is supposed to have blocked a meeting heretofore. Mr. Truman has said he would meet Stalin in Washington. Presumably he would be agreeable to meeting the Russian Premier anywhere in United States territory, and Alaska happens to be near enough to Russian territory to eliminate false issues of pride.

If the north Pacific isn't agreeable, Mr. Truman could invite Premier Stalin to meet with him in the Persian Gulf on a United States battleship or aircraft carrier. This would still be United States territory. The American people would not regard such a journey by Mr. Truman to far-off waters as too big an inconvenience if there were really a chance to make an over-all peace settlement. But such a meeting should follow

rather than precede exploratory conferences so that the world will not witness again a mere statement of principles with hopes expressed in high-sounding phrases and with details that are major questions still to be resolved.

Russia has taken the initiative. America should not hesitate to answer in kind and endeavor to bring about a meeting of minds.

Private Power Companies Seek To Control Prices

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. POULSON. Mr. Speaker, under the guise of aiding farmers, the utility companies of Arizona are lobbying to raise the rates of all new low-cost public power to the rate level for privately produced power.

These private companies are contributing money to promote a fantastic billion-dollar Arizona reclamation and power scheme. This is the proposed central Arizona irrigation project. It would provide water for a few thousand acres of privately owned land at a cost to the Nation of $1,400 to $2,500 an acre.

In addition to enormous pump lifts, dams, reservoirs, and hundreds of miles of tunnels and canals costing three-quarters of a billion dollars, the proposed project calls for construction of Bridge Canyon Dam, on the Colorado River, several hundred miles from the land to be irrigated, at a cost of more than $265,000,000.

This dam would produce power for commercial sale, mostly in southern California, and for pumping water over mountains to the Arizona project. It would be strictly a power dam, and without its revenues the entire project would be totally infeasible under Federal reclamation laws.

The proposed Arizona project would drain off one-third of Bridge Dam power, which would be vitally needed for national defense and domestic and industrial use. This third of Bridge power would be used to pump water into Arizona and is equivalent to 2,500,000 barrels of oil annually, or 8,000 tank cars a year.

Under the scheme of the Arizona power companies, by raising the rates for Bridge power to private power rates the following would be accomplished:

First. Additional revenues would be secured, and these revenues would be used to pay the irrigation costs of the Arizona project;

Second. Arizona private power companies would live comfortably, undisturbed by competition with public power. Any cooperative or municipal power system buying Bridge power would have to pay the higher rate, which would ease competition for the private companies;

Third. Arizona water users would have a great project at little cost to them, a project they could never have paid for themselves.

The Arizona scheme is shrewdly designed. Arizona power companies have urged Interior Secretary J. A. Krug to base rates for power produced by new Federal projects on the market value of the power at the distribution center. That means, at the private power rate in the area in which the public power is to be consumed.

The following private power companies signed a petition to Krug in support of the scheme: Arizona Edison Co.; Central Arizona Light & Power; the Arizona Power Co.; the Tucson Gas, Electric Light & Power Co.

The latest scheme of these private Arizona companies was advanced in connection with the pending assignment of power from the new Davis Dam, now being built by the Bureau of Reclamation on the Colorado River. But the plan reaches far beyond Davis Dam and embraces all new public projects now building or proposed.

This is what the Arizona power companies wrote to Krug:

> In order to assist the users of water in securing authorization for future irrigation projects, the costs of which are beyond the ability of the water users to pay, we urge you to adopt a schedule of rates which will be based upon the market value of the power at the distribution center. The difference between the value of the power and its cost as computed under the basic reclamation law could be used to apply upon the irrigation and other portions of the project cost.

The Arizona power companies quote from the 1947 annual report of the Interior Department as follows:

> There are few, if any, irrigation projects remaining to be developed in which the water users will be able to pay the full irrigation costs. The irrigation costs in excess of the water users' payments must be paid in power.

This is what Secretary Krug once termed "a sales tax on power." The legality of such a sales tax is another matter.

Referring to the above quote, the Arizona power companies wrote Krug:

> With this we are in full accord. However, we do believe that power should be sold at the distribution center at a price equivalent to its market value. * * * Such a policy would result in the Government securing revenues in excess of those which it would secure if the price of the power was determined by its cost computed according to the formula in the basic reclamation law. Under this procedure the difference in price between value and cost could be applied to the irrigation portions of the project.

That is the heart of the scheme by which the private power companies hope to live comfortably at the expense of the American taxpayers.

The proposed central Arizona project, which the Arizona power companies are supporting, would take enormous amounts of Colorado River water that California and Nevada now claim under contracts with the Federal Government. Thus, a serious controversy exists between the States, and until that controversy is settled by the United States Supreme Court, there can be no assured water supply for the project.

Yet, in the face of this situation, and in opposiltion to the Federal Power Commission, the Arizona power companies are supporting a scheme to have the United States invest a billion dollars of the taxpayers' money in the proposed project.

The scheme is consistent with Arizona's past performances. For more than a quarter century the Arizona party line has been to charge for Colorado River power all the traffic will bear, and to make California pay the freight.

California, as a public power State, has fought to bring power to all the people of the West at the lowest cost consistent with sound business principles.

For years Arizona power companies have sought to gain at least indirect control over power produced on public projects.

Arizona fought for higher rates on power produced by Hoover Dam, the pioneer in the public power field.

As far back as 1923 a bill was introduced in the Arizona Legislature requiring the payment of $5 to the State for every horsepower produced by any public project on the Colorado River, the greatest source of hydroelectric power in the Southwest.

This bill was aimed at Boulder—now Hoover—Dam, not then built; and it was intended to make the measure a part of the historic Colorado River compact. The bill called for the $5 payment in perpetuity. It would have brought Arizona more than $9,000,000 annually, which would have been saddled on the people of California who contracted to pay, and are paying, for Hoover Dam. Arizona paid nothing for the construction of Hoover Dam, but demanded an immense revenue.

Both the Arizona House and Senate passed bills, but differences in them could not be reconciled. The result was that Arizona did not adopt the Colorado River compact at this time, although the six other Colorado River Basin States had ratified the compact. Arizona held out for a dog-in-the-manger royalty until 1944, and did what it could to halt development on the river.

Without Bridge Canyon Dam, for which the public must pay, the proposed central Arizona project could not be built.

Without using money derived from the commercial sale of Bridge Dam power, the project could not be built. Not only must Bridge power pay for dams and power plants, but it must pay the entire cost of the 320-mile aqueduct to the Arizona project. The people in Arizona who will get the water pay for none of this.

Here is what Nelson Lee Smith, chairman of the Federal Power Commission, told the Bureau of Reclamation about Bridge Dam:

> The commission staff * * * points out that the Bridge Canyon project and its two auxiliaries, Bluff and Coconino Reservoirs, have no essential physical relationship with the central Arizona diversion project. These reservoirs are not needed to regulate the flow for the central Arizona diversion, nor would the Bridge Canyon power plant necessarily be the only source of power available for pumping (for the proposed project).
>
> The only relationship between the three reservoirs as a group and the diversion project appears to be the assumed financial relation in order to provide means for repayment of a large percentage of the reimbursable costs of the diversion project chargeable to irrigation.

Chips Piled on Table—Diplomatic Gun Game Can't Continue—United States Should Hear Russian Peace Offer

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Thomas L. Stokes that appeared in the Washington Evening Star of February 2, 1949:

CHIPS PILED ON TABLE—DIPLOMATIC GUN GAME CAN'T CONTINUE—UNITED STATES SHOULD HEAR RUSSIAN PEACE OFFER

(By Thomas L. Stokes)

We very likely have the only atom bombs in the world, and we certainly have the biggest ones, according to the Atomic Energy Commission's annual report to Congress, which also reveals that we are producing more and bigger ones all the time.

In short, we are well-stocked on bombs.

For a day or two we read about that in the newspapers and heard it over the radio. But that was just one item. When you stop to consider it, the American newspaper reader and radio listener today lives in a veritable din about implements of war, faster and faster war planes, rocket ships, and the like. Generals and admirals make speeches and give out interviews about the need of more and bigger of everything, and about high strategy to meet this or that possible thrust of the enemy.

DRIFT FROM COMMON SENSE

It's news, and that's the frightening part of it. We are letting ourselves drift into a dangerous state of mind almost without being aware of it. A fellow takes a chance to raise a whisper about peace.

It is, for instance, considered very naive in some quarters, if not actually that now horrid thing appeasement, to suggest that our Government should take up seriously the last of several overtures in the last few months from Prime Minister Josef Stalin, of Russia, for negotiation of our many differences.

That shows how far we've wandered from American common sense.

It is, we are told, just another move in the Russian game to trick us and deceive us, and maybe it is. But we've both been playing a vast poker game for some time now. Russia shoves in Poland, Rumania, Czechoslovakia, and Berlin crises, and we push forward with Greece and Turkey and the Marshall plan and now the Atlantic Pact, and, between times, set off a bomb or two in the Pacific just to see how good we are getting at that.

The chips are stacked up high on the table, and so is the pile of guns underneath our respective chairs—ready for the quick draw.

That game can't go on forever.

It is said that the latest peace offer of Premier Stalin is aimed at the projected Atlantic Pact, that thereby he hopes to stop that. That diagnosis may be correct. That proposed alliance of western powers, coupled with military supplies from us, probably looks no nicer from the other side of the iron curtain than Russia's moves look to us on this side. But her previous moves have not stopped us. We don't have to give up that or anything else to sit down and talk.

It might possibly be that our persistence finally has had its effect in high places in Russia, and now they are willing to talk business.

WE LEAD FROM STRENGTH

It is said that you can't trust Russia. That has been said over and over so much that it gives the impression at least that we don't think we are clever enough to sit down and negotiate, that we really don't trust ourselves. That can't be true. Constantly cited are other conferences, Yalta and Potsdam among them, in which it is said glibly that we were badly outsmarted. It is difficult now to place ourselves back in situations in the midst of war and make any true judgment.

We have plenty of good diplomatic brains. And we lead from strength, for we are the strongest nation in the world today. We are so strong that we can afford to make the simple gesture of accepting the invitation for negotiations, either at the highest level or lower, whichever is most practical. In fact we are so strong that we cannot afford to refuse, for the stake is the peace of the world.

It is a matter of pride at least to this newspaperman that the way has been opened by newspapermen, for this latest interview procured by Kingsbury Smith, of International News Service, follows another similar one last year that was secured by Eddy Gilmore, of the Associated Press, both of whom are well known among Washington newspaper correspondents.

Newspapers and press associations consider it quite a feat to interview someone like Joseph Stalin, but these are more than newspaper feats in their significance. They represent newspaper enterprise in the best sense of public service in that they truly symbolize the desire of the people of the whole world for a just and honorable peace.

Veterans' Pensions

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a letter from a highly esteemed friend of mine, and a veteran of World War I, Mr. T. W. Iiams, of Sidney, Iowa. I feel the suggestions which Mr. Iiams makes in this letter deserve full and serious consideration by the proper committee of Congress, and every Member of Congress, in order that plain justice may be done.

SIDNEY, IOWA, *January 27, 1949.*

Hon. BEN F. JENSEN,
Member of Congress, Seventh Iowa District, Washington, D. C.

DEAR BEN: I see that hearings have begun on the pension bill and this reminds me that I have slant on this question which, to my knowledge, has never been adequately considered by those who drafted veterans' legislation.

In these latter years the veterans of World War I (there are a great many of age 60 or over) are having as their chief difficulty the matter of sufficient employment. Even though a few of these men are still fairly healthy and really able to hold a position or a job, nobody seems to want them. In the case of the larger majority of them, they are not able to obtain and keep sufficient employment (day labor is all they know) to give them more than the barest kind of an existence, which could not be called living, and in many cases not that much, if they did not have the support and help of younger and more fortunate relatives.

I saw active combat service with the Texas-Oklahoma, or Ninetieth Division, in World War I. Have seven gunshot wounds but draw no compensation. As a member of the American Legion, I have never been one to differentiate between those members of the Legion who saw battle service and those who did not, but—

In regard to the matter of pensions for veterans of any war, it is my opinion that there should be a differentiation in the ages at which the veteran becomes eligible for pension. I base this opinion on the fact that for the past 30 years I have been actively associated with veterans' claims and their many troubles and difficulties. As a service officer of the American Legion since 1919—and putting in full time at it—I have gleaned a lot of experience and a thorough knowledge of the average veteran's personal problems through actual contact with them and in knowing them and their circumstances first hand. From all this, I gather that if a man saw combat service, even if for only a day or two, it is very possible that this actual battle service shortened his natural life by at least 5 years. If the age for pension eligibility is set at, say, 60 years of age, the veteran who saw combat service should be set at 5 years less, or at age 55. I think this phase of the pension question is of paramount importance and that it has never been adequately considered. Records will show that all too many men of World War I have died or will die without benefit of pension to smooth their last years unless some legislation for this relief is passed—and quickly.

If one consults the figures put out by the Veterans' Administration, it is found that the combat serviceman has always been given the "short end." A smaller percentage of those men who saw combat service draw compensation than of those who saw none; also, the man who saw combat service is drawing, on the average, less compensation than one who saw no combat service. Many of us have seen this working out in our daily life, but few of them are in a position to make their needs known in quarters where it would help, and it is the purpose of this letter, in speaking for them, to say that we would like to see some changes made which would give the combat veteran a better break than he is getting now, even according to the Veterans' Administration's own figures.

The matter of setting the ages at which a veteran becomes eligible for pension is one way of equalizing the present disadvantage of him who really "has borne the battle."

I am aware of the argument advanced by some that the combat veteran and the noncombat veteran both served in obedience to orders from the Government. That neither had anything to say about where he was to serve and therefore they should all be treated alike. As far as the American Legion membership eligibility is concerned, I have always agreed, and still do—but I also believe that if a government order sent a man to the post of excessive hardship, as well as constant danger—that man deserves a little more consideration from his government in the matter both of a disability compensation and pension than he is now getting.

I hope that your future efforts will be forcibly directed to the correction of this status quo to the end that the combat veteran will get the better break which he has so long deserved but which he has never

had. Thanking you for your interest in matters of veterans' legislation in the name of many whom I have served, I am,

Yours sincerely,

T. W. IIAMS,
Adjutant, American Legion, Sidney, Iowa.

Resolutions of Twenty-third Women's Patriotic Conference on National Defense

EXTENSION OF REMARKS
OF
HON. JOHN S. WOOD
OF GECRGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

RESOLUTION 25, ADOPTED JANUARY 29, 1949
COMMENDATION OF CONGRESS

Resolved, That the Twenty-third Women's Patriotic Conference on National Defense commend the action of Congress in citing for contempt the script and scenario writers who refused to answer questions of the House Committee To Investigate Un-American Activities as to whether they were or had ever been members of the Communist Party.

RESOLUTION 20, ADOPTED JANUARY 29, 1949
REQUEST FOR UN-AMERICAN ACTIVITIES COMMITTEE REPRINTS

Resolved, That the Twenty-third Women's Patriotic Conference on National Defense request the Congress of the United States to print 1,000,000 copies of the following six booklets:

One Hundred Things You Should Know About Communism in the U. S. A.
One Hundred Things You Should Know About Communism and Religion.
One Hundred Things You Should Know About Communism and Education.
One Hundred Things You Should Know About Communism and Labor.
One Hundred Things You Should Know About Communism and Government.
The Communist Party of the United States as Agents of a Foreign Power.

RESOLUTION 24, ADOPTED JANUARY 29, 1949
UN-AMERICAN ACTIVITIES COMMITTEE

Whereas recent events have demonstrated that national security requires full cooperation from the Chief Executive and the Attorney General in releasing information (other than top military secrets) to congressional committees:

Resolved, That the Twenty-third Women's Patriotic Conference on National Defense petition the House to retain and strengthen the House Un-American Activities Committee and grant the committee ample funds to carry on its important work in exposing the obstructionists and enemies within our ranks; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Secretary of Defense and to both Houses of Congress.

RESOLUTION 22, ADOPTED JANUARY 29, 1949
OUTLAW THE COMMUNIST PARTY

Whereas the spread of communism is increasing throughout the world and is becoming more evident in our own country: Now, therefore, be it

Resolved, That the Twenty-third Women's Patriotic Conference on National Defense urges Congress to enact legislation to outlaw the Communist Party in the United States.

Michigan Veterans' Organizations Oppose Veterans' Administration's Program for Abandoning Plans To Erect Hospitals in Michigan

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. SADOWSKI. Mr. Speaker, I am receiving hundreds of letters from Michigan organizations protesting the recent action of the Veterans' Administration in abandoning plans for the construction of needed hospitals in the Michigan area. The Veterans' Administration is now insisting on sending Michigan veterans hundreds of miles from home for hospitalization and medical care. This is unfair to both the sick veteran and to his family. Most of these families cannot afford to travel hundreds of miles from their home State to visit their sick sons or husbands. Hospitals should be constructed within a reasonable distance from the homes of the veterans and their families. Because of the greed and logrolling tactics practiced in the past, some hospitals have been built away out in the sticks where it is both difficult and inconvenient to obtain doctors and hospital attendants, and now the Veterans' Administration is trying to penalize the heavily populated areas by abandoning those projects which were previously scheduled for construction and is insisting that these out-of-State hospitals be occupied.

I believe that all the Congressmen from the Middle West, regardless of party, will unite in opposition to this unfair and discriminatory program of abandonment that has been recently announced by the Veterans' Administration. Many Michigan veterans are being compelled to forego hospitalization and medical attention because they cannot obtain admission to a veterans' hospital near their homes.

I wish to include a resolution that was passed by the Allied Veterans Council. The council is made up of representatives of the following veterans' organizations: United Spanish War Veterans, Veterans of Foreign Wars of the United States, American Legion, Disabled American Veterans, Red Arrow, Polish Legion of American Veterans, Jewish War Veterans of the United States, Military Order of the Purple Heart, Canadian Legion of Wayne County, Yankee Division Veterans Association, Canadian Corps Association, Polish Army Veterans Association, Marine Corps League, Regular Veterans, Polar Bears Association, Rainbow Division, AMVETS, Catholic War Veterans, Army of the Philippines:

Because of numerous complaints being made to the national headquarters of the Disabled American Veterans on the lack of beds in the Veterans' Administration hospitals located in various parts of the country, it has been established that there is an immediate need for additional VA hospitals.

The delay in their building is bringing pain, misery, and death to hundreds if not thousands of American veterans. So-called nonservice-connected veterans of World War II with far-advanced, active TB are on the waiting lists. Medical authorities have admitted that undoubtedly many of them will be dead before a bed in a Veterans' Administration hospital is available to them.

Many of these young veterans have splendid war records with history of combat with the enemy and months or years of exposure in both the European and South Pacific theaters of war.

In one great city known to the national headquarters of the Disabled American Veterans, it is a crime to have TB and not be hospitalized and under medical care. There are no beds available for the non-service-connected active TB in the Veterans' Administration hospitals in this city or in the State or county institutions, so some of America's war heroes have been placed in the workhouse under lock and key like common ordinary lawbreakers or bums.

Following World War I, many of our war disabled were in similar situations. Hospitals not being available, disabled veterans were placed in buildings that had previously been condemned. These buildings were not fit for occupancy of healthy people but were used by the war disabled.

Is this condition about to be reenacted? There is a desired and established need for additional beds in the Michigan area. The VA's latest program that called for the abandoning of the plans to erect hospitals and provide additional beds in the Michigan area is tragic. A veteran of World War II contacting TB in Michigan must be hospitalized in other States because no VA facilities are available.

Michigan has over 600,000 World War II veterans and a large number of these men were disabled. The plans for a tubercular hospital in the city of Detroit were hailed by the organized veterans as recognition by the Government of a long overdue hospital for this type of patient.

The VA hospital in Grand Rapids was likewise recognized as a very essential feature of the VA hospital building program. Now plans for the erection of these two hospitals are to be discontinued.

The vast majority of veterans believe in the Marshall plan. As a matter of fact it has been stated that the Marshall plan began with the ordinary GI sailor or marine passing out food from his own mess kit to the starving kids in his area and no questions were asked whether they were friend or enemy.

The Marshall plan will undoubtedly continue to receive the support of all Americans who need no instruction in the principles of brotherly love and human kindness, charity, and American fair play, when it comes to our treatment of friend or enemy.

But what the average American veteran cannot understand is why the milk of human kindness is extracted from the reports and findings of so-called American institutions and boards that appear to be interested in the welfare and future of America, including the veterans of America's war, to whom this Nation owes so much. Were it not for the courage and sacrifice of the American veterans, including those seriously ill and who cannot obtain admission to a veterans' hospital, it might be a far different group studying

and planning the economic restoration of what was once the United States of America.

The organized veterans are pleading for their disabled buddies who were once able defenders of our country in time of war, and urge that the same spirit of human kindness and Christian charity that permeates the Marshall plan be extended to them. Because of the above conditions: Be it

Resolved, That the Allied Veterans' Council, Inc., of Wayne County, urge our Congressmen and Senators to exert their best efforts in restoring the plan for the erection of the Tubercular Veterans' Hospital in Detroit and the General Veterans' Hospital at Grand Rapids; and be it further

Resolved, That our Congressmen and Senators be urged to vigorously oppose any reduction in the number of beds originally planned by the Veterans' Administration; and be it further

Resolved, That a copy of this resolution be sent to our Congressmen and Senators for their information and action.

Protect Our Natural Resources

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following radio address I delivered on WMEX, Boston, Mass., on February 3, 1949:

Ladies and gentlemen of the radio audience, during the 1920's we pillaged our own natural resources.

In the 1930's we neglected them.

In World War II we spent them with a lavish hand to help our allies as well as ourselves.

The time has come for us to take stock of our depleted reserves, so that our children will not fall heir to an empty heritage.

The true wealth of the United States consists of its human and natural resources.

By human, we mean the energy, spirit and brain of our people, released in full by the freedoms we enjoy.

By natural resources, we mean the 6 inches of fertile topsoil, the vast mineral resources deep underground, the dense stands of lofty timber, the surging power of our turbulent rivers.

Three hundred and twenty-nine years ago, when the first settlers stepped ashore at Plymouth, Mass., a great and virgin continent stretched before them.

The handful of colonists has grown to a mighty nation of one-hundred-and-forty-odd-million people.

The pace of our development has been so rapid that we have counted only the gains and not the losses.

But, like the prodigal son, we can overspend and wake up some day to find that we have nothing.

At the beginning, this Nation was blessed with resources which seemed to be without end.

And so, Americans cut timber without replanting it, farmed the land without replenishing its fertility, and dug minerals from the earth wastefully.

With the prospect of new lands, new forests, and new mineral reserves to the west, the pioneer applied the ax, the pick, the saw, and the match to priceless resources.

When he had taken everything that he could, he moved on a little further to the West, repeating the process, and never thinking of the despoiled land he had left behind.

Finally, he reached the Pacific Ocean.

The days of take-and-move were over.

He had to settle down and learn the tasks of good husbandry.

He had to give to nature as well as take from it.

Facing the facts, as he must do today, he perceives the ruin which has accompanied his growth.

Outside of the great and imposing cities and flanking highways is the price he has paid.

America has used up 80 percent of its virgin timber reserves, has lost one-third of its life-giving topsoil which is the equivalent of 140,000,000 acres of tillable land.

We have dug up the cream of our mineral resources and must go deeper and deeper into the earth to supply our needs.

Mineral reserves, especially those of a strategic nature in time of war, have been disappearing at an alarming rate.

This process was speeded up during the all-out efforts of World War II.

We passed our peak as a mineral producer in 1943.

To counteract this dangerous trend, we need to discover new mineral fields through a Nation-wide geological survey, and by improving our methods of extraction.

In this way, we can use minerals from fields which it doesn't pay to mine under present conditions.

We must search out new uses for neglected minerals and develop substitutes for minerals which are in short supply.

Unless we learn to conserve and bring back blighted areas into production, we may face the future of a China; a sprawling land without soil enough to properly feed its people; a nation plagued by destructive floods and civil strife born of its man-made poverty.

In the United States, the destruction of the cover crop allows the rains to wash off into the rivers.

Meeting with other swollen streams, they rage down river valleys, destroying people and property in their path.

Once we associated freshets with the spring.

Now they threaten us—even in January.

Every one of our major rivers has been in flood during the past 20 years, and many are flooded more than once each year.

Two million acres were flooded in the Ohio in 1937.

Five million acres were flooded in the Missouri Valley in 1947.

The loss in crop and property value in this last flood was one-half the total cost of the Tennessee Valley Authority which, among other advantages, has removed the danger of such disasters in the TVA region.

Since 1903 floods have taken more than 5,500 American lives.

But the real cost cannot be measured in terms of property damage and lost lives alone.

The real danger is in the destruction of the basis for future life.

The Columbia River flood of last year swept enough soil into the sea every day to cover 44 farms, each 80 acres in size, to a depth of 6 inches.

Millions of tons of this precious topsoil, which is the basis of our food production, are swept away every year.

Even in Massachusetts, which up to a few years ago considered itself immune to such dangers, the flood problem has become acute.

Gov. Paul Dever, with commendable foresight, is asking the legislature for a $2,000,000 appropriation to save the homes and factories in the western part of the State from a repetition of the December floods which caused so much damage.

While recognizing that this is an interstate matter which comes under the Federal Flood Control Act, he feels that this is also an emergency situation about which Massachusetts must do something without delay to protect the property and lives of its citizens.

And the pity is that this same waterpower which tears our topsoil away from the land is the same force which, if harnessed to a network of giant dams, could provide the energy to bring better life to all Americans.

Almost every section of our country is face to face with a power shortage.

This is a temporary roadblock in the way of an expanding America.

It is almost impossible for a private power company to assume the complete development of a river running through two States.

The cost is too much, and there are other aspects of river development, such as flood control, reclamation, and control of pollution, which are the proper concern of government.

But the private power companies stubbornly oppose our efforts to utilize the complete hydroelectric possibilities of our waterways.

Neither they nor their investors should fear such progress.

As one who sponsored the bill calling for a Merrimack Valley Authority, among other such projects, I assure you that public power and private power can work together as a team for the general welfare.

Our legislation clearly provides that electricity from Government-built dams will be sold to existing power companies on the same terms as to the State, municipal, and rural electrification authorities.

Private power companies, with their extensive and interlocked transmission systems, are able to distribute and sell electricity more efficiently and cheaply than any Government agency.

Their facilities for so doing are already in existence.

The point is, however, that they will be able to give the people more power at less cost if they can buy such power from the Government.

The Government can manufacture it more cheaply than they can, as part of its over-all river-basin program.

Such cooperation can save the migration of industries from Lawrence, Lowell, and other manufacturing centers to those sections of the Nation which now provide low-cost power in sufficient quantity.

Since 1920 the use of electricity has doubled three times.

With the number of new users mounting rapidly, and use per capita rising just as fast, we face the prospect of brown-outs in many areas.

Any increase in energy resources must come from hydroelectric generators.

It is a fact that other primary sources of power, like oil and coal, are rising in cost and are frequently in short supply.

Hydroelectric power, on the other hand, is almost limitless.

As long as we have sun and air and rain, our rivers can provide constant sources of energy to do the work of man.

We cannot take pride in the fact that we allow our great rivers to continue as instruments of destruction instead of servants of the people.

In short, we need a sound policy for our river basins.

Such a program will protect the cover crops which nature provides to cushion the falling rain, to store this rain in reservoirs, and then send it over parched lands before allowing it to escape to the sea.

We must control the flow of our rivers to prevent floods, and direct this water through turbo-generators over and over again to extract the last measure of horsepower from it.

Look at the worn-out and abandoned farm land in New England.

Then consider the steady increase in our population.

Since it requires 3 acres of crop land to sustain each American at present living standards, it requires 3,000,000 additional acres brought under cultivation each year if we are to maintain this standard.

Instead of which, we are destroying—Nation-wide—500,000 acres every year.

Thus, the net marginal loss of crop-land resources over population demands is 3,500,000 acres every year.

Consider, also, the rising living standard of the American people.

Each of us is eating one-fifth more meat, one-third more eggs, and one-fourth more milk than before the war.

There are similar increases in other health-producing foods.

This is desirable and it is also proof of the soundness of the American way of life.

But, in the absence of a proper conservation of our natural resources, this progress will be endangered.

Recognizing the problem, President Roosevelt introduced on a regional scale the integrated approach to resource management.

Called the valley-authority approach, it established a Federal coordinating agency.

This controls water use through many-purpose projects, planned along lines of natural economic units, namely, the great river basins.

The TVA became a fact.

Here, in this once blighted area, many thousands of acres of wasted land have been brought back to fertility.

The raging waters have been controlled, harnessed, and hydroelectric power has been developed on a scale never dreamed of by private enterprise.

This power has been put to use for man at the lowest price in the history of the region.

The health, wealth, and the happiness of the people of the valley have reached an all-time high.

TVA increased the use of electricity in its area from far below the national average to 60 percent above the national average.

From 1945–47, 20,000 small business enterprises were established in the valley, even while New England was losing some of its manufacturing units

TVA has bettered the health of the region.

Its anti-malaria program has dropped the rate from 10 percent to less than one percent.

TVA has bettered the school system by research grants to local colleges.

The TVA has been hailed as the outstanding achievement of any government at any time.

Its principles have been adopted by countries throughout the world.

Investigations are developing plans for a Yellow River Authority in China, a Danube Valley Authority in Southeastern Europe, and many other regions hope to apply the lessons of America's outstanding experiment in river control and use.

That is, all except New England.

Take the Merrimack River.

I have spoken to you before concerning its undeveloped power possibilities.

Tonight I want to speak briefly about another and sinister phase—its pollution.

Last fall, the voters of those cities and towns which are drained by the river—rejected a State referendum designed to assess these communities for the purpose of financing a river-cleanup program.

The voters were right, for the cost was prohibitive . . . and the plan would only clean up part of the river.

But the problem remains, and it is a serious one.

In the city of Lawrence, for instance, where the accumulation of industrial and human waste almost reaches the saturation point, textile and paper mills line the banks of the river.

And yet, according to a report of the National Resources Board, the industries which are greatly bothered by serious water pollution include textiles, pulp and paper, etc.

The health of many communities is endangered during periods of low stream flow.

The river is always fed by murderous chemicals from sewers and factories.

Are we taking proper care of our natural resources?

Look at the river which runs through your industrial city and ask, isn't it time we did something about this danger?

And the inescapable answer is that only an over-all integrated program with Federal help can control a river basin in the public interest.

For flood control, for reclamation, for hydro-electric development, for every sound economic reason, and for our health and our lives.

National Theater

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. JAVITS. Mr. Speaker, there is appended editorial comment by Brooks Atkinson, of the New York Times, on the proposal contained in House Joint Resolution 104, for the information of the Members:

[From the New York Times of January 30, 1949]

(By Brooks Atkinson)

Sooner or later the theater people of the United States may have to decide just exactly what a national theater is. Representative JACOB K. JAVITS, of New York, has filed a bill that puts the responsibility of devising a national theater, opera, and ballet on the shoulders of professional practitioners of these arts. Senator IRVING M. IVES, of New York is sponsoring the same bill in the Senate.

Although we Americans are constantly taking bows for our wealth, enterprise, and virtue, we are the only first-class nation that does not recognize art as an integral part of national life. England has been scraping the bottom of the barrel of its resources for some time, but the British Government helps to support the Old Vic and Sadler's Wells and helps to subsidize the National Arts Council, which stimulates and assists artistic projects in Great Britain. Only the other day Parliament gave a second reading to a bill to provide $4,000,000 toward building a national theater structure in London. Parliament fights about nearly everything, but the proposal to build a national theater is one thing that nearly every member of every political group approves.

GOVERNMENT IN ART

Apart from the Federal Theater, which was an emergency relief project, we have never regarded the support of art as a legitimate function of government. Ever since colonial times we as a people have been suspicious of a central government and contemptuous of its group intelligence. Culturally we have never completely outgrown the latter day nineteenth century attitude of regarding art as a respectable and harmless diversion that rich people magnanimously patronize, thereby acquiring some good marks redeemable in heaven. Art has not yet been absorbed into the democratic way of life.

The attitude is medieval. But it is also embarrassing in our participation in UNESCO, which is an international organization set up on the assumption that every nation has official cultural representatives competent to take part in international projects. One of UNESCO's subprojects is the International Theatre Institute, designed to promote the exchange of plays and companies and to apply to the theater the enlightened point of view already accepted in science and trade.

Although our theater is one of the most stimulating in the world, we are the only first-class nation without a Government agency qualified to send an official theater delegation to a meeting of the ITI. Last summer the State Department got around the dilemma by sending Rosamond Gilder and Warren Caro to Prague as observers.

It costs less than $10,000 a year to maintain an American branch of the ITI. But there is no Government agency authorized to accept responsibility for this cog in the international machinery; and ANTA, a good-will organization so poverty-stricken that it cannot afford to pay the rent on its own headquarters, has saved the Government's face by agreeing to finance the branch of ITI here. In politics, science, and trade we are one of the most powerful nations of the world. In the sphere of cultural relations we rank with Monaco.

PROPOSED CONVENTION

These matters of international prestige are not of first importance. But theater, opera, ballet, and the public arts of performance vitally affect the culture of our people, who certainly ought to have as convenient access to the arts as the Russian people have. Representative JAVITS' bill proposes that, at the expense of the Government, the President call a convention of theater, opera, and ballet people to draw up plans for national institutions of their respective arts.

The theater panel would include representatives from Equity, Dramatists Guild, League of New York Theaters, the craft unions, ANTA, National Theater Conference, American Educational Association, Drama League, and all groups of people working at theater in the United States. Their first job would be to plan a national theater free of bureaucratic control and designed according to democratic principles. The next step would be for Congress to review the plan, accept it if it turns out to be satisfactory, and vote the authority and funds to sustain it. Opera and ballet panels would work in the same fashion.

If Representative JAVITS' bill is passed by Congress, the thousands of people working at theater all over the country will have to make up their minds as to what a practicable national theater is, and this is a very neat problem in itself. For the theater in every part of the country, including the commercial theater of Broadway, needs help; but the commercial, regional, university, community, and independent theaters have very little in common, have different problems and points of view, different kinds of audiences and different standards.

TOURING COMPANIES

No doubt there should be a theater building in Washington, where there is none today—another instance of our cultural backwardness. But a building is the least essential part of a theater, which is an organization of actors and artists working together for the performance of plays. And the basic problem would be how to make such organizations available to the entire country at prices low enough to suit the pocketbooks of the great mass of the people.

Before the war Robert Sherwood had a plan for establishing a national theater by sending about five touring companies around

the country to 1-night stands with a balanced annual program of classics, musical plays, current plays, and revivals. That was an excellent and enlightened plan—practical and comprehensive, but it became one of the first casualties of the war.

As a matter of fact, there is the nucleus of a national theater already in existence—the American National Theater and Academy (ANTA), chartered by Congress in 1935 but never seduced by the appropriation of funds. Considering its poverty and the generalized comprehensiveness of its plans, ANTA has made heartening progress in the last 3 years. It has become a central clearing house for information and services for theaters throughout the country, and it is the only thing approaching a general theater center in New York.

ANTA'S PLANS

What ANTA is doing now with quiet desperation on nickels and dimes ought to be one of the essential services of a publicly endowed national theater. But ANTA's main plan is one of subsidizing regional professional theaters throughout the country, using as a nucleus those already in existence, but helping local groups everywhere to establish others. This is obviously a sensible approach to the problem. But it has the disadvantage of being diffuse and general. It would be prohibitively expensive for a privately supported institution and would require a powerful central organization with authority to maintain artistic standards. For a national theater must represent first-rate professional work.

From the point of view of the country as a whole, ANTA's plan is the best one in existence at the moment. Since ANTA is chartered by Congress, it is legally the American National Theater right now and would be the logical organization to take charge of the machinery of a constitutional convention in consultation with other interested groups. Reorganized with a much broader base among working theater people, it could serve ultimately as the working headquarters of a national theater. By force of circumstances it does not have that much practical authority now. But Representative JAVITS' bill leaves the question wide open. What is a national theater?

The Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. JONAS. Mr. Speaker, under leave to extend my remarks, I include House Resolution 17 of the Sixty-sixth General Assembly of the State of Illinois, adopted January 25, 1949, a photostat copy of which was submitted to me by Hon. Edward J. Barrett, secretary of state for the State of Illinois:

House Resolution 17

Whereas no segment of the American people has made a greater contribution, in peace and in war, to the welfare of our Nation than have the working men and women of America; and

Whereas this magnificent contribution was made possible through the long struggle of organized labor to secure for the workingman recognition of certain fundamental rights; and

Whereas Public Law 101 of the Eightieth Congress, otherwise known as the Taft-Hartley Act, attempts to abridge labor's fundamental rights and to set the cause of the workingman back a generation; and

Whereas the Taft-Hartley Act not only adversely affects organized labor but jeopardizes the peace and prosperity of the entire country, because whatever hurts labor hurts the Nation: Therefore be it

Resolved by the House of Representatives of the Sixty-sixth General Assembly of the State of Illinois, That the Congress of the United States now assembled be urged to take immediate steps to repeal the Taft-Hartley Act and to restore to the working men and women of America the rights to which they are entitled and the respect they so richly deserve; and be it further

Resolved, That copies of this resolution be sent by the secretary of state to the President of the United States, to the President of the United States Senate, to the Speaker of the House of Representatives of the United States, and to each of the Members of the Congress of the United States from the State of Illinois.

Adopted by the house, January 25, 1949.

PAUL POWELL,
Speaker of the House of Representatives.

CHAS. F. KERVIN,
Clerk of the House of Representatives.

EDWARD J. BARRETT,
Secretary of State.

Federal Power Policy Study

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. DONDERO. Mr. Speaker, on the closing day of the Eightieth Congress, there was transmitted to me, as chairman of the Committee on Public Works, from the Committee on Appropriations, a study entitled "Federal Power Policy Study." Mr. A. B. Roberts, a consulting engineer, of Cleveland, Ohio, directed the study and Mr. W. H. Sigersen, C. P. A., assisted in the accounting phases of the study. Both of these men are outstanding authorities in their respective fields.

The report consists of 130 pages of highly informative data on electric power. Unfortunately the document, as yet, has not been printed so as to make it available to the public generally. It is, of necessity, technical in nature, but may be summarized in brief, as follows:

First. The Federal Government should cooperate with its citizens in the development of hydroelectric power, irrigation, and water-supply projects, and avoid competition with existing adequate facilities.

Second. The area of competition between federally owned power and citizen-owned power companies usually begins at the bus bar of Federal projects. In many multipurpose projects this competition does not include construction and operation of the dams themselves. The Federal construction of transmission lines to power markets frequently duplicates and tends to threaten existing and prospective private investments which do and could further serve the public adequately and as full taxpayers.

Third. Federal construction of transmission lines from dams on streams of erratic flow is particularly wasteful, unnecessary, and destructively competitive. Such projects require large storage reservoirs to equalize or regulate the flow. For many such projects the dam height and storage space is necessarily limited by the terrain, with the result that the full name-plate rating of the generators can be available only a few hours per day with remaining hours reserved for storage of water. This kind of power is of highest value only for absorption into integrated nearby systems during periods of daily peak demand. In such cases Federal investment in transmission lines not only is competitive with private investment but wasteful of Federal funds.

Fourth. In general, Federal power is not cheap but is made to appear so by allocating substantial portions of the investment and annual expenses to features other than power. For example, a reexamination of the allocation of TVA's investment in flood control, navigation, and power is now under way by the Federal Power Commission and the Corps of Engineers, which may substantially increase the capital base upon which TVA's rates are presently fixed. An adjustment of all Federal power rates is indicated.

Fifth. There should be full public disclosure of the subsidies involved at the projects now in operation and those proposed.

Sixth. Present conflicting procedures should be standardized and fully developed for:

(a) The determination of economic feasibility.

(b) Accounting and rate-making.

Seventh. Consideration should be given to the treatment of a Federal hydroelectric project in the same manner as for a licensee under the Federal Power Act. The standards of the Federal Power Act, if observed and applied in determining the economic feasibility of projects which include power, would make some radical changes in the investment allocations heretofore adopted.

Eighth. Studies should be made by competent authorities on the economic justification of all projects, whether complete, under construction, authorized or proposed, with a view to determining the effect of present price levels, rising costs, and changed economics of the Nation on the ability of such projects to repay funds advanced by the United States Treasury within a 50-year period, with interest. Those completed should be reviewed to ascertain if actual economic results obtained justify the actual investment and to determine whether any changes in practices need be made.

Ninth. Rates for power should be sufficient to meet all operation and maintenance expense, adequate provision for depreciation, payments in lieu of local, State and Federal taxes, full interest on the Federal investment in power, together with provision for repayment of such investment within a 50-year period on a straight-line basis. Federal investment in power should include interest during construction.

Tenth. The rights of States and their public utility commissions should be recognized at all times.

Eleventh. As a rule, the better hydroelectric sites of the United States have

already been developed, and the remaining sites have been preempted by Federal Government planning for later development. As the less attractive hydroelectric sites are constructed, they will tend to show an increase in cost and a diminishment of economic feasibility. The total cost of projects now proposed for power, flood control, navigation, and irrigation will exceed $40,000,000,000.

Twelfth. The Southwestern Power Administration serves no useful purpose and should be liquidated.

Thirteenth. At present the Bureau of Reclamation includes in electric rates an annual interest component of 3 percent of the investment allocated to power, which is later applied as a reduction of the investment chargeable to irrigation. This practice should be stopped and the interest component returned to the Treasury of the United States.

Fourteenth. Soil conservation methods should be vigorously extended to provide substantial flood prevention and reduce the need of large, costly, and numerous downstream reservoirs to be used for flood control.

The Committee on Appropriations of the Eightieth Congress is to be commended for the thorough manner in which its investigation staff, under the able direction of Mr. Robert E. Lee, Chief of Staff, handled its study of Federal power operations and comparison with the private electric utility industry. This complete report should be made available to the general public as soon as possible.

Friendship Train and Merci Train

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. JAVITS. Mr. Speaker, one of the finest means for showing the bond of personal friendship between peoples was initiated by Mr. Drew Pearson in the Friendship Train. Our allies in France have now responded with the Merci Train. Its contents are described in the appended editorial from the New York Times. Its contents in terms of human warmth and appreciation will find a response in the heart of every American.

GRATITUDE TRAIN

As one means of breaking down the barriers between the peoples of the many nations, a Friendship Train was organized last year by Drew Pearson and thousands of tons of foodstuffs were sent to Europe, a beau geste from us who have so much to others who had little. Today that bread of friendship cast upon the waters has come back to us from the French people in the form of a 49-car trainload of gifts to the American people.

The gifts that cram the outdated little French two-purpose railway cars—40 men or 8 horses—are as varied as the homes from which they came. One of Lafayette's descendants sent his ancestor's walking stick and a catalog of his books. One man contributed his grandfather's bicycle. President Auriol sent 49 rare Sévres vases, 1 for each of the 48 States and the District of Columbia. There is one of Napoleon's innumerable hats, a Louis XV carriage, a sedan chair. All were objects prized highly by the givers.

There is no taint of commercialism about the venture, any more than there was about the food that filled the original Friendship Train. These are gifts that the heart dictated. They are received as such. Undoubtedly many of them will be given honored places in the various State museums to which they should be assigned after they have been shown in their original setting aboard the Gratitude Train. In the same spirit in which they were given, the American people gratefully receive them.

American Relations With Russia, and Military Preparedness

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 3, 1949

Mr. WILEY. Mr. President, the February 1949 issue of the magazine The Reserve Officer, published by the Reserve Officers Association of the United States, contains an article which I have prepared in connection with National Security Week, being celebrated beginning February 12. The article is entitled "Myths That May Mean Mass Suicide." I ask unanimous consent that the text of this article be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MYTHS THAT MAY MEAN MASS SUICIDE

EVERYONE IS SUBJECT TO BECOME A VICTIM OF SOME HOKUM AT ONE TIME OR ANOTHER; HOWEVER, WHEN IT CONCERNS OUR NATIONAL DEFENSE, IT BECOMES NOT A LAUGHING MATTER BUT RATHER A DEADLY PERIL TO OUR EXISTENCE

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin)

In the life of a nation, belief in a myth may be as suicidal as an hallucination or a delusion in the life of an individual.

In the history of a people, a myth may be so powerful as to drug that people into paralysis, immobilize them into unpreparedness. Myths can be mightier than machines, more deadly than the deadliest poison gas.

Do you remember the myth back in the days of 1940 and 1941 to the effect that the United States could, if war came with Japan, lick the Nipponese within 30 to 60 days.

Do you remember the myth that paralyzed France in the early days of the Second World War to the effect that this was a phony war and that there would be no intensive fighting, but only an eventual negotiated peace?

These and other myths can be found throughout the pages of history, and often their consequences have been tragic.

At this time, I should like to ask the question (and I believe that all Reserve officers who read this article might like to ask the question): Are there myths today in our national thinking which might do us similar damage? Certainly no group in our Nation is as deeply concerned with ridding myths from our national consciousness than are Reserve officers. You men are, after all, the minute men of America's defense, the leaders who have sprung to the ramparts as the vanguard of our citizen army, navy, and air force whenever this blessed Republic has been endangered. Your eyes are clearly open to the realities of world politics and the world military situation. Myths are as obnoxious to you as poor arithmetic is unthinkable for a mathematician.

I believe that there are, indeed, many myths today which are doing us harm, and I should like to submit a few thoughts on some of them. Undoubtedly, my readers could add many more items to the list of myths which will follow. However long your list or mine may be, our aim is the same, to debunk the myths by the truth which sets men free.

Of course, different groups of our people tend to develop different myths. For that matter, every one of us, including myself, is subject to become a possible victim of some hokum at one time or another. When, however, hokum concerns our national defense, it becomes not a laughing matter or something to be tolerated, but a deadly peril to national existence.

Myths regarding Russia

The deadliest myths of all in our national thinking concern America's relations with the Union of Socialist Soviet Republics. It is obvious that these relations constitute the single most important subject in the world of today, for there are only two great powers today—the United States and the U. S. S. R., with a host of subsidiary powers.

We have unfortunately built our own mental iron curtain in many respects—an iron curtain of self-delusions about Russia. It is essential that we have a clear understanding of these delusions so that we can eliminate them.

Factors causing delusions

There are certain contributing factors which help cause many of our delusions regarding Russia. Among those factors are these:

1. The insidious efforts by Communist and fellow-traveler groups in our midst to deceive us regarding Russia's intentions and to mask Russia's true imperialist character.

2. Another factor accounting for our self-deluding beliefs about Russia is that the U. S. S. R. represents a land whose traditions, whose entire approach is different from that of the western powers. We constantly interpret Russian actions, therefore, in the light of western morality and western precedents, whereas actually the thinking and the deeds of the leaders of Russia are based more upon the unscrupulous Asiatic precepts of Genghis Khan, than they are upon any western historical precedents.

3. A third factor accounting for our self-delusions regarding Russia is that we Americans are so peace loving in our approach, so tired and disgusted with the results of two world wars, that we tend to substitute wishful thinking in order to deceive ourselves about the possibility of a third world war, and in order mentally to minimize that possibility.

Specific myths

Well, what then are the specific myths?

1. Perhaps the basic myth of all is that a crisis may some day slowly loom in our relations with Russia, at which time we will see quite clearly that war is in the offing and that we must prepare against war. You might call this "the myth of adequate time" for preparedness. It is a myth that in the event of a third world war we will have a considerable amount of surplus time in which to step up our conscription program, remobilize industry, decentralize key Government agencies, and leisurely prepare for hostilities.

It is quite obvious, however, from an analysis of the facts in this atomic age that time, like the dimension of space, has been virtually annihilated by the ingenious developments of split-second offensive warfare. We definitely will not have time to do any of the leisurely things that we had sufficient time to do in the First and Second World Wars. It is quite essential, therefore, that

we do as many of the things which are possible now as we would do in the event that a deepened crisis of United States-Russian relations looms. Clearly we cannot now do everything that we would do if war appeared a matter of days off; ours is, after all, a peaceful economy of free men and women. We cannot keep our national budget, our industry, and our Government on a perpetual semiwar footing. But any expert observer knows that even in our present peaceful economy we are not now doing the minimum that we could do (e. g., in the field of stock piling) for adequate preparation against a potential conflict.

Inadequate decentralization

Take the field of Government decentralization, which I discussed in my article in the February 1948 issue of The Reserve Officer magazine. In this article I pointed out that one atomic bomb smashing Washington could quite obviously knock out the very heart and brains, so to speak, of our entire military defense set-up. I am very grateful for the wonderful response which this article met, particularly from the alert members of the Reserve Officer Association, throughout our country. But what has happened since that article appeared and since other individuals have explained the danger of an atomic bomb hitting the Pentagon Building in Arlington, Va.?

Well, judging at least from outward appearances, you could put all of the Federal decentralization preparations made since then in a single Reserve officer's hat. There has been hemming and hawing. There have been excuses and alibis. There have been promises about something being done in the nebulous future, but there has actually been more centralization in Washington than decentralization in recent months.

I have hopes that the results of the Hoover Commission on the Reorganization of the Executive Branch of the Government may serve to speed Government decentralization. However, it is quite clear that this Commission's efforts alone will not fill the need, but that some of the specific suggestions which others have recommended and which I recommended in my article last February must be taken. Decentralization however, is but one part of the vast mosaic of defense preparations which are essential, when once we clearly recognize that we will not have sufficient time to gird our loins in a third world war.

Now, obviously, there are many defense preparations being made necessarily secretly by our defense officials. Neither I nor any other layman would presume to ask that these confidential preparations be announced openly; on the contrary, secrecy in many instances is essential for national security. But it is clear, too, that our public could rightly be let in on a lot more details than the public is now permitted to have, especially as regards decentralization efforts of the National Security Resources Board, efforts to disperse our industry and Government against the possibility of war.

Wishful thinking about Russia

2. Well, will there be war at all? Every thinking person prays that war may never again come. This is especially true of every person who has seen the horrors of the First and Second World Wars and who knows that wars accomplish very little that is constructive and settle very few, if any, problems. It is our prayer—yours and mine—that the United Nations will find the basis for a just and lasting peace. But some people feel that the common folks of all the world are actually so sick and disgusted with war, that there could not possibly be a third world conflict. Thus, there is the specific myth that the peoples of the U. S. S. R., who suffered so much in the Second World War, would not allow themselves to be precipitated into a new global conflict. Nothing could be further from the truth. It obviously matters very little to the 6,000,000 Communists at the absolute helm of the Soviet Union what the people of the Soviet Union want or do not want. It obviously matters very little to these cold-blooded leaders that the Russian people have suffered grievously in the Second World War, that their loss in life was staggering, not to mention their loss in national resources and property.

It is quite clear that when and if the leaders of Russia believe that they could win a third world war, either by superior weapons, the element of surprise, or by any other means, and when and if they believe that a hot war would be preferable to infiltration in the cold war, they would engage us in a very hot war. It is principally their fear of losing that proves the deterrent to the Red leaders from precipitating another conflict.

The masters of the Soviet Union are the coldest, shrewdest, calculating bunch of racketeers at the helm of a state that human history has ever seen. Their decisions are based not upon national sentiment or desire, but upon the cold calculations of a few individuals steering the Russian ship (or submarine) of state.

Myth of Russian compromises

3. Another myth in our relations with Soviet Russia is that there have been many occasions when the Russians have been "easier to get along with" than on other occasions. Some folks seem to believe that oftentimes, we have been close to a "permanent" settlement with the Russians, only to have that basis bungled by some element of diplomacy. This, too, is obviously far from objective fact.

It is quite clear that the Russians since the end of the Second World War and for that matter, long before that, have been playing a "cat and mouse" game with American and other diplomats. This is a game in which the Russian poker players appear alternately tough and alternately soft, alternately willing to make so-called concessions and alternately unwilling to make the slightest compromise. By foisting this notion, the Russians have constantly thrown us off balance. Repeatedly, they have built up phony "peace movements" in the cold war, and then have shocked us by a successive series of disappointments which have so frustrated us that there have been many who have said, "Oh, well, perhaps it's not worth dealing with them at all, and perhaps we might just as well give them Berlin" or give them something else they want.

We must not be fooled by phony "peace" movements. Russian strategy is a long-range strategy. The Russians may change their tactics now and then; they may want to give the appearance of halting their imperialism, but we can take it for granted that, so long as Marxist materialism and Communist fanaticism rule the Soviet state, we will be in a continuous state of siege.

Myth of Russia's peaceful growth

4. Another myth is one insidiously foisted by Communists in the U. S. A. to the effect that Russia is a peacefully growing nation, anxious to keep her own prosperity, her industry, and her agriculture peacefully improving and she is therefore undesirous of waging war. This myth, too, is readily debunked by the apparently confirmed reports that Russia is far from a peacefully growing and stable state, eager to rebuild. Rather, she is having serious internal troubles of her own.

The Russian leaders well remember the old formula that when a nation is having internal troubles, a suitable means for eliminating them is by precipitating external troubles and perhaps war. Russia, with her diverse nationalities and tongues, has always reacted to war by further amalgamating herself. Hitler's legions obviously furthered this amalgamation process, and perhaps a third world war which would bind the Russian people still closer together, by atomic bombs falling on her cities, could still further advance this process.

It may seem unthinkable to us Americans that a nation would precipitate a war as a means, among other things, of securing greater national unity. But nothing is beyond the shrewd calculations of the Soviet leaders. They are well aware, too, that war between Russia and the United States, just as war between any major powers, would inevitably bring more chaos in its aftermath—chaos in which totalitarianism could readily breed.

Myths about future warfare

5. Then, too, there are myths concerning the exact type of warfare which may come. On the one hand, we have certain civilians who mistakenly believe that the next war will be a 100-percent "push-button affair," in which a few technicians sitting at instrument boards will hurl guided missiles into space—missiles containing atomic war heads and bacteriological capsules, and that this will constitute the entire extent of the war, with practically no human beings being involved, except in terms of becoming the victims of the war.

At the opposite extreme of these "push-button warfare" enthusiasts, are some of the military and naval brass hats who, in the traditional way, have been thinking of fighting the next war with the outdated instruments of the last war. These are the men who are thinking in terms of mass armies on land, or giant battleship armadas on sea. It is against this type of rut-bound brass-hat thinking that (as I recalled last February) another Wisconsin man, Gen. Billy Mitchell, so long warned us.

Obviously, we must avoid both extremes—the extreme of falling a victim to the hoax about a 100-percent push-button war, and the other extreme of being a chump and accepting the fool notion that we will have the parallel of World War I trench warfare or World War II type warfare in the advent of a third conflict.

Myth about war's inevitability

6. Perhaps the worst myth of all is the myth about the inevitability of war. In many quarters there is, unfortunately, a complete fatalism about the alleged inescapability of a third world war. Now, everyone recognizes that our military men must intelligently plan against the possibility of a new war breaking out. But it is one thing to keep optimistic about the chances of peace but to plan to win a dreaded war if it comes; it is another thing to capitulate psychologically beforehand and to fall into despondency and brooding about the so-called inevitability of war. None of us—reservists, members of the Regular Military Establishment, legislators, diplomats, citizens—should ever abandon hope that, somehow, we will find the means to perpetuate a just and lasting peace, particularly if we remain preeminent in all types of defense and offensive preparations.

These, then, are some of the myths of our times. All of my readers may not agree that all of the above are myths. It would, of course, be dangerous to label arbitrarily any viewpoint conflicting with our own as a myth.

I believe, however, that there is ample objective basis for terming the above beliefs as myths.

Conclusion

You and I recognize the realities of this atomic age. We recognize the aggressive expansionism of Russia, her intention to use every possible means to accomplish her ends, her cat-and-mouse diplomatic game, her fear of our way of life. Yet we feel that the genius of America which won victories on battlefields at staggering cost in life—the genius of America which has always been adequate to meet emergencies—this genius will not let us down in the diplomatic fight for peace.

Eternal vigilance which is the creed of every Reserve officer, must be the creed of every American. Eternal vigilance of heart and mind, a clear perception of the "truth which sets men free"—these must be ou goals.

Each of my readers, undoubtedly, in addition to his membership in the ROA, is a member of a lodge, a church group, a business group, a civic or other group. It is up to each of us to help in our own sphere of activity, antidote some of the false notions, some of the really cockeyed beliefs which might do our beloved Nation so much damage, and which already have done us so much damage.

When once the American people get an understanding of the true facts, the true realization of the present m 'litary and political situation, there is nothing that can stop them from acting calmly, constructively, and ably. History has proven this time and again. "Give the people the facts, and they will take the appropriate action." I am certain that the ROA will continue to do its magnificent job in giving the people the facts, in helping to give the Congress the facts, so that in our external vigilance, we may never lose our precious birthright of liberty.

Hawaii Found the Most Democratic Place on Earth by President of the National Congress of Parents and Teachers

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter addressed to the local presidents of the National Congress of Parents and Teachers in the National Congress Bulletin of January 1949 by Mrs. Mabel W. Hughes, president of the National Congress of Parents and Teachers, on her recent visit to Hawaii.

I believe Mrs. Hughes' impressions of Hawaii merit particular attention as she was given an unusual opportunity over a period of several weeks to study conditions at first hand in the islands, particularly those relating to the educational system.

She noted an exceptional interest in Hawaii in education and points out in her letter that the percentage of increase in the membership of parent-teacher organizations in the Territory during the past year was higher in Hawaii than in any other part of the country.

The parents and teachers organization of Hawaii, as well as the National Congress of Parents and Teachers, is on record as strongly favoring immediate statehood for Hawaii.

The text of Mrs. Hughes' letter follows:

DEAR LOCAL PRESIDENTS: As I think back over my recent trip to Hawaii, I feel I must share with you some of my impressions of that beautiful cluster of islands and its gracious people.

Like every visitor to Hawaii, I was impressed by the way the people of those islands live and practice democracy. I found the Territory of Hawaii the most democratic place on earth. There all races live together in harmony, attend the same schools, and enjoy the same opportunities for advancement. Hawaiians, Japanese, Chinese, Filipinos, Portuguese, Puerto Ricans, Samoans—all are important components of the population. These people all are practicing the democracy that the rest of the world is wistfully talking about. There has never been a racial riot in all the history of the islands. How much easier the task of the United Nations would be if only the other nations of the world were as enlightened as is Hawaii.

Among the outstanding memories I brought home with me are pictures of the many schools I visited. They were of all types, from the largest high schools in Honolulu to the two-room rural schools on several of the islands. Although all the schools are not new and all do not meet the standards of the progressive educators and parents of Hawaii, some of them are very beautiful and all of them are freshly painted and clean. They have up-to-date teaching aids, good libraries, fine pictures, and choice pieces of sculpture and porcelains. And everywhere one finds the most beautiful fresh flowers arranged daily by the pupils themselves. In fact, I found several classes working on courses in the art of flower arrangement. Needless to say, accomplished musicians, singers, and dancers are to be found in all Hawaiian communities, and it follows naturally that the children should be well instructed in all these refining arts.

When the missionaries came to Hawaii from New England in 1820 one of their first acts was to establish schools. Lahainaluna, on the island of Maui, is today the oldest school west of the Rocky Mountains. Punahou School in Honolulu was established a short time later, in 1841. It was my great pleasure to visit both these schools, Lahainaluna and Punahou. At the latter I spent nearly an entire day as the guest of the faculty at luncheon, viewing programs by two departments of the school, and in the afternoon attending a parent-teacher meeting. It was at Punahou that the first parent-teacher association in Hawaii was organized in 1915.

During my stay I likewise met with the Honolulu school principals and also with the rural Oahu principals. From both gatherings I learned much of lasting value. Similarly, I spent a most enjoyable two hours with a group of about 30 officials of the department of public instruction.

I cannot conclude this all-too-brief summary of my visits to the schools of Hawaii without mention of the University of Hawaii. There, during the first week of my visit, I had the pleasure of conferring with Dr. Bruce White, dean of education and teacher training, with regard to a course to be given at the university on the parent-teacher movement. I also visited the nursery and kindergarten schools of the university's training school. Before I left for home I returned for luncheon with a group of the faculty. It is the hope of Kilmer O. Moe, president of the Hawaii Congress, and my own hope that the University of Hawaii may serve in time as a training center in parent-teacher leadership for the entire Pacific area—Samoa, Guam, the Philippines, and perhaps even Japan—much as Northwestern University is now serving the national congress in continental United States.

Everywhere in educational circles the question most frequently discussed was Federal aid for education and what share in such funds Hawaii would receive when the proposed legislation is finally enacted. Teaching standards in the islands are high, requiring 5 years of college work. The salary for beginniners is $177 a month, plus a bonus of $45, for 12 months in the year. Teachers in town and rural communities alike work according to the same salary scale.

Wherever I went I encountered great courtesy and a warm, alert interest in the purposes of the National Congress of Parents and Teachers. In the brief course of my visit I made more than 50 speeches to more than 8,000 persons. The meetings were held mainly in school buildings where groups of parents ranged in size from 25 to 250 persons. My talks were completely informal and were followed by lively discussions in which members of the audience took part. Besides attending meetings of the State board of managers and the State executive committee, I had the opportunity of participating in district, council, and local parent-teacher meetings.

Throughout Hawaii, but especially in the outer islands, I found great interest and enthusiasm for the parent-teacher movement. People who have to be up by 5 o'clock next morning to work on the sugar and pineapple plantations will drive from 10 to 20 miles in the evening to the nearest schoolhouse for a parent-teacher meeting. Under the splendid leadership of their president, membership is booming. Last year the congress was able to proudly report a gain of 28.4 percent, or the greatest percentage increase in the whole of the national congress.

It was with deep regret that I said my last "aloha" to the kind Hawaiian friends who had extended to me, as your national president, the unrivaled hospitality of their lovely homeland.

Faithfully yours,

MABEL W. HUGHES,
President, National Congress of Parents and Teachers.

Save the Republic

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. JENKINS. Mr. Speaker, I am glad to extend my remarks to include an open letter written by Mrs. E. Wyatt Payne, one of the leading Republican women of the country. Her letter is as follows:

SAVE THE REPUBLIC BEFORE THE SYMBOLS DISAPPEAR

DEAR REPUBLICANS: Will you join me in a personal campaign to save the Republic and the symbols which represent our American heritage? We are face to face with every conceivable method, means, propaganda, and sabotage to undermine the faith of the people in our form of government. Although the military and psychological battle lines are evident and the UN seems impotent to deal with major problems, we Americans have been negligent regarding our greatest contribution to the continuation of the American way. We are unwittingly letting the symbols of the Republic disappear from our national, local, educational, and individual life. Can we save the Republic without the symbols which blazed the trail to American freedom and liberty?

A few examples will suffice to prove the point. Since its inception the General Federation of Women's Clubs have had a committee called American citizenship; why did they delete the word "American"? (Another symbol disappears.) Who was responsible for the inscription over the Constitution on the Freedom Train, which reads: "Here, Democratic Government Was Established"? Who is responsible for the lack of patriotic symbols, exercises, pictures, and songs in the schools? You see we have been very busy with foreign affairs and experiments in social progress and while we kept our heads in the clouds of Utopian perfection, the enemy came and sowed the tares of patriotic disintegration right in our own homes, schools, churches, and clubs. That's why the great remedial work must be done

by the folks back home, and we must stop the spread of communism, socialism, New Dealism, and all "isms" which destroy the symbols, the vocabulary, and the faith of our fathers which made and kept us a nation.

You will remember Mr. Woodrow Wilson once started a slogan, Make the world safe for democracy. Now, it hasn't been safe for anybody since, but he started something which has almost obliterated the original concept of the Republic. In fact, the Republic and the republican form of government have been doing the disappearing act ever since, because of the planned reaction to the social and political connotation and use of the word "democracy." They have been so successful in interpreting the word to mean Democratic Party that today even mentioning the words "Republic" or "Republican" puts the one on the defensive team. Most all writers, educators, speakers, and one-worlders think the word "democracy" is the only medium through which to define America.

Recently I attended a national educational conference in St. Louis. During a whole week of study and talks with leading educators I did not hear the words "American," "Republic," or "our form of government" mentioned. The theme of the conference (which included delegates from all States and 15 foreign countries) was—please note carefully—"Democratic education, the hope of the world." The extent to which this menace has gone is shown in the final statement to the teachers by a leading Columbia professor: "You, the teachers of America, hold the future of the world in your hands; you have two choices; you will either teach children to be despots or democrats." For heaven's sake, let's be realistic and face facts. When the youth of America are indoctrinated from kindergarten through college with foreign ideologies under the guise of social progress and under the name of democratic education, can we, at the voting level, change the vocabulary, their resulting philosophy, and their actions to an understanding of and love for the republican form of government? No; it is too late. How gullible we have been.

Let every Republican resolve to become a committee of one to reestablish the name of the Republic in the hearts and minds of the people, and refrain from using the word democracy, because we are thus aiding and abetting the New Dealers and left-wing educators in their planned campaign to change our philosophy by changing our vocabulary and textbooks. "We have given you a Republic, if you can keep it."

Yes, Mr. Franklin, the Republican Party will keep it.

This is a republic. The founders, the Constitution, and the pledge say so.

Yours for victory,

Mrs. S. WYATT PAYNE,
President, West Virginia Federation of Republican Women's Clubs, Huntington, W. Va.

National Associations Adopting Resolutions Supporting Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. FARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following list of national associations adopting resolutions supporting statehood for Hawaii:

National associations adopting resolutions supporting statehood for Hawaii

Association	Convention held	Date
1. American Legion	San Francisco, Calif.	February 1946.
2. American Veterans Committee	National convention, Des Moines, Iowa.	June 14-16, 1948.
	Cleveland, Ohio	Nov. 25-28, 1948.
3. American Water Works Association	National convention, New York	June 1948.
4. Association of State and Territorial Health Officers		April 1946.
5. Chamber of Commerce of the United States, Board of Directors.	Annual meeting	Nov. 22, 1946; Apr. 28, 1948.
6. Committee for Maritime Unity		
7. Congress of the National Society of Delta Sigma Rho	National convention, Chicago, Ill.	Apr. 10-12, 1947.
8. Disabled American Veterans	Convention held at Las Vegas, Nev.	Aug. 17-23, 1947.
	New York	Aug. 15-21, 1948.
9. General Conference, Methodist Church	Boston, Mass.	May 10, 1948.
10. Governors' National Conference	Salt Lake City, Utah	July 17, 1947.
11. International Association for Identification	Rochester, N. Y.	July 18, 1946.
	Denver, Colo.	Sept. 30, 1948.
12. International Longshoremen's and Warehousemen's Union.	Seventh biennial convention, San Francisco, Calif.	Apr. 7-11, 1947.
13. Lions International	Philadelphia, Pa.	July 20, 1946.
	New York City, N. Y.	July 29, 1948.
14. National Association of Real Estate Boards	Atlantic City, N. J.	Nov. 15, 1946.
15. Kiwanis Club	Los Angeles, Calif.	June 6-10, 1948.
16. National Association of Sanitarians	Fourteenth annual convention, Salt Lake City, Utah.	Sept. 15-17, 1947.
17. National Education Association	Convention held at Buffalo, N. Y.	July 1946.
18. National Federation of Women's Republican Clubs	Convention held at Chicago, Ill.	March 1947.
19. National Society, Daughters of the American Revolution.	Fifty-fifth Continental Congress, Atlantic City, N. J.	May 20-23, 1946.
20. Republican National Committee	Washington, D. C.	April 1946.
21. Soroptomists Clubs		
22. United States Junior Chamber of Commerce, board of directors.	Tulsa, Okla.	Aug. 21, 1947.
23. Veterans of Foreign Wars		September 1946.
	St. Louis, Mo.	Aug. 29-Sept. 3, 1948.
24. World Trade Committee		February 1947
25. Young Women's Christian Association		
26. Zonta Clubs of America	Swampscott, Mass.	June 1946.
27. American National Livestock Association	Boise, Idaho	Jan. 13-15, 1948.

Council of Europe

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the New Orleans States of January 29, 1949, and the New Orleans Item of January 31, 1949:

[From the New Orleans (La.) States of January 29, 1949]

DREAM OF STATESMEN REALIZED WITH AGREEMENT FOR A COUNCIL OF EUROPE

(By Herbert L. Matthews)

LONDON, January 29.—The western union powers had agreed today to create a Council of Europe and thus fulfill a dream of centuries of European statesmen.

There will be a committee composed of government ministers meeting in secret and capable of making binding decisions, which means real delegation of sovereign powers to a European body. Alongside this committee will be an advisory consultative body representing the national parliaments of Europe which will meet in public.

These are not mere proposals; they are agreements made by the Foreign Ministers of Britain, France, Belgium, the Netherlands, and Luxembourg. The British Cabinet, for instance, held an emergency meeting in the Prime Minister's room in the House of Commons to approve these momentous decisions which now commit the Government of Great Britain.

Only the details remain to be filled in. They are to be worked out by the permanent commission of the Brussels powers, which meets weekly in London. It is composed of the ambassadors of the four continental countries, plus Gladwyn Jebb, of Foreign Office, who represents Britain.

In comparison with this news, the further announcement that the Brussels powers had agreed, as expected, to grant de facto recognition of Israel came as an anticlimax. France has already recognized Israel and it was known that Britain and the others were going to do so in the next few days.

When the Foreign Ministers, who had been meeting in the office of Foreign Secretary Ernest Bevin, came out at the end of their 2-day conference they were visibly elated. They knew they had made history. They had taken the first important practical step toward the goal that has beckoned European statesmen from Sully's seventeenth century "grand design" to Briand's "United States of Europe."

Here is the relevant passage of the communique:

"After considering the most valuable preparatory work accomplished in Paris by the Committee for the Study of European Unity, the council (consultative council of the Brussels powers) agreed that there should be established a Council of Europe consisting of a ministerial committee meeting in private and a consultative body meeting in public. The permanent commission was instructed to study the detailed application of decisions of principle taken by the council. The council decided to invite other European countries to take part in negotiations for establishment of the Council of Europe."

Although many of the proposed details remain secret and others are still to be worked out it is possible to add some flesh to these bare bones.

It was agreed that the appointment of delegates to the consultative body and their voting powers shall be left to the discretion of each country which can satisfy its own constitutional practices.

France, for instance, can elect her delegates by majority vote of Parliament and thus exclude Communists. Britain could appoint delegates from the Labor Party or all three parties.

This is one of the compromises reached during the past 2 days. Because the French wanted delegates to the European Assembly to be elected and Britain wanted them nominated by the governments.

Britain originally wanted voting in assembly on the consultative body, as it is now called, to be compulsory bloc-voting by nations. Mr. Bevin as expected yielded on this point and decisions will be taken by majority vote of all delegates, voting individually and not as national groups.

A British compromise proposal whereby the ministers' council would control the agenda of the consultative body was accepted. Subjects for discussion by the consultative body can be determined on the initiative of either organization but ultimate control of the agenda, which is to say power of the veto, will rest with the ministerial committee.

The principle on which voting will take place in both organizations has been decided but it is being kept secret. Guessing is that it will be by two-thirds vote in the ministerial committee and a majority in the assembly. This would reflect the fact that the latter body is merely advisory whereas the former has executive powers.

Nothing is being said either about the weighting of representation, but it is presumed that the greater powers will have a proportionately heavy vote in the ministerial committee while each individual delegate will have equal weight in the consultative body.

[From the New Orleans (La.) Item of January 31, 1944]

A TURNING POINT IN HISTORY

Formation of a Council of Europe was proclaimed in London at the week's end. This is a momentous development in the continuing drama of current history. Its potentials dwarf most of the day's more spectacular chronicles of Congressional bickerings over Taft-Hartley repeal, the Kuomintang's defeat in China, and all the rest.

Within a year or two, these will be little more than individual dates in the chronology of 1949, remembered as we today recall repeal of the Smoot-Hawley tariff or the signing of the Hay-Pouncefote treaty. But the fact that a Council of Europe has come into being may well be a major turning point in the history of mankind.

The difference between a Council of Europe and a parliament of Europe is one of degree, not of kind. Implicit in the creation of such a council is profound reorientation of continental thinking. Compared to such a change, the further shift from council to parliament is comparatively slight. The situation is very much like that of man seeking entry to a desirable home the door of which is locked and barred. The big problem is to get the portal open. Once that is accomplished, stepping across the threshold is a simple matter.

The nations of Europe have been excluded from political and economic unity—from a United States of Europe—by the barriers of ancient custom, national jealousy, and the ingrained tribal thinking of 2,000 years. Temporary holy alliances here or triple ententes there have constituted the only thrusts toward voluntary cooperation. Not even military conquests could fuse them into real entity on such a relatively small scale as that of Austro-Hungary. The instant the Hapsburg dynasty was shorn of military might, fission split the empire into Czechoslovakia, Hungary, Austria proper, and parts of Yugoslavia and Poland. The worst error of the four old men at Versailles in 1919 probably was that instead of seeking to forge a union of Europe, they split that continent into still smaller—and therefore weaker—national components of a debile world league.

Global war, and the devastation that accompanied it, have sharpened European understanding of the old adage that in union there is strength. For a time after the guns fell silent, national jealousies were revived as jingoes prated with resounding but otherwise empty phrases against any surrender of sovereignty. But the omen of peril from the East was growing, as one small nation after another was swallowed up by the Soviet colossus.

When finally the Marshall plan was formulated, its basic meaning was clear. "We," said the United States, "can't make each one of you individually strong enough, either economically or militarily, to resist aggression. But if you unite, if you pool your productive capacity and resources, if you forget the outworn tariff barriers and border guards you maintain, your combined might can be assisted to keep you economically self-sufficient and militarily secure."

It wasn't accomplished overnight. But patience and firmness—and the growing menace behind the iron curtain that sealed off eastern Europe—overcame bit by bit the political thought-pattern fixed by centuries of habit. Three small nations—Belgium, the Netherlands, and Luxemburg—formed the economic Benelux federation which ultimately entered with Britain and France into the pact of Brussels.

At the week end, the five Brussels partners took two steps of enormous significance. France had already accorded de facto recognition to Israel. Saturday the other four signatories took the same step simultaneously. The announcements were made individually at London, Brussels, The Haugue, and Luxemburg. Nevertheless, for the first time a European economic and military confederation thereby took political action that was united in all but name.

On the heels of this, came announcement that agreement had been reached to create a Council of Europe on which the five partners of the Brussels Pact would be charter representatives, and into which other European countries would be invited. A bicameral organization has already been agreed upon, with a Council of Ministers for one chamber and a Consultative Assembly for the other.

This is clearly recognizable as the democratic parliamentary pattern of political federation. The loose economic union which was begun under the Marshall plan thus paved the way for joint political action. Only a much shorter and much easier step is now needed to go from that point to formal political federation. Beyond the threshold of a doorway whose locks and bars are down, and which now stands invitingly open, the Council of Europe can become a Parliament, the central assembly of the United States of Europe, a potent force for peace and abundance in tomorrow's brave new world.

"A Promise Made Is a Debt Unpaid"—Adequate Veterans' Hospital Facilities Must Be Provided

---

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. STIGLER. Mr. Speaker, from the volumes of words spoken in this House there comes now and then a ringing call for action in behalf of those whose service in the cause of freedom has preserved for us and our people the privileges we enjoy here. Demands are made upon us and our Government in behalf of many worthy causes, impossible of fulfillment in their entirety because of their multiplicity and scope. Even America cannot do all that it would for its people and its neighbors.

But we have tried to be ever conscious of our supreme obligation to the men and women who gave of their time and their very lives in service to their flag and country in time of war. By our actions we have shown to the world our determination that the pledges made by a grateful Nation to its fighting men and women shall be redeemed in full measure.

Many things we said we would do for our war veterans, and most of them have been done. But above all we said that we would provide medical care and hospitalization—if that be necessary—for our sons and daughters who wore the uniform in time of war. In all the sordid history of war, there stands out boldly one saving grace—the proper care of those wounded and maimed in service to their flag. Certainly, the history of America has reflected a consciousness of this obligation to our war veterans.

Mr. Speaker, as a war veteran myself and as one who fought through the years for facilities adequate to properly care for the veterans of that earlier war, I felt proud indeed when Congress and the administration charted a course which would leave no veteran of the recent war in want and in need of care. This time it was not an implied promise, for we reduced to law our intention that provision would be made in full measure of the need. A promise made is a debt unpaid, and this debt goes deeper even than national honor. It goes to the very heart of America.

It was my privilege to serve on the Veterans' Committee of the House when plans were under way for the construction of additional veterans' hospital facilities. There was no division of opinion as to the merits of the undertaking. And so was the beginning of the greatest hospital-building program ever undertaken by any people—and never for a more worthy purpose was any program launched.

Mr. Speaker, there are some 350,000 veterans in Oklahoma. Certainly there was never an intention that these men and women should be denied medical care and hospital facilities. Certainly no thinking person would consider penalizing the great patriotism of these men and women of Oklahoma by denying them even the minimum of care.

Many of our veterans have suffered in silence. Countless have been unable to obtain the medical care and hospitalization they so desperately needed because the facilities were not there. Still others were sent to facilities in neighboring States, there to suffer once more the despair of loneliness far from their loved ones. Mothers and wives and children traveled great distances to visit their veteran kin in hospitals far from home.

And they complained not unduly, for had not their Government announced plans for the construction of additional hospital facilities in Oklahoma?

But the axe fell the other day, and the Administrator of Veterans' Affairs said that plans for hospital construction in Oklahoma would be partially abandoned. Refusing to believe that our people were to be so discriminated against, we asked the Administrator for a clarification of the matter. His spokesman told the Oklahoma congressional delegation that 24 of the contemplated 90 new hospitals had been stricken to comply with the requirements of President Truman for a reduced budget. This spokesman said that where construction had begun, the work would be finished; that where construction had not been started, the axe would necessarily fall. It was his judgment that had they known this would happen, they perhaps would have abandoned other sites now under construction in favor of our hospitals. But that is poor solace to our suffering veterans.

Further representations have been made, and we expect to carry the fight further. How paradoxical that we should have to fight for the fulfillment of a promise so freely made to those most deserving of our aid.

Mr. Speaker, I represent the people of the Second Congressional District of Oklahoma. Their sons have been in the front ranks in our wars, and I can do no less than my best in their behalf. Among my people I have particularly enjoyed the writings and the wisdom of one who edits the Muskogee County News. By unanimous consent, I include in my remarks a recent editorial by Mr. Robin Hood, editor of the News. This editorial is most timely and I hope that the Members as well as those in authority in the Veteran's Administration will give it the careful consideration it deserves.

BETWEEN YOU AND ME

(By Robin Hood)

COMPLETE THE HOSPITAL

If the Federal Government must economize in its plans for the hospitalization of veterans, there is no better place to begin than in Muskogee, by completing the existing overcrowded facility.

When the Veterans' Administration laid its postwar program for hospitals to serve millions of additional ex-soldiers and ex-sailors, it bypassed Muskogee and asked Congress to provide billions for gigantic new buildings. These were to be located in or near large cities; the excuse was that new construction should be close to medical schools. One new hospital was to be located in Oklahoma City, with capacity for 1,000 beds. Another was to be built at Norman for psychoneurotic cases.

But these plans went to the wayside a week ago when President Truman directed that the hospitalization program be cut in half, part of his effort to bring Government income and Government expenses close enough together to be on speaking terms with each other. The Veterans' Administration now has reconciled itself to getting along with no hospital at Norman but asks for construction of a 500-bed hospital at Oklahoma City.

But with a relatively small expenditure the Government can add 336 beds to the unit out on Agency Hill. Its present capacity is 386 beds.

The present hospital was designed with the definite purpose of adding a fourth floor to one of the wings, adding three stories to the existing connecting links, and constructing a fourth wing. So complete was the designing that the foundations under and roofs over the wide runways were laid down for four floors; the roofs were laid to be the floors for the second stories. Ground space is ready for the fourth wing; no land is necessary.

The entire new construction can be devoted to beds with the exception of usual ward office space for nurses. The existing kitchens, dining room, assembly hall, library, engineering facilities, staff offices, and other administrative facilities were constructed to handle the additional bed capacity.

The need in Oklahoma is critical. The Sooner State's only veteran hospital other than the one in Muskogee is located in temporary buildings at Will Rogers Field, where there are 220 beds. A large proportion of Oklahoma cases are necessarily sent to surrounding States. Standard procedure is to route veterans from the northern tier of counties into Kansas and from the southern tier of counties into Texas, where similar crowding exists. Veterans' Administration files show that it is not unusual for veterans in need of hospitalization to wait 4 to 6 months for admission.

With a view to eliminating some of the overcrowding, Congress appropriated $465,000 just before the war to enlarge the hospital so as to provide office space for the regional offices of the Veterans' Administration, which at that time was occupying space required for hospital beds. Before work could start the emergency was on, construction materials became critical, the task was postponed, the ear-marked funds were returned to the general treasury. Later the administrative offices were moved uptown, to the Railway Exchange building, which the citizens of Muskogee bought and presented to the Veterans' Administration as a gift.

Such assistance from the city should mean something to the Veterans' Administration. In such a city can be found the generous help and cooperative spirit that will ease many of the problems of an enlarged hospital. The community asks no special favors from the Government. Yet in view of the fact that probably nowhere in the United States can a 336-bed capacity be built and administered so economically, it seems like a bit of ingratitude on the Government's part to brush aside the Muskogee project with the thin excuse that there is no medical school here.

Without criticizing the magnitude of the proposals for hospitalization, it seems self-evident that existing facilities should first be developed to their economical capacity.

The plea of local veteran groups, backed by physicians of all eastern Oklahoma, for completion of this modern, beautifully located hospital plant is indeed a just one.

Civil-Rights Program—FEPC in New York—White Americans Betrayed

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1949

Mr. RANKIN. Mr. Speaker, the Communists all over the world are gloating because of my being left off of the Committee on Un-American Activities.

They seem to think that they have won a great victory.

But I serve notice on them now that I will carry on my fight from the floor of the House, to expose these enemies within our gates as long as I am a Member of this body.

The Committee on Un-American Activities rendered the greatest service of any agency of this Government in exposing those enemies, those traitors, who were here plotting the overthrow of this Government at a time when our boys were dying by the thousands on every battle front in the world.

These subversive forces are still with us, and are endeavoring to force through Congress the so-called civil-rights program, including the FEPC—one of the most vicious pieces of communistic legislation ever proposed in a civilized country.

This alien minority was largely responsible for placing this vicious measure on the statute books of the State of New York.

The Republican members of the legislature were brow beaten into voting for it when they did not want it. Governor Dewey signed it "with 22 pens." When he did, "all the perfumes of Arabia" would not have sweetened "his little hand."

Wherever the American people found out what that vicious measure meant, and understood that it was written by Joe Stalin in 1920, it simply meant the defeat of Dewey.

This vicious measure has been defeated everywhere the people have had a chance to vote on it; and if this Congress forces it onto the American people now, you will see the greatest house cleaning Congress has experienced in many a day, just as soon as the people get a chance to vote on their nominations next year.

They will not wait for the general election, but will begin with the primaries.

Mr. Speaker, I have been fighting this communistic program for a long time. At this point I am inserting a speech which I made on this floor on this proposition on July 29, 1948, in which I included one delivered on February 13, 1947, and one delivered on June 12, 1945.

I hope every Member of this House will take the time to read what I had to say, and to examine the quotations and statistics which I inserted.

Then they will see what a dangerous program these Reds, their stooges, and fellow-travelers are trying to force through Congress at this time.

Here is what I said on this floor on July 29, 1948:

Mr. RANKIN. Mr. Speaker, at the other end of the Capitol we are witnessing a spectacle that forcibly reminds us of the old example of Nero fiddling while Rome burned.

Instead of amending the Federal Reserve Act to check inflation and save the country from the disaster of another deflation, such as we had in 1921 and again in 1929, they take up this communistic civil-rights program, beginning with the anti-poll-tax bill.

I wonder if Members of the House and of the Senate think that the object of this Congress is to persecute the white people of the Southern States in order to save the faces of certain candidates for President on this crazy civil-rights program, which they have endorsed.

Is that the reward our servicemen from the South are to get for their sacrifices in the recent conflict?

Is that the reward the white people of the South are to get for sending a larger proportion of their sons to that war than any other group in America?

The Government based each southern State's quota on the entire population and then took a preponderance of the white boys to do the fighting.

That was especially true in Mississippi, which furnished the largest proportion of her young white men to the service than probably any other State in the Union.

Remember that this civil-rights program is not only directed at the white people of the South, but it is directed at white Americans everywhere. It is a Communist-inspired movement, fostered by an alien minority that has flooded in here from Russia in recent years.

They are simply using the Negro as a smoke screen to cover up their nefarious designs to wreck the country, and destroy the white man's civilization throughout the world.

Let me warn you that we people of the South do not have to submit to this kind of persecution. In the words of Henry W. Grady:

"We wrested the South from the rule of the Negroes, the carpetbaggers, and the scallawags when Federal drumbeats rolled nearer and Federal bayonets hedged closer about the ballot boxes of the South than they ever will again in this free Republic."

If these attempts to force this communistic program onto the American people succeeds, it may well mean the end of this Republic and of our American way of life. It may mean communistic regimentation of the American people, North and South.

Why all this persecution of the white people of the South?

Why all this persecution of white Americans through this FEPC that has been foisted upon the people of New York by Governor Dewey and his cohorts, that has driven the American businessmen in that State underground and forced them to resort to subterfuge in their employment in order to stay in business at all?

No intelligent businessman would go to New York now to start a new enterprise. In fact, many are thinking of closing out or leaving the State.

Why all these attempts to wipe out segregation in the South and force Negroes into our public schools through this so-called civil-rights program?

It is simply carrying out the chief plank in the Communist platform.

It is not doing the Negroes of the South any good. But it is doing them immeasurable harm. It is depriving them of a home. Today we have developed two servants to take their places, electricity and gasoline; and the unfortunate Negroes in the South who are enjoying more peace, more happiness, more prosperity, more protection, and more security than they have ever enjoyed anywhere else on the face of the earth, are finding themselves without homes as a result of this agitation that has been carried on by the communistic left-wing elements of both major political parties.

They are crowding into your large cities of the North, where they are killed by the hundreds, or thousands, whenever the Reds are able to stir up a race riot.

It is time to get back to American principles. You are not going to force Negroes into our white schools. They know that, and we know it. You are not going to destroy our election machinery. This attack on the poll tax is a subterfuge. That is the only tax many people pay, white and black, for education in the South.

Are you going to pass an antilynching law without making it apply to mob violence? In your antilynching bill, you propose to insure the life of every Negro rapist for $20,000, to be paid by the taxpayers of the county where a lynching occurs, but you exempt mobs and race riots. It ought to be called a bill to encourage rape.

Are you afraid if you make it apply to mobs and riots that it will break some of your northern counties?

In the race riot in Chicago back in 1920 they killed 2,200 Negroes—to say nothing of the white people who were killed. At $20,000 apiece, the cost would have been $44,000,000 for the Negroes alone.

The race riot in Detroit, Mich., on June 1, 1943, would have cost the people of that county $14,000,000—while only one lynching took place in the Southern States last year.

As I said, this whole civil-rights program, including the FEPC, seems to be taken from the Communist platform. Everyone knows that the Communists are out to wreck this Government, destroy our American way of life, and wipe Christianity from the face of the earth.

These Reds hate me because I have fought them and exposed them at every opportunity.

It was my amendment to the rules of the House at the opening of the last Congress that created the Committee on Un-American Activities, which has done more to expose these Reds, these Communists, these enemies within our gates, than any other agency of this Government.

That is the reason for all these attacks on me. That is the reason for these petitions the Communists have been circulating among the Negroes of the North asking that I be expelled from Congress.

Why do they want me expelled? What crime have I committed?

They want me expelled because of my fight against this communistic program called civil rights, which includes the anti-poll-tax bill, the antilynching bill, the anti-segregation bill, and the FEPC bill.

They want me expelled from Congress because of my stand for white supremacy. They even induced a gang of Negro bishops to pass a resolution asking that I be expelled from Congress because of my stand for white supremacy, for segregation in our schools, hotels, trains, etc., in the South, and for my fight against the other vicious provisions of their so-called civil-rights program.

The Communists had a Negro man and an alleged white woman picketing the Democratic Convention at Philadelphia with a large placard reading "Oust RANKIN" in capital letters large enough to be seen and read two blocks away.

Our committee exposed these Communists that were indicted in New York more than 2 years ago.

Here is a statement which the head of the Communist Party in this country, William Z. Foster, admitted on oath, in response to my questioning, that he made in a speech accepting the leadership of his party in this country. Here is what he said:

"No Communist, no matter how many votes he should secure in a national election, could, even if he would, become President of the present Government. When a Communist heads the Government of the United States—and that day will come just as surely as the sun rises—the Government will not be a capitalist government but a soviet government, and behind this government will stand the Red army to enforce the dictatorship of the proletariat."

No wonder he and his gang want me out of Congress. They know that I am one of the worst enemies communism has, in Congress or elsewhere, that I know how to fight them, and that I have the courage to expose them.

This is the gang that is stirring up race trouble in the South. They do not care anything about the Negroes; they just want to stir up trouble preparatory to their planned revolution.

FEPC IN NEW YORK

Now, Mr. Speaker, here is a speech which I made on February 13, 1947, on Governor Dewey's FEPC law in New York.

I said then that he had got his mustache in the wringer, and that, in my opinion, he never would get it out. That prediction was borne out in the recent election.

In the speech referred to I said:

Mr. Speaker, I arose to discuss this so-called civil-rights program, and especially the vicious FEPC law which Governor Dewey has imposed on the people of New York, and which he would undoubtedly impose on the entire Nation if he had his way.

For the information of the House and the country, I am going to insert as a part of these remarks two speeches I made in the House on this subject, in which I set out the regulations adopted under the Dewey law in New York, as well as the set-up under the one established by Mr. Roosevelt's Executive order.

Read them carefully and you will realize the extreme viciousness of any such program.

If the New York law were on the Federal statute books, with the same regulations in effect that have been imposed on the people of that State, then Communist Russia could pack her spies into every defense plant and every business establishment in this country.

If you doubt that, read those regulations which I have included in the following address:

Mr. RANKIN. Mr. Speaker, I arose to discuss a measure introduced by the gentleman from Illinois [Mr. Dirksen] for the recreation of the now defunct FEPC, or the so-called Fair Employment Practice Committee.

I believe Mr. Dirksen made a speech for such a measure in the last Congress.

It would certainly take a genius to reconcile that speech of the gentleman from Illinois [Mr. Dirksen] and this FEPC bill he has introduced with his recent speech against communism, especially since that FEPC is the chief plank in the Communist platform.

It is the most dangerous piece of communistic legislation with which this country has ever been threatened in all its history. I am going to show what it would do to the people of Illinois by pointing out what it is doing to the people of New York, where this vicious measure was written into the laws of that State without consulting the people who are suffering under it.

All these bills contain the same old bunk about making it a crime to discriminate in employment because of 'race, creed, color, national origin, or ancestry,' and so forth.

Before Mr. Dirksen attempts to ram this monstrosity down the throats of the people of Illinois, and all the other States, I suggest he do as they did in California, let the people of Illinois vote on it. That is what they did in California in the last election, and it was defeated by a majority in every single individual county in California.

Now let us see what such a measure is doing to the people of the State of New York.

A man from New York said to me this morning, "You know this measure is being operated in New York simply by failure to operate it." The other night there were two men from New York in a taxicab here in Washington driven by a man who works here on the Hill. They got into an argument. One of them said, "I told you this FEPC would ruin the State of New York if they ever put it on the statute books." The other one said, "I did not think so. I thought it was a humanitarian measure. But I now see my mistake."

Then the other man said, "Here is what it has done to me. I own a good home," I believe he sa l, "out on Riverside Drive, and I also own a house next to it which I bought for my own protection. I had a friend living in the other house, but his business took him to another section of the country and he had to vacate. Like a fool, I put up a sign 'for rent,' thinking that someone in the community whom I could afford to rent it to would apply. Somebody put a colored fellow up to come and apply for it and the court now says I must let him have it."

I bring this to you for what it is worth. I understand the Communists in New York are demanding that the same rule be applied to rooms or apartments for rent.

But I want to read to you some of the regulations that are now being imposed upon the people of the State of New York under this vicious law. Businessmen from New York tell me that the way they are getting around this measure is by operating through employment agencies, because no intelligent businessman would go to a State with that kind of law on its statute books and attempt to establish a new business or a new enterprise, especially with the regulations or rulings under it which I am now going to read to you.

Remember they put this measure on the ticket in California and the people voted on it in the last election; and it lost in every single individual county in California. It was beaten in the entire State by about 3 to 1.

You simply destroy business with a measure like this. That is what the FEPC did here. Men have gone out of business all over the country in the last few years because of the persecution that was carried on by this outfit here in Washington, the personnel of which I shall insert later on.

A few people are going around urging us to pass it as a national law, to put everybody else in the same predicament. These people who are carrying on this racial agitation are using the Negro as a smoke screen. They do not give a tinker's dam about the Negro. They are not trying to help the Negro. They are doing them more harm than anybody has in the last 50 years, and the decent, law-abiding Negroes know it.

But let me show you what they have done in New York, and let me give you some of the regulations or rulings, as they are called, and ask you if you would like to have them in your State. I want to ask the gentleman from Illinois [Mr. Dirksen] how he would like to have them in Illinois, or how you would like to have them in Ohio, Indiana, Pennsylvania, or in Missouri, or in any other State in the Union.

Here are the regulations, or rulings, issued by the State of New York. They are headed:

"State of New York Executive Department. State commission against discrimination. Rulings."

Here are some of the things you cannot do under the law of New York:

UNLAWFUL EMPLOYMENT PRACTICES BEFORE HIRING ANYBODY

Those words are written in capitals. Here is the first unlawful practice:

"Inquiry into the original name of the applicant for employment, whose name has been changed by court proceedings or otherwise."

If you inquire as to his name or what his name used to be you violate the law. You commit an unlawful practice. For instance, take this man who writes for PM, who calls himself I. F. Stone. His name was Isadore Feinstein, as Cordell Hull once pointed out. Suppose he comes to you asking for employment and you ask him that question. Then you will have committed an unlawful act.

Here is the next one:

It would be unlawful practice to make "inquiry into the birthplace of the applicant for employment, the birthplace of his parents, spouse, or other close relative."

How would you like that in Iowa, Illinois, Texas, or Nebraska? In California I know you do not like it, because you have just voted on it.

Here is the next unlawful practice:

"Requirement that the applicant for employment produce a birth certificate or baptismal certificate."

That would be an unlawful practice under this FEPC Act in New York.

I was surprised to see Governor Dewey get his mustache in the wringer on this proposition. I do not see how he is ever going to get loose from it.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. What about this requirement during the war that every person employed in certain industries had to prove that he was born here before he could get a job?

Mr. RANKIN. Certainly. If we had had this law all over the country then, the Japs would have had a spy at the elbow of every man in a key position; so would the Germans, and so would every other enemy country.

I thank the gentleman from Illinois for his timely suggestion.

It is an unlawful practice in New York, under this law, to make "inquiry into the religious denomination of an applicant for employment, his religious affiliations, his church, parish pastor, or religious holidays observed. Inquiry into whether an applicant for employment is an atheist."

Inquiry into whether an applicant for employment is an atheist is forbidden, although you may be publishing literature for the Methodist Church, the Baptist Church, or any other denomination.

Another thing, an applicant for employment—and I am reading from the rules laid down by this commission:

"An applicant for employment may not be told that this is a Catholic, Protestant, or Jewish organization."

In other words, if you are in the business of publishing religious literature, you cannot even give him that information, under this law, which the gentleman from Illinois [Mr. Dirksen] now proposes for the whole country, including Illinois.

Here is another unlawful practice:

"An applicant for employment may not be told that the following holidays will be observed by the firm and no others, naming the holidays, e. g., Decoration Day and Fourth of July, etc."

You cannot tell them under the laws, rulings, and regulations of the State of New York that they may observe the Fourth of July.

Here is another unlawful practice:

"An applicant for employment may not be told that employees are required to work Rosh Hashana and Yom Kippur."

Frankly, I did not know there were any such days until the last few years.

Another thing, it is an unlawful practice under this New York law to make "inquiry into the complexion of an applicant for employment."

Inquire into his complexion and you are likely to get yourself tangled up with the law of the State of New York.

Here is another unlawful practice:

"Requirement that an applicant for employment annex a photograph."

That would be an unlawful employment practice. You are not supposed to know how he looks.

Remember, this is not in Russia, but in New York.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. And yet the State Department in order to grant a visa requires a photograph of the person to be presented with his application.

Mr. RANKIN. Certainly, and they ought to do so. Much as I respect the distinguished gentleman from Illinois [Mr. MASON], I certainly would not want to employ him unless I knew how he looked. If I had never seen him, I would certainly want to see his picture.

Here is another unlawful practice:

Inquiry whether an applicant for employment is a naturalized or native-born citizen; the date when the applicant acquired citizenship; whether the applicant's parents or spouse are naturalized or native-born citizens of the United States; the date when such parents or spouse acquired citizenship.

You cannot inquire into these questions under this FEPC law in New York.

Here is another unlawful practice:

Requirement that an applicant for employment produce his naturalization papers or first papers.

He may lie to you and tell you that he is a naturalized citizen, but you cannot ask to see his papers.

Another unlawful practice in New York is to inquire into the lineage of an applicant for employment, his ancestry, or national origin.

You remember a few years ago the Dallas News inserted an advertisement for a colored janitor, and this FEPC outfit down the street ordered them to take it out, said it was an unlawful practice.

One member of this FEPC outfit here in Washington went into the office of Swift & Co. in Chicago. This FEPC man asked them: "How many Negroes do you have on your board of directors?"

The answer was "None."

Then the FEPC man asked him, "Why haven't you?"

That was the FEPC down here in Washington a few years ago before it died, because a few radicals could not browbeat Congress into perpetuating it.

But it is now in force in the State of New York.

Here is another unlawful practice under the New York law:

Inquiry into the location of places of business of relatives of an applicant for employment.

It is an unlawful practice to make inquiry into the place of residence of the parents, spouse, or other close relatives of an applicant for employment.

I am reading from the records at Albany.

Here is another unlawful practice:

Inquiry into the maiden name of the wife of a male applicant for employment and/or inquiry into the maiden name of the mother of a male or female applicant for employment.

The other day we had the Eislers down here. One of them has been shown to be representing the Comintern, according to his sister's testimony. He has a brother out in California, who seems to be poisoning the public mind through the moving-picture industry. He tries to defend his brother and refers to this woman as "my former sister." If you wanted to employ any of them and check the name of at least one of them as given here, you could not inquire into those names at all—if you are trying to do business in the State of New York—even though one of them has a half dozen aliases. You could not even ask where they came from or when they got here or when they changed their names.

Here is another unlawful practice, in New York:

Inquiry into the general military experience of an applicant for employment.

I wish every ex-serviceman could read that, and the next one.

Here it is. It is an unlawful practice to make inquiry into the whereabouts of an

applicant for employment during the First World War; i. e., during the period from 1914 to 1919.

In other words, inquiry as to his whereabouts in the period from 1914 to 1919 is forbidden as an unlawful practice in the State of New York.

Is that what you want in Colorado? Is that what you want in Massachusetts?

Mr. GIFFORD. We have it.

Mr. RANKIN. Get rid of it, and we will help you.

Is that what you want in Kansas, in Ohio, and in other States?

Let your States vote on it. Michigan is going to vote on it right away. If you will tell the people of Michigan the whole truth let them know the whole truth about this monstrosity, I will guarantee you they will beat it worse than they did in California.

Here is another unlawful practice:

Inquiry into the organization of which an applicant for employment is a member, including organizations the name or character of which indicates the religion, race, or national origin of its members.

I presume, if they should ask me if I am a member of the Masonic lodge, I could have them jerked up and brought before this inquisition board or probably prosecuted at various places throughout the country.

Mr. Speaker, I am not criticizing the people of New York. I have long since learned in going from one State to another that real Americans are about the same everywhere. I believe if they had a vote on it the people of New York would beat it, just as they did in California.

They are having a vote on it in Michigan because a little minority group has been attempting to browbeat the Legislature of Michigan into passing it. I dare say when it goes on the ballot in Michigan and the people of Michigan understand what it means they will defeat it more thoroughly than they did in California. The same thing would happen in probably every other State in the Union.

Mr. AUGUST H. ANDRESEN. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Minnesota.

Mr. AUGUST H. ANDRESEN. Will the gentleman tell us what the penalties are in New York?

Mr. RANKIN. In addition to being harassed to death with orders and directives to cease, desist, rehire, and so forth, there is a punishment provided of imprisonment in a penitentiary or county jail for not more than 1 year or by fine of not more than $500, or by both.

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Massachusetts.

Mr. GIFFORD. I want to remind the gentleman that we have that law in Massachusetts.

Mr. RANKIN. I was afraid of that.

Mr. GIFFORD. I was thoroughly amazed when I looked into it; I had not learned what the rules were. But, perhaps we carried it too far. I am so sorry, and I have been, and I am not in favor of this, I can assure the gentleman.

Mr. RANKIN. I know the gentleman is not, and I am sure the people of Massachusetts would not favor it if they had a vote on it.

Mr. GIFFORD. Employers always inquire and must know whether you come from a respectable family or not. They are so careful. Perhaps they overdid it. But I think a man ought to be able to find out whether he came from a respectable family.

Mr. RANKIN. There are a great many questions that should be asked, which are forbidden under this law.

But Mr. Speaker, one of the greatest betrayals of white Americans ever known was the setting up by Executive order of the so-called FEPC here in Washington, which I helped to kill by knocking out the appropriations to finance it.

On July 12, 1945, I made a speech in which I analyzed that vicious program. That speech reads as follows:

Mr. RANKIN. Mr. Chairman, the passage of a law at this time legalizing this so-called FEPC would be a betrayal of the white people of the country. If every individual in the United States could understand just what it means, there would be such a roar of protest coming from every State in this Union that it would never see the light of day.

If every Member of Congress would screw his courage to the sticking place and vote his convictions on this so-called FEPC, it would not get 50 votes out of the entire membership of 435.

It is a most dangerous and brazen attempt to fasten upon the white people of America the worst system of control by alien or minority racial groups that has been known since the Crucifixion.

When I read the names of the personnel of this outfit you will understand what I mean.

To sanctify this organization by law would give the lie to everything we have told our American boys they were fighting for. Instead of coming back to liberty, freedom, and democracy, they would find themselves sold into this bondage, herded, humiliated, and regimented by alien influences directed by a foreign comintern representing the deadly doctrine of Karl Marx that is based upon hatred for Christianity and for everything that is based on Christian principles.

It is a manifestation in legislative form of that infidelity that has closed thousands of Christian churches in Europe and has been responsible for the murder of untold millions of Christian human beings.

This measure is not directed altogether at the white people of the South. If it were, you folks in the North would not have so much ground for alarm. We in the South know how to combat subversive elements. As Henry Grady once said, we wrested the South from such domination "when Federal drum beats rolled nearer and Federal bayonets hedged closer to the ballot box of the South than they ever will again in this Republic."

But you people in the North have not had that training, and this FEPC is likely to bring grief, strife, hatred, race riots, and chaos in your northern cities if this vicious agency is perpetuated and sanctioned by your votes.

Do not forget that the returning servicemen know what this thing means, and they are going to call you to account next year—beginning with the primary. They are not going to wait until the general election.

Do not forget that every businessman, every farmer, every professional man, and every other independent individual whose blood glows with the instinct of American liberty, is going to join these men, and those other patriotic forces that are fighting to save American institutions for which these boys have been fighting and dying upon every battlefield in the world.

If every man and every woman in the United States could just read the list of individuals that compose the personnel of this crazy FEPC, and its subdivisions throughout the country, I dare say there would not be enough of you left to vote for it, even if nominated in the primaries next year, to form a corporal's guard.

For your information, and for the information of the American people generally, I am going to read you the official personnel as it exists today. Remember, this list is taken from the official record. This is the group that wants to nose into and control every business in the United States. Remember, they can search the files and records of every business establishment in America where some disgruntled individual is willing to trump up a charge of discrimination. They can drag them all over the country and try them, and in that way destroy any ordinary business concern.

The next thing they are going to try to do is get control of your schools and force their communistic henchmen into the schools and teach your children their subversive doctrines.

Read these lists carefully, which, as I said, are taken from the official records here in Washington, and you will see that not one out of ten on these rolls is a white Gentile American.

Here is the official list:

Committee on Fair Employment Practice, Washington, D. C., Office of the Chairman

Incumbent	Title	Race	Salary
Ross, Malcolm	Chairman	White	$8,000
Johnson, George M.	Deputy chairman.	Colored	8,000
Hubbard, Maceo	Hearings examiner.	do	5,600
Bloch, Emanuel	do	White	5,600
Copper, Evelyn	do	do	5,600
Berking, Max	Assistant to chairman.	do	3,800
Alexander, Dorothy	Secretary to chairman.	Colored	2,600
Clifton, J. Jeanne	Secretary to deputy.	do	2,000
Brooks, Mary	Clerk-stenographer.	do	1,800
Banting, Myra	do	White	1,800

You will note that in this office of the Chairman, consisting of 10 people, there are 5 Negroes and 5 white people, most of whom have foreign names. One of the whites is a stenographer who receives the smallest salary of anyone on the list.

Remember that the members of this group preside over the destiny of every business enterprise in America, and are using their assumed powers to harass white Americans out of business.

This is the organization Members of Congress are being asked to perpetuate by the passage of this bill.

FIELD OPERATIONS

Here is the Division of Field Operations:

Field operations

Incumbent	Title	Race	Salary
Maslow, Will	Chief	White	$6,500
Mitchell, Clarence	Principal fair-practice examiner.	Colored	5,600
Davidson, Eugene	do	do	5,600
Beall, W. Hayes	Senior fair-practice examiner.	White	4,600
Mercer, Inez	Fair-practice examiner.	do	3,800
Rogers, Eleanor	Clerk-stenographer.	Colored	1,800
Saito, Otome	do	Japanese-American.	1,800
Thompson, Mildred	do	Colored	1,800
Cornick, Emma	do	do	1,620

You will note that it consists of nine people—five Negroes, one Japanese, and three others—two of whom have records of affiliations with Communist-front organizations, according to the reports of the Dies committee.

Imagine this group going about over the country riding herd on the white American businessmen of the Nation, telling them whom they shall employ, whom they shall promote, and with whom they may associate.

It would be interesting, and probably enlightening, to check up on these people and see how many of them are native-born Americans.

Members of Congress had better do this now, before they get caught in this trap, because this question of un-American activities is going to be an issue in every Congressional district next year, beginning with the primaries.

The people are not going to wait until the general election for someone who holds a commission as a result of the pernicious activities of Sidney Hillman and his gang to wrap the party cloak about him and shout to the people of his district that "I am a Republican" or "I am a Democrat."

More than 2,000,000 young men have already been discharged in this war, and they are organizing now to try to save America for Americans. They are going to read your records, and they are likely to ask you some very embarrassing questions when you get home.

REVIEW AND ANALYSIS DIVISION

Now look at this list and see who reviews all these records of racial discrimination when they come to Washington, and you will understand how the editor of the Dallas News felt and how other white gentiles feel, including Cecil B. DeMille, the great American movie producer, when they are harassed out of business.

Here is the list:

Review and analysis division

Incumbent	Title	Race	Salary
Davis, John A	Chief	Colored	$5,600
Lawson, Marjorie	Research analyst.	do	3,800
Golightly, Cornelius.	Compliance analyst.	do	3,200
Hemphill, India	do	do	2,600
Coan, Carol	do	White	2,600
Davis, Joy P	do	Colored	2,600
Hoffman, Celia	Clerk-stenographer.	White	1,800
Spaulding, Joan	do	Colored	1,800

You will note that it consists of 6 Negroes and 2 white people, one of whom is named Carol Coan and the other Celia Hoffman, a white stenographer receiving the lowest salary on the list.

Now, if you sign the petition to bring out this bill or vote for this monstrosity, do not forget that when you get home those white American businessmen who help to sustain this Nation in time of peace and whose sons are fighting its battles in time of war are going to want to ask you some questions that you may not be able to answer.

LEGAL DIVISION

But if you want a real laugh, look at this Legal Division.

Legal Division

Incumbent	Title	Race	Salary
Reeves, Frank D	Attorney	Colored	$4,600
Stickgold, Simon	do	White	4,600
Gordon, Jernevive	Clerk-stenographer.	Colored	1,800

You will note that this so-called legal division consists of two Negroes and a Simon Stickgold.

INFORMATION DIVISION

Now we come to the information division. If you want information about this outfit, write to this division:

Information division

Incumbent	Title	Race	Salary
Bourne, St. Clair	Information specialist.	Colored	$3,800
Whiting, Margaret	Clerk-stenographer.	do	1,800

You will note that it consists of two Negroes, one registered as an information specialist and the other as a clerk-stenographer.

BUDGET AND ADMINISTRATION

Now we come to the Budget and Administration Division. This Division not only makes up the budget but administers the regulations. Here is the list:

Budget and administration

Incumbent	Title	Race	Salary
Jones, Theodore	Chief	Colored	$5,600
Jeter, Sinclair	Assistant administrative officer.	do	3,200
Baker, Vivian D	Clerk-stenographer.	do	2,000
Jackson, Bosales A	Clerk-typist	do	1,620
Paynter, Minnie A	do	do	1,620
Hollomon, Irving	Clerk	do	1,440
Selby, Ralph R	Chief, fiscal	do	2,600
Ross, Sylvia B	Voucher auditor	do	2,000
Nelson, Otelia	Accounting clerk.	do	1,620
Carpenter, Elizabeth.	do	do	1,620
Brent, Pearl T	do	do	1,620

This outfit, which is composed of 11 Negroes, and no whites at all, not only makes up the budget for financing this aggregation, but it seems to have the power of administration. I hope you will read this list to your white businessmen, farmers, and ex-servicemen at home when you get back and ask for renomination in the primaries next year.

MAIL AND FILES DIVISION

Now, here are the ones that have control of the mails and filing system:

Mail and files

Incumbent	Title	Race	Salary
Douglas, Lela	Chief, Mail and Files.	Colored	$2,000
Welch, Selena	Docket clerk	do	1,800
Gamble, Jessie	File clerk	do	1,620
Phillips, Rose	do	do	1,440
Reed, Charles	Messenger	do	1,380
Mitchell, Regina	File clerk	do	1,440

You will note that this division is composed entirely of Negroes—six Negroes, and no whites at all. I wonder why they discriminated against the white race in setting up these two powerful branches of this most dangerous agency?

REGIONAL OFFICE, NEW YORK

Now, let us turn to the regional offices and see who is going to harass the business people back in the States. Here is the list for the State of New York:

Regional office, New York

Incumbent	Title	Race	Salary
Lawson, Edward H.	Regional director.	Colored	$5,600
Jones, Madison S	Fair-practice examiner.	do	3,800
Jones, Robert G	do	do	3,800
Donovan, Daniel R	do	White	3,800
Irish, Miriam	Clerk-stenographer.	Colored	2,000
Asepha, Tillie	do	White	1,620
Schwartz, Sonia	do	do	1,620

This is the list that is going to help Governor Dewey harass the white American businessmen of the Empire State. You will note that it is composed of four Negroes and three white people. Please read the names of the three white people and see if you can figure out their antecedents.

Businessmen of New York are going to have a hard time after this war without having all this communistic conglomeration to deal with, to say nothing of the one which Governor Dewey and his political henchmen have now heaped upon them.

REGIONAL OFFICE, PHILADELPHIA

Now, let us turn to Philadelphia, the birthplace of the Constitution—the City of Brotherly Love. At the risk of causing glorious old Benjamin Franklin to turn over in his grave, I read you the list:

Regional office, Philadelphia

Incumbent	Title	Race	Salary
Fleming, G. James	Regional director.	Colored	$5,600
Greenblatt, Mildred.	Fair-practice examiner.	White	3,800
Manly, Milo A	do	Colored	3,800
Risk, Samuel R	do	White	3,800
Grinnage, Willard	do	Colored	3,200
Gorgas, Helen	Clerk-stenographer.	do	1,800
Klinger, Karyl	do	White	1,800
Brown, Grayce	do	Colored	1,440

You will note that it is composed of eight individuals—five Negroes and three whites, Mildred Greenblatt, Samuel R. Risk, and Karyl Klinger.

Don't you know there will be some brotherly love when that crowd gets going on the businessmen of the Philadelphia area?

REGIONAL OFFICE, WASHINGTON, D. C.

Now, here is the regional office in Washington, D. C., the National Capital, where there has been so much persecution of white gentiles in the last few years. Here is the list:

Regional office, Washington, D. C.

Incumbent	Title	Race	Salary
Evans, Joseph	Regional director.	Colored	$5,600
Houston, Theophilus.	Fair-practice examiner.	do	3,200
Kahn, Alice	do	White	2,600
Chisolm, Ruby	Clerk-stenographer.	Colored	1,800
Urback, Dorothy	do	do	1,620

You will note it consists of four Negroes and Alice Kahn. Just what chance a white gentile will have with this group is entirely problematical, to say the least of it.

REGIONAL OFFICE, CLEVELAND

Now, let us move out where the West begins and take a look. Here is the list in the Cleveland regional office:

Regional office, Cleveland

Incumbent	Title	Race	Salary
McKnight, William.	Regional director.	Colored	$4,600
Abbott, Olcott R	Fair-practice examiner.	White	3,800
Glore, Lethia	do	Colored	3,200
Kelley, Berniza	Clerk-stenographer.	do	1,620
Wasem, Edna	do	White	1,800

You will note that this group is composed of three Negroes and two whites, Olcott R. Abbott and Edna Wasem.

Don't you know the white people of Cleveland will enjoy being dominated by them?

CINCINNATI REGIONAL OFFICE

Cincinnati seems to be largely under the jurisdiction of the Cleveland office since it only has two people:

Cincinnati

Incumbent	Title	Race	Salary
James, Harold	Fair-practice examiner.	White	$4,600
(Vacancy)	Clerk-stenographer.		1,800

DETROIT REGIONAL OFFICE

Now let us move on to Detroit, Mich. Here is the regional office for Detroit:

Detroit

Incumbent	Title	Race	Salary
Swan, Edward	Examiner in charge.	Colored	$4,600
Sese, Doris K.	Clerk-stenographer.	Japanese-American.	1,620

You will note that it is composed of one Negro and one Japanese. I know the businessmen of Detroit are grateful for this consideration.

I should like to hear some of the comments they will make to you gentlemen from Detroit when you get home next summer, if you support this vicious measure.

REGIONAL OFFICE, CHICAGO

Here is a list of the regional office in the Windy City:

Regional office, Chicago

Incumbent	Title	Race	Salary
Henderson, Elner	Regional director.	Colored	$5,600
Gibson, Harry H. C.	Fair-practice examiner.	do	3,800
Schultz, Joy	do	White	3,800
Williams, Le Roy	do	Colored	3,200
Zeidman, Penny	Clerk-stenographer.	White	1,800
Ingram, Marguerite S.	do	Colored	1,620

You will note it is composed of four Negroes, Joy Schultz, and Penny Zeidman. I am told that a representative of this group went into the office of Swift & Co. and asked how many Negro members they had on their board of directors. The answer was, "We have no Negro members on our board of directors." Then the question came back, "Why haven't you?" This just shows what this supergovernmental set-up is driving at. They want to communize America and destroy everything which our glorious ancestors have left us and for which our boys are now fighting and dying all over the world.

REGIONAL OFFICE, ATLANTA

Here is a list of the Atlanta office:

Regional office, Atlanta

Incumbent	Title	Race	Salary
Dodge, Witherspoon.	Regional director.	White	$4,600
Hope, John	Fair-practice examiner.	Colored	3,800
McKay, George D.	do	White	3,200
Chubb, Sally	Clerk-stenographer.	do	2,000
Ingram, Thelma	do	Colored	1,800

You will note that it consists of two Negroes and three whites; the most important post in this office, that of examiner, is held by a Negro. I wonder how the people of Georgia enjoy the domination of this group. I may have more to say about them later.

REGIONAL OFFICE, KANSAS CITY

Here is the list of the Kansas City office:

Regional office, Kansas City

Incumbent	Title	Race	Salary
Hoglund, Roy A.	Regional director.	White	$5,600
Ormabee, Eugene	Fair-practice examiner.	do	3,800
Jones, Mildred	Clerk-stenographer.	Colored	1,620
Schlien, Helene G.	do	White	1,620

You will note that this office force consists of three whites and one Negro. You can read the list of whites yourself and then judge how many of them really represent the people of that area.

ST. LOUIS REGIONAL OFFICE

Here is the list of the regional office at St. Louis:

St. Louis

Incumbent	Title	Race	Salary
Theodore Brown	Examiner in charge.	Colored	$3,800
Morris Levine	Examiner	White	3,200
Armatha Jackson	Clerk-stenographer.	Colored	1,620

You will notice that it consists of two Negroes and Morris Levine. Just how they came to select these particular individuals to preside over the destiny of the white businessmen of the great State of Missouri I cannot understand.

REGIONAL OFFICE, DALLAS, TEX.

The members of the regional office at Dallas are as follows:

Regional Office, Dallas

Incumbent	Title	Race	Salary
Castenada, Carlos	Regional director.	White	$4,600
(Vacancy)	Fair-practice examiner.		3,200
Gutleben, Willetta	Clerk-stenographer.	White	1,800

You will note there is one vacancy. Last year that position was held by a Negro, namely, Roy V. Williams. The other two members, Carlos Castenada, the regional director, and Willetta Gutleben seem to be in charge of the office at the present time. This is the regional office that attacked the Dallas News last year for carrying an advertisement for a Negro janitor. This fellow Castenada, the director, held the same position that he holds now. If this set-up is made permanent, then I presume the rest of the white American businessmen in Texas may expect to be harassed just as the Dallas News was.

REGIONAL OFFICE, NEW ORLEANS

The regional office at New Orleans consists of the following members:

Regional office, New Orleans

Incumbent	Title	Race	Salary
Ellinger, W. Don	Regional director.	White	$3,800
Morton, James H.	Fair-practice examiner.	Colored	3,200
Ronning, Evelyn	Clerk-stenographer.	White	1,800

You will note that there are two whites and one Negro in this office. As the Negro is the fair-practice examiner, just what the decent people of Louisiana may expect at the hands of this outfit is something to contemplate.

REGIONAL OFFICE, SAN FRANCISCO

The San Francisco office consists of the following individuals:

Regional office, San Francisco

Incumbent	Title	Race	Salary
Kingman, Harry L.	Regional director.	White	$5,600
Rutledge, Edward	Fair-practice examiner.	do	4,600
Ross, Bernard	do	do	3,800
Seymour, Virginia	Administrative assistant.	do	2,000
Marzen, Jewel	Clerk-stenographer.	do	1,800

This is the only office we have found yet that consists entirely of white (?) people. Just what the background of each one of them is I am unable to say.

LOS ANGELES REGIONAL OFFICE

The Los Angeles regional office consists of the following:

Los Angeles

Incumbent	Title	Race	Salary
Hunt, A. Bruce	Hearings examiner.	White	$5,600
Brown, Robert E.	Fair-practice examiner.	Colored	3,600
Lopez, Ignacio	do	White	3,800
Vetter, Vera G.	Clerk-stenographer.	do	1,800
Lerna, Marie	do	do	1,620

You will note that there are four whites and one Negro in this office, the Negro being the fair-practice examiner. I do not know what consideration the white businessmen of the Los Angeles area are receiving at the hands of this group, but from what I can hear there is considerable gnashing of teeth over the situation.

Mr. Chairman, this FEPC is a supergovernment of commissars, with more power for evil than any other agency that has ever been created in this country. If Congress should ratify it and make it the law of the land, then we will have sacrificed and destroyed that sacred freedom for which our brave men are now fighting and dying on every battle front in the world.

We have no right to pass such a drastic, revolutionary measure that literally changes our way of life, as well as our form of government, while these boys are away from home in uniform, fighting to sustain American institutions.

As I said before, we are going to carry this battle against such un-American activities into every congressional district in the United States next year, in the primary, so that no one can crawl behind the party cloak and claim immunity at the hands of any segment of our people.

This is a battle for the survival of free constitutional government, for the survival of the American way of life, for the survival of free enterprise, for the survival of American liberty itself.

It is a battle to save America for Americans.

Mr. Speaker, our country is at stake; our civilization is at stake; our American way of life is at stake; Christianity itself is at stake.

I call upon all patriotic Americans to join me in this fight to turn back the tide of communistic fanaticism and save our country, our civilization, and our way of life from destruction at the hands of our enemies at home and abroad.

God save America.

Letter of Wisconsin Farmers Union

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and reply thereto:

FARMERS EDUCATIONAL AND
COOPERATIVE UNION OF AMERICA,
Chippewa Falls, Wis., January 26, 1949.
Congressman GLENN R. DAVIS,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I am writing you about a problem that is rapidly bankrupting our dairy farmers and milk plants in Wisconsin.

The Eightieth Congress destroyed the old farm program and the appropriations to put sufficient floor under agricultural prices to keep farmers from going broke.

The Hope-Aiken bill is a monstrosity. It is the only bill designed to benefit a certain group with cheap grain and the dairy deficiency producing areas with our milk at 60 to 90 percent of parity. Just how do you suppose a farmer can live on 60 to 90 percent of parity or cost of production and pay 180 percent of parity for the things he buys?

This is sure showing up out here now. Milk is down to about $2.75 per hundredweight on a basis of around $4 cost. Our milk plants and our farmers are rapidly going broke. They are hot under the collar.

There are no funds available to support prices until prices drop still further. There are no funds in the Department of Agriculture to support powdered milk or other products so the trade is taking advantage of this fact.

Farm purchases of industrial goods are at a standstill and will become serious unless a deficiency appropriation is made at once so the Department of Agriculture can step into the market.

We sincerely hope that you will support the repeal of the Hope-Aiken bill and support the Farmers Union program of full parity for all farmers. If a dairy farmer isn't entitled to full parity, then just why is industry entitled to 180 percent of parity? Unless rapid action is taken on this matter there will no doubt be a delegation of dairy farmers descending on their Congressmen and Senators. This situation is desperate.

We also endorse the prohibition of the sale of oleo sold as an imitation of butter. Unless this is done we demand that our present legislation remain intact.

As soon as we have our State convention we will, no doubt, be forwarding you our stand on many other matters.

Sincerely yours,
WISCONSIN FARMERS UNION,
K. W. HONES, *President.*

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 31, 1949.
Mr. KENNETH W. HONES,
President, Farmers Educational and Cooperative Union of America, Chippewa Falls, Wis.

DEAR MR. HONES: This is by way of acknowledgment and reply to yours of the 26th.

I want to assist in every way I can toward the development of a sound support program. That goal can best be achieved if all of us who are vitally concerned with the future of agriculture are candid and fair, and avoid misstatements and unfounded recriminations.

The Hope-Aiken bill was the Truman administration's program, submitted and supported by Secretary of Agriculture Brannan and other farm leaders in and out of the administration. It was approved by the Senate Agriculture Committee, and as a compromise, by the House Agriculture Committee. I mention the word compromise because, as you are well aware, the bill was adopted to be effective as of January 1, 1950. That is the status of the law as of this date. In other words, the sliding scale of parity is not now in use, and certainly could not be responsible for the situation of dairy farmers in Wisconsin today.

You are further aware that parity prices are determined, in part, by the current prices of the products the farmer buys. Your use of the figures 60–90 percent of parity or cost of production and 180 percent of parity for the things he buys is expressive of a current disparity in agricultural and industrial prices, but actually doesn't give any assistance to Congressmen who are daily seeking the answers to these conditions.

The old farm program you write of still exists, and will exist for 11 more months. Under that program, the Department of Agriculture has had, and does have, the responsibility for announcing and supporting the price of milk. This has not been done at any time under the Seventy-eighth, Seventy-ninth, Eightieth, or Eighty-first Congresses. How then can you point the finger at the Eightieth Congress?

Referring to the oleo question, you can depend on Wisconsin's eight Republican Congressmen to support the position your organization has taken. I do not know what attitude the two Democrats from Milwaukee will take, although if they follow their party's platform, they will be compelled to vote to repeal the existing legislation.

I shall always welcome facts or opinions on Wisconsin agriculture which will be helpful in legislating on national agricultural programs.

Very truly yours,
GLENN R. DAVIS,
Member of Congress.

The Farmers Should Keep an Eye on What Is Going on in Washington

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. CURTIS. Mr. Speaker, throughout the history of the American Government, officeholders and individuals seeking office have repeatedly stated that the welfare of the Nation depends upon the welfare of the American farmer. Is that just a political saying? Is it something to be said merely to please the farm voters? The answer is that it is a basic fact. The prosperity of the Nation does depend upon the prosperity of agriculture. About the worst calamity that could happen to America internally would be an agricultural depression. That is why I have repeatedly and consistently supported the support price program and all farm legislation, even though at times there may have been some details of the legislation that I would rather have had changed.

If the 6,520,000 farm families of America prosper, the manufacturing and commerce of the Nation will hum with activity. There are two reasons why this is true. In the first place, the farmer spends the money that he receives for the things that the city folks make and sell. Farmers are large buyers not only of food, clothing, and other supplies that they need from day to day, but they buy automobiles, trucks, farm machinery, lumber, fencing, electrical equipment, and everything that our American economy produces. It has been reliably determined that for every dollar of farm income this Nation enjoys seven dollars in total national income because of the turn-over.

So much for the spending side of the farmer's part in our economy. The second principle is that the farmer produces new wealth. From the good earth and the products thereof he produces wheat, corn, cotton, potatoes, hogs, cattle, and the like. When these products are sold and delivered to market, they set in motion a lengthy chain of activity—transportation, manufacturing, processing, wholesaling and retailing, advertising, and activity in every line of endeavor. All of these activities mean financial transactions and money turn-over.

Mr. Speaker, at this point I would like to insert in the RECORD a table prepared by Mr. Carl H. Wilken, of Sioux City, Iowa, which was presented before our Committee on Ways and Means. The table is as follows:

Year	Gross farm income	Percent gross farm income of national	National income
	Billions		*Billions*
1929	$13.0	14.8	$87.3
1930	10.5	14.0	75.0
1931	7.6	13.9	58.8
1932	5.7	13.6	41.7
1933	6.4	16.2	39.6
1934	7.8	16.0	48.6
1935	9.0	15.8	56.8
1936	10.0	14.9	66.9
1937	10.6	14.4	73.6
1938	9.4	13.9	67.3
1939	9.9	13.6	72.5
1940	10.3	12.7	81.3
1941	13.1	12.6	103.8
1942	17.7	13.0	136.4
1943	23.0	13.6	168.2
1944	23.6	12.9	182.2
1945	24.0	13.1	182.8
1946	27.1	15.2	178.3
1947	33.0	16.2	202.5
1948 [1]	32.4	14.4	225.0

[1] Estimated for 1948.

NOTE.—Gross farm income is total farm production sold, plus farm produces used on the farm. Total average percentage of gross farm income to national income 14.3 percent or approximately $1 of gross farm production to $7 of national income.

President Truman has submitted a budget to the Congress for Federal expenditures for the coming fiscal year for about $42,000,000,000. What will happen to that budget and to the financial structure of our Government, and to our Government bonds, if farm prices are permitted to slip back to what they were prior to the war? By referring to the above table, it can be seen that in 1939 our farm income was only $9,900,000,000, and as a result we enjoyed a national income of only $72,500,000,000, or, taking the last year before we were drawn into the war—1941—the total farm income was $13,100,000,000, and the total national income was $103,800,000,000.

From a total national income of only $103,800,000,000 the Federal Government cannot take $42,000,000,000, or any figure near it, out in taxes. Now, more than ever before, the economic well-being of our entire country depends upon the economic well-being of our farmers.

Some farm prices have already gone too low. There is a bad situation with respect to fats and oils, both edible and inedible. The Truman administration has restricted the export of these fats and oils to Europe at a time when that Continent is literally begging for them. The lard market is greatly depressed. In turn, there is a drop in the price of hogs that should not be. The price of inedible fats has fallen so low that it is doubtful that the commercial renderers can afford to pick up carcasses of the dead animals resulting from the recent blizzards and snowstorms that have swept over several agricultural States.

We must realize that fats and oils represent almost 10 percent of our gross cash value of all farm products sold. We can see that this affects the entire agricultural economy. In the last 12 months, lard has dropped from 28 cents a pound to 14½ cents, cottonseed oil from 30 cents to 15 cents, and tallow from 26 cents a pound to 7 cents a pound. The Truman administration not only has retained the export controls and prevented our own fats and oils from reaching Europe, but during that same time it has permitted the importation of about 470 million pounds of fats and oils into the United States. This has greatly affected the hog market.

Mr. Speaker, the farm situation should be dealt with fairly and honestly by the Government of the United States. It demands something more than glibly promising farmers high prices, at the same time the individual is promising consumers lower prices for farm products. The farmers themselves and the farm organizations should keep an eye on what is going on in Washington and see to it that they are dealt with honestly. Propaganda and falsehoods have confused the agricultural picture and made it difficult to legislate. Last fall it was repeated throughout the district which I have the honor to represent in Congress, that I opposed certain farm measures, including the 90 percent parity support price. Those charges were totally false. As a matter of fact, I introduced one of the bills that would make possible the extension of the then existing parity program. It was also stated that I voted against the International Wheat Agreement. Of course, the facts are that this agreement is in the form of a treaty, and it does not come before the House of Representatives for a vote. This statement, like countless other statements, was totally false. Again I say that the farm program in America is an economic one. It demands the best attention from both the Government and our farm leaders, and it certainly should not be a subject for playing politics. The individual who misrepresents the facts is in no sense a friend of the farmer.

If the present plans of the Truman administration and the Democratic controlled Eighty-first Congress in regard to labor legislation are carried through, it will be to the economic disadvantage of the farmers of America. Their goal is the establishment of a minimum wage of $1 an hour. Their proposals for placing more and more of the workers of the United States directly under Federal control and for repealing the Taft-Hartley law are going to mean higher costs for everything the farmer buys. It is more important than ever that Congress makes sure that the farmer gets his just share of the national income.

Our farm support price program should be geared to maintaining a high farm income. The import-export situation should have attention. We should not enact legislation that would make it possible for the President to reimpose price control. Such a thing would depress farm prices at once. The Department of Agriculture should faithfully enforce all support price laws. Necessary equipment to do profitable farming should be made available to our farmers, and this includes the things that are needed to expand rural electrification. Electricity is a necessity on our farms and they should be reached with that service. Our soil should be conserved and our water resources utilized and irrigation should be extended. We need a prosperous agriculture in America.

Chemical Associations Oppose H. R. 1211

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. REED of New York. Mr. Speaker, under unanimous-consent request heretofore granted, I am inserting in the CONGRESSIONAL RECORD as a part of my remarks examples from testimony given before the Ways and Means Committee:

Although there is no normal peacetime basis upon which to judge the effects of international trade, as production expands and increases in the countries which are the beneficiaries of United States tariff concessions, the unequal conditions under which domestic production will be required to compete with foreign exports presents the threat of undermining the economic structure which has carried us forward in peace and prepared us for national emergency. This fact assumes added emphasis in the light of current proposals to remove those safeguards incorporated in the 1948 Trade Agreements Extension Act (Public Law 792), under which the United States Tariff Commission was authorized to determine, with respect to articles considered for possible modification, imposition, or continuance of duty, the peril point beyond which modifications or reductions could not be made without injury to domestic industry.

Accordingly, we strongly urge that these economic factors be seriously weighed in consideration of proposed legislation to restore and extend the Reciprocal Trade Agreements Act in its original form.

Respectfully submitted.

M. F. CRASS, Jr.,
Acting Secretary, Manufacturing Chemists' Association, Inc.

Since the enactment of this (the 1948) bill, the Tariff Commission has promulgated regulations in accordance with law to carry out this policy and by its orderly procedure has justified the confidence placed in it by Congress.

But one set of negotiations has been announced since the act of 1948. In the preparation for these negotiations it has been our experience and through contact with other industries we learn that the United States Tariff Commission has canvassed industry, agriculture, and labor in its attempt to compile facts which would assist our State Department in negotiating with foreign countries and which would insure trading upon an intelligent basis so as not to jeopardize any branch of our domestic economy.

The provision for the participation by the Tariff Commission, we feel, was a wise one and it has been welcomed by labor and industry in this country.

The economic condition of the world has not yet settled to a normal peacetime basis where it would be safe to establish permanently the degree of protection needed in the case of the great majority of products and commodities which compete with our production. We feel, however, that the function performed by the United States Tariff Commission is essential to the well-being of our labor, agriculture, and industry, in that it provides competent findings determined by economic fact.

We, therefore, respectfully urge that the purpose of H. R. 1211 be changed and the bill be so amended as to retain the provisions of the act of 1948, printed as addenda to this brief, which provide for participation by the United States Tariff Commission.

Respectfully submitted.

SYNTHETIC ORGANIC CHEMICAL MANUFACTURERS ASSOCIATION OF THE UNITED STATES,
S. STEWART GRAFF, *Secretary.*

Statehood for Hawaii, Important Step in Pacific Policy

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. FARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me to the Women's Patriotic Conference on National Defense, Saturday, January 27, Statler Hotel, Washington, D. C.:

We of this country are today principally responsible for the peace, progress, and prosperity of the peoples of the Pacific area. Our policies and our influence will determine their future happiness.

The United States is today completely responsible for the islands of the North Pacific. A myriad of islands and atolls, they constitute a bridge that extends all the way from Hawaii to the continent of Asia. No longer is their status and development shrouded in mystery. No longer are they in the hands of a potential enemy. They are ours.

Excepting only Guam, all of these islands, the Marshalls, the Carolines, and Marianas, were part of the Empire of Japan prior to the conclusion of World War II. Now they are ours under a United Nations trusteeship.

South of the equator is Samoa. It has been under our flag for 50 years. The many other

islands that constitute Polynesia and Melanesia are with few exceptions under the control of European powers, Great Britain, France, the Netherlands, and others. But they recognize frankly that to a degree unequaled in any other large area in the world the responsibility for peace is particularly that of the United States. And by no means the least are our good and brave friends, the freedom-loving people of Australia and New Zealand. No American can know these people and their record in the last war without feeling a deep sense of obligation to them.

BRAVE FRIENDS TO THE WEST

And so also, we have good and brave friends to the west. When the United States redeemed its promise to make the people of the Philippines free at the conclusion of World War II, it insured for us the lasting friendship and loyalty of these courageous people, now numbering close to 20,000,000, and instilled new confidence among all Pacific peoples in our promises and purposes.

Turning now to the northwest, we find ourselves responsible for the future of Japan at probably the most critical period in the history of these people. And then to the north is our own Alaska. To all of these people who live within and on the perimeter of the Pacific, we owe a great responsibility. Whatever we do in the development of Pacific policy will be of profound importance to them.

This is particularly true in view of what is going on today in southwestern Asia, the Dutch East Indies, and in China. It is sufficient to say for the purposes of this talk that a state of turmoil prevails. It is one which we properly regard with the utmost concern; one whose outcome may be attended with far-reaching consequences for all of us—particularly those of us who call some spot in the broad Pacific home.

QUESTION OF STATEHOOD

I believe the question of statehood for Hawaii should be considered against the background of what is happening in the Pacific.

I believe that it constitutes a vital and important part of any well-rounded Pacific policy.

It will establish beyond question our intentions to remain the dominant influence in the Pacific.

It will show that we intend to meet in full our obligations to preserve the peace and, if you please, the rights of Pacific peoples.

It will be a dramatic exemplification of our belief in the principles of democracy.

It will demonstrate to the peoples of the Pacific that whenever and wherever they come under the American flag they will be treated with equality in accordance with the traditions and basic principles of this country.

It will prove again to the people of the world that this country keeps its promises.

HAWAIIAN PEOPLE FREE

Hawaii constitutes one of the few groups of islands in the Pacific that have not at one time or another been under the control of some European power.

Our people have always been free and were completely self-governing up to the time Hawaii was annexed by this country. This was accomplished voluntarily. We asked for it, believing no better means could be found to secure our rights in the future, and it is an interesting footnote to history to recall that annexation of Hawaii was bitterly fought by the isolationists of 50 years ago. Annexation was only accomplished by joint resolution.

We, of Hawaii, feel that we have been promised statehood. We believe this promise is inherent in the territorial form of government which provides a system of training and tutelage for the responsibilities of state government.

BEAR FINANCIAL RESPONSIBILITIES OF A STATE

For a period of almost 50 years, we have borne all the financial responsibility of a State. Normally, our total contribution to the Federal Treasury exceeds that of twelve to fourteen and at times sixteen States. On a per capita basis, our contribution in Federal taxes individually is well in excess of that of more than half the States.

We point this out not by way of complaint. In fact, we are proud of what we have done to discharge our duties as American citizens. We point this out rather by way of showing that we are financially capable of meeting the responsibilities of State government. We have met all the requirements of statehood.

SIX INVESTIGATIONS OF STATEHOOD

Our qualifications for statehood have been the object now of six separate investigations by committees of Congress. Two of these, taking place in 1935 and 1937, preceded the World War II. The last, conducted by a Joint Committee of the Senate and House, found that we had then—more than 10 years ago—met all the requirements of a State government.

It recommended postponement only because of the uncertainties of the international situation—uncertainties which stemmed from the prospect of war with Japan and uncertainties which certainly have now disappeared. Since the conclusion of the war the question of statehood has been under almost continuous investigation by committees of Congress.

A subcommittee of the House Committee on Territories of the Seventy-ninth Congress in 1946 recommended immediate consideration of statehood legislation. After an exhaustive investigation, this committee found Hawaii met all the requirements for statehood and its admission to the Union was in the national interest.

ACTION IN EIGHTIETH CONGRESS

In the spring of 1947, the Committee on Public Lands of the Eightieth Congress, after extensive hearings, reported a bill providing statehood for Hawaii to the House by unanimous vote. It will be interesting to you of this conference that Admiral Chester W. Nimitz was one of the witnesses presented by the friends of statehood. He fought the war in the Pacific, for the most part from his headquarters at Pearl Harbor. He said the record made by the people of Hawaii during the war was outstanding, that it removed any doubts concerning their patriotism and that they were entitled to the kind of government they wanted.

Maj. Gen. Charles D. Herron, retired, who was in command of the Hawaiian Department just prior to the war, in an even stronger statement, supported Hawaii's aspirations to statehood. Both the War and Navy Departments submitted letters saying that from the standpoint of national defense, there was no objection to statehood for Hawaii.

HOUSE PASSED BILL

On June 30, 1947 the House of Representatives by a vote of 196 to 133 passed the bill to enable Hawaii to become a State, but the Committee on Interior and Insular Affairs of the Senate to whom it was referred refused to act without further investigation.

Senator GUY CORDON, of Oregon, went to Hawaii as a one-man subcommittee and conducted another extensive investigation, this time directing his inquiry particularly to current conditions. In March of 1948 he recommended immediate enactment of the statehood bill passed by the House.

The whole Committee on Interior and Insular Affairs voted 7 to 5 in May to defer action on this legislation until all other members of the committee who desired to do so could visit the islands. This vote killed statehood for Hawaii in the Eightieth Congress.

In the development of Pacific policy, we of Hawaii believe we have an important contribution to make. We believe this can only be made by giving us the stature of a State and providing us with the representation in Congress, two Members of the Senate and, in our case, two Members of the House, such as a State is entitled to. We believe that our long experience in dealing with Pacific problems and Pacific peoples holds much of unusual value to the consideration of Pacific problems, the full strength of which cannot be realized until we are made a State.

STRATEGICALLY SITUATED LAND AREA

Hawaii constitutes probably the most strategically situated land area in the world today. If you will look at a map of the air and steamer routes of the Pacific you will see that they come to a focal point in Hawaii. The islands are situated about one-third of the way across the Pacific.

Hawaii is the gateway to the South Pacific and the Far East. It is where east meets west. Hawaii today constitutes naturally the western border of this country. It is inconceivable that control of Hawaii pass into the control of any other country.

For more than a century American influence has been predominant in Hawaii. Even as far back as 1864 Abraham Lincoln said of the Hawaiian people, then governed by a constitutional monarchy: "Its people are free, and its laws, language, and religion are largely the fruit of our own teaching and example."

BONDS CLOSE

We of Hawaii are bound closely to the States by ties of tradition, loyalty, and trade, but these bonds should be drawn even closer, as they only can be by the admission of Hawaii to the Union as a State.

The land area of the Hawaiian Islands is greater than that of three States, Rhode Island, Delaware, and Connecticut, but this does not really begin to measure their size. The islands of Hawaii extend over a distance of 350 miles, the same distance as from Washington, D. C., to Cleveland. They have a greater seacoast than all but two States, California and Florida. And the ocean waters that separate the islands do not constitute a liability or barrier. They constitute one of Hawaii's greatest assets. They have long been one of the principal sources of food and of recreation.

Today the population of Hawaii is greater than that of four States. With 540,000 people, Hawaii has a population greater than any other State at the time of its admission to the Union except Oklahoma.

POPULATION 540,000

Our population of 540,000 brings us within the same general bracket as a total of 13 States—more than a quarter of all the States in the Union. This is the number of States whose population entitles them to two or less Representatives in the House. We are thus within approximately the same range of population as 7 out of the 11 Western States; North Dakota, South Dakota in the Middle West; and Vermont, New Hampshire, Rhode Island, and Delaware in the East.

Our population, moreover, is growing very rapidly. It reflects the movement of people to the West that is making California one of our most populous States. Many of the veterans who saw service in the Pacific in the last war have settled in Hawaii; many more would come if the proper opportunity to do so presented itself.

INDUSTRIAL DEVELOPMENT MARKED

As indicated by the heavy taxes paid the Federal Government, our industrial development has been quite a remarkable one.

Hawaii produces about one-quarter of all the sugar produced under the American flag. Our sugar industry brings us about $100,000,000 a year. It pays the highest wages of any sugar industry in the world and has achieved the highest rate of production per acre known anywhere. It is conducted on a highly scientific and modern basis.

We of Hawaii are responsible for the development of the pineapple industry. This fruit was practically unknown to the American people until it was introduced to the market by Hawaii. Today Hawaii produces 90 percent of the pineapple consumed in this country.

The development of air transportation brings Hawaii within close and easy access to the Pacific coast and promises rapid expansion of the tourist industry.

Now we have become the base of a program of research into the fish resources of the Pacific that constitutes the greatest undertaking of its kind ever known to this industry. We hope out of this will come knowledge that will provide the base for a fish industry in the Central and South Pacific that will equal or exceed that of the salmon industry of Alaska.

NINETY PERCENT AMERICAN CITIZENS

Ninety percent of our people are American citizens today. They have been drawn from all the principal races of the Pacific. We of Hawaii are proud of the friendliness and understanding that marks the relationship of our people. Coming to the islands during the course of a period well over 100 years, they have thrived and prospered in the American traditions of life and government.

Our people share an intense pride in our great American heritage without regard to racial ancestry. The record of the war can leave no question about our loyalty. We want statehood so that we will be secure in our political and economic rights.

We want statehood because it is only by this means that we will realize the equality, the freedom of action in the management of our own affairs, that every American expects and that liberty-loving people yearn for everywhere.

We want statehood so that we will participate automatically, not only in the responsibilities, but in the privileges of the Federal Government.

In as far as we bear all of the financial responsibilities of a State government, we feel we should benefit also from all the benefits of Federal appropriations. Without statehood we do not participate in that great myriad of Federal-aid laws, unless specific provision is made for us to do so.

We want statehood because we believe that it will bring better government. It is local self-government in the best traditions of our country.

We believe that the entire country stands to benefit by statehood for Hawaii. Like nothing else, it will dramatize the significance and objectives of our new role in the Pacific.

Statehood for Hawaii will move our western border 2,400 miles out into the Pacific, the plains of the twentieth century. It will be a new manifestation of the American pioneering spirit as well as the logical conclusion of a policy now 50 years in the making.

It will show the Pacific peoples, who are coming under our influence and guidance, that our system of government offers every promise of the liberty to which all free men aspire.

It is a fundamental step in the development of a new Pacific policy that we should not be too slow in making.

It needs to be made right now.

How Much Do People Know?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mansfield (Pa.) Advertiser of January 26, 1949:

HOW MUCH DO PEOPLE KNOW?

We wonder sometimes just how many people know about the things they talk about or the things that are happening. Do they inform themselves, or make any effort to find out the truth, or do they just mouth the slick propaganda that is handed to them?

For example, take the propaganda that was sent out from Washington last summer that there would be a shortage of gasoline before the summer was over and they might have to ration it. What became of that shortage? Did you see it or feel it? We are under the impression that we published something to the effect that we doubted the shortage because we had been reading information sent out by the oil industry that there would be enough gasoline to go around.

Just now people are talking about the Taft-Hartley law, which the labor leaders and President Truman seem to think should be repealed. How much do people know about that law? Who remembers why the law was passed? Do you remember the very serious time just before the Taft-Hartley law was introduced in Congress when the railroad leaders were going to call the members of their unions out on strike and thus tie up all the railroads in the country? Do you recall that President Truman spoke very strongly on the subject and that the people admired him for it? That he even asked Congress for a very stringent labor law that would have given Truman almost absolute power over the union members? And that the House of Representatives voted for the law that afternoon and passed it? And that sober-minded persons in the Senate got together and decided that not even the President should have as strong a law as that to hold over railroad workers or any others, even if we are all mad at them? And President Truman's law was not passed; so he asked them to make their own labor law, and the Taft-Hartley law finally came through as the best compromise they could arrange among the 435 Members of the House of Representatives and the 96 Members of the Senate.

And remember how one of the union presidents said that he would spend a million dollars of the money the railroad men had paid in dues to defeat President Truman. There are other incidents of that time that are amusing as we look back on them, but we have not the space for them now.

Do you believe that labor leaders should have the right to call strikes which endanger national health and safety?

Do you believe the labor leaders should have the right to engage in unfair labor practices?

Do you believe the labor leaders and strikers should have the right to damage the cars of other people, to beat up and intimidate workers who do not want to strike?

Do you believe the labor unions and their leaders should have the right to do all kinds of damage and yet not be fined for it?

Do you believe the members of the unions should have the right to know how the money they pay in dues and assessments is being spent?

Well, these are only a few of the things in the Taft-Hartley law.

It is admitted that the Taft-Hartley law should be amended. Even Senator TAFT and Congressman HARTLEY admit that, and will work for such amendment. But if you listen to the propaganda sent out by the labor leaders you do not know these things.

Another that might be mentioned is the so-called health insurance law. How many people know anything about it? Not even those who propose the law can tell you how much it will cost and how many people it will cover, and for what? One group says it will cost only $4,000,000,000, but they do not say that under the bill the people in the country would not be covered. And so it is with other phases of the matter, but so many people seem to be hypnotized by the words "health insurance" that they do not bother to learn anything about it. They will not try to learn if they could not buy health insurance from responsible agencies of today for less than it would cost them under any Government scheme.

It is not lack of education that causes people to accept propaganda so easily, because the educated are just as careless as the uneducated. It is merely a sort of easy gullibility that makes so many people fall for nice-sounding phrases without stopping to look into the matter.

A Reactionary Labor Bill

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an editorial from the Washington Daily News entitled "A Reactionary Labor Bill":

The Truman administration's labor bill, now before Congress, seems to us a dangerously reactionary measure.

It is in almost all respects worse than the Taft-Hartley Act, which it would repeal, and in many respects even more unfair than the one-sided Wagner Act, which it proposes to restore and improve.

Its enactment would promote industrial strife, encourage abuses of organized labor's power, and deprive workers, employers, and the public of protection for their rights.

Congress would do the country a grave disservice if, yielding to pressure from union leaders and the administration, it hurried this bill to passage after brief, inadequate hearings.

President Truman's State-of-the-Union message urged restoration of the Wagner Act with certain improvements. These, he said, should prohibit jurisdictional strikes and unjustifiable secondary boycotts, prevent strikes over interpretation of contracts, and provide means for settling or preventing strikes in vital industries which affect the public interest.

It is far from clear that the administration's bill would do any of these things.

But it is very clear that the bill would do many other things which, in our opinion, a great majority of the American people do not want done.

It would legalize the closed shop, thus enabling unions to bar workers from jobs they are capable of performing. (The Taft-Hartley Act, while forbidding the closed shop, permits the fairer union shop, under which

workers can be employed, whether or not they are union members, although they must join unions and pay dues after they are employed.)

It would permit union officers to spend for political purposes unlimited funds raised by compulsory assessments on union members, including members not in sympathy with the purposes for which the money would be used.

It would abolish the requirement that officials of unions which want the benefits of Government aid and protection must sign affidavits that they are not Communists, and so weaken the power of union members to rescue their organizations from Communist domination.

It would relieve union officials of any legal obligation to report to members and the public on their conduct of union financial affairs.

It would deprive employees of the right to be free from union coercion.

It would permit mass picketing to bar workers who want to work from their places of employment.

It would end the Taft-Hartley ban on strikes by Federal employees, thus encouraging a false belief that Government workers have a right to strike.

It would remove the requirement that unions, as well as employers, must bargain in good faith.

It would deprive employers of the right to discuss union matters with their employees.

It would undermine the effectiveness of the Government's now independent mediation service by making it subordinate to a strongly partisan Secretary of Labor.

Those are only a few of the things the administration's reactionary labor bill would do.

The bill, as a whole, represents an abject attempt to please union officials who want the Government to help them attain enormous power but leave them free from public responsibility for its proper use.

Legislation inspired by and shaped for that purpose can never be the foundation of a just and enduring national labor policy.

Minimum Wage and Rent Control

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 28, 1949.

GERALD FORD,
House of Representatives,
Washington, D. C.

DEAR JERRY: I would like to get your views on raising the minimum wage from 40 to 75 cents per hour. Just who all will this include legally? I think I am against any minimum wage law. If we have a depression and a person, or a party, has some work to do, but can't afford to pay 75 cents per hour to have it done but could pay less and I am out of work and can't get any work, I might be tickled to death to do this work for what he or they could afford to pay to have it done. It might mean the difference between my family and I earning our livelihood and going on welfare. But if this 75-cent minimum wage law is passed, I would have no choice. A man should have the right to pay what the job will afford and labor should have the right to work for that wage if he wishes rather than to go on welfare. I think we have far too damn many laws and this might be one of them. I, too, realize you Republicans can do a lot of thinking, arguing, fighting, etc., and in the end have nothing to say but keep a stiff upper lip and figure on the Dixiecrats for some support.

Now a word on rent control. I sometimes wonder if Federal rent control isn't a weapon of the Communists and does cause unrest, discontentment, dissatisfaction, and chaos because people cannot find and have houses to rent. This is what the Commies try to produce. In our papers there is talk of the Democrats going to try to pass a new law which will impose a rigid rent control on all housing for rent based on 1942 levels. This is the most asinine, ridiculous, and absurd thing I ever heard of. It is comparable with asking a baker to sell his baked goods on today's market at 1942 prices. Compare the price of his flour, lard, milk, labor, fuel, and other items that go into baked goods today with 1942 prices. This same thing applies to rent today. Compare the cost of building and maintaining a house for rent today with the cost of building and maintenance of a house in 1942 and you won't build any houses to rent—and there aren't any houses being built for rent, and won't be as long as there is any form of rent control or talk of rent control. Abolish rent control and all talk of it and you will have houses for rent. Of course, rent will go up at first but when it goes up it will induce people to build galore for rent and rent will soon drop. Everybody will have a place to live, be happy, and contented and the Commies will be out in the cold. The Commies like rotten controls over all the people and then they claim democracy won't work. To me this is the only solution.

Rent control will only make all of us pay higher taxes to put the Government in the business of building high-priced houses at rent that poor people still can't pay.

I am not writing you this to criticize the past administration nor tell you what to do. These are just my ideas and if I am wrong, give me your ideas. I have an open mind and it can be changed.

If there is anything I can do or any information I can furnish you that will help you make your decisions, write me; nothing will be too much trouble.

Yours truly,

D. H. S. RYMER.

SPRING LAKE.

Jewish Theological Seminary of America

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. MULTER. Mr. Speaker, I am pleased to make a part of the CONGRESSIONAL RECORD the following letter from our President, so that all interested may read it:

THE WHITE HOUSE,
Washington, December 9, 1948.

Dr. SIMON GREENBERG,
The Jewish Theological Seminary of America, New York, N. Y.

DEAR DR. GREENBERG: I have great pleasure in sending hearty congratulations and cordial greetings to all who gather for the dedication of the west coast branch of the Jewish Theological Seminary of America at Los Angeles.

By integrating the great tradition of Israel into the framework of our democratic life the seminary has long been a major factor in broadening public understanding of the Jewish faith and the Jewish people. In signalizing the founding of the west coast branch of the seminary, it is important to note that this institution has made another forward stride in the development of a great university of Judaism in America.

May God speed the achievement of your high ideal.

Very sincerely yours,

HARRY S. TRUMAN.

Long Beach-Los Angeles Harbor, the Nation's Greatest Fishing Port

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. DOYLE. Mr. Speaker, my home city is Long Beach, Calif., and it is the largest city in the Eighteenth Congressional District in California, which I have the honor to represent in this House of Representatives. Long Beach is the second largest city in Los Angeles County, and the Long Beach-Los Angeles Harbor areas are contiguous; the Los Angeles Harbor portion of the twin harbor of Long Beach-Los Angeles being represented in this Congress by the Honorable CECIL KING.

Realizing that it is little known or realized that a portion of the coast line in California which I have the honor to represent is included in the portion where there is the greatest shipment of sea food bought and handled, I feel it valuable to place in the Appendix of the CONGRESSIONAL RECORD the information that has been contained in two news articles, one in each of the Long Beach daily newspapers, dated January 25, 1949.

The first appears in the Long Beach Independent.

The second appears in the Long Beach Press-Telegram.

BATTLE CRY OF FISHING SOUNDS IN LONG BEACH

"Skiff!"

That's the battle cry of the Nation's mightiest fishing port—Long Beach-Los Angeles Harbor.

Ringing down from the crow's nest, the cry of the lookout speeds into action the men of California's fourth largest industry.

Skiff means that a school of tuna has been sighted off the coast of Mexico and it signals sardines off the California shores.

When the call comes bellowing down to the crew, out runs the bulky skiff carried in the stern of the typical commercial fishing boat. The craft carries one end of the half-mile long, $20,000 purse seine net. The purse seiner itself, which may cost $500,000, swiftly runs the other end of the net in a giant circle back to the skiff, enclosing the school of fish.

Loaded aboard the fishing boat, the catch goes to the canneries of Southern California, to Long Beach and San Diego.

Outproducing all of the New England States combined, the Long Beach-Los Angeles fleet combs Pacific waters from the Equator to northern California for tuna, sardines, and mackerel.

High meat prices are tossing a booming trade to the fishing industry. Canned fish involves no waste, is ready for the table when purchased.

But while consumers are aware of the advantages of fish, few realize the close connection between fishing and farming. Fish meal and oil are vital adjuncts to feed for poultry and livestock.

Fish meal is rated the most complete source of amino acids, in both quantity and quality. Additionally, it is a powerful source of an unidentified substance required for strong growth in young fowls and for the fertility of eggs.

Last year California produced nearly 40,000 tons of fish meal, more than half the output of the entire Pacific coast.

California sardines provide human consumers with important supplies of iron, calcium, iodine, and other health-guarding minerals.

Sardine oil, higher than cod liver oil in vitamin D content, is also a valuable source of vitamin A.

The California fishing industry is the largest natural vitamin source in the world. It produced more than 75 percent of the 90,000,000,000 units of natural vitamin A and 70,000,000 units of vitamin D in the United States last year.

LOCAL FISHING FLEET AGAIN NO. 1 IN UNITED STATES

Long Beach - Los Angeles Harbor during 1948 retained its position as the Nation's greatest fishing center, the United States Fish and Wildlife Service said today.

In spite of a slack sardine season, which was the worst in the modern history of the port, 460,000,000 pounds of fish, mostly for canning, was delivered here during the past year.

This catch brought fishermen $30,000,000, which is one-tenth of the value of all the fish caught in the United States and Alaska.

Gloucester, Mass., was 210,000,000 pounds short of the catch brought to Long Beach-Los Angeles Harbor, having accounted for 250,000,000 pounds, valued at $11,000,000.

San Diego and Boston each received about 200,000,000 pounds of fish during 1948. The combined San Diego-Long Beach-Los Angeles Harbor catch, therefore, was 660,000,000 pounds. The local and San Diego industries are closely related. Tuna and sardines account for most of the catch.

The beginning of 1949 finds the industry here and at San Diego in an unprecedented upheaval. The record price of $340 a ton for yellow-fin tuna, chief variety landed by Southern California boats, lately failed to hold with the industry. Only two concerns are now paying that figure and others decline to pay $340 or even guarantee a price. The result is a virtual strike by fishermen.

The Spirit of Nationalist China

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include two editorials from the Panama Star and Herald, published in English and Spanish in Panama City:

[From the Panama City (Panama) Star and Herald of December 23, 1948]

A LETTER WE ARE PROUD TO RECEIVE

Last night we experienced deep satisfaction as we received and read the following letter from E. Wallace Chadwick, Representative to the United States Congress from the State of Pennsylvania, commenting on our editorial of December 21, dealing with the situation in China:

CRISTOBAL, C. Z., *December 21, 1948.*

STAR AND HERALD,

Panama City, Republic of Panama.

(Attention: A. V. McGeachy.)

DEAR MR. MCGEACHY: I am so much impressed with your leading editorial this morning—The Spirit of Nationalist China—that I venture to say so to you. Being out of touch with home newspapers, I do not know what their reaction to the current Chinese situation has been, but I do not believe that even the New York Times will accomplish a more searching or understanding editorial appraisal than yours.

So far as I know, there is only one person in America (at least among those in official position) who has from the first comprehended the more vital aspects of our problems in China. Our great Secretary of State may have overemphasized in his thinking the inefficiencies of the military efforts of the Central Government. But Dr. WALTER JUDD, a Member of the House from Minnesota, gave his colleagues the same picture 2 years ago that your editorial now portrays.

Sincerely yours,

E. WALLACE CHADWICK.

This letter is one which we are really proud of and we are truly grateful to Representative Chadwick for such a gratifying reaction to our comments on the Chinese situation and the plight of the war-weary Nationalist forces. It suggests also that in Representative Chadwick, the cause of China, which deserves a little more patience and understanding, can hope to find a sympathetic advocate.

A CRIPPLING BLOW

The Chief of the Economic Cooperation Administration, returns to the United States from China to announce that all ECA aid to China has been suspended until the situation there clears.

If the intention behind that conditional phrase is to accelerate the wrecking of the present regime, its expression could not have been better timed. It is indeed a crippling blow to Nationalist prestige in a land where face-saving is everything.

Mr. Hoffman surely kicked some vital props from under the Nationalist regime in China, a regime that deserves some credit for having kept a firm and steady hand on the helm of the Chinese ship of state as it plowed its way through the stormy seas into which it was launched in 1911.

Had it not been for the persistence of the Nationalists of the Kuomintang Party, China might years ago have collapsed into the arms of Japan, and this would have contributed immensely toward enhancing Japan's power in the last war. China's almost inexhaustible manpower, vast mineral resources, and agricultural and industrial potential plus Japan's organizing ability could have created a mighty war machine, discounting, of course, any demoralizing effects which the atomic bomb could have produced.

But the Chinese Nationalists, the people of whom Chiang Kai-shek was then and still is the leader, spurned all Japan's offers and fought every bit of Japanese chicanery and outright attacks. Thus Japan had to be satisfied with such crumbs as she could nibble away from China. Judging from the good use she made of these crumbs—until the atom bomb fell—it is appalling to speculate on what she could have accomplished had she been able to dominate all of China with the willing concourse of the Chinese people.

Thanks to the Chinese Nationalists, however, to the people whose regime has been indicted as wasteful and corrupt, Japan got only crumbs and even these were bitterly disputed by the forces of Chiang Kai-shek.

Today the permanence of this regime is endangered as Russia adopts the tactics of Japan. The latter fought the champions of the nascent Republic—the Nationalists—by inciting, encouraging and supporting the war lords or provincial tuchuns to revolt against Sun Yat-sen's new order. Today, Russia backs the so-called Communists, and sees to it that they move on from victory to victory, using arms and military supplies which Japan had amassed in Manchuria for the day when she hoped to match strength and skill in arms with Russia.

Today the west, toward which Nationalist China had turned hopefully for aid in the pacification of the country and the elimination of the threats of external aggression, turns its back on the Nationalists, who therefore, as is inevitable among the people of the Orient, must lose face in the eyes of the people, and the loss of face in the Orient is fatal.

It would not be surprising now to hear of desertions en masse from the ranks of the Nationalist armies to the Communists, because the west has abandoned the Nationalists to the Communists, whom Russia firmly and unhesitatingly supports.

In all its tumultuous history since 1911, the Nationalist cause, which is the cause of republicanism, never had received so serious a blow as that now administered through the fateful words of ECA's Administrator Paul Hoffman. Not even Japan, at the height of her power, was ever able to administer so vital a blow.

The cause of Communism has been heartened in the Orient even as the cause of democracy suffers a perhaps fatal blow.

Will this decision by the ECA Administrator mean the loss of China to democracy?

Mr. Speaker, the editorial from the Star and Herald of December 21, 1948, follows. Nowhere have I seen a better analysis of the basic factors that have led to the sore plight of those brave spirits in China who have struggled so long and valiantly and against almost incomparable odds to make their country free, only to be denounced now by those whom they trusted as their best friends.

THE SPIRIT OF NATIONALIST CHINA

Prime Minister Sun Fo, son of the founder of the Chinese Republic, Dr. Sun Yat-sen, has declared that China—meaning Nationalist China—will fight on until an honorable peace can be secured.

In an interview with news correspondents after announcing that he had formed a new cabinet, the Premier added, "I can assure you that we will not surrender outright to the Communists." And when asked if this meant that there might be a compromise with the Communists, he answered: "It takes two sides to reach a compromise. This cabinet is not a cabinet of surrender."

These are brave words spoken by a determined but perhaps tiring man, despite the fact China virtually has been abandoned to her own devices by the Western World.

The leaders of the Kuomintang are finding out today that, though the spirit remains strong and indomitable and in spite of its determination to march onward, the flesh, the physical being, is becoming the victim of fatigue, because it has been driven too hard, because it has been sorely undernourished—the fate of the great majority of the Chinese people.

The Western World complains of and criticizes what it describes as the waste and the corruption that have made it difficult effectively to help China back to economic stability. This is the Occident's reason for the abandonment of China to her fate and possibly to capture by communism. But there is much more to China's difficulties than waste and corruption. There is the tragic

history of 8 years of war against Japan's efforts to take over China or at least to get her under the Mikado's imperial thumb. Its enervating effects on life in China cannot, should not, be overlooked in passing judgment.

The waste and corruption pointed out in China are evident also in countries which, before the war, had been vastly better organized than China. These conditions, no doubt, are the results of the economic dislocations of the war which brought scarcities in the war-infested lands and shattered all sense of values when outrageous sums had to be paid even for a loaf of bread. It was this free spending to meet and overcome emergencies that eventually injured the moral sense of this hitherto thrifty people, because wild, unorganized spending soon became a habit. As it happened elsewhere in the world, so it happened in China.

It is evident that in passing judgment on China, the West failed to consider or to weigh and appraise the effects on the entire Chinese population of the 8 years of warfare waged against the military might of prewar Japan.

During those trying 8 years it was only the indomitable spirit of the Chinese Nationalist Government, led by Chiang Kai-shek and his Kuomintang supporters, that kept China on her feet. She stood alone fighting off Japan's determined bid for domination in east Asia. Thus China had no opportunity during that period to devote any time or any part of her funds to any organized development of the Nation's agricultural or industrial potential along modern lines. She had to plod along with such little help as her armies could get from primitive farming methods. Industry, of course, was out of the question except such undertakings as could be carried out in caves or scattered about in the form of piecework.

That struggle with Japan merged into the Second World War, which found Japan on an all-out war footing in China, whose strategic importance, because of Japan's role in Hitler's war for world domination, had been greatly enhanced.

The Chinese Nationalist regime, during the pre-Pearl Harbor period, stood fast against the blandishments of those who sought her favorable concourse to strengthen their position in the Orient. Japan and Russia were her constant wooers, but her eyes were ever turned toward America, the land from which she has hitherto received the best deal.

Had corruption been the cherished goal of the Chinese National leaders they could have nicely feathered their nests with the price of the highest bidder for their favor. But the Chinese leaders—the men of the Kuomintang—preferred to remain faithful to the ideal of a Chinese Republic free, independent, and thriving under the Chinese themselves.

The spirit of China was strong and unyielding in those trying days. But almost a decade of incessant fighting and nerve-wracking anxieties has exacted a heavy price. The flesh is tiring and the need for a rest is pressing. Therefore we hear from the lips of Sun Fo such words as: "We will not surrender outright to the Communists," but will continue to "fight on until an honorable peace can be secured."

Less than a lustrum ago such thoughts would never have arisen in the mind of Dr. Sun Yat-sen's son, and certainly they never would have been voiced by him or any of the leaders of the Kuomintang. But Russia's help to the Chinese Communists has been so great and consistent that the Reds, who were on the run but 2 or 3 years ago, have built up since then towering strength with the aid of the Kremlin's strategists.

Eight years of war against Japan in the heyday of that nation's imperial might was no picnic. Those years exacted a terrific price from the Chinese people, permitting no respite in which to consolidate the Republic they created in 1911.

The Nationalists have been fighting ever since the overthrow of the Manchu Dynasty in 1911. But the end of the Imperial regime marked the beginning of a veritable Via Crucis for the followers of Dr. Sun Yat-sen, the Father of the Republic. It marked the beginning of the submission of the war lords for the unification of China under one single republican leadership, with representative government as its goal. One by one, the war lords were beaten down on the battlefields, or came to terms without much fighting.

No sooner had the struggle with the war lords ended than the struggle against Japan's schemings started. It was the goal of Japan to keep China crippled as long as possible, and this could be achieved only through turmoil and unrest. There being no more war lords to goad into rebellion against the young Government, Japan came out into the open with demands which had they been accepted, would have meant the end of free government in China.

Eventually, Japan chopped Manchuria away from China and established a puppet regime with the young heir to the Chinese imperial throne as Emperor of Manchukuo (Manchuria). While Japan consolidated this steal, her modernly equipped armies kept Chiang Kai-shek's Nationalist forces more or less on the run throughout the length and breadth of China, until the Nationalists were virtually pinned against the wall in far away Chungking.

Yet these people, who never had a chance to consolidate and stabilize their republican institutions, have been accused, judged, found guilty, and condemned to fall under the boot of the Red totalitarians who have carefully organized the malcontent elements of China into a formidable force pitted against the democratic elements.

There must be bitter disappointment and disillusionment in China today, as those who were accustomed to run indiscriminately with the hares and the hounds smirkingly remind those who stuck to the republican principles, "I told you so."

It would be a calamity were China to be lost to democracy. Perhaps the present situation the world faces makes it expedient that China play the role of pawn in the great game that is developing on the world's chessboard. Perhaps, in due course of time, the Western World will again turn to China and rescue her from the vile contamination of the Reds. Perhaps. Let us hope.

Proposed Meeting Between President Truman and Premier Stalin

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the New Orleans States of February 1, 1949, and the Washington Post of February 1, 1949:

[From the New Orleans States of February 1, 1947]

STALIN AND PEACE

It is difficult to tell how often the American reporters at Moscow send in a questionnaire to Marshal Stalin, but it is not hard to figure out that he answers them as, if, and when it suits his purposes.

The chief of the Soviets was asked if the USSR would be prepared to consider issuance of a joint declaration with the United States that neither has any intention of resorting to war with one another.

Would he? Of course, he would.

He was asked would the U. S. S. R. be prepared to implement such a peaceful declaration by gradual disarmament.

Would he? Naturally.

He was asked if he would be willing to call off the Berlin blockade if the Western Powers agreed to postpone establishment of a separate German state.

Why, surely. If the Western Allies also lifted trade and transportation restrictions.

Would he be willing to talk all this over with President Truman?

Natch.

All of which is nothing but grist for the Soviet propaganda mill, for it gives Stalin a chance to pose feeding the doves of peace. And all of which action Stalin has had time to engage in through the United Nations Security Council; through the Baruch plan for outlaying the atom bomb; and through agreement to peace treaties for Germany and Austria.

There is no trusting Stalin, and the sooner we learn it the better off we'll be.

[From the Washington Post of February 3, 1949]

ACHESON ANALYSIS OF STALIN PROPOSAL TO MEET TRUMAN

(Following is a partial text of Secretary of State Acheson's statement on Premier Stalin's replies to a correspondent's questionnaire.)

I suppose except for the preservation of our Nation and of our liberties, there is no matter more fundamental to the American people than the preservation of peace. I say this because it is a matter not only fundamental but sacred in America, and neither our people nor any of our representatives would play international politics with a matter of this importance.

The hopes of hundreds of millions of people throughout the world are pinned on the preservation of peace. No man of conscience would tamper with those hopes or use the raising or lowering of them as a pawn in a maneuver.

Now, with those observations, I wish to talk about these questions and answers quite candidly but quite realistically.

(Here Acheson read the correspondent's first question and Stalin's reply indicating he would be prepared to consider a joint Russian-United States declaration denying the intention to make war.)

Now, I confess I find this answer puzzling. Both the Soviet Union and the United States and all other members of the United Nations are pledged by the most solemn treaty commitments not to engage in war against one another. * * *

The President of the United States in his inaugural address stated that it was the position of his administration and of the people of the United States to give unfaltering support to the United Nations. He did not say that he was prepared to consider making that statement. He made it. So, as I say, this answer is a puzzling one. So far as commitment is concerned, so far as the most solemnly pledged word is concerned, I had thought that we had long passed the point at which this answer seems to stick.

(Here Acheson read the second question and Stalin's reply that Russia naturally would cooperate toward disarmament.)

Now, "naturally" means, "in the nature of things" and the nature of things in the past 3 years since the end of hostilities has not been such as to encourage the expectation of the cooperation which is indicated in this answer. The United States * * * led the way by a demobilization after the last war which was not gradual but was

precipitant. This country disbanded the greatest assemblage of armed force which had ever been put together in the world before. Not only is this true but this Government, together with all the other governments represented upon the Security Council, with the unhappy exception of the Soviet Union, did their best to implement those paragraphs and articles of the Charter which, first of all, were designed for the peaceful settlement of disputes, and, secondly, for the provision of an international armed force which would give authority to the United Nations.

The use of the veto has frustrated the first effort. Obstruction of the U. S. S. R. in the military committees has frustrated the second effort. The United States went still further.

In the atomic energy commission of the United Nations, it led the way in an attempt to put under international control the most destructive weapon and the most destructive force which man has yet devised. Here again these efforts of many nations were frustrated by Soviet action. * * *

Now, I mention these points, not to score in a debate in which I have no interest, but to point out that in the nature of things, the other nations have not received and have little reason to expect the cooperation which is indicated in that answer. * * *

Now I should like to take up out of order the fourth question because it relates to the first two.

(Here Acheson read the fourth question and Stalin's reply that he had no objection to a peace meeting with President Truman.)

Now you will notice that the purpose of the meeting has to do with the arrangements of which I have already spoken; that is, considering issuing a declaration regarding a matter which is already the subject of solemn treaty commitment. The White House spokesman reminded you, in answer to questions, of the fact that President Truman has on numerous occasions stated that he would be pleased to have Premier Stalin visit the United States and visit the President in Washington.

Now in this connection * * * the Government of the United States would not discuss with any nation any matter which was of direct interest to other nations without the participation of the representatives of those other nations. This is not a new or startling doctrine. There have been many statements of it.

This morning we have still a further development. There has been a new question and answer. We gather from that exchange that Premier Stalin is unhappily prevented by the condition of his health from coming to Washington, because he cannot travel either by sea or air. He thus seems to be effectively grounded. The implication of this answer, perhaps, is that the President of the United States for the fourth time should travel half-way around the world to meet Premier Stalin and on this occasion to do so for the purpose of talking with him on a matter so tenuous that it defies specific statement. I think that concludes the comment on that question and answer.

(Here Acheson read the third question and Stalin's reply that he saw no objection to lifting the Berlin blockade on condition the Western Powers postpone organization of western Germany and end their counterblockade of the Soviet zone. He then reviewed the situation in Berlin and the numerous efforts to reach an understanding.)

During all of this time the reasons which were given by the Soviet Government were first of all that there were technical difficulties which interrupted transport. Then the reason was given that the blockade was necessary to protect the economy of the Soviet zone against the results of a monetary reform in the western zone. * * *

During all of these months the three Western Powers have tried patiently and persistently to solve the difficulties which have been put forward by the Soviet Government as the reasons for the blockade.

As to the second point in this answer made by Premier Stalin, that he would expect that if Soviet restrictions were lifted the western restrictions would be lifted; that point has been made clear from the start. The western governments have always stated that if the Soviet Government permits normal communications with and within Berlin their countermeasures will, of course, be lifted.

There are many ways in which a serious proposal by the Soviet Government to restore normal interzonal communications and communications with and within Berlin could be made. All channels are open for any suggestions to that end. The United States, together with the other western occupying powers, would, of course, consider carefully any proposal made to solve the Berlin problem consistent with their rights, their duties, their obligations as occupying powers.

As I say, all of the normal channels are open. I hope you will not take it amiss if I point out that if I on my part were seeking to give assurance of seriousness of purpose I would choose some other channel than the channel of a press interview.

May I end this statement as I began it, by stating that the interest of the United States and of all the hundreds of millions of people throughout the world in peace is so fundamental that the matter of peace cannot be tampered with and cannot be used as an instrument in any international political maneuver. It will not be so used by the United States.

Foreign Aid and Domestic Taxation

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. REED of New York. Mr. Speaker, a message to the American taxpayers on the use of their Federal taxes may not be heartening but it is timely inasmuch as the 15th of March approaches, so under unanimous consent to extend my remarks in the RECORD, here is the message:

MORE WORLD AID

"We must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of undeveloped areas." (From the inaugural address of President Harry S. Truman.)

What bold new program does President Truman have in mind? Republicans sniffed the political air; smelled an international WPA financed by United States dollars. Administration supporters lauded the vague proposal as a desirable extension of the good-neighbor policy to the whole of the democratic world.

Fact is that while proposal may be bold, it is not new. On his trip home from Yalta, just a few weeks before his death, Franklin D. Roosevelt asked his pilot to fly over the Saudi Arabian desert. He inquired of one of the Army engineers accompanying him: "How far does the water table lay beneath the surface?" Replied the engineer: "Only about 50 feet." Mr. Roosevelt then suggested to Saudi Arabia's King Ibn Saud that American companies could bring water to the desert. Former Secretary of Labor Frances Perkins, in her book The Roosevelt I Knew, quoted F. D. R. as saying on his return: "When I get through being President of the United States and this damn war is over, I think Eleanor and I will go to the Near East and see if we can manage to put over an operation like the Tennessee Valley system that will really make something of that country." Various Government agencies and officials shared Mr. Roosevelt's dream. Today Mr. Truman is out to make it come true on an even broader scale.

Those close to the President say his bold program does not contemplate the expenditure of billions of public funds; nor would this Government itself undertake the irrigation of deserts, dam building, dredging of waterways, etc. Program will undoubtedly emphasize use of private capital with some form of Government guaranty. Financiers would not be permitted to exploit the areas they develop. Corporations participating would have to provide schools, medical aid, housing, recreational facilities, hospitals.

Presidential aides agree that one major obstacle to success of plan is world-wide shortage of scientists and technicians. Following last war several countries, including India and Lebanon, wanted American technical assistance. Few technicians were interested; they preferred private jobs here at home. Government couldn't loan its own men; the law wouldn't allow it. Industry in United States wouldn't send some of its technical men on loan to foreign governments or foreign companies. Result: At end of 1946 it was estimated that fewer than 500 United States technicians were working on foreign projects—largely in Afghanistan, Egypt, Iran, and Latin America. Recently enacted Smith-Mundt Act permits loan of Government specialists to foreign countries, but new budget provides no funds for sending United States "know-how" abroad.

Heretofore United States capital to finance undeveloped areas abroad has been scarce; American businessmen regard such ventures as extremely risky. Export-Import Bank and the World Bank have felt same way until recently. World Bank is now making some development loans. ECA is helping; is permitting limited use of local currencies set aside by ECA participating nations for developing backward areas, particularly for locating and producing strategic materials. Italy and the Netherlands have already embarked upon a program of soil conservation and land reclamation. Britain is engaged in costly job developing her colonies. If Mr. Truman's plan is translated into action, the world's baby nation—Israel—is expected to be the first real beneficiary.

Resolution of Farmers Cooperative Association of Frederick, Md.

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. BEALL. Mr. Speaker, under unanimous consent to include in the RECORD a resolution adopted by the Farmers Cooperative Association, Inc., Frederick, Md. This organization is composed of 1,500 farmer members of Frederick, Montgomery, Carroll, and Howard Counties, Md.

Whereas the Congress of the United States is considering two major farm plans, i. e., 90 percent or fixed parity and 60 to 90 percent or the sliding-scale plan; and

Whereas, the 90-percent plan has demonstrated a tendency to encourage overproduction; and

Whereas overproduction of farm products under fixed parity will either deplete the Treasury of the United States or be an invitation to socialistic controls of farm practices, and the beginning of the end to free enterprise: Now, therefore, be it

Resolved by the members of Farmers Cooperative Association, Inc., in annual meeting assembled this 29th day of January, 1949, That we recommend the adoption of a sliding scale of parity payments since we are unalterably opposed to any governmental controls of agriculture; and be it further

Resolved, That copies of this resolution be sent to Senators TYDINGS and O'CONOR and Representative BEALL.

Future of the Republican Party

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. JENKINS. Mr. Speaker, there is much public and private discussion concerning what course the Republican Party is to take in the immediate future. Mrs. Wyatt Payne, of Huntington, W. Va., who is prominent in the councils of the Republican women of the Nation, has given much consideration to the question of what is in the future for the Republican Party. The following article appeared in the public press recently:

THE SHIP OF STATE IS AFLOAT ON THE SEA OF COMMUNISM AND SOCIALISM—WHY?—WHY?—WHY?

To the Members of the Republican National Committee:

Letters have been received from State and National leaders asking for suggestions from the field. I am addressing my personal views to you who have the responsibility for shaping the destiny of the party and selecting those candidates and leaders who will either make it or break it. Please accept the suggestions with the assurance that I am your friend, saying out loud what seems so obvious to lay Republicans working at the grass roots. So, please don't shoot until you check my record as a regular.

Some will call the views expressed isolationism, riding in a surrey with the fringe on the top, others will say they are just plain horse sense. Somewhere between the two groups we must find a common ground of sensible adjustment, on the basis of streamlining the mechanics and techniques without changing the American philosophy. We modernize our churches, put in sound systems and hearing aids, but when we start streamlining the Ten Commandments we get into trouble. Let's look in the mirror and see what happened to us.

The Republican Party is the victim mainly of propaganda—very bad propaganda—which was not countered in time or in fact. The first telling blow made us fearful that our glorious record of sound government, based on the Constitution, would not stand up under the barrage of New Deal lies and Communist propaganda. We soft-pedaled the Republican basic principles until the people forgot both their wisdom and practice. We sat by and let the New Deal-Communist propaganda pin very destructive tags on the party, and they made them stick too, as every campaign since has shown. Let's be specific to prove the point.

1. The Hoover depression: When Charlie Michaelson did the "masterpiece" of propaganda on this great and good American, what did we do to counteract it? Nothing. Mr. Hoover was advised by friends that it would defeat him and many felt that Senator Borah or some outstanding leader should refute the falsehoods, show how we were "coming back" with sound policies, even phenomenally reducing the national debt, and tell the people then what caused the depression. This would have removed from succeeding campaigns the most devastating weapon against us. The advice was not heeded and we are plagued with the results at every turn.

2. The battle of words—liberal versus conservative. Needless to say, we lost it. Instead of thanking the opposition for the compliment and taking our position on the right, proving that conservative principles, whether in family, business, or government relations, are sound, safe, successful, and basically and realistically progressive, we tried to outliberal the liberals and got lost in the labyrinth of "Who cares who was first."

Both parties are the same (very successful propaganda, not countered). People reasoned if we say what they say, and do what they do, why not "Render unto Caesar the things that are Caesar's" and they did—four times. Our party must make the difference clear.

Isolationists: Here again, their vicious propaganda paid big dividends because our facts were not explained immediately in the light of truth, that our great system of free enterprise (made possible because of Republican protective tariffs) had made it possible to help people all over the world during every crisis including famine and war. Furthermore, that the Republican Party was ready and willing to help the world help itself, but we would not promise to permanently underwrite the peace, economic security, food bill, rearmament, and clashing ideologies of nations all over the earth, for the obvious reason that it is financially impossible without wrecking our own economy. And as for the wars, except for their propaganda and our gullibility they would not have been our wars, anyway. We believe in the wisdom of our forefathers who warned of political alliances with foreign powers and we must protect the United States first. Any sane American looking at the facts today—our commitments, our national debt, our responsibility for the failure or success of world peace—knows that we have been played for big stakes both at home and abroad and are well on the road to serfdom because we lost the vision and the boundaries of the Republic and became international saps.

Democracy: Disregarding history which shows that democracies are the units of government most likely to turn to dictatorship and the further fact that we are a Republic, we somehow let them put this one over too. Enclosed article gives further information on this.

Our great chance went by default: The challenge and the vital issue in the recent election was Americanism versus communism. Every other factor, local, national, or international, depends on our realization of the aims and purposes of this menace and the removal of its godless philosophy from every avenue of American life. The exposé in Washington, the recent factual information on its inroads into the schools, churches, unions, and Government had conditioned the people for an American campaign. Why didn't we meet this challenge?

What of the people: The Government primes its pump with our money and pretends things are rosy but what and who is priming the spirit of the people? We are living on a false economy made up of promises, subsidies, and doles; we are caught in a maze of confusion, red tape, reports, dead-lines, threats of war and impossible taxation, without hope in the future for further opportunity to receive the experience or benefits of the basic elements of American success; namely, creative initiative and reward for work well done. We are beginning to crack up, mentally and physically, under such constant pressures on our daily lives. When will we wake up? What party will have the moral courage and patriotism to tell this story as it really is? Certainly our party has every right to that great service to the Nation because basically it is sound. If we have any future either before of after a depression it will be because we accept the challenge at face value and go forward under God armed with the breastplate of principle, courage, and truth.

What the people (a big majority) will vote for: The opportunity to live again in a free America. In my travels all over the country, speaking and checking the indoctrination of Communist and Socialist philosophy in the schools and churches, I have talked with and to thousands of people in all brackets. I am convinced they will vote for the American way as interpreted by the Republican Party if and when and not until we have a candidate and leaders who will stand—in the face of all opposition—for the American principles which made and kept us as a Nation as enunciated and practiced by our party when we dared to be Republican and won victories. We will not win with "Me Too" and "Dodge the Issue" platforms or candidates. Our party believes in certain basic and time-tested principles, which, when practiced, bring "The greatest number" of people ever experienced in any land, but we go through campaign after campaign without even mentioning them. For instance, when did the workers last hear that their work-opportunity was the result of the American system of free enterprise and protection and not the gift of some visionary person, or scheme, in Washington? That's true. Why don't we say so. Small wonder that we have a generation of new voters who know nothing of our party except what the New Deal-Communist propaganda says about it.

The solution: Begin now to defeat the New Deal-Communist combine with the only weapon that will ever defeat it. "Know the truth and the truth will make you free." Begin now, using every possible medium to reinstate and reinterpret real Republicanism in the mind and hearts of the people through good propaganda. Take the tags off by proving they were fabricated to fool the people and get votes. Show every American—with press and their own horse-sense—the stark realism of the results in every country where dictatorships rule the people and prove by thousands of comparisons that our present situation is exactly the same, and that we must put the Government back in the hands of the people who most certainly are paying the bill and the consequent loss of all that we hold dear. Do all of this now. Every day. And do it down where the people can get it. Then, groom several men for candidates who have proven that they believe in the unadulterated American philosophy, first, last, and always. Men who believe in helping the world, but know that our greatest contribution to the world is to keep the light of liberty and freedom burning in America! Then, see that one of these men survives the convention and we will win!

In a nutshell: Before good intentions or wrong leadership forces our great party to fold its tent like the Arabs and silently steal away into political oblivion, may I suggest—in deference to the founding fathers—the two-party system, the great Americans of both parties and the millions of present-day

Americans praying for such leadership that you in authority and we in the field are honor bound to wage one more real Republican campaign.

Faithfully and loyally yours,

MRS. E. WYATT PAYNE.

HUNTINGTON, W. VA.

Industry Favors Retention of Tariff Commission's Peril Points Report

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1949

Mr. REED of New York. Mr. Speaker, under unanimous consent request heretofore granted, I am inserting in the CONGRESSIONAL RECORD as a part of my remarks examples from testimony given before the Ways and Means Committee:

The Trade Agreements Act has not improved the living standards of workers in the nations which produce the fresh vegetables and tropical fruits shipped to the American markets. Farm workers in Mexican vegetable areas, according to most recent USDA figures, average $1.20 per day. In Cuba the official wage minimum for farm workers is $2.88 per day, but this appears to be rarely observed.

* * * * *

This association further states that it has found no evidence that the amendments adopted by the Eightieth Congress have hampered the negotiation or consummation of any trade agreement. The basic principle behind these amendments was—in the words of President Wilson—"open agreements, openly arrived at."

* * * * *

The 1948 act further provides for factual study by the Tariff Commission to determine the maximum tariff rate that would unduly restrict imports, and the minimum rate below which the domestic industry would be unfairly imperiled. There is a strong suspicion in our area that prior to 1948 trade agreements were negotiated almost entirely on expedient political factors, with little regard to the impact on the domestic industry and economy. Certainly all facts should be available to those who negotiate a trade agreement. (Florida Fruit & Vegetable Association, Orlando, Fla.)

We all well remember the repeated assurances we had from Mr. Hull and Mr. Clayton that no tariff reductions would be agreed to that would injure any established United States industry. We did, for a while, have a faint hope they were being honest with us. This, they long ago destroyed. However, it is hard to believe they and their successors would so openly prove their insincerity as they did by opposing last year the inclusion in the present act of the provision that the Tariff Commission should determine the peril points in tariff rates; reductions beyond which would jeopardize certain domestic industries. And now to emphasize the fact that they expect to make concessions which will do just that, their No. 1 demand is that that part of the present bill shall be repealed.

The great rush in pushing through this new bill can only be because they are afraid the peril points determined by the Tariff Commission on the tariff covering commodities that will be up in the forthcoming Geneva negotiations will be above the new rates they expect to establish on those commodities.

If there was a single grain of truth in their assurances they would make no concessions that would injure any domestic industry, then surely they would be happy to receive the determination by a neutral body of just how far they could go.

It is completely beyond the comprehension of management and labor in these affected industries who our State Department is so desperately determined to close our factories, put our people on the streets; and inevitably lower the American standard of living. There can be no other possible result if they are permitted to reach their goal through additional tariff-lowering trade treaties, through the ratification of the International Trade Organization charter, or continued negotiations under the general agreement on tariff and trade.

Surely the handwriting on the wall must be clear to anyone who realizes that the country, which now has the highest wage rates in the world, has the lowest tariff.

* * * * *

Our very last hope of anything approaching a square deal from our own Government, supported by our taxes, is that a nonpartisan Tariff Commission will establish minimum tariff rates on the important commodities, below which we hope even the State Department do-gooders will hesitate to go when they know it means unemployment to large numbers of our citizens.

(Brief of the United States Potters Association, presented by J. M. Wells, secretary-treasurer of the Homer Laughlin China Co., Newell, W. Va.)

The Tariff Commission has had but one opportunity to exercise the jurisdiction conferred upon it—the pending schedule of items upon which a new trade agreement is to be negotiated. In the preparation for these negotiations, it has been our experience, and through contact with other industries we learn, that the Tariff Commission has canvassed industry, agriculture, and labor in its attempt to compile facts which would assist our State Department in negotiating with foreign countries upon an intelligent basis so as not to disrupt any branch of our domestic economy.

The provision for the participation by the Tariff Commission, we feel, was a wise one, and one which should be welcomed by those Government agencies charged with the negotiations, as it has been welcomed by labor and industry in this country.

Economic conditions of the world are still so unsettled as to afford no normal basis where it will be safe to establish permanently the protection needed in the case of the great majority of products and commodities which compete with our production. We feel, however, that the function performed by the United States Tariff Commission is essential to the maintenance of our labor, agriculture, and industry.

We respectfully urge that if it is the intent of Congress to continue the trade-agreement policy the provisions of the act of 1948 conferring jurisdiction on the United States Tariff Commission to determine peril points should be reinstated in H. R. 1211. (Respectfully submitted. Toy Manufacturers of the United States of America, Inc., by Horatio D. Clark.)

A continuation of impartial investigation on the part of the Tariff Commission should not interfere with the policies or activities of other United States Government departments such as the Executive and State Departments, which seem on the surface to wish to do an honest job. Certainly the unrestrained procedures which have been promulgated by the administration all these years should have produced a better world situation than we have now reached if the free-trading theories are correct. We have gone through World War II and this free-trade policy has not improved matters either before or after the war. How can it be expected to avoid further conflicts when a great part of the world is under the dictatorship of the Communists, with whom no agreements can be made and kept? Therefore our own welfare should come first in order to protect our capacity for war production if for nothing else. As a last straw to grasp for the protection of our people we respectfully request that the Tariff Commission be continued as a fact-finding body to help steer our ship of state away from the rocks of further broken agreements and world animosity. There seems no other hope of a sensible attitude toward world commerce than to utilize the long and valued experience of the Tariff Commission created by the Congress for the very purpose of these checks and balances. The Commission's ability as a fact-finding Government agency far exceeds the ability of any ITO dictatorship which our present administration seems bent upon foisting on our people. Other nations with whom we have made trade agreements do not hesitate to protect their industries through adequate barriers when the need arises—why can't we do likewise?

We earnestly petition that you consider these matters seriously and conclude in your deliberations to retain the functions of the United States Tariff Commission in the matter of all future trade agreements or supplemental foreign trade agreements. (Respectfully submitted. Fatty Acid Producers Association, Inc., Collapsible Tube Manufacturers Association, Candle Manufacturers Association, Beeswax Bleaching and Refining Industry, by Lester B. Platt, New York, N. Y.)

Small Business

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. MULTER. Mr. Speaker, the following column which appeared in the New York Post on January 31, 1949, directs the attention of Congress to a matter of grave importance. I am sure that the new Small Business Committee, as soon as it is organized, will inquire into these matters and propose appropriate legislation to aid in a solution of the problem.

YOUR OWN STORE

(By Sylvia F. Porter)

Have you a dream of starting a little business of your own? Are you, like so many others, praying for the day when you can stop working for someone else, can strike out for yourself, put your own name on the door? If so, read on—and read well.

For this column is dedicated to you.

Once upon a time, you could start that little business in America on a shoestring. But not any more, not any more.

Today, you need an initial stake of at least $5,000 to go into your own business. And that's the absolute minimum.

Once upon a time, your dream, your ambition, your courage, and your willingness to work could carry you much of the way and you could set up shop with little or no capital. And in the thirties, lots of Americans managed it just that way. But no longer.

Today, you need several thousands in personal savings or a sufficiently good credit rating to permit you to borrow those thousands from the savings of others. And if you have only the minimum, you risk being toppled over and destroyed by the first chilly business breeze.

The Department of Commerce and the Institute of Life Insurance have just analyzed more than 1,000 new wholesale and retail firms with one or more employees established since 1945. Over the week end, the institute released a compilation of the figures with the comment:

"The decline in the dollar's buying power has had as pronounced an impact on the cost and finances of starting and running a business, whatever its size, as on the everyday family budget."

Which is true, of course—as far as it goes.

But the figures shout about much more than that to me. They say, for instance, that:

It's harder and harder to become and stay a small-business man in this land that once was made up almost entirely of small-business men.

Despite all our talkie-talkie about the virtues of the small firm and the curse of monopolies, the small firm is fighting an increasingly tough battle, the monopolies are flourishing under our eyes.

Yet, America's greatness rests on its small businesses. We are what we are because a little man with a big dream could try to become a big man with an even bigger dream.

What is it—your business dream? Is it starting a little restaurant of your own with, maybe, a bar, too? For a "hole in the wall," you need an initial stake of $6,900. For a larger place with a chance of a larger intake, you need $66,300 to start.

Is it starting a food shop? For a small one, your stake must be $7,200; a larger one, $19,900.

Is it an apparel store? Here, figure $7,200 to $34,800.

Or a filling station perhaps? For this, the Commerce Department allows the minimum of $5,000.

And if you're interested in the wholesale area, the stakes skyrocket to many, many times the totals I've written here.

Business deaths are soaring. Last year, they reached the highest mark since 1942 and bankruptcies involved the most money since 1935. And without doubt, one major factor for the failures was the lack of adequate capital, the inability of the firms to withstand the harsher winds that blew over such fields as liquor, restaurants, foods, apparel.

Business births at the same time are leveling off. And without doubt, a prime factor in the slow-down is the fact that would-be businessmen haven't the savings or credit to finance their projects.

Look hard at this, you folks who dream the great American dream of being your own boss. For these are facts you must face.

Look even harder at it, you men and women who represent us in Congress who will vote on our antitrust and tax laws this year. For you're looking at a dangerous flaw in the foundations of America.

include the following editorial from the Pittsburgh Post-Gazette:

AN INCREDIBLE LABOR BILL

The administration's labor bill is not merely a straight political pay-off to the union leaders who supported Mr. Truman last November, but it is a pay-off reckoned at time-and-a-half rates. If enacted, this legislation would promote even more of the industrial anarchy which brought on the Taft-Hartley Act.

The measure would regulate only a very narrow area of labor activities, and even here with such a timidity as to be almost ineffective. In no case is this more apparent than in the provision regarding strikes which imperil national health and safety. The 80-day injunctive power given the Government under Taft-Hartley—a power that Mr. Truman himself has used to good effect at least half a dozen times—would be ended.

Instead, for disputes which the President held to jeopardize the general welfare this bill would substitute a 30-day cooling-off period and a Government fact-finding procedure. The sole compulsion, either to stop such a walk-out or enforce the fact-finding decision, would be moral suasion. Just how worthless moral suasion can be was bitterly shown some years ago when President Roosevelt, for all his labor support and despite an America at war, could not morally dissuade John L. Lewis from striking.

Of the many union practices branded as unfair in Taft-Hartley only two remain in this bill—jurisdictional strikes and secondary boycotts (though even some of the latter are permitted). Here again, enforcement is weak. The Government could no longer seek an injunction to stop an unfair labor practice until the NLRB had ruled thereon. Thus, the illegal act could continue while the law took its slow course—during which time an employer might well have caved in. To seal his doom further, the administration's proposal would forbid the employer to sue a union for damages arising out of unfair labor practices.

Gone in this bill are the curbs on mass picketing, on feather-bedding, on the unions' imposing excessive initiation fees, and on union political spending (though banks and corporations, to be sure, are specifically limited in this matter). Not only would the closed shop be legalized, but State closed-shop bans, recently upheld by the Supreme Court, would be nullified for businesses engaged in interstate commerce. Nor would unions any longer have to file financial reports.

These are by no means all the injustices in the measure. For in some respects it actually gives more unchecked power to union bosses than did the Wagner Act, which it is supposed to "improve." It seems incredible that an administration dedicated to a "fair deal" for all would seriously propose it. Certainly, we trust that responsible Congressmen of both parties will not surrender to one special interest, the labor leaders, the tyrannical powers this bill would give them over individual workers and the rest of American society.

tofore granted I am inserting in the CONGRESSIONAL RECORD as a part of my remarks examples from testimony given before the Ways and Means Committee:

The trouble with the administration of the Reciprocal Trade Act is that there is no one whom the American people can hold responsible for its administration. I have seen enough of the way bureaucracy works in municipal, State, or Federal Govrenment to know that someone must be charged with the responsibility of administration, or there is not going to be good administration.

THE CONTINUED EXISTENCE OF THE AMERICAN JEWELED WATCH INDUSTRY IS VITAL TO THE DEFENSE OF THE UNITED STATES

The contributions of the three American jeweled watch companies to the war effort were recognized, during the war, as essential. It is also essential, for national defense, to have available an adequate source of skilled labor, trained in the making of fine watches.

The following letter was sent to Mr. Harley Hise, Chairman, Board of Directors, Reconstruction Finance Corporation, by F. C. Denebrink, rear admiral, United States Navy, Director for Procurement, Manpower and Utilities, in behalf of the Munitions Board:

"DEAR MR. HISE: Reference is made to Mr. Carpenter's letter to you of November 18 regarding the importance of the Waltham Watch Co. in the field of national defense.

"In Mr. Carpenter's last paragraph he mentioned that the highly skilled labor employed by the Waltham Watch Co. is a valuable, intangible resource for national defense. Mr. Carpenter has asked me to write to you to give additional information as to this important factor. The information given has been reported to us and is believed to be reliable.

"There are now 8,000 people in the American jeweled watch industry; 40 percent of these people require from 2 to 10 years to train. Of this 40 percent at least 1,000 require 5 to 10 years to train; 60 percent of the 8,000 people are women, 40 percent are men. These figures establish the fact that there is a large nucleus of personnel now in the industry which would be almost impossible to replace in a mobilization period.

"The Waltham, Hamilton, and Elgin Watch Cos. were employed to 100 percent of their capacity in Government work from December 1941 to August 1945. During this period they manufactured jewel bearings, chronometers, fire control watches, time fuzes, aircraft instruments, and other essential products. Most of these items could not then nor could they now be produced by other domestic watch companies.

"It is considered that the maintenance of at least a minimum level of operation by the Waltham, Hamilton, and Elgin Watch Cos. is vital to the defense of the United States and should be preserved.

"Sincerely yours,

"F. C. DENEBRINK,

"Rear Admiral, United States Navy, Director for Procurement, Manpower and Utilities."

(By Walter W. Cenerazzo, national president, American Watch Workers Union.)

Wool

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the

following statement that I have received from Mr. John G. Wright, president, Boston Wool Trade Association, Boston, Mass.

INTERNATIONAL EXCHANGE—STOCK-PILING STRATEGIC MATERIALS

The world's demand for wools since the war has resulted in the consumption of the current clips plus about 7,500,000 bales of the J. O. stocks out of the 10,000,000 accumulated during the war. While this demand would normally result in higher prices your executive committee feels that the high prices in dollars is partly the result of cross-rate exchange transactions which are natural developments of artificially fixed currency rates.

As you know, the Australian Government has for some time been trying to prevent any wools from being shipped from Australia to this country except at the official exchange rate of $4.03\frac{5}{16}$ for British sterling. It appears that they have been quite successful in stopping any indirect shipments to this country.

Probably more important to this country has been the inflationary effect on wool prices in Australia of European countries within the sterling area being able to exchange dollars for sterling in the free market with which to purchase wool. The discount on the official rate has been considerable, probably about 20 percent for the average exchange in the last 3 or 4 months.

While we approve of the theory of the Marshall plan and while it is undoubtedly helping to rehabilitate Europe, the method of administration of wool leaves this country at a most unfair disadvantage. As we understand it, dollars are allocated or loaned to certain European countries for the purchase of wool in the primary markets. These dollars are paid for at the official rate of the currency of the country though the actual value of the currency may be depreciated and far below the official rate in the free market. These countries may buy the wool in the primary markets at this discount, manufacture the wool and ship the products to the United States for dollars.

Your executive committee has been fully cognizant of these facts and has protested through official channels and is trying to secure results more equitable to all. Government officials are sympathetic and are giving these matters their preferred attention. It is a tremendous problem of vital importance to our whole trade, but until we have free markets for the world currencies, it seems almost inevitable that these problems will be with us. It is like trying to dam up a running stream—if you stop the water in one place, it runs over in another. If any members of the trade have suggestions or information which they think would be useful to the executive committee, I am sure the committee would welcome them.

The wool trade was well represented at the Wool Textile Section meeting of the Munitions Board. It was recommended by this committee to the Munitions Board that wool be moved up from class 2 to 1A in the form of a 4-month supply of uniforms for the men expected to be drafted in an emergency and an additional 4-month supply of cloth and knitting yarns, and, beyond that, wool as deemed necessary after the first two requirements were filled. This recommendation was based on the feeling that if there were an emergency it would be a sudden one and that the uniforms should be available immediately, also that uniforms and cloth stock pile with less deterioration than wool or tops. This recommendation has to go through several committees, and it may take 6 months to arrive for acceptance or rejection by the Munitions Board.

JOHN G. WRIGHT, *President.*

President Truman's Inaugural Address Stresses Partnership and Not Imperialism—It Is Cooperation and Not Exploitation

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1949

Mr. DOYLE. Mr. Speaker, of all of the various and many editorials printed in the newspapers of the Eighteenth Congressional District of California, which I have the honor to represent in this Congress, the following article appears to me to be especially strengthening of the sinews of the American way of life. Likewise, it is an important treatment of the inaugural address of the President of the United States by a newspaper whose editorials are a generally accepted Republican philosophy of government.

I take pleasure in commending to all the Members of Congress a thorough reading and digest of this article as it appeared in the Long Beach Press-Telegram as of January 28, 1949:

BUSINESS MINDS AT WORK ON PLAN FOR ECONOMIC DEVELOPMENT OF ALL LANDS

President Truman has said or done nothing to make clear exactly what he had in mind when, in his inaugural address, he advocated American assistance to undeveloped countries around the globe. He apparently contemplated a plan of cooperation by the United States, both the Government and private investors, with backward countries to increase industrial production and raise the living standards in other countries.

Although the President has not filled in with practical details the outline of his idea for global economic cooperation, others have been busy developing plans to carry the idea into execution. One of them is Eric Johnston, president of the Motion Picture Association of America and former president of the United States Chamber of Commerce. In an address to the Los Angeles Chamber of Commerce, he spoke for creation of a world economic development corporation to promote industrialization through partnership of American capital, technique, and know-how with the capital and manpower of foreign countries.

A Government fund would protect American investors in foreign lands against loss from nationalization of business and confiscation of property, but the investors would take the normal business risks.

Mr. Johnston disclaimed the idealistic, do-good point of view. He talked economics. He explained that, without sales abroad, the American economy would suffer. He likewise showed that foreign exports from the United States now are paid for with American money. America lends the money, then the foreigners use what they borrow to buy goods in the United States. It is a system that cannot continue forever. The time will come when the United States either must be paid for what it exports, or it will stop exporting. What then? The same thing happened after the First World War. The principal factor in the depression beginning in 1929 and running through the 1930's was the collapse of foreign trade when the foreigners no longer could obtain American credit with which to purchase American products.

As a matter of business, Mr. Johnston proposes that the United States develop profitable markets abroad for surplus American goods. He said: "This program is partnership and not imperialism; it is cooperation and not exploitation."

This is the view of the situation taken by others who believe that the United States is destined to succeed to the role of Great Britain in global economic development, but without acquiring territory as the British did. There are reports that machinery to carry out this policy already is being set by agencies of government. If that be true, President Truman obviously has gone much further with the plan than he divulged in his inaugural address.

Africa and Indonesia are said to be areas upon which the American planners have their eyes. Private capital from the United States already has gone into Arabia in great amounts in quest of oil. As one result, Arabia, a long slumbering country, is taking on modern ways.

Over a long period of time it was truly said that the sun never sets on the British Empire. That great example of imperialism has been dissolved. In its place, the United States, without any territorial expansion, may lead in a world project to make every country economically successful and therefore a market for the surplus products of other lands.

Emphasis on Alcohol

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, a fine, Christian mother of my personal acquaintance, and who resides in the Second District of Wisconsin, has written to me to protest the emphasis on alcohol in the officers' clubs of our present-day Army.

Mother of three veterans of World War II, this lady has called my attention to an editorial in the December 1948 issue of the Christian Herald, which I take this means of bringing to the attention of my colleagues:

MORALS

An Army officer's wife sends us a schedule of social events planned for 1 month at the officer's club and mess, on one Army post. She's worried about it. Maybe you will be, too, when your son is drafted. We quote from this schedule:

"Sunday: Juke-box dancing. Monday: Bar is open. Come out and relax. Also Monday: Let's rest in our cocktail bar. Tuesday: Women's club. Meet the wife for cocktails and family (!) dinner. Wednesday: Bingo tonight. Bring the kids to this one. Also Wednesday: Bar open from 7 to 11. Come on out. It's like heaven. Thursday: Maid's night out. Bring your husband here. Friday: Pay-day night. Come out and drink it over. Also Friday: Bridge party, 25 cents per seat. Winner takes all. Whisky for booby prize. Saturday: Conte Carlo free champagne, 8 to 9. Juke-box dance, 9. Also Saturday: Steeplechase—horses, beautiful girls for jockies. Regular pari-mutuels. Also Saturday: Have a private party in our cocktail lounge; think of all the people you owe a party. Halloween party, $15 first prize, whisky second. Let's really get behind this one!"

We read, further, that the non-coms club has the same schedule. For the love of heaven, is this what we're sending our youngsters into?

Fisheries Favor Amendment to H. R. 1211

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. REED of New York. Mr. Speaker, under unanimous-consent request heretofore granted, I am inserting in the CONGRESSIONAL RECORD as a part of my remarks examples from testimony given before the Ways and Means Committee:

The fishing industry is the oldest commercial industry in the United States and is vitally important to the economy of the country. Furthermore, it provides a very valuable supply of one of the dietary essentials—animal proteins. On the other hand, it may be considered small by some when compared, for example, to the automobile industry or the steel industry.

* * * * *

Section 2 of H. R. 1211 repeals the Trade Agreements Extension Act of 1948 (Public Law 792, 80th Cong.). Section 5 of H. R. 1211 amends section 4 of the act entitled "An act to amend the Tariff Act of 1930," approved June 12, 1934, as amended, to strike from the statute certain provisions added to it by Public Law 792, Eightieth Congress, which provisions the California Fish Canners Association considers beneficial and which the association urges be inserted in H. R. 1211. We refer to the requirement of section 3 of the Trade Agreements Extension Act of 1948 (Public Law 792, 80th Cong.), that the United States Tariff Commission shall make an investigation and report to the President the findings of the Commission with respect to each article to be considered for possible modification of duties and other import restrictions as to the limit to which such modification, imposition, or continuance may be extended without causing or threatening serious injury to the domestic industry producing like or similar articles, and to report whether increases in duties or additional import restrictions are required to avoid serious injury to the domestic industry.

When the fish-canning industry found that the foregoing provision had been made a part of the statutory restriction on the negotiation of trade agreements last year, it felt that it had finally been afforded some measure of protection; that at last it could not be offered on the sacrificial altar of international trade to promote and benefit some other industry, as has seemed to be its fate in the past.

The fish-canning industry fails to see why there should be any objection to the inclusion of this provision.

* * * * *

We strongly urge upon your committee, therefore, that you continue the attempt to protect industry before the damage is done; that you permit an impartial bipartisan body, experienced in tariff matters, to determine just how much surgery the patient can stand without fatal results, rather than to place scalpels in the hands of medical students who, while operating, will be praying constantly that the skilled surgeon will be able to correct their mistakes in time.

(California Fish Canners Association, Inc., 15 members, 20 plants: California Marine Curing & Packing Co., Terminal Island, Calif.; California Marine Packing Co., Newport Beach, Calif.; Coast Fishing Co., Wilmington, Calif.; Franco-Italian Packing Co., Terminal Island, Calif.; French Sardine Co., Terminal Island, Calif.; High Seas Tuna Packing Co., Point Loma, San Diego, Calif.; Southern California Fish Corp., Terminal Island, Calif.; South Coast Fisheries, Terminal Island, Calif.; South Pacific Canning Co., Long Beach, Calif.; Terminal Island Seafoods, Ltd., Terminal Island, Calif.; Van Camp Seafood Co., Terminal Island, Calif.; West Coast Packing Corp., Long Beach, Calif.; Westgate Sea Products Co., San Diego, Calif.; Western Canners Co., Newport Beach, Calif.; Pan Pacific Fisheries, Inc., Terminal Island, Calif.)

Union of American Hebrew Congregations

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. MULTER. Mr. Speaker, the Catholic community of Boston made a unique contribution to the fortieth biennial convention and observance of the diamond jubilee of the Union of American Hebrew Congregations in Boston. For the first time, so far as I know, in this country a Catholic prelate addressed a Jewish religious assembly.

Asserting that there is nothing in Catholic doctrine to prejudice the attitude of Christians toward Jews, Archbishop Richard J. Cushing, of Boston, said that any such statements are lies meant to divide us. The archbishop further declared:

I ask you not to believe those things. No man can have my faith concerning Christ, His life and death, without desiring to serve, to help, to befriend all men without exception: white, black, gentile, Jew. Always remember that a Catholic bishop took time from a busy day to come and tell you that. I would not send a scholar to prove that our doctrines do not make us your enemies. I come to pledge my personal affection and officially to declare there is nothing in my faith to make us enemies of you. It is all the other way. I can and do pledge to you the friendship of my people.

Judging by the amount of anti-Catholic literature and talk loose in this land, judging by the movements of various kinds organized against Jews, Negroes, and others, a staggering percentage of people in even this privileged country still hate millions of their fellow men.

Questioning the efficacy of interfaith parleys and like ventures, he averred that—

in the last analysis, people will learn morality best within the household of their own spiritual families. They will give most sincere attention only to those who speak for God as they understand God. Hence, the great need for moral education on the bases of mutual respect and brotherly charity, education to be given by our own to our own within our own traditions.

Archbishop Cushing declared there must be more and more religion, which he called the—

foundation stone of every independence to which you, as free men, lay claim. It underlies all our human dignity, our political democracy, our hopes for faith and freedom. * * * If the American concept of the sources of our dignity and freedom be true, then the atheist, the man who denies God in theory or in practice, is as much the enemy of the American way of life as is the totalitarian, black, brown, or red. * * * Those who love liberty, therefore, as you love liberty, will protect their liberties and those of their nation by the means that you have chosen: by religious means, by an increasing faith in and love for God.

Role of Tariff Commission Favored by Textile Industry

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. REED of New York. Mr. Speaker, under a unanimous-consent request heretofore granted, I am inserting in the CONGRESSIONAL RECORD as a part of my remarks examples from testimony given before the Ways and Means Committee:

Although the opinion of the Commission is merely advisory and not controlling, the amendment, in our opinion, was the only step taken by the Congress since the inception of the program to provide a significant standard to guide the State Department in the exercise of the great power which the Congress had delegated to the President and to make effective the assurance given by President Roosevelt "that no sound and important American interest will be injuriously disturbed" and that "the adjustment of our foreign-trade relations must rest on the premise of undertaking to benefit and not to injure such interests."

The amendments of 1948 enlarging the power of the Commission marked a great advance in the administration of the act, because, in our opinion, the program as developed by the State Department had forsaken the premises laid down by the President and had been primarily motivated by international political considerations. It relegated to second place the pledge to benefit and not to injure and put foremost as the object to be gained a persistent and ever-widening reduction of import duties. (Statement of C. T. Murchison, president, the Cotton-Textile Institute, Inc., New York, N. Y.)

The present act, due to expire on June 30, is a far better approach. It gives to the Tariff Commission the power to review the duties imposed on imports to this country. Under the present law, the Tariff Commission is required to hold public hearings and to determine the peril points below which contemplated tariff reductions under the reciprocal trade program should not go. Under Public Law 792, it must submit its recommendations to the Chief Executive. The President, if he disregards such recommendations, must tell Congress his reasons.

We submit that this is a more democratic and practical procedure. Rather than leave such matters without recourse to the State Department, we must have a flexible system that will provide protection whenever any industry is threatened in the home market.

The peril point in the woolen and worsted industry is a fact. It is here, right at the present time.

Representatives from New England insist that this peril be removed by an amendment which will raise the tariff on imports of woolens and worsteds.

Before that can be done, however, the new legislation being considered by this committee, and which seeks to eliminate the peril point reporting function, should be rejected.

If not, our textile industry is doomed. We are here to see that this does not happen.

Gentlemen, don't sell our woolen and worsted industry down the river of free trade. (Statement of Hon. THOMAS J. LANE, a Representative in Congress from the State of Massachusetts, representing the textile industry.)

OVERSEERS' ASSOCIATION,
PACIFIC MILLS, WORSTED DIVISION,
Lawrence, Mass., January 21, 1949.

Hon. EDITH N. ROGERS,
House of Representatives,
Washington, D. C.

MY DEAR MRS. ROGERS: The overseers at Pacific Mills, Worsted Division, Lawrence, Mass., have gone on record opposing bill H. R. 1211. This bill is to have open hearings before House Ways and Means Committee beginning Monday, January 24.

We believe the Trade Agreements Act should be governed by the Tariff Commission so that, with proper hearings and balance arrived at through these hearings, no reductions will be advised that will injure the domestic industry involved. Also, from time to time, people as well as industry can have a point of appeal to help correct any inequality that may arise.

Although we may be considered part of management, let us assure you that we are very close to the employees of our industry, and we can assure you that they are adverse to any legislative enactment that will deprive them of at least regular employment, or any wage that might lower their income through competition with unequal standards of wage ratio in countries entering into these reciprocal trade agreements.

Therefore, we ask you to appear at these hearings and oppose bill H. R. 1211, and recommend the further continuance of the Tariff Commission.

Very truly yours,
PACIFIC MILLS OVERSEERS' ASSOCIATION,
THOMAS R. BEE, *President.*
A. W. SILLOWAY, *Secretary.*
TOM PEEL,
JAMES L. BATTS,
CHARLES POLLARD,
HENRY FREDETTE,
Directors.

We do not think it is necessary for Congress to abdicate completely to the State Department all power over international trade agreements in order to promote international trade. Nor do we believe that the broad general principle of promoting international trade should be used as a subterfuge by the State Department to commit the United States to international trade organizations without the approval of Congress. We do not think the State Department in administering the Trade Agreements Act has given reasonable consideration to the welfare of the American textile industry, the American farmer, or the American textile worker.

If it is the wisdom of Congress to extend the Trade Agreements Act, we urge its extension without change from its present form. It is vital that the Tariff Commission or some analogous independent agency be entrusted with the responsibility of fact finding, in accordance with economic criteria established by the Congress. (By C. A. Cannon, chairman, legislative committee, American Cotton Manufacturers Association.)

We were, therefore, very encouraged last year to see that Congress had voted to give the Tariff Commission a clearer, more authoritative status in respect to future agreements; but we are now equally discouraged to find that Congress is being asked, in H. R. 1211, to reverse its position and not only repeal the Trade Agreements Act of 1948, but also to eliminate even the slight consideration given in the original 1934 act that before concluding such agreement the President shall seek information and advice with respect thereto from the United States Tariff Commission, from the Departments of State, Agriculture, and Commerce, from the National Military Establishment, and from such other sources as he may deem appropriate.

From this proposal we infer that the President now desires to eliminate from fact-finding those agencies, except the State Department, most experienced in presenting facts. It is the State Department which has acted as the President's agent in all of these negotiations. It is the State Department, primarily experienced in questions of political expediency and not economic considerations, which assumes the role of leader in all negotiations.

The Tariff Commission, on the other hand, has demonstrated many times its ability to gather detailed data and analyze it impartially. It is only since the Tariff Commission has made public its studies of various industries of the United States and their history in world trade that we have had available to us data which would even serve as a basis for discussion. In our own industry, the Commission's Trade Agreement Digests, published in 1946, on both rayon and silk were an immeasurable help in reviewing industry conditions, even though the Commission has itself been hampered by lack of information on foreign costs of production in postwar years. The Summary of Tariff Information series, published this year, still further adds to the enlightenment of those who wish to know what facts are being considered in negotiating trade treaties.

We believe that the President, his advisers, Congress and all others participating in what is a relatively new international experience for the United States, the trade agreement negotiation, cannot in good faith permit the representatives of this country to sit down with the more experienced negotiators of other countries with no provision for the preparation of adequate information as to the economic effects of such proposals; nor permit the actual negotiation to go into effect without even the relatively light rein over the results which Congress gave itself in providing that the Tariff Commission's advice must be heeded, as stipulated in the present Public Law 792. We also believe that Congress will find that other countries, despite their extensive experience in such matters, do not presume to effect such negotiations without the active advice and attendance of adequately informed industry representatives. Such countries know full well that trade agreements are primarily economic in their impact on the nationals of their respective countries; and the economic effect is studied and considered.

Perhaps the very complexity of the foreign system of quota controls, currency controls, special intra-country taxes, etc., is evidence that a truly well thought out trade agreement is not a simple matter of cutting periodic slices of 50 percent from a single rate of duty as seems to be the present system of our negotiating representatives.

We earnestly ask for deeper consideration by the members of your Committee of the far-reaching effects of such a change as that now proposed in H. R. 1211. On the eve of the returning industrial efficiency of such long-time chief competitors as Germany and Japan in the international textile picture, and the daily accounts of purchases of the latest type of textile equipment by other countries, much of it from the United States, there is more vital need than ever before to take no backward steps in providing for the widest possible fact finding and open consideration of all matters affecting international trade in textiles. The United States Tariff Commission, a Government body of nonpartisan character, as appointed by Congress, should be the chief agency for such fact finding in foreign trade negotiations. If Congress wishes to delegate to others the power to change its trade treaties, then that delegation should be given only to those whose public duty it is to factually consider the effect of such proposals in the American industries involved.

We, therefore, respectfully urge that H. R. 211 be revised as follows:

Sec. 2: This should be changed to read: "The Trade Agreements Extension Act of 1948 (Public Law 792, 80th Cong.) is hereby extended for a further period of 2 years from June 12, 1949."

Sec. 3: This section should be eliminated.

Sec. 5: This section should be eliminated.

Respectfully submitted: Tariff Committee of the National Federation of Textiles, Inc.: Chairman Paul Whitin, Paul Whitin Manufacturing Co. of Northbridge, Mass., West Warwick, R. I., and Gilbertville, Mass.; Gardiner Hawkins, United Merchants & Manufacturers, Inc., of Jewett City, Conn., Clearwater, S. C., Bath, S. C., Elberton, Ga., Fall River, Mass., Wilmington, Del., and Old Fort, N. C.; Alan B. Sibley, Deering, Milliken & Co., Inc. of Abbeville, S. C., Greenville, S. C., Laurens, S. C., Spartanburg, S. C.; Irene Blunt, Secretary, New York, N. Y.; John J. Goldsmith, Hess, Goldsmith & Co., Inc., of Kingston, Pa., Wilkes-Barre, Pa., Plymouth, Pa., and Pomona, Calif.; H. D. Ruhm, Jr., Bates Manufacturing Co., of Lewiston, Augusta, and Saco, Maine.

Communism Versus Christianity—A Pattern of Action by Communists Who Aim To Destroy Christianity

---

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, my attention has been called to a poem written by Langston Hughes, a member of the American section of Moscow's International Union of Revolutionary Writers. It does not seem possible that such an organization can exist in this country. The anti-American propaganda goes back a long way and its philosophy has been permitted to permeate the social and economic life of the United States.

Mr. Speaker, the Christian people of this country are on notice that communism has as its objective the complete destruction of the Christian way of life. Can those of us who profess it sit idly by, inarticulate and inert? Communism is a cancerous condition in our body politic and it is time we did something about it.

Mr. Speaker, I include an excerpt as part of my remarks, and call special attention to the poem entitled "Good-by Christ":

Attention, Christians! Be sure to attend the book and author luncheon at Vista del Arroyo Hotel, Pasadena, Calif., Friday, November 15, 1940, at 12:15 promptly. Hear the distinguished young Negro poet, Langston Hughes, author of the following poem, and member of the American section of Moscow's International Union of Revolutionary Writers.

"GOOD-BY, CHRIST

"Listen, Christ,
You did all right in your day, I reckon—
But that day's gone now.
They ghosted you up a swell story, too,
Called it Bible—
But it's dead now.
The popes and preachers 've
Made too much money from it.
They've sold you to too many.

"Kings, generals, robbers and killers—
Even to the Czar and the Cossacks,
Even to Rockefeller's church,
Even to the Saturday Evening Post.
You ain't no good no more.
They've pawned you
Till you've done wore out.

"Good-by,
Christ Jesus Lord God Jehovah,
Beat it on away from here now.
Make way for a new guy with no religion at all—
A real guy named
Marx, Communist; Lenin, peasant; Stalin, worker;
Me—I said, me!

"Go ahead on now,
You're getting in the way of things, Lord.
And please take Saint Gandhi with you when you go.
And Saint Pope Pius,
And Saint Aimie McPherson,
And big, black Saint Becton
Of the consecrated dime.

"And step on the gas, Christ.
The world is mine from now on—
Move!
Don't be so slow about movin'!
And nobody's gonna sell me
To a king, or a general, or a millionaire."

Attend the luncheon, Christians, and hear George Palmer Putnam introduce the author of the above "poem"—Langston Hughes, distinguished young Negro poet—and eat, if you can.

Control in Far East Slipping From United States to Russia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a report by Admiral Charles M. Cooke, Jr., on the alarming import for this country of what is happening in China and Asia. Admiral Cooke was responsible for much of the brilliantly successful strategy of our naval forces in the last war. Some say he is our greatest naval strategist since Mahan.

On his retirement last November, following 2 years as commander in chief of our Asiatic Fleet, almost his first act was to issue this sober statement of warning to his fellow Americans. He knows the incredible folly of our Government's failure to have a forthright policy of support for the Government of China in its efforts to resist subjugation by the Communists. He knows what ought to be and can be done in China, even at this late date. He knows what will happen to our interests and security in the Pacific if we do not do it.

Are we to blunder into a second world war in a decade because of failure to appreciate how imperative it is for our security and for peace in the Pacific that China be free and independent and under a government friendly to ourselves, rather than under an avowed enemy, whether Japanese militarists or Soviet satellites?

VISIONS CONTROL OF ORIENT SLIPPING FROM UNITED STATES TO REDS

(By Frank H. Bartholomew)

SONOMA, CALIF., November 22.—"Control in the western Pacific-east Asia is now passing to the Communists," Admiral Charles M. Cooke, Jr., told the United Press yesterday in an exclusive interview.

The four-star admiral recently retired after 2 years as commander of United States naval forces, western Pacific. As head of the American combatant forces in China his headquarters were at Tsingtao, to which port 1,250 additional Marines were recently ordered.

"Control of the western Pacific-east Asia area was dominantly Japanese in recent decades," the admiral said. "Japanese abuse of this domination had world-wide disastrous consequences. With VJ-day, control passed to the United States after a bloody march across the Pacific. It is now passing to Soviet Russia.

"Russia's position in the western Pacific before the war was not strong. Rather it was a position of vulnerability which tended to weaken strategically the Soviet world status. The incorporation and organization of Manchuria, north Korea, and north China in the Communist sphere of the maritime provinces of eastern Siberia is bringing about a shift of economic and military superiority from the United States to Russia.

"No one should be fooled by statements that Chinese Communists are not in the Communist fold."

Cooke was asked if in his opinion it is too late for the United States to retrieve its position.

"Before we try to retrieve it we had better know specifically what it is we want to accomplish," he replied, speaking with the judicial care which won him the nickname "Savvy" at the Naval Academy.

"Two points must be decided. What are our objectives in the Orient? How compelling are they; how far will we go to support them?

"We have got to know. The United States has need of a clean-cut objective in China. There have been extensive periods when we did nothing, followed by periods when we did substantial things.

"I was out there for 2 years and, while knowing our policy, I was not advised as to the objectives our policy was supposed to bring about.

"What are these objectives? Are we trying to check the spread of communism in China or are we not?

"If we think communism is not best for China, is not best for our own position in the western Pacific, and is not best for the world, presumably, we want to do something about it.

"We don't accept the communization of Europe, and we are doing something about that—to the extent of billions of dollars—in support of a definite objective.

"Americans cannot help but be aware of the section of thought in the country and in the National Capital representing a so-called liberal philosophy and taking the position that communism may be all right for China and that we ought to stay out of a fratricidal war anyhow. If that line of thinking is to guide us, we should not continue to pour millions of dollars into Nationalist China only with the certainty of further offending the expected victors.

"We cannot well have two policies in China—one of them seeking the reestablishment of prosperity under the Nationalist Government and simultaneously checking the spread of communism, and at the same time an opposite policy of letting the Communists drive ahead unrestricted, with the assistance of Moscow—a Moscow which incidentally is committed by treaty to support the Chinese Nationalist Government.

"The effect of this sort of thing is exemplified by congressional action last spring in appropriating a large sum of money for Chinese relief in which a certain section was made available for aid to the Nationalist army—yet I very recently read, whether correct I don't know, that a ship left Seattle with the first arms and ammunition to go forward to Chiang Kai-shek as a result of this legislation.

"Is it too late to do anything effective? Let me put the answer this way—if it is not too late to continue sending money and supplies to China, it is not too late to take a supporting action designed to accomplish whatever objective we may adopt. If our country has concluded that the Nationalist cause is lost, then the expenditure of our wealth is useless in sending out relief to support that cause.

"We cannot wash our hands of direct as well as moral responsibility for China and say that, since it is the Chinese fighting the Chinese, let's stand clear. We cannot forget that we had much to do with putting the Russians into Manchuria, north China, north Korea, and the Kuriles, and that we spent a year and a half trying to get the Nationalist leaders to accept the Communists into their government. In Europe at the present time we have decided that we don't like the ruthless aggression of the Communists and that they are inimical to our national interests; are we then, having contributed much in implanting them on the Chinese, now to turn our backs and say over our shoulders to our erstwhile ally, Chiang Kai-shek, 'You have an inefficient and corrupt government and we cannot help you?'

"That might be too bad for us too—because, in addition to introducing the Communists into China and helping to develop a situation which neither we nor the established Government of China can control, as things now stand, we are, by the loss of Manchuria to the Communists, already in process of being replaced by an unfriendly nation as the dominant power in the western Pacific."

"Would a Communist victory in China mean Communist domination of the entire Orient?" the admiral, now living on his 160-acre Hillwood ranch overlooking San Francisco Bay to the south, was asked.

"No one has the answer to that one," he replied. "Certainly there are Communist movements in Indonesia, the Malay States, and the Netherlands East Indies. Whether they could be welded together I don't know.

"The danger that Japan will be forced into the Communist sphere increases. How is this augmented danger to be countered? Is it to be a permanent charge on United States military power? Is it to be a responsibility to be assumed by the United Nations? Is it to be met by the reconstitution of Japanese

military strength? Or, is it to be defaulted by the democratic world?

"As a specific formula I have this to suggest, and I base it upon direct experience with the Chinese people, military forces, and Government:

"Let us send at once to China, assuming Chinese concurrence, a strong commission to guide United States action. The action we have taken in the past has proven ineffective, if not unwise. If this ineffective action has resulted from the advice of the representatives and commission heretofore in China, they should be either replaced or superseded. If our course has disregarded the advice of such agencies then we need more authoritative representation.

"Utilizing the well-considered advice of such a high-powered agency, we should fix our objective strongly and clearly, and support it forcefully."

Labor Favors Tariff Commission's Peril Points Report

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. REED of New York. Mr. Speaker, under unanimous consent request heretofore granted, I am inserting in the CONGRESSIONAL RECORD as a part of my remarks examples from testimony given before the Ways and Means Committee:

Lastly, we hope that the Congress will in no case prevent the Tariff Commission from carrying out its full function in the present round of trade agreements. We believe that we have an opportunity to test the capacity of the Commission to perform its function as a guide, keeping in mind that its present staff is approximately 30 percent below its normal strength. To deny this test would appear to us to represent an unwillingness to accept a trial of a procedure that many believe to be superior to previous procedure. It would, moreover, call off the test when it had already progressed more than halfway to its goal.

To sum up, our request to this committee, and through it to the Congress, is for a procedure in tariff adjustment that will afford the best prospect for establishing rates of duty that will reflect the realities of foreign competition in its varied impact upon different branches of domestic production. This calls for more specific information than has been relied upon in the past and greater concern in measuring the probable effects of changes in duty rates. We have in mind rates of duty, and now this is stating just a general principle, that will permit the average American producer, not the least efficient, to sell his output in the domestic market in competition with imports at prices that will return a reasonable profit after paying fair wages and in other respects meeting the labor standards required by law. We think that such rates can be approximated by a Commission that is empowered to find the facts and to interpret them impartially. We see no other way of accomplishing the same end.

On this proposition we take our stand, in the belief that it will appeal to the minds of reasonable men.

* * * * *

We think that the Tariff Commission is the agency most appropriate for this function. It is a bipartisan agency capable of weighing the facts impartially. This is the body that has the commodity experts and the personnel that is competent in judging the competitive factors. If it is not now properly staffed, any deficiency should be remedied. We are suggesting the formula that in our view would give the best results. We believe it to be sound, practical, and reasonable. (Statement of O. R. Strackbein, executive secretary, America's Wage Earners' Protective Conference.)

We are aware, of course, that the Commission has supplied statistical material to the Trade Agreements Committee, which, we understand, advises the State Department; but we do not believe that this meets our objections. The State Department can then go ahead and ignore the Tariff Commission. The latter becomes a more statistical collection agency. The value of its expertness in reaching conclusions about how high duty rates should be is lost or greatly depreciated.

Let us say, for example, that the Tariff Commission should find upon proper investigation that the duty on engraved ornamental glassware should not be reduced or should be reduced not more than 20 percent if the American producer is not to suffer serious injury. It would supply the Committee on Trade Agreements with the supporting data. The latter would no doubt give consideration to the data thus supplied by the Commission; but it could disregard the information or give to it such interpretation as it saw fit and advise the State Department that the duty could be reduced the full 50 percent allowed by law.

We do not believe that it is crippling the trade-agreements program to require that the word of the Tariff Commission should carry greater weight. Does anyone suggest that the process of railway rate regulation is crippled by the fact that the Interstate Commerce Commission, which is composed of experts in the field of transportation, makes final and binding decisions with respect to rates? Does anyone suggest that the regulation of public utility rates is crippled by the fact that the Federal Power Commission, after adequate hearings and fact finding, determines what the rates should be? (Statement of Harry H. Cook, president of the American Flint Glass Workers' Union, Toledo, Ohio.)

Statement of George J. Burger Before the Trade Policies Subcommittee of Senate Interstate and Foreign Commerce Committee

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, February 7, 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement made on December 6, 1948, by George J. Burger, director in charge, Washington office of the National Federation of Small Business, before the Trade Policies Subcommittee of the Senate Committee on Interstate and Foreign Commerce, which is considering proposed basing point legislation. The statement represents the viewpoint of many small businesses and regardless of the ideas which may be entertained as to the necessity for this character of legislation, the address of Mr. Burger merits the careful attention of the Members of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I am George J. Burger, director in charge of the Washington, D. C., offices of the National Federation of Small Business, Inc., 715 Bond Building, Washington, D. C.

The National Federation of Small Business, Inc., is an organization composed of, and representative of, small independent businessmen and professional men over the Nation. It is the largest independent business organization, in point of numbers of individual actively supporting members, of any business organization in the United States.

Our interest in the activity of this Trade Policies Subcommittee of the Senate Interstate and Foreign Commerce Committee springs directly from the active interest demonstrated repeatedly, by direct individually voted ballots, by our members in all Federal antitrust laws—in their integrity, their strengthening where necessary, and their full enforcement.

A federation spokesman appeared before the Resolutions Committees of both the National Republican and National Democratic Parties at Philadelphia, early last summer, to urge that both groups officially commit themselves to a policy of full utilization and enforcement of our present antitrust laws. I am happy to report that both political parties adopted small-business planks incorporating this suggestion.

Specifically, the Republican Party pledged itself to a program of aggressive antimonopoly action. Specifically, the Democratic Party pledged itself as follows: "We pledge an intensive enforcement of the antitrust laws, with adequate appropriations. We advocate the strengthening of existing antitrust laws by closing the gaps which experience has shown have been used to promote the concentration of economic power."

Gentlemen, at this point let us make it clear that we of the federation are well pleased with your determination to evaluate the compact of recent Supreme Court antitrust law decisions on our economy. It is our feeling, in fact it has been the philosophy on which we have based our entire operations, that the more Congress knows about the affairs of our business system the more wisely it will be able to conduct its affairs and the affairs of the Nation.

Here let me make one important point crystal clear. We of the federation have not the slightest objection to the employment by any individual manufacturer in bona fide competition with others in his line of business of any pricing system—basing point, delivered price, zone price, or f. o. b.

Let me illustrate in the case of one industry with which I am very familiar: In saying what I have said above I mean there is no objection to a tire manufacturer located, say, in Washington, D. C., selling a 6.00 by 16 tire at a delivered price of $9 to a dealer in this city, and selling a similar tire to a dealer at San Francisco, Calif., for $9. I want it understood that in saying this I fully understand that freight absorption is involved—that it costs more to ship to California than it does to lay an article down at the point of manufacture.

On the other hand, we of the federation have serious objection to any agreement between manufacturers or suppliers to use any pricing system in collusion to achieve fixed prices and do away with competition. Then, too, we have serious objection to individual manufacturer use of any pricing system where the effect of that pricing system is to discriminate unfairly between various of his customers.

Let me illustrate, again in connection with the industry previously mentioned: In saying what I have said above I mean there is serious objection to any possible agreement—express or implied—among various rubber manufacturers involving joint use of any pricing system where the effect is to set identical, noncompetitive, prices for similar products throughout the various markets over the Nation. I mean, too, that there is serious objection to any manufacturer selling his products to one buyer at delivered prices involving freight absorption in one case and to other buyers on an f. o. b. basis in another.

Here let me offer my own layman comment that, so far as I know, there is nothing in any antitrust statute that will prevent any manufacturer or supplier from using whatever pricing system he desires, so long as he does it individually and in such manner so as not to discriminate unfairly between various of his customers. My knowledge of the Robinson-Patman law, my experience with it, commenced the year it was enacted. My knowledge of the trade malpractices it sought, and still seeks, to correct springs from long and sometimes very bitter experience as an independent retailer and wholesaler of tires and tubes and auto accessories in general from 1910 to approximately 1935, and from constant representation based on intimate knowledge of, and connection with, independent business interests from that date to present.

We say this because we only too keenly realize that there are at work in our Nation today powerful forces that, even though perhaps unconsciously, are working away from our traditional system of free, competitive enterprise which is safeguarded by our present antitrust laws. Again, quite frankly, we feel that an attempt is being made to use your good, honest offices for this purpose.

Let us look at the matter this way. The point proximately at issue before your groups is the effect of the Supreme Court Cement case decision on the basing-poing pricing system per se—or, the individual manufacturer's right to absorb freight charges.

The point ultimately at issue may in reality—when all the sugarcoating and frothy lace of verbiage is removed—be well the status of the antitrust laws themselves—of the Sherman Act, or the Clayton Act and its amending Robinson-Patman Act, or all three.

Following the Court's decision on this case, there rose from various segments of industry complaints that the Court had either written or interpreted antitrust law in such manner as to effectively declare illegal such pricing. It was argued that the effect of this decision therefore was to force all industry on an f. o. b. pricing basis. On top of this were heaped charges that the effect of this decision would splinter efficient large producing units, that it would create "local or area monopolies," that it would discriminate against the small producer in favor of the giant multi-unit chain producer, that it would drive price levels up.

By way of furnishing a concrete example of the impact of this decision, cement firms reverted almost at once to f. o. b.-pricing basis. Steel firms, then and now under shadow of Federal Trade Commission antitrust prosecution for alleged concerted use of basing-point pricing system, followed suit.

In response to these alarms and excursions, the Congress agreed to establish your subcommittee "to conduct a full and complete inquiry into the impact upon the consumers of goods and upon small and large business in the United States of the decision of the United States Supreme Court rendered on April 26, 1948, in the case of the *Federal Trade Commission, petitioner,* v. *the Cement Institute and Others,* and of other recent decisions of such Court and the lower Federal courts construing Federal statutes relating to the regulations of trade practices in interstate and foreign commerce." It ordered and authorized your committee to "report its findings, together with its recommendations for legislation as it may deem advisable, to the Senate at the earliest practicable date, but not later than March 15, 1949."

All this occurred following the Supreme Court decision, despite the fact that the Court expressly confined its decision to concerted use of the basing-point system, despite the fact that the Court very pointedly excluded questions of the validity of the basing-point system itself, system of pricing from the scope of its strictures.

We believe that this is a most significant point. We believe further that many businessmen, and perhaps some Congressmen, have been deceived by this mistaken clamor originating in certain segments of United States industry. We believe that at the base of it all you will find, on close study, that there is somewhere a strong desire that you recommend to Congress that it legalize either the pricing system that was condemned by the Court in the Cement Industry case or some similar basing-point pricing system involving concerted action as a necessary ingredient. So much has not been said in so many words—but from the facts available there is no other conclusion possible.

Just as firmly, we believe that when it comes time to tally the final score you will find that your group is faced with only two alternative courses of action. First, to recommend that Congress take no action on the matter. Or second, to recommend that Congress legislate effectively in renunciation of the principle that competition is an essential factor in our system of economic endeavor.

In handing down its decision on this Rigid Steel Conduit case, the Seventh Circuit Court of Appeals declared: "We think there was direct proof of conspiracy, but whether there was or not, in determining if such finding is supported, it is not necessary that there be direct proof of an agreement. * * * The record clearly establishes the fact that conduit manufacturers controlling 93 percent of the industry use a system under which they quote only delivered prices, which are determined in accordance with a formula consisting of a base price at Pittsburgh or Chicago plus rail freight, depending upon which basing-point price controls at any particular destination or in any particular section of the United States; that as a result of using that formula the conduit purchasers were enabled to match their delivered-price quotations, and purchasers everywhere were unable to find price advantage anywhere; and that the purchasers at or near a place of production could not buy more cheaply from their nearby producer than from producers located at greater distances, and producers located a great distance from any given purchaser quoted as low a delivered price as that quoted by the nearest producer. * * * Our study of this record and of the applicable law has convinced us that the Commission was justified in drawing the inference that the petitioners acted in concert in a price-fixing conspiracy."

Note well that the element of concerted action appears prominently in the Rigid Steel Conduit case, a case which is used to illustrate the contention that the Cement case decision has produced law which banned individual use of the basing-point system (the basing-point system itself).

In this connection the United States Chamber of Commerce asserts that: "The court (the Seventh Circuit Court in the Rigid Steel Conduit case) apparently took the position that these circumstances (wherein one seller knows that each of the other sellers is using the basing-point formula, knows that by using it he will be able to quote identical delivered prices and thus present a condition of matched prices under which purchasers are isolated and deprived of choice among sellers so far as price advantage is concerned) were sufficient basis for the Commission's conclusion that the basing-point pricing method of competition has a tendency to hinder competition and create monopoly, and, hence, is an unfair method of competition, in violation of the Federal Trade Commission Act. Inasmuch as these circumstances are present in varying degree wherever any delivered-price method is used, this decision can conceivably be said to foreshadow reliance on the Cement case as a basis for holding all delivered-price methods to be unlawful."

Now, it may be, as has been charged, that in the Rigid Steel Conduit case the Seventh Circuit Court's decision was based on Cement-case law, which outlaws individual use of the basing-point decision. But at the same time it is extremely significant that people who would have Congress override the court do regard the practices in the Rigid Steel Conduit case as individual, when the Seventh Circuit Court itself clearly states that evidences of conspiracy were plain; that, therefore, the people involved in this case were using the basing-point system in violation of antitrust law.

It seems very significant to us that this circuit court decision is used to illustrate the alleged effect of the Supreme Court Cement-case decision on the basing-point pricing system as such, especially in view of the fact that the circuit court clearly states that evidences of conspiracy were plain.

In fact, all this, taken in conjunction with earlier portions of this testimony, leads us to the conviction, previously expressed, that the real point at issue in these hearings, the motivating force behind these discussions and studies, is not the legality or illegality of the basing-point pricing system itself, that rather it is the future legality or illegality of concerted use of this system of pricing.

Much strength is lent to this conviction by an Associated Press dispatch of September 4, which appeared in the New York Times, reporting that Mr. Ernest T. Weir, chairman of the board of the National Steel Co., was arming his salesmen with personal letters to customers in which he urged the steel buyers to induce Congress to pass legislation permitting a return to the basing-point method of selling steel.

Let me repeat and emphasize one significant sentence from this dispatch: "But the Supreme Court of the United States declared that method of selling goods was illegal in a decision affecting the cement industry but applying to all industries."

Here, gentlemen, let me call your attention to one fact that must not be overlooked. In the event you do recommend, one way or the other, that Congress legalize the basing-point system as it was used in the cement industry, you must necessarily legalize the practices in which the industry engaged in order to keep its pricing system in effective operation.

I repeat, gentlemen, "If this does not happen, there is a reason. * * *" I suggest that this reason is found in the charges of specific trade practices used by the cement firms and in other but similar practices employed in other industries.

I repeat also that if it is decided to recommend that Congress legalize the basing-point system as used heretofore in the cement field it must resign itself to legalizing joint agreements to—

1. Boycott dealers who prefer to exercise independent action.

2. Discharge so-called uncooperative employees.

3. Engage in organized opposition to construction of additional manufacturing plants (possible plants that might be located near Mr. Edwards' periphery).

4. Engage in punitive selling in price cutters' territories at prices lower than those profitable to force price cutters back into line.

5. Cease all sales competition on the basis of comparative qualities.

If this is done, it will constitute an effective recommendation that Congress abandon present antitrust laws. If it is done it will run directly contrary to the solemn platform declarations of both the Republican and Democratic Parties on the subject of antitrust-law enforcement.

Passing from this to another phase of the problem, let's consider the possible practical effects of this decision on the Nation's small-business men.

First, let us note that in a recent communication to your committee, the United Cement and Gypsum workers emphasized that the Supreme Court Cement decision would force decentralization on the industry. For years, gentlemen, as Senator JOSEPH C. O'MAHONEY so ably pointed out to you, small, independent enterprise has been increasingly endangered by rapidly increasing concentration of business. For as many years it has been pointed out that decentralization—by which we mean the breaking up of giant industrial concentrations, not of merely large size, efficient producers—is needed if free enterprise is to continue successfully in these United States. This subject is covered thoroughly in Mr. Thomas Hewes' magnificent study, Decentralize for Liberty, commented on so favorably by the Saturday Evening Post.

Next, let us note that the Supreme Court Cement case decision forbids maintenance of a pricing system through specific restraints, one of which is the boycott of uncooperative dealers. Simply stated this boycott is but one form of coercion, preempting by one person the rights of another. How this coercion is today affecting small-business men in the tire, appliance, auto, gasoline, and other fields is well known to many of you who have given particularly close study to the problems of small business.

Third, let us note that the Court's cement order forbids organized opposition to the construction of additional manufacturing plants in support of the pricing system as used in the industry. Organized opposition to the construction of additional manufacturing plants—mark that well. And let me make just this comment: In the tire industry alone today there are many small, independent dealers who are being sorely discriminated against by their manufacturer suppliers. They have but two alternatives—either to give up the tire business or to sit by and suffer. Why? Because over the years the number of independently owned and operated manufacturing facilities has dropped from over 300 to about 21 or 22. Thus, these dealers have all but entirely lost their freedom of choice as to suppliers; for them there is no alternative of relief through any possibly better deal—there is only the deal that they have.

Let me point out here, gentlemen, that we of the federation do not deny that changes away from concerted use of the basing-point pricing system may well involve some, perhaps many, inconveniences and sacrifices to large as well as small business. If these happen, then we say they are to be expected. Note well we do not make this statement heedlessly, callously; we deeply sympathize with innocent people who may suffer harm in this conversion. But, as we see it, over the years we, as a Nation, have allowed ourselves to be wound up into a tight pattern of monopolistic controls. And those inconveniences and sacrifices we must be prepared to pay for what the former United States Assistant Attorney General in charge of the Justice Department Antitrust Division Wendell Berge has characterized as the "35 or 40 years we paid lip service to the ideals of the Sherman Act, and we, in practice, brought a few suits as a token to those ideals"—if we wish to continue our Nation on a really free, competitive-enterprise basis.

We repeat, as far as we can determine there are only two alternative courses of action open to your committee—either you can recommend that Congress take no action on this matter, which will represent a ringing affirmation of your belief in free, competitive enterprise and freedom of opportunity, or you can recommend that Congress legalize this so-called individual use of the basing-point system, which will represent disavowal of our antitrust laws and a solid step away from free, competitive enterprise and freedom of opportunity.

In conclusion may we recommend that you keep the following principle in mind all through your consideration on this matter—that small, independent business is actually no more than the practical expression of a free, competitive-enterprise system in healthy operation, that free, competitive enterprise cannot flourish in the absence of freedom of economic opportunity, and finally that experience has shown freedom of opportunity of which this Nation is capable will not long remain in the absence of present antitrust-law protection.

For whatever it is worth to us as a nation, we may safely, I imagine, assume poses before the world. But let us always be sure we recognize ourselves for what we are. Without freedom of enterprise we cannot be a nation of freedom of opportunity. It is as true as ever that whom the gods would destroy they first make mad.

Eat Crow, America

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. LEMKE. Mr. Speaker, we won World War I and lost the peace. We won World War II, and have bungled our victory so that we are again in danger of losing the peace, not only that but of promoting world war III.

Under leave to extend my remarks, I wish to include an article by Col. Charles L. Hall, a graduate from West Point in 1908, and who served in France on the general staff in World War I, and has received the Distinguished Service Medal with the Purple Heart with Oak Leaf Cluster. He remained on active duty until retired for disability in 1948. Here is Colonel Hall's article, which appeared in the Chicago Sunday Tribune on January 30, 1949:

EAT CROW, AMERICA

(By Charles L. Hall, colonel, U. S. Army, retired)

There is probably no subject upon which the American people are so confused as the organization of Europe. This confusion is shared by practically every thinking citizen. Our political leaders are no better off than the rest of us. If a military man were called on to face a problem of this complexity, he would start work on an estimate of the situation. If any realistic estimate of the present international situation has been prepared, the public has not heard of it. It might be helpful if such a document were presented.

All estimates are based on a general situation. Ours must be based on the present situation of the world. In order to use the estimate as a guide for future action, we must also make some assumptions. The most natural assumptions are that Washington and Moscow will remain the most important centers of power in the world; that the Washington center will continue to demand the preservation of western civilization over as large a part of the world as possible; and that the Moscow center seeks an entirely different form of civilization, bolshevist in political aspect and pro-Russian in feeling. These are the only assumptions made in this study.

ARMED TO DESTROY GERMANY

The official policy which governed military operations from January 1943 to VE-day provided for the unconditional surrender of Germany. The negotiations between the allies laid down a scheme for exploiting this unconditional surrender which provided for the destruction of Germany as a source of military and economic power, and for the reduction of the German people to a state of semislavery. While the so-called Morgenthau plan was never officially adopted—owing to some remants of common sense in the British Government—its general features were copied in the Potsdam decisions. The scheme was not carried out because the Allies were unable to agree on a method of implementation, but there is no evidence that failure to execute it was due to any one's discovery that it was intrinsically unsound.

Indeed the official attitude—by all the great powers—is that the Potsdam decision was wise, and that it failed not because of its lack of wisdom, but because one or the other of the Allies tried to stretch the agreement for his own selfish benefit. We will get nowhere unless we frankly recognize that the complete execution of the Potsdam decrees would have left us in just as bad a situation as we now are.

ALL RESOURCES FOR VICTORS

The Potsdam terms provided essentially that all the resources of Germany and of all Germans abroad should be employed entirely for the benefit of the victors for an indefinite period. In order to prevent the commercial strengthening of Germany which would have followed the exploitation of German resources in situ, the level of German industry was to be fixed at an amount which would provide just enough food to keep Germans alive.

Any excess production by this mass slave labor would obviously be required for the support of the overseers needed to manage it, and for their military protectors; since the allies were apparently to pay all the expenses of their armies not payable in German currency. Water transportation of German exports and imports was presumably to be handled in Allied ships.

BOUGHT FOOD WITH STEEL

Suppose this wonderful plan really had been carried out by the three (or four) Allied Governments involved. Since about 1880 German food has been purchased through the exportation of manufactured steel. Export steel was to be abolished. The actual needs in import food, even for semi-starved German paupers, were to be greater than before the war; because the north German farm lands were to be confiscated and Germans from outside the Reich were to be driven back to it. Hence manufactured consumer goods would have had to replace steel.

To gain sufficient markets to dispose of these consumed goods, the Germans would have had to provide, among other exports, practically all the textiles used in Europe and in the European colonies. Of course, those friendly consuming states which had previously manufactured textiles would have struck. Then the occupying powers would have had to take their choice between (1) operating a slave economy with insufficient food to maintain production or (2) importing extra food at their own expense.

THAT IS PRESENT CHOICE

This is exactly the choice we have at present. The bankruptcy is now worse because we are doing both, but the collapse of the Potsdam system would have occurred no matter how well the occupying powers might have agreed. It was really the policy which was crazy, not the failure to implement it.

The revised Anglo-American policy, now in effect, is a modification of the Potsdam policy. It provides for a slave economy for an indefinite period, but does not demand that any particular class of exports be absolutely prohibited. Admittedly the best this scheme can accomplish is enough exportation to provide a minimum subsistence level for the population. Nobody pretends that it could provide the occupying armies with any goods except a few locally procurable ones. All the clothing and equipment of the troops, all the imported food, all the pay and separation allowances they do not spend in Germany, and all the home overhead of the increased military establishment remain charges on the home state.

STILL FACE DEFICIT FOREVER

Of course, we are a long way from reaching even that point yet. But here we are adopting a policy which—if perfectly successful—will still leave us facing a deficit forever. Public opinion will sometimes stand a slave policy at a profit. No public opinion that ever existed in this world will approve the indefinite continuance of a slave policy at a loss.

The reason that the public has not revolted is simply because we are scared of the Russians. Our leaders have decided that the balance of power must be reestablished. Otherwise they think that the whole of continental Europe will become a Russian fief. Obviously they are right. The total force available in Europe for resisting bolshevism, with Germany a vacuum, is less than the Russian force which can be applied against western Europe. This is true whether the word "force" is used to include all the economic, military, psychological, and financial power available, or is restricted to armed forces. Either way Russia is greater than western Europe minus Germany.

Moreover Russia plus Germany is probably greater than western Europe plus the United States, allowing for the inevitable difficulties of applying our force overseas. We are not even certain that the United States plus western Europe is greater than Russia, with Germany a vacuum, unless our force is fully applied and western Europe is a firm ally. In other words we have to be prepared for war.

HINGES ON ECONOMIC BALANCE

Whether western Europe will be a firm ally depends, in the final analysis, on whether an economic balance can be established. The west European states which count are Great Britain, France, Italy, Belgium, and Holland. The last-named state has functioned as a middleman between the German economy and the Dutch East Indies. You obviously cannot make a living as a middleman between a vacuum and a revolution. Italy never did function very well, and certainly cannot if it is shut out from the Balkans by force and from Germany because that state has no excess exports.

Great Britain has depended on coal and its position across trade routes. It has no extra coal; and there is no trade on any trade routes it lies across, and cannot be as long as Germany is prostrate. France could, perhaps, get along if it were politically stable, but it isn't. Belgium is a food-deficit state surrounded by hungry peoples, but is better off than any of our other prospective allies. Our new balance of power against Russia requires our economic aid for an indefinite period, or else its supporting states will starve. We are creating an unstable equilibrium based on pauperism.

NOW COMES HOOVER POLICY

Some common sense on the subject has become evident in a new theory, which might be called the Hoover policy. This frankly recognizes that western Europe cannot function if Germany is an economic vacuum. The policy also recognizes that a slave economy can never produce a prosperous community. So the economic shackles are to be stricken off. Germany is to be turned loose, as soon as a reasonable supply of food is assured, to make and sell what it can. If it becomes reasonably prosperous, Great Britain and Holland will automatically get their share of that prosperity.

The trouble with this policy is that it totally overlooks the eventual attitude of the people affected. Mr. Hoover openly looks forward to an indefinite Allied military occupation. Slaves can be kept down by force; but a commercially prosperous people can make the position of an occupying army impossible. The occupying power is faced with three alternatives. If it demands full financial support for the occupying power, the taxes—partially in foreign currency—have such a bad effect on the budget that economic prosperity will vanish. If the army is reruced to the point that its financial load becomes unappreciable, the inhabitants can throw off the burden with sticks and stones; and the threat of such disorder will prevent necessary capital development anyway. If the occupying army is completely supported by its home state, so that it becomes a source of indirect income to the Germans, the taxpayers at home will revolt at a type of tourist expenditure which no nation ever stood for.

BREAK-DOWN HELD CERTAIN

In the long run the scheme will break down for purely military reasons. Russia will eventually recover from the internal effects of World War II. With supposedly balanced forces confronting each other, each side will want all the assistance it can obtain. Everybody will compete for the control of Germany, and the souls of the Germans will be one of the elements in German control. The best way to obtain German souls will be to take the people into partnership. In fact, if present tendencies continue, we are pretty sure to see some day two sets of German forces, with neither ally at all sure of the reliability of his own foreign legion.

Moreover, no coalition has ever been able to afford two enemies who could be separated. More accurately, perhaps, a coalition which indulges in that luxury is defeated. That is what happened to the Austro-German alliance in 1914, after 10 years of challenging the by no means indissolubly wedded British fleet and Russo-French armies at the same time. If we are going to establish a balance of power in western Europe which will be an asset (or a less conspicuous liability), we are crazy to rely on Greeks in preference to Germans.

MAIN OBSTACLE PSYCHOLOGICAL

The main obstacle to this revolutionary change in policy is psychological. The bipartisan group now in control of our foreign policy was the firmest supporter of unconditional surrender and the consequent reduction of Germany to the status of a power vacuum. There is no way of eliminating them from control except by the sort of political revolution which destroyed the Whig Party in 1856 and split the Democratic Party in 1860. But to reestablish German power, these leaders must eat a lot of crow. A German army worth having would need its surviving prewar leaders. German soldiers worth having must not be taught that they were villains in 1940. German industry worth having will need all its managerial skill, regardless of previous Nazi affiliations. For all practical purposes, the reestablishment of German strength large enough to assist in the new balance of power requires the spiritual destruction of the scaffolds of Nuremberg.

And this is not all the crow the politicians will have to eat. Because somebody is sure to point out that all we try to do under this plan of German control could have been accomplished had we made a compromise peace after the fall of Paris. The inescapable corollary is that the 50,000 dead of the last phase of the war died in vain, and that the 50,000 maimed were handicapped for life to no purpose.

BITTER DISH FOR POLITICIANS

Not only will the dish be boiled crow to the politicians—it will be particularly bitter boiled crow. Of course, the politicians can—and probably will—think of that procession of 50,000 bereaved mothers and 50,000 maimed youths, and postpone making any real decision. But the longer they put it off, the worse shape they will be in. Just now most of them can say they were unfortunate victims of war propaganda. But the men who waved the bloody shirt could not say that when they finally agreed to the withdrawal of Union troops from the South in 1877. In fact, they had contributed to the propaganda. As long as any of them were active, nobody in the South really trusted the Federal Government. Our country was fortunate enough to be able to get along for over a generation with a huge discontented segment. But the coalition against Russia will have a hard time whatever it does. It will not be able to write off a huge segment of available potential power on the untrue ground that it is not actually required.

Our electorate will never be able to replace the present bipartisan group by other persons equally desirous of international action but not required, for lack of political records to the contrary, to eat crow individually. No ordinary election can shake the group now in power, because practically all political leaders—on both sides—belong to it. They are in the fortunate position of the southern supporters in 1852. Neither party could then attack the bipartisan proslavery policy, because every one of importance had assented to it.

The only men who now have clear political records on the subjugation of Germany are the complete isolationists, and they cannot abandon isolation at this hour, and thus consent to international action. The isolationists correspond politically to the abolitionist wing of the coalition which formed the Republican Party in 1856, and were prevented by their records from any form of compromise on the eve of the Civil War.

We have three choices. We can pursue the present modified Morgenthau policy, or its ineffectual successor, the Hoover policy, and find it necessary to eat crow in the end anyhow—with the probable result that the progress of the isolationists will then permit a complete bipartisan political overturn. Anyhow, by then it will be too late to do any good anyway. Or we can eat crow right now and perhaps get away with it, before Russia has recovered from its wounds. Or we can revert to isolation, with a third world war postponed—perhaps—for a generation. There are no other choices.

Of course, the Nation is injured whatever we do. We gave a blank check to a genius, who indorsed it at Yalta just before he died; and now we have to meet the payments. Eat crow, America.

Butter Legislation

REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. TALLE. Mr. Speaker, agriculture is the backbone of our Nation's economy. The 2,500,000 dairy-farm families plus the 40,000 small dairy plants which furnish milk, other dairy products, and meat to the people of the United States comprise the dominant food-producing

group in American agriculture. And, taking into consideration the fact that normally more than one-fourth of all the milk produced by our dairy farmers is churned into butter, it is not an overstatement to say that butter is the balance wheel of the dairy industry.

It follows, therefore, Mr. Speaker, that any legislation that is harmful to our butter producers is harmful to our Nation's economy.

Mr. Speaker, under leave to extend my remarks, I include a recent statement issued by the Iowa Creameries Association with reference to several items of pending legislation in which dairymen are deeply interested:

EXPRESSIONS OF THE IOWA CREAMERIES ASSOCIATION

To Iowa Senators and Congressmen:

The Iowa Creameries Association is vitally concerned with a number of issues reportedly before Congress or reported soon to be introduced. We are herewith presenting our position on these issues and our reasons:

I. OLEOMARGARINE LEGISLATION

The Iowa Creameries Association as a member of the National Creameries Association supports the stand taken by the three dairy groups, namely, the National Creameries Association, the American Butter Institute, and the National Cooperative Milk Producers Association. This was the banning of the manufacturing and sale of margarine colored in the semblance of butter.

II. THE NEED OF A PARITY PRICE OF MANUFACTURING MILK AND ITS PRODUCTS

Iowa ranks fourth as a dairy State—Iowa's geographical location is rather distant from our large consuming centers. The total farm income for dairy products for 1947 in Iowa was $176,734,000. In addition the farmers received approximately $33,000,000 from dairy cattle sold for slaughter.

The 1947 creamery butter production was 209,145,000 pounds. Approximately 75 percent of the butter production was sold outside Iowa.

Most of the prices paid for Iowa's butter is based on either the New York or Chicago mercantile exchanges' prices even though the butter is delivered to other points.

Relative small volumes of butter traded on the exchanges sets the price for the vast amount of butter which bypasses the two exchanges. Also many other dairy products are based on butter prices.

Under marketing agreements and orders, fluid milk in some areas is established at prices out of line with other areas. When surplus milk occurs in these higher price areas, the butterfat from the surplus milk is made into butter.

The impact of this situation on the dairy industry of Iowa is this: A relative small increasing amount of butter offered on the exchanges reflects in a depressed market and lower prices. Consequently, the large butter-producing areas of the Midwest are handicapped by a prices-supporting system that works to the advantage of one area and disadvantage of another. Any Federal assistance to a marketing or price support based on a parity should give the same relative values to all areas.

III. TARIFF REDUCTIONS ON BUTTER IMPORTS

Tariff reductions on butter under the Reciprocal Trade Agreement Act will have a depressing influence on the Midwest butter industry. This is largely because any arrival of relatively small shipments creates lower prices on the mercantile exchanges.

Also butter imports should be required to meet the same high production and manufacturing standard as those required for domestic production. During 1948 Iowa creameries spent from three to five hundred thousand dollars for greater dairy quality improvements.

The Federal Food and Drug Administration demands rigid and exacting standards for all dairy products shipped interstate. Imported dairy products should be required to meet the same inspections and exacting standards.

IV. WAGE AND HOUR

Evidence appears that the Administrator of the Wage and Hour Division is to recommend a minimum wage of 70 cents per hour and the removal of overtime exemptions of workers engaged in the first processing of farm products.

The Iowa Creameries Association is strongly opposed to the removal of overtime exemptions for workers engaged in the first processing of agricultural products. Local creamery operations are far different than those of the assembly line. For example, unfavorable road conditions can delay the cream and milk haulers many hours. Oftentimes, creamery employees are required to work late at night to handle the late cream arrivals, for the cream must be cared for on arrival. Adjustments are made by the creamery management for these irregular hours. Under wage and hour liability, and with regulations that only few can decipher, the creameries will be at the mercy of inspectors if exemptions are lifted.

Under the existing regulations, there are changes that should be made. A number of our creameries have milk-drying units. If skim milk is dried, the operator is exempt for that is construed as first processing. If buttermilk is dried, the operators are not exempt and must be paid extra for overtime over 40 hours worked per week. Drying buttermilk is not construed as first processing.

The Iowa Creameries Association urges you to do all in your power to prevent the removal of overtime exemptions for agricultural workers and those engaged in the first processing of agricultural products. In fact, the interpretation of first processing should be more liberal and clarified.

Senate bill 546, introduced by Senator HENRY CABOT LODGE, proposing mandatory payments of not less than minimum wage for not less than 40 workweeks or not less than 30 hours per week by all concerns selling $10,000 of goods, materials, etc., to the Government would be a hardship to a number of Iowa creameries. It would mean that oftentimes a creamery would be unable to meet the annual employment requirement and thereby lose the opportunity of making a sale to the Government.

IOWA CREAMERIES ASSOCIATION,
JULIUS BRUNNER,
President, Osage, Iowa.
J. S. QUIST,
Executive Secretary, Ames, Iowa.

A Vested Interest in Freedom

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by me before the Women's Patriotic Conference on National Defense at the Hotel Statler on January 28, 1949:

Madam Chairman, I want to talk to you this morning on the subject of freedom. Your combined organizations are here for the purpose of considering our national defense. What does national defense relate to as you begin your sessions? What are you proposing to defend? I assume that your concept of defense relates to the kind of life we enjoy in this country. I therefore assume further that the specific thing you want to defend is the freedom which we have inherited from our forefathers and in which we have, or had, a vested right.

The lawyer, when considering vested rights, thinks in terms of something of value. It is an interest in something tangible—a valued right, if you please. I believe that we can all agree that we have been enjoying the blessings of liberty and freedom without giving serious thought as to the obligations we assumed as these rights have become manifest under a system of free government.

Some of us may differ as to what is meant by freedom. Jefferson expressed it by writing into the Declaration of Independence the philosophy of freedom as we understand it. You will recall he said:

"We hold these truths to be self-evident: That all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men * * *. We * * * solemnly publish and declare that these United Colonies are and of right ought to be free and independent States * * * and for the support of this Declaration, with a firm reliance on the protection of divine providence, we mutually pledge our lives, our fortunes, and our sacred honor."

Down through the years since that declaration was drafted we have grown from a few Colonial States to a great Nation, which is today the leader in world affairs—and I say that in all humility—but we have progressed under a system of free government. Yet the Declaration of Independence was merely a statement of principle, and at that time there was still to be written the Constitution. You will recall that even after the Constitution was written, there was an insistence upon an admendment to that document, and several years after, in 1791, 10 amendments to the Constitution were adopted. These amendments were incorporated and known as the Bill of Rights. Recently, the New York Daily Mirror featured an article on the Bill of Rights. It is not long and I want to read it to you because it is so pertinent to this matter of freedom and brings to us a clearer concept of the meaning of those amendments:

"I AM YOUR BILL OF RIGHTS

"I am the first 10 amendments to the Constitution. Until I was written in the Constitution that document was like a body without a soul.

"I am your Bill of Rights.

"Don't take me for granted. Like all mortal creations, I can be killed.

"The giant shadow of totalitarian-state slavery moves over the world. Wherever that shadow falls, I am obliterated. That shadow has fallen over the United States.

"Three men—Thomas Jefferson, James Madison, and George Mason—fathered me. As men brought me to life, I can be slain by men—and will be slain unless you and you and you traditionalist Yankee Doodle Americans organize to defend me.

"I am the Bill of Rights.

"I am freedom of religion, freedom of speech, freedom of the press, freedom of assembly. I am the privacy and sanctity of your home. I am your guaranty of trial by jury, as I am the policeman who guards your property rights.

"Cruel and unusual punishment and excessive fines and bail cannot be visited upon you so long as I am alive. I order that all rights not specifically mentioned in the Constitution shall be retained by you—the people. I am the rights of the States against engulfing centralized power.

"I am the Bill of Rights—your signed lease to spiritual, mental, and physical freedom.

I ask you to meditate on all my 10 clauses. Memorize them. Engrave them on your hearts.

"My existence depends on your vigilance—on how vigilantly you watch your rulers. And my eternal enemies, known as dictators, are abroad in the world and here in the United States.

"Personal unlimited power has destroyed the liberties of many peoples in ancient and modern times. It can happen to you, and maybe, subtly and unknowingly to you, it is happening.

"Put every law that is proposed in Washington and elsewhere into the crucible of my 10 commandments. Your question must always be: Not what does a law give me, but what does it take away from me?

"I am the Bill of Rights.

"When I am violated a part of you dies.

"I am 155 years old. Will I reach my two hundredth year? That depends on you and your children."

Where does freedom come from? Government? No. Freedom, as Jefferson said, is an inalienable right. It is not the creation of government. Freedom sets up government to be its servant and so defines its organization and limitations, that government may be the instrument of freedom in moving toward the accomplishment of its high aims. You may wonder why I have chosen this subject. I can tell you frankly that I am concerned about our ability to retain freedom as the motivating force in our society. There are many things that are apparent in Washington today which lead one to believe that we may be on the road to state socialism, and possibly totalitarianism.

"Liberty is the man at the lathe—the secretary in the office—the man in late afternoon at work in his garden and swapping stories with his neighbor over the fence.

"Liberty is the man with his family who drives along the country highway on a summer afternoon viewing the country and watching nature grow—it is the family at the beach or in the park with their lunch baskets.

"It is the young men and young women who are looking over plans for a new home and trying to visualize their own family in the years ahead. This is freedom and liberty which does not come from government, but is the inalienable right of all people. A right that comes from God."

Let us bring to bear the witnesses of great men in this matter of government and liberty.

GOVERNMENT AND LIBERTY

"The history of liberty is a history of the limitation of governmental power, not an increase of it. When we resist, therefore, the concentration of power we are resisting the process of death, because concentration of power is what always precedes the destruction of human liberties" (Woodrow Wilson).

"Every government degenerates when trusted to the rulers of the people alone. The people themselves are the only safe depositories" (Thomas Jefferson).

"Let not more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution" (Thomas Jefferson).

"Wherever there is an interest and power to do wrong, wrong will generally be done, and not less readily by a powerful and interested party than by a powerful and interested prince" (James Madison).

"The accumulation of all powers—legislative, executive, and judicial—in some hands may justly be pronounced the very definition of tyranny" (Federalist Papers).

"God grants liberty only to those who love it and are always ready to defend it" (Daniel Webster).

We fought two wars. We have spent untold treasure in property and sacrificed young lives in the interest of maintaining freedom. We know today that we did not win either war. You must be convinced, as I am, that the winning of wars does not bring peace. Never has mankind been so confused as it is today. You wonder as you sit in your homes, far from the seat of Government, about the problems that confront us. We in Washington are a bit closer to the machinery but we are as confused as you are.

I think it can be said without contradiction that there is less peace and less freedom in the world today than there was before we entered the war in 1941. The struggle is between two ideologies—one, in the freedom of a ruthless dictatorship; the other, maintaining the concept of liberty and freedom for the people. Yet while we profess to lead the world toward liberty and freedom, in the actual doing our record is not too good.

Let us observe ourselves and our sins of commission and omission, dispassionately and objectively. Soul searching is a healthy practice.

Three weeks after Pearl Harbor we gathered our allies against the Axis in Washington—and there is the first meeting of the United Nations—we wrote down and proclaimed the principles for which we were fighting World War II. This was our solemn pledge to our allies and to the people of the world, allied, neutral, and enemy alike. It was likewise our allies' pledge to us.

Among other statements, we pledged: Our countries seek no aggrandizement, territorial or other. Second, they desire to seek no territorial changes that do not accord with the freely expressed wishes of the people concerned. Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them. These, and more, were the solemn pledges of the big three, Russia, Britain, and the United States.

These were the solemn pledges of the Poles who fought in the underground and in the air over Britain; to the million Poles who streamed out of the forced-labor camps of the Soviet Union; to the Poles who fought in north Africa, at Cassino, and in France. These were the pledges for which 250,000 Poles died in the Warsaw uprising called for by the Soviet radio. A dirty double-cross.

These were the solemn pledges that induced the Chinese to struggle and die by the millions for another 3½ years after Pearl Harbor, refusing all Japanese offers for a favorable peace, and finally turning over to General Wedemeyer 1,500,000 prisoners of war—1,500,000 Japs our boys did not have to face in the Pacific. These were the solemn pledges to our Yugoslav and Czechoslovak allies, to our Estonian, Lithuanian, Latvian, and Greek allies.

These pledges were made specific in special agreements, pacts, and declarations from time to time. For example, at Cairo in December 1943 in a public document signed by Churchill, Roosevelt, and Chiang Kai-shek we proclaimed:

"All the territories Japan has stolen from the Chinese, such as Manchuria, Formosa, and Pescadores, shall be restored to the Republic of China."

Meantime, at the Tehran, Yalta, Potsdam, and Moscow conferences and elsewhere deals, some secret and some public, were made; sometimes in plain language and sometimes in weasel words. In these deals we gave Poland, Lithuania, Latvia, Estonia, Yugoslavia, Northern Korea, and Manchuria to the Soviets in violation of all pledges. In peace treaties we turned over Rumania, Hungary, and Bulgaria to the tender mercies of the Soviets. Most of Austria and eastern Germany were sold into the same slavery. In China we immobilized the armies of the Republic by truce after truce until the Russians could arm the farm boys conscripted by the Communist dictators to overthrow our loyal ally, our only friend in the Far East except for the Philippines.

We dishonored our pledges. We betrayed 235,000,000 of our friends and allies to whom we had pledged the right to choose the form of government under which they shall live. And we betrayed 90,000,000 of our enemies to whom we made the same pledges.

Where is the voice of America's conscience? Why is it stilled? Even if we do not value the respect of the freeman of the world, do we no longer value our own self respect?

If our voices are stilled, if we lack the courage to speak out against those practices which ultimately will destroy freedom—one of the reasons, perhaps not all, is the effort by Government propaganda to lull our people into a false sense of security. We have been, and are today, trusting souls; we have sought security in the fairy tale that government can do no wrong.

Do you know that in 1946 various Government agencies spent public funds for propaganda purposes the sum of $74,829,467?, and that a total of 42,000 Federal employees were engaged in propaganda work? For what purpose? (1) To discredit Congress, and (2) to influence legislation. Congress is the one department which still stands against despotism in government.

Here is a specific example of what a House committee discovered. A tremendous drive had been organized within government to stimulate pressure for socialized medicine. At least six agencies were using Government funds illegally for this purpose. This campaign was carried on through the medium of health workshops. These health workshops were financed with Federal funds and a program was planned and conducted by a key group on the Government pay roll, who used this device to generate public sentiment in favor of socialized medicine. Officials of the United States Public Health Service, Children's Bureau, Office of Education, Department of Agriculture, and Social Security Board were found to have been involved.

Now the merits of the socialized-medicine program are not involved in the point I am making. I say that this effort on the part of government to promote it raises directly a principle involved in freedom. If the Government can impose this program upon the medical profession, cannot it do so upon the lawyers, the teachers, and the ministers, the engineers—and, yes, every organized union man? The principle goes deep into our social and economic life; it is a direct challenge to liberty and freedom.

Many more instances of Federal propaganda could be cited. I shall not pursue the point, but here is what the House committee had to say, in part:

"The more than 2,000,000 employees on the Federal pay roll, strategically assigned throughout the 48 States and Territories, comprise a very effective field army for the urging of campaigns to influence popular opinion and to bring pressure upon Congress in specific issues. It is proper to assume that these vast numbers of employees are loyal to the national administration and to their employing agencies and that they are motivated by the same desire for increased power and appropriation which inspire the propaganda campaigns at the national level.

"In sheer weight of numbers alone, this vast Federal army effectively influences public thinking. Directly or indirectly it touches the daily life of every citizen. The average citizen also assumes his Federal Government to be objective, impartial, and fair in its information services. He ordinarily accepts as authoritative that information which comes from Government through official channels. Whereas the individual might reject propaganda coming to him from other sources, he is more likely to be receptive to it when it is offered in the guise of information which comes through official channels.

"Federal propaganda is cleverly designed for the greatest possible effectiveness. It appeals to the special interests of groups and

individuals by seeming to promote their special advantage. If instinctive fear of increasing power of Government intrudes to make the individual wary, he is soothed with the assurance that controls and restrictions will fall upon him lightly, if at all, and is encouraged to believe that other areas of our national life need a little more controlling, anyway. The Federal propaganda of the moment carefully avoids telling the group or the individual under pressure that vigorous campaigns are conducted in other areas which, if successful, will increase their tax burdens and throw added restrictions upon their liberties.

"Your committee intends no reflection upon the public intelligence. It does believe, however, that the American people are unaware of this new technique of influencing public opinion. American citizens have not learned how cleverly facts may be distorted and information may be colored to mislead them. They have not yet realized how their faith in Federal Government can be abused for the purpose of conditioning national thinking.

"Unless proper checks are devised and enforced, the inevitable result will be a further concentration of power in the Federal Government, higher taxes and less freedom for the individual."

Loyalty's Reward

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. HOLIFIELD. Mr. Speaker, a wave of hysteria against other nationals and against our own people whose ideas do not happen to conform identically with a majority public opinion view, has followed every major war.

We have been experiencing such a wave since VJ-day 1945. Character assassination, spy hunts, and disloyalty charges have been the order of the day.

Happily a wave of sanity is replacing the hate hysteria of the past 3 years and a calm is following the storm. This, in my opinion, will be beneficial to the Nation because it will clarify the real issues and give us judgment free from prejudice in pointing out real instead of fancied threats to our security. A thought-provoking editorial on this subject was printed in the Washington Post of February 6, 1949.

Under unanimous consent, I include this editorial printed with my remarks in the Appendix of the RECORD:

LOYALTY'S REWARD

Like a certain well-advertised soap, Government employees now have been found to be 99-plus percent pure, politically speaking. The FBI reports that of 2,387,253 persons checked for loyalty, 2,378,763 have been cleared. Full investigations have been ordered in only 7,996 cases, and it is a reasonable assumption that some of these persons have been absolved of disloyalty. Investigations are now on a current basis covering new employees. In view of this heart-warming testimonial to the allegiance of Federal workers, we suggest that the time has come to call off the dogs—to abolish the elaborate loyalty check procedure and return such screening as still may be desirable to the Civil Service Commission operating under redefined standards of procedure.

The very size of the percentage of employees to whom no suspicion has attached is in itself reason to ask what all the shooting has been about. For inevitably the mass loyalty investigations have brought with them an atmospehere of inquisition and near hysteria that has done profound damage to the morale and efficiency of the Federal service. This is the sort of atmosphere, aided and abetted by irresponsible charges from Capitol Hill, that has led to such abuses as the smearing of a highly trusted Commerce employee because his estranged daughter worked for a Russian news agency. The smears and hounding attending the loyalty program have had a stultifying effect on initiative; they have made Federal workers wary about saying anything that even a casual bystander might suspect. The whole tendency has been to make Government employment unattractive, to persons of independent mind and independent convictions.

This atmosphere has developed despite the sincere efforts of many officials connected with the loyalty program to be fair. No matter how scrupulous the investigations, the system has put a premium on tattle, spite talk, hearsay, and informerism. It has made the lives of thousands of Federal employees miserable. It has held above their heads a constantly suspended sword of Damocles. Charges often have been of the vaguest sort, and the burden of proof has been, not on the accusers, but on the accused. Indeed, congressional and public pressures have made it almost impossible for loyalty boards to exercise discretion in cases of reasonable doubt. Too often the line of questioning has revolved around conformity with prevailing mores in personal habits and personal opinion. Defendants and witnesses have been asked questions with little or no bearing on loyalty—for example, what the person charged thinks of the segregation of blood in blood banks, whether he has any sympathy for the underprivileged, whether he has intelligent and clever associates, what he thinks of conscription, or even of the loyalty program itself.

Some of the loyalty investigations have been grossly unjust on their face. For instance, an American civilian employee in Japan was charged with disloyalty because of a statement he made at a conference on agricultural products and ways of eliminating the black market. He advocated that in return for fertilizer being given to farmers they be required to turn in a certain portion of their produce to the Government for distribution. An Army officer retorted: "That sounds like Communist doctrine," and on that basis the employee was charged. A woman employee was accused of disloyalty because, at the time of siege of Stalingrad, she collected money for Russian war relief (she also collected money for British and French relief). In yet another case the basis for a charge of disloyalty was that an associate had heard that the defendant's mother-in-law was pro-Russian.

A charge of disloyalty is perhaps the only crime in the United States in which the defendant cannot confront his accusers. In cases ranging from treason to purse snatching, this is an elementary right under the American juridical system. Jurisdiction over loyalty, however, is outside the judiciary, and persons given a broad set of charges against which to defend themselves are told that it is impossible to bring their accusers to light because of the necessity of protecting the FBI's sources. The result of this process often is to punish a man, not for his acts but for what he conceivably might do. This process, moreover, has given rise to the nebulous and frightening term "security risk" under which persons are discharged or denied employment without reference to actual loyalty.

Even if one accepts the thesis that no one has a right to a Government job, it is impossible to condone practices that result in proscribing a person for both public and most private employment with either the implication or charge of disloyalty based on evidence that would not stand up in court. If some sort of screening for Federal jobs is to be continued under the Civil Service Commission, we think there ought to be a complete study of standards by some eminent and disinterested figure. Basic to any new set of standards in our opinion, should be a requirement that the evidence be of a nature acceptable in a court, for certainly the charges are just as serious as any made in court.

Furthermore, we believe there ought to be a complete redefinition of what constitutes sensitive jobs, for it is these that are the primary concern of loyalty investigations. It would be pertinent to know just how many of the two-million-odd cases investigated by the FBI were related to positions actually important to national security, for the cost of the loyalty program has been extravagant in terms of both money and morale. No American can afford to close his eyes to the subversive designs of the Communists. The question is whether these cannot be met by methods that do not generate division, suspicion, alarm, and confusion that themselves play directly into the hands of the Kremlin.

Our Economic Future

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. HILL. Mr. Speaker, under unanimous consent, I include as part of my remarks an editorial in the Denver Post of January 28, 1949, entitled "Will Depression Be the Truman Legacy?" and also a guest editorial on the subject entitled "Economic Suicide?"

Mr. Speaker, there are many indications on the horizon at the present moment that are quite disturbing regarding our economic future. This is no time to rock the boat. Pessimism has no place in our thinking when we face periods of recession. Mental attitudes have much to do with the spirit in which we tackle our difficult economic problems. These two editorials are worthy of careful reading and study. They picture in graphic terms some of the conditions which we should strive to avoid, and I am sure we can if we meet our problems with the proper approach.

The articles follow:

WILL DEPRESSION BE THE TRUMAN LEGACY?

President Truman, if he will look at certain dark omens on the economic horizon, can ask himself a disturbing question today. It is this: Will the Truman legacy, by which history will know him, be not the "fair deal" but "the depression of 1949"?

As Congress explores Mr. Truman's recommendations for $4,000,000,000 additional revenue, principally from corporate taxes, it cannot ignore the warning letters written large on the wall. The danger of an economic slow-down, which would be gravely heightened by unwise tax policies, is spelled out in a thoughtful and disturbing analysis of business trends in this month's Fortune magazine. The Fortune article is summarized in today's guest editorial.

Fortune, which maintains one of the ablest economic staffs in private business, cites

three disquieting signs: Rising unemployment, softening prices, and decline in the rate of investment. It is the third omen—the drop-off in investment—which is the most dangerous, for reasons which should be apparent to everyone, whether worker or entrepreneur, who understands the functioning of capital enterprise.

Fortune sees 1949 investment as "aimed at a point lower by $9,000,000,000 than where it stood in 1948." If this should occur "and the drop is not offset," the analysts warn, "there probably will be 4,000,000 or 5,000,000 unemployed by next July."

This is a warning for Americans—who as consumers would greet a general drop in the price level—to look at themselves also as producers. In our role as consumers, our continued enjoyment depends upon maintaining a high level of employment, and this, in turn, depends upon a dynamically expanding economy.

In short, our continuing prosperity rests upon capital investment. And it is this economic impulse, the heart of our business life, which is in jeopardy through the current Truman-CIO campaign against profits.

The Marxian Socialists are correct in their appreciation of our basic dependence upon expanding production and marketing. They argue, however, that we reach a point in this expansion where we can continue only through war and imperialism—either that, or depression. This we must deny.

Our economy can expand through invention, improvement, and promotion on the one hand, and through a rising standard of living brought about by increased returns to labor on the other hand.

But the key to this expansion—the nuclear energy of our economy, so to speak—is capital investment. As Mrs. Roosevelt, certainly no economic buccaneer, commented earlier this week:

"It is essential to a high level of employment that it be profitable for capital to be invested not just in safe enterprise but in new and untried enterprises * * *."

A tax policy which chokes the rewards of enterprise will destroy our prosperity. It is this fact, on which the warning letters are already written large, that should make Congress go slow in new taxation. Our present level of taxation should be left as it is, neither raised nor cut. To juggle the structure further holds promise of economic disaster.

ECONOMIC SUICIDE?—HEAVIER CORPORATION TAXES MAY BRING UNITED STATES DEPRESSION

The following guest editorial, from the editors of Fortune magazine, is a summary of an article on taxation in the current issue of the magazine.

"NEW YORK.—More than any other single thing, a rise in corporate tax rates now will make 1949 a depression year.

"If the present downward trend to investment continues and is not offset, it may mean an over-all drop in investment this year or nearly 25 percent below 1948 ($30,000,000,000 as compared to $39,000,000,000), and unemployment may reach four or five million by midsummer.

" 'Profit expectations for 1949 are lower than the actualities of 1948,' Fortune points out. 'If a tax increase reduces these expectations still further, the result is predictable by economic axiom: Less and less new investment, more and more unemployed.'

"Signs of a change in the business cycle have been mounting since September.

" 'Of these signs, the first and most painful is the rise in unemployment. The over-all figure—still under 2,000,000—is healthily small, but its trend is up for the first time since postwar reconversion began. Most significant, there has been a sharp shift toward part-time work.

" 'Second, and least painful, of these signs is the decline in prices. Rubber has dropped from 25 to 19 cents a pound since August. Fuel-oil prices have been cut twice. Gray markets have vanished in lead and copper and are disappearing in steel. The price of standing houses is being shaded. It took real price selling to put Christmas department-store sales over the 1947 top, and it will take more and more from now on.

" 'The third sign, and the most critical, is the rate of investment. Total investment in the United States last year was $39,000,000,000, a peacetime record, but the year-end rate was down. The key ingredients of investment are residential housing, which began dropping last summer; inventories, which have stopped rising, and business plant and equipment, which accounted for nearly half of last year's investment—$19,000,000,000, a record.

" 'This latter figure, according to estimates of the Investors Bankers Association, will be 10 percent smaller in 1949. Many large corporations started their postwar expansion programs in 1945 and have now finished them.

" 'All in all, 1949 investment in plant and equipment, in housing, in inventories, seems now aimed at a point lower by $9,000,000,000 than where it stood in 1948. If that happens, and the drop is not offset, there will probably be four or five million unemployed by next July.

" 'It may be that the downward trend is already too strong for the Government to stop. We have yet to see whether the use of countercyclical fiscal tools developed since the thirties can ever be timed just right.

" 'But tax policy is the most powerful of all fiscal tools. If we are serious about trying to master the business cycle, the least we can do is to refrain from using this tool in ways to make the cycle worse. A tax increase now will do just that.' "

Address by Hon. Spessard L. Holland, of Florida, to the Baltimore Real Estate Board

---

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. O'CONOR. Mr. President, on Saturday evening the distinguished Senator from Florida [Mr. HOLLAND] addressed the members of the Real Estate Board of Baltimore and their guests at the organization's thirty-third annual banquet.

The Baltimore Sunday Sun of February 6 carried a full account of the address, which was delivered in the distinguished Senator's usual forceful style.

I ask unanimous consent that the report of the address as contained in the Baltimore Sun be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOLLAND PRAISES LABOR-LAW AIMS—SENATOR TELLS REALTORS HE WILL FIGHT FOR ACT'S OBJECTIVES

Major objectives of the Taft-Hartley Act "should be retained, and I will fight for their continuance," Senator SPESSARD L. HOLLAND (Democrat, Florida) told more than 850 members of the Real Estate Board of Baltimore and their guests last night.

Speaking at the organization's thirty-third annual banquet at the Lord Baltimore Hotel, Senator HOLLAND said that "I supported enactment of the Taft-Hartley Act and I still feel that each of the major objects is important, yet I realize the act is not anything like perfect.

"When the act was drawn and became law we were deprived of the constructive suggestions from leaders of labor organizations which would have thrown light on many problems," he continued.

ASKS CONSTRUCTIVE SUGGESTIONS

"I hope for constructive suggestions from the people who know most of the unfair provisions in the bill, and if we get that help, we will be able to effect amendments without liquidating the act or cutting off the great good in it."

Of first importance in the act, Senator HOLLAND asserted, is the provision for an 80-day injunction in connection with the stopping of strikes in national basic industries.

"That 80-day period has been used seven times," he said, "and six times it has been sufficient to allow time for a solution. In only one case was the argument unsettled at the end of 80 days.

"That provision must remain. Without it the Nation would be left at the mercy of people who have shown their unwillingness to consider the interests of the people, even the interests of the working people themselves. My feeling is that people who work with their hands are the first hurt when there is a shutdown in a great national industry.

Another major provision that should be retained, according to Senator HOLLAND, is that which gives validity to State laws. Seventeen States have adopted anti-closed-shop laws, he added.

Also "provisions against jurisdictional strikes and secondary boycotts should be retained," he continued.

"Neither the Senate nor the House is trying to destroy labor or questions the value of labor's great contributions," he said.

"GOOD SCRAP" FORECAST

"We're going to see a good scrap over there. We are putting the interests of the general public first and asking people of all points of view to come in and help."

Discussing income taxation, Senator HOLLAND predicted that two important provisions of the 1948 bill would be retained regardless of whether additional taxes have to be required.

These were:

1. The provision for split income, in which married couples in 33 States, including Maryland, were given equality and parity of treatment with couples in the 13 States having the community principle, and

2. The provision in which a beginning was made in restoring personal exemptions and exemptions and credits for dependents which were cut during the war.

EIGHTY-ONE MILLION DOLLARS SAVING SEEN

"There is no indication that any person now thinks either of these values can be lost," he said.

Senator HOLLAND stated that the 1948 income-tax bill saved the people of Maryland $81,000,000, of which $15,000,000 was saved by the split-income provision.

Regarding the question of regional education, Senator HOLLAND said that "there is no question of race whatever" in the plan.

"It is the desire of the governors of 15 States to pledge their mutual resources to build better schools and establish additional school" for the benefit of both white and Negro youth."

CITES NEED OF DOCTORS

"We feel that the South badly needs better education in many fields," particularly medi-

cine, dentistry, and the veterinary field, according to the speaker. "There is a complete absence of training in many important fields, such as petroleum engineering and metallurgy."

He spoke also of deficiency in graduate training.

Senator HOLLAND declared that the South affords the Negro better educational opportunities than the rest of the Nation, and he cited Library of Congress figures that the South was far below other sections of the Nation in deaths caused by racial violence.

He said that "in all medical schools outside the South, only 86 students were registered and studying last year," while there were 1,100 Negro students in the two Negro schools in Washington and Nashville.

NEGRO'S OPPORTUNITY IN SOUTH

In the field of education, Senator HOLLAND said that in the South "7 out of every 1,000 Negroes are professional educators, whereas in the Negro population of the rest of the Nation, only 1 out of every 1,000 Negroes is a professional educator."

In the South, he continued, "there is no limit to the place to which they can rise. They can become college presidents. And there is no limit to their field of service, for we allow them to work in the field they want to serve. It is my observation that these young people want to devote their lives to serving their race."

David M. Nichols, president of the real estate board, presided. Howard W. Jackson, former mayor, served as toastmaster. Senator O'CONOR introduced the speaker; Mayor D'Alesandro also spoke.

OTHERS AT SPEAKER'S TABLES

Other guests at the speaker's tables included:

Congressmen Fallon, Bolton, and Garmatz; Maj. Gen. Milton A. Reckord, adjutant general of Maryland; C. Markland Kelly, president of the city council; Christian H. Kahl, president of the board of Baltimore County commissioners.

W. David Tilghman, vice president of the real estate board; Robert A. Bready, president of the Home Builders Association of Maryland; C. Philip Pitt, secretary of the real estate board; Thomas N. Biddison, city solicitor; Nathan L. Smith, director of public works, Baltimore County; Paul L. Holland, director of public works, and J. Neil McCardell, city comptroller.

TVA and the Government Power Program

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject TVA and the Government Power Program, recently delivered by me before the seventh annual meeting of the National Rural Electric Cooperative Association at the Hotel Commodore, New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TVA AND THE GOVERNMENT POWER PROGRAM

I have been asked to discuss the power policy of the Federal Government, and I am going to do so in terms of the expression of that policy in the TVA Act. I do so, first, because the TVA Act embraces practically all the major elements of public power policy; second, because I am familiar with TVA and what it has achieved; and, third, because the experience of the TVA as an expression of Federal power policy will be helpful to you as you consider the development of your own areas.

From the vigor and volume of the debates going on today, one might think that the formulation of a Federal power policy was just in its initial stages, something new under the sun. This is particularly true since much of the debate is embroidered with such catch phrases as "socialism," "American way of life," and "our system of free enterprise." Yet the fact is that the Congress and the people it represents have been concerned with the problem for a long time, and in the course of nearly half a century they have hammered out and put into effect some pretty clear principles. They have determined that the people of the country have the right to develop the power they own in public streams and dispose of that power through public and cooperative systems at low rates and in ways which will encourage abundant use. Like all public policies in a democracy, these principles have been debated and adopted step by step and incorporated in congressional acts, usually dealing with specific projects or programs. There are a considerable number of such acts, but the principles which they developed are, for the most part, incorporated in the TVA Act of 1933, as amended.

FEDERAL POWER LEGISLATION

Some of you may not realize how long ago the power policy of this country had its beginnings. It can be dated back 45 years ago, to the days of President Teddy Roosevelt. In 1903 he vetoed a congressional act which would have authorized the development by private interests of the power site at Muscle Shoals, Ala., on the Tennessee River. In his veto message, the President declared:

"The recent development of the application of water power to the production of electricity available for use at considerable distances has revealed an element of substantial value in streams which the Government is or is likely to be called upon to improve for the purposes of navigation, and this value, in my judgment, should be properly utilized to defray the cost of the improvement. Wherever the Government constructs a dam and lock for the purpose of navigation, there is a waterfall of great value."

Three years later, while Roosevelt was still President, the Reclamation Act of 1906, dealing with western irrigation projects, provided for the development of power to supply the power needed for irrigation purposes. But it also went further and provided that power could be developed when opportunity afforded, even though not necessarily related to irrigation uses.

That policy has been expanded from time to time during the intervening years. An act in 1912 dealing with navigation developments provided for power development. In 1913, there was the Raker Act, dealing with the use of national park land by the city of San Francisco for storing water for domestic purposes and for developing power. In 1918, the Government commenced the construction of Wilson Dam, at Muscle Shoals, in connection with the nitrate plants. A steam plant was also built. While these projects were commenced under the National Defense Act of 1916, their peacetime usefulness was recognized. The Federal Water Power Act of 1920 dealt with the licensing of projects on navigable waters. In 1928, the Boulder Canyon Act provided for the construction and operation of what is now Hoover Dam.

The past 15 years saw a number of acts dealing with power policy. There was the TVA Act in 1933. There was the REA Act in 1936, authorizing loans by the Federal Government for rural electrification. There was the Bonneville Act the next year, providing for the disposition of power from Bonneville Dam built for navigation purposes. In 1938 there was the Fort Peck Act, dealing with the construction and operation of Fort Peck Dam. The Flood Control Acts of 1938, 1944, and 1945 included expressions of power policy, and so did the Reclamation Act of 1939, dealing with irrigation projects.

Thus the Congress has expressed in many acts the power policy of the Federal Government. The acts are not uniform, of course; they have a diversity of provisions on power policy, as no doubt they should. In a country as large and varied as ours, it would be folly to insist upon rigid adherence to a formula. Many factors, differing from region to region, can dictate variations to fit particular circumstances. Yet they all hew generally to the principle that the power in public streams belongs to the public and should be developed for their benefit. Briefly, the major elements of power policy can be summarized as follows:

1. That Federal dams, where feasible, shall include facilities for generating electrical energy.

2. That preference in the sale of power shall be given to public agencies and cooperatives.

3. That power shall be disposed of in such a way as to give benefits to domestic and rural consumers.

4. That power shall be sold at the lowest possible rates consistent with paying all the power costs.

5. That power shall be disposed of in a way that will encourage widespread use and forestall monopoly by limited groups.

GENESIS OF TVA ACT

All of these principles, as I have said, appear in the TVA Act. And they were placed there advisedly. Rarely has an act of the Congress been debated so long, so bitterly, and in so much detail. Many of you will recall, I am sure, the beginning of that debate in the years immediately following World War I, when Wilson Dam was still in its early construction stages. It was dramatized by the offer of Henry Ford to take over the nitrate plants built by the Government at Muscle Shoals and lease Wilson Dam for a hundred years. There were many other proposals for disposition of the Government properties at Muscle Shoals. All during the 1920's, the debate continued in each session of the Congress.

On two occasions, the Congress passed bills by the late Senator George Norris, of Nebraska, providing for public operation of the Government's Muscle Shoals properties, but both were vetoed by the Presidents then in office. As the debate continued, the issues and the possibilities became clearer. They culminated in the passage of the TVA Act in 1933, wherein the Congress recognized the opportunities inherent in the orderly and unified development of an entire river system and the basin and territory adjoining it. It involved the provision of flood-control and navigation facilities, agricultural and industrial development, forest development and conservation, and other benefits which could flow from an orderly development by the Federal Government which could assist the people of a region in getting the most from their resources.

In the broad picture, power development had an important—in fact, indispensable—role. The TVA Act recognized that, as Gordon R. Clapp, chairman of the TVA Board, has aptly put it, "Electricity is not a mere commodity in the modern world; it is a force—a mobile, manageable source of energy to lift a load of labor from men and women."

He said further, "Abundant electricity at low rates can set in train a whole course of economic activity bringing benefits to country and town alike. The farmer, using electricity to make his farming operations more profitable, becomes a better customer for the goods and services available in the towns. At the same time, the increased demand for goods and services brings about increased business activity, for the expansion of trade and commerce."

Mr. Clapp concluded: "The opportunities for the application of electricity are almost limitless, if only we recognize and seize the opportunities to put it to work. Because of its fluidity, the ease with which it is widely dispersed, it opens the way to decentralization of industry."

The specifications underlying this broad use of electricity were spelled out in the TVA Act in terms of the major elements of Federal power policy. The act provided that, after the primary objectives of flood control and navigation improvement had been met, power should be produced and sold so far as consistent with such purposes. It directed TVA to give preference in the sale of power to States, counties, municipalities, and cooperative organizations of citizens and farmers. It said the projects shall be considered primarily for the benefit of the people of the section as a whole and particularly the domestic and rural consumers to whom power can economically be made available. It authorized sales to industry to secure a sufficiently high load factor and revenue returns which will permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity. The act provided that the power facilities, as distinguished from the navigation and flood control facilities, should be self-supporting and self-liquidating. It envisioned the cooperation of TVA with existing institutions in the region for the application of electric power to the fuller and better balanced development of the resources of the region.

This was a charter that recognized that abundant low-cost power, produced in connection with the over-all development of public streams, could be a vital force in the development of a whole region. Where the Congress had been groping for 30 years, the long and detailed debate of the twenties culminated in the crystallization of these policies in the TVA act. In the 15 years since that time, those policies have been tested and retested in the crucible of experience. And they have stood the test of time and the courts. The record in the Tennessee Valley is witness to the fact.

As the TVA dams were being constructed, many complaints were received that good farm land would be inundated and thereby rendered unproductive. However, statistics have proved that such inundated areas produce a yield of fish far greater in value than that of any crops that could have been grown in the same area before inundation. And I'd rather fish for my food than plow for it any day.

INCREASED USE OF POWER

The use of power has grown enormously under the policies directing low rates and widespread use. Power production in the valley today is 10 times the production in the same area in 1933. (Nearly 15,000,000,000 kilowatt-hours annually.) Today TVA sells power to 143 municipalities and cooperatives which serve more than 900,000 customers. Of the total consumers, nearly 800,000 are the residential and farm consumers whose interests were made paramount in the act. That is a tremendous increase over the 225,000 rural and domestic consumers in the region in 1933.

Average use per customer has risen from 600 to 2,600 kilowatt-hours annually, as compared with the national average of about 1,560 kilowatt-hours per customer.

Rural electrification also has made great strides. In 1933, only about 3 percent of the farms in the present TVA region had electric service. Today, nearly 60 percent of the farms have service, and it is expanding rapidly. The municipal and cooperative electric systems which have assumed responsibility for distribution of TVA power have been expanding service by 1 percent a month through the extension of lines into new rural areas. Although the region has long been behind the rest of the country in rural electrification, it is rapidly catching up.

In the light of this vast expansion in the production and use of power, the cries against "endangering the system of free enterprise," "socialism," and so on appear rather silly. For the fact is that the availability of abundant supplies of power has vastly widened the scope of private initiative and enterprise in the valley. The private business of farming has been helped to become more prosperous. Manufacturing, by which the people of the region convert their raw resources into higher value goods, has been spurred. The number of jobs has increased. Incomes have risen, the people of the region have more money to spend, and they provide a better market for the products of other regions as well as their own. In short, the greatest beneficiary of public power is private enterprise itself.

The widespread use of power has been encouraged through the TVA policy which established a uniform wholesale rate schedule which gives power to a municipality or a cooperative a hundred miles from a dam at the same rate as one located near a power plant. It is an area rate, sometimes referred to as a "postage stamp" rate, which spreads the benefits derived from power development in the river over a wider region. Widespread use has also been encouraged by the fact that the TVA Act provided for the construction and acquisition of transmission lines by which its power could be transmitted to the areas that wanted it. At the present time, TVA operates a transmission system of 6,700 miles carrying power from the generating plants to the substations which serve the municipalities and cooperatives. By such means, the power of the Tennessee River is being distributed (on a basis of equality, in both rates and service) over an area of 80,000 square miles.

That provision for the acquisition and construction of transmission lines is at the very heart of the problem of securing equitable distribution of power and a reasonable price for the power developed at the TVA projects. Lacking it, the only customers which TVA would have had would have been private utilities in a position to build transmission lines to the plants—and they would be able to dictate pretty much their own price for power.

Finally, there is the question of cost. As President "Teddy" Roosevelt foresaw 45 years ago, the cost of Federal developments on the streams of the Nation can be minimized by the use of the power that is generally developed from them. When a dam is built, power is developed—in his words, "there is a waterfall of great value." The only question which remains is, "Shall that power be harnessed and used?" And of course the fact is that the harnessing of power thus created makes many a Federal project feasible for construction where the other purposes of water control—navigation, flood control, irrigation—might not sustain it.

This is exemplified in the Tennessee Valley, where today the Federal Government is obtaining flood control and navigation benefits at far less cost than they could have been obtained by single purpose developments. For example, it is estimated that a navigation channel comparable to that now existing on the Tennessee would cost $225,000,000; in the multiple-purpose system of TVA, the cost was about $149,000,000. A comparable flood-control system would have cost $227,000,000; the multiple-purpose system provided it for an investment of $153,000,000. These costs compare very favorably with the costs of navigation and flood control projects provided by single-purpose projects on other streams.

With navigation and flood control being furnished at bargain rates, the power investment in the TVA multiple-purpose system (60 percent of the total investment in flood control, navigation, and power facilities) is proving a paying one.

I want to make it very clear at this point that TVA only generates and transmits power, selling it, under the terms of the TVA Act, to public and cooperative agencies, industries, and utilities, at wholesale rates. The revenues it receives from these rates exceed the requirement of the TVA Act that the power projects be self-supporting and self-liquidating. Over the entire period of TVA existence, including the period when power operations were hampered and hamstrung by power company litigation, power has provided sufficient revenue not only to cover the costs of operation, maintenance, and depreciation, but to earn a return on the average net investment amounting to 3¾ percent. Over the past 9 years, the return has averaged more than 4 percent. That is a clear and unmistakable reply to the charge sometimes heard that TVA power is subsidized.

As for the municipal and cooperative systems, they have been averaging 10 percent return on their net investment. These are the agencies which distribute the power to consumers at retail, under what is commonly meant by the term, TVA rates.

Although the power policies of the Government would appear to be well established, they are still subjected to a great deal of opposition. This stems chiefly from privately owned public-utility organizations which detest the demonstration that power can be put into the hands of people abundantly and at low cost and still on sound business principles. Of course, the kind of opposition has changed. Once the private utilities opposed the construction of power facilities at Government dams. Now they support such projects, but they insist that the power from them be sold to the private utilities at the bus bar, that is, at the power plant to be distributed by them over their systems and at their rates. Of course, they promise to pass along the savings made by purchase of Government power, but fail to mention that the savings which can be made in the generation of power are small compared to the cost the household or farm consumer usually has to pay for it.

For the demonstration in the Valley has shown that the real profit, the gravy of the electricity business, is in the distribution of power, rather than in generation. The financial statements of the TVA, kept separately, show that the TVA's operations are economically sound. They show also that the cost of generating power is relatively small and that the opportunity for savings to consumers in this area of operations is small

The books of the municipal and cooperative customers, which buy power at wholesale from TVA, show the costs of distributing power. And they reveal that it is possible to distribute power abundantly and at low rates and still cover all costs by a substantial margin. They depend upon a large volume

of sales to obtain their revenues, rather than limited sales at high rates. And in so doing, they demonstrate that the opportunities for savings to consumers through public projects lie not in generation of power but in the distribution of power under enlightened, low-rate policies which stimulate demand.

So it is easy to see why the private utilities seek to destroy or discredit TVA and other public power developments. In order to do this, and to get the power from Government dams cheaply for themselves to be resold at a large profit, they oppose the construction of transmission lines and of generating plants by REA. Today they are waging a bitter fight against the proposal of TVA to construct a large steam plant at New Johnsonville to help firm up its hydropower and produce energy to meet the power needs of the region. They oppose the construction of other steam plants which would firm up the hydropower of other Government projects and make it more useful and valuable.

NEW JOHNSONVILLE STEAM PLANT

The opposition to the New Johnsonville steam plant of the TVA is particularly bitter, and it is easy to see why. In the Tennessee Valley region, by the action of Congress in authorizing the purchase of private-utility systems and providing for issuance of bonds to finance such purchases, TVA has become the sole supplier of power for the area it now serves. It has entered into long-term contracts with municipal and cooperative systems in the valley to supply them with power, and these agencies have invested their own funds, borrowed from REA, and sold bonds to the public on faith that the TVA would be able to meet their power demands, which are growing rapidly. The precedent for using steam plants has already been well established by the acts of Congress. The TVA Act authorized the construction and operation of steam plants, and in 1933 TVA was given custody of a large steam plant at Muscle Shoals. In 1939, TVA purchased several steam plants from private utilities and has operated them ever since. In 1940, the Congress authorized the construction of the Watts Bar steam plant by the TVA. Although the immediate reason for this was the need for power for national defense, the peacetime value of the plant was recognized.

Now, in connection with the New Johnsonville project, the private utilities seek to have the Congress reverse its policy. They do so in the hope that, by making it impossible for TVA to meet the power needs of its service area, they can discredit TVA's operations and deal a crippling blow to public power projects everywhere.

As the St. Louis Post-Dispatch put it:

"What the power lobby objects to is a public operation that is likely to work well—as it knows TVA does—instead of one that might not work so well. Its intent, as the National Popular Government League succinctly says, is 'to impair the efficient operation of TVA.'"

The fight is bitter. If the private utilities succeed in their aim, they will have made a big step toward discrediting a demonstration of power economics which throws a revealing light on their demands for purchase at the dams of power from the Federal Government projects.

You compose the only national organization fighting for the Government's power and rural electrification programs. I am glad you have endorsed the proposed TVA steam plant at New Johnsonville. Your active support will enhance our chances of success.

I believe that the present attempt to hamstring public power will fail. As I have shown, the power policies of the Federal Government developed over a long period and with adequate consideration of all the issues. They are already well established. I am confident that the Congress won't change these.

Christianity and Communism

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Nation's Business for February 1949:

THE STATE OF THE NATION
(By Felix Morley)

Shortly before the outbreak of World War II a very notable book, entitled "The Idea of a Christian Society," was written by T. S. Eliot, the famous poet who was recently awarded the Nobel prize for literature.

Eliot is often referred to as anglo-American. Though born and educated in this country, he has for many years made his home in England, where certain intangible values mean more to him than our far greater material advantages.

Three centuries ago, Europeans were leaving the relative comfort of that continent to confront appalling physical hardship in what was then the raw New World. They sought—and found—spiritual freedom. Now we see a contrary phenomenon. Some Americans find the abundance on this side of the Atlantic unsatisfactory. Throughout Europe there is a shortage of commodities of every kind. There is a plethora of rationing and controls and governmental regimentation. But there is also something which is attractive to men in whom the spiritual quality is pronounced.

In the book to which reference is made, this poet suggests one reason for his personal, voluntary expatriation. "The idea of a Christian society," he says, "is one which we can accept or reject; but if we are to accept it, we must treat Christianity with a great deal more intellectual respect than is our wont; we must treat it as being for the individual a matter primarily of thought and not of feeling."

If one reflects on this assertion it comes uncomfortably to mind that, in the United States today, Christianity is not treated with intellectual respect. We simply do not give to religious matters the careful consideration which is lavished on the design and production of an automobile; the development of a new type of airplane, or the merchandising of goods. If we are honest with ourselves we will probably admit that very little thought goes into our spiritual inventories.

And yet the threat of spiritual bankruptcy is a far more serious danger than those commercial failures which we regard as a barometer to test the condition of our national health.

This is not to say that Americans have become, for the most part, an irreligious people. The churches are well filled; money is generally available to repair the old, or construct new, places of worship; the ministerial profession is respected.

But the spiritual substance behind this surface display is open to serious question. We know perfectly well that most of us put no real effort into our religious observances. If the openly atheistic minority is small, so also is the number of those who feel any deep concern. As a generality, the average American attitude toward religion may even be defined as slightly contemptuous. The real "he man" does not go in for that sort of thing.

For superficial success, and for the acquisition of negotiable property, the religious quality actually is not necessary. It may indeed be a handicap, as Jesus warned when he drew the sharp alternative between the service of God and that of Mammon. He never argued, however, that material prosperity would be denied to those who make its attainment their supreme objective in life. The lesson of the New Testament, in this connection, is merely that the greater the emphasis on ephemeral values, the less the chance of happiness.

This was well understood by the men who declared that life, liberty, and the pursuit of happiness are unalienable rights of mankind, and who established this Republic to make good their Declaration of Independence. The basic principles of the American form of government have heretofore made it relatively easy for hard-working men to make a living. But the founders did not believe that men would lose sight of fundamental principles in the effort.

Indeed great care was taken to insure that this disastrous blunder should not be made. In the famous farewell address, George Washington asserted that: "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism, who should labor to subvert these great pillars of human happiness." And then, with a warning more urgent today than when he voiced it: "Let us with caution indulge the supposition that morality can be maintained without religion."

Even though it was affirmed so strongly by George Washington, the thought that there is a direct connection between religion and "political prosperity" is now probably novel to most Americans. We are accustomed to thinking that a man's religion, or the lack of it, is a purely personal matter. How then can it also be political, meaning everybody's business?

It is curious that people who ask this question, in all sincerity, are also frequently those who argue that many lesser idiosyncrasies are properly matters of general political concern.

Any community will rise indignantly against a person who habitually pollutes its water supply. It is increasingly maintained that illiteracy must be eliminated, even though the individual resentment to compulsory schooling is a deeply personal matter. But there is not the same feeling about people who are unsanitary or illiterate in the spiritual field.

In fact we now have Government agencies like the Federal Communications Commission actually ruling that "freedom of belief necessarily carries with it freedom to disbelieve."

In spite of Washington's warning to the contrary, many of his countrymen have come to maintain that Government should encourage public health and public education, but should be wholly neutral, if not actually opposed, to the development of religious thought. The state today certainly indulges "the supposition that morality can be maintained without religion."

More and more we tend to act on the assumption that the individual should be physically and mentally, but not spiritually, trained. And since it is difficult to reconcile this argument with the teachings of Christ, it is also difficult to reconcile it with Christianity.

Here we have an illustration of what T. S. Eliot means when he tells us that, if we want to be a Christian people—and it is by no means certain that we do—the doctrines of Christianity must be treated "with a great deal more intellectual respect" than is customary. And here we have an explanation of why, at a recent meeting of that strange United Nations' offshoot called UNESCO, Eliot was denounced by the Soviet delegate as a "hyena," a "jackal," a purveyor of "disgusting filth," and other Communist endearments.

The Soviet Union makes no bones about being not merely anti-Christian, but also definitely anti-God. It is a wholly logical official policy, for communism cannot triumph unless the function of the human conscience is obliterated. Conscience, as the word itself tells us, is "knowing with." It is that intangible organ whereby we "know with" God. If conscience could be cut out, like the appendix, we may be sure that mass operations to this end would be ordered by Soviet boards of medicine. Since conscience evades the surgeon's knife, the next best prophylactic—in Communist eyes—is to eliminate God himself. Then that which "knows with" God also dies.

To most Americans this a repugnant, even a horrible, philosophy. But we are unsure as to how it can be met. We have the atom bomb; we have peacetime conscription; we have great factories and marvelous technical skills and many more dollars than Stalin can command. Still, communism marches on. If blocked in Europe, it runs like a consuming flood through Asia.

We are not winning the struggle against communism. And we shall probably continue to lose as long as we endeavor to oppose a diabolical force with purely material agencies. The tragedy here is not so much our faith in the material. The tragedy lies in our lack of faith in anything which is more than material.

It is only a half-belief which we oppose to the calculating conviction of the Kremlin. To believe in Christianity, or any other form of positive religion, a people must be willing to pay it the tribute of earnest intellectual respect.

Granite Industry Most Optimistic Trade in Vermont

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I include a statement appearing in the Barre Daily Times of Barre, Vt., of date January 17, 1949, which reads as follows:

GRANITE INDUSTRY MOST OPTIMISTIC TRADE IN VERMONT—FURNITURE, DRUGS, AND CHEMICAL TRADES REPORT HIGHER PAY ROLLS IN 1948—LUMBER OUTPUT EXPANDS, STATE REPORT DECLARES

Of 24 industries summarized in the biennial report of the department of industrial relations, all but two, the furniture and drugs and chemicals trades, reported higher pay rolls in 1948 than in 1947.

The granite industry report is the most optimistic of the brief summaries of business conditions.

"Business appears to be excellent for this industry and good labor-management relations exist at this time," the report states. "Many new employees have been added particularly apprentices, who are mostly veterans."

"The war caused almost complete suspension of operations in the slate industry. During the past 2 years some of the quarries opened up again, but, production still is on a smaller scale than before the war. Labor costs, small-scale operations, inefficient methods increasing the cost of the finished product, all retard expansion of this industry."

There is no comment on conditions in the woolen industry. Woolen company officials last fall admitted that the outlook was uncertain even though the mills were operating at full capacity.

MANY WORKERS OFF

Regarding the machine-tool industry, where several lay-offs occurred in late fall, the report states, "Plants in this classification were at maximum production strength during the war years. Since the end of the war, employee totals have decreased to a considerable degree."

During the past 2 years some woodworking plants have expanded and a few new small concerns have commenced operations.

"This past biennial period has been a period of expanded output by the lumber industry," according to the report. "Heavy demands for lumber caused good employment and some new small mills opened up."

There has been a general increase in the number of employees in retail and wholesale businesses, but at the close of the biennial period employment opportunities were not so plentiful, the report stated.

Figures given in the summary follow. The first figure is the number of units or concerns reporting; the second, total pay roll; the third, male employees; fourth, female employees; and fifth, value of output. The words "unit," "plant," "quarry," or "concern" apply to separate employers and one unit might cover several branches in different locations:

Granite, 1947: 110, $5,940,000, 2,195, 173, $12,164,000; 1948: 113, $6,290,000, 2,248, 170, $12,731,500.

Marble, 1947: 4, $1,790,625, 794, 77, $2,348,000; 1948: 4, $1,860,220, 819, 79, $2,460,360.

Slate, 1947: 8, $488,350, 281, 13, $1,724,375; 1948: 10, $501,408, 316, 15, $1,796,200.

OTHER STONE

Other stone: Talc, copper, lime, asbestos, and brick, 1947: 13, $1,335,610, 818, 48, $2,861,340; 1948: 14, $1,510,525, 831, 41, $3,186,350.

Woolen and cotton goods, 1947: 45, $10,981,720, 3,660, 3,417, $41,711,231; 1948: 47, $11,362,412, 3,746, 3,540, $42,110,625.

Knit goods, 1947: 5, $1,616,760, 460, 536, $6,510,760; 1948: 5, $1,740,000, 435, 520, $6,690,395.

Rubber, leather, canvas goods, and plastics, 1947—13, $3,184,680, 844, 910, $8,379,830; 1948, 14, $3,095,310, 820, 883, $8,463,264.

Machines and machine tools, 1947—46, $23,361,780, 7,425, 1,329, $63,790,500; 1948, 45, $24,176,842, 7,310, 1,286, $64,816,450.

Farm tools and equipment, 1947—9, $468,250, 251, 39, $1,509,610; 1948, 8, $482,814, 273, 42, $1,610,385.

Woodworking, 1947—96, $5,356,195, 3,116, 802, $15,897,364; 1948, 98, $5,510,300, 3,052, 841, $16,695,720.

Lumber, 1947—104, $2,317,496, 1,480, 61, $8,237,640; 1948, 109, $2,446,517, 1,503, 63, $8,310,556.

Furniture and furnishings, 1947—20, $2,186,930, 1,102, 291, $5,418,300; 1948, 20, $2,306,100, 1,165, 312, $5,392,807.

Household utensils, 1947—11, $1,267,480, 525, 160, $2,341,618; 1948, 11, $1,330,265, 549, 181, $2,616,513.

Paper and paper products, 1947—19, $3,585,618, 1,316, 790, $18,814,050; 1948, 19, $3,710,940, 1,282, 779, $19,201,565.

Chemicals and drugs, 1947—10, $1,082,648, 420, 225, $5,636,714; 1948, 9, $993,843, 389, 247, $5,158,330.

Miscellaneous manufacturing: Milling, dairy and poultry feeds, manufacturing concrete blocks, fertilizers, hides, canned corn, frozen foods, cereals, optical lenses, sanitary tampons, fish rods, packing meat and canning chicken, 1947—41, $3,516,370, 1,460, 472, $40,787,311; 1948, 39, $3,429,713, 1,388, 412, $39,826,125.

Printing and publishing, 1947—26, $1,518,870, 553, 268, $2,569,435; 1948, 25, $1,540,376, 540, 251, $2,446,100.

Dairy products, 1947—52, $2,265,693, 1,364, 220, $54,603,260; 1948, 54 $2,477,525, 1,402, 211, $55,164,300.

The following industries do not list the value of output. The figures refer to number of units, total pay roll, male employees and female employees, in that order.

Public utilities, manufacturing: Electric energy and gas plants, 1947—16, $1,910,648, 812, 202; 1948, 16, $2,096,470, 833, 199.

Public utilities, non-manufacturing: Railroads, trucking concerns, bus companies, 1947—27, $10,135,150, 4,186, 885; 1948, 28, $10,341,600, 4,064, 891.

Service: Hotels, garages, restaurants, laundries and dry cleanings establishments, 1947—208, $4,520,560, 1,643, 1,776; 1948, 214, $4,641,306, 1,708, 1,752.

Retail and wholesale: Stores and wholesale establishments, 1947—79, $5,680,500, 1,855, 2,210; 1948, 83, $5,876,225, 1,886, 2,303.

Miscellaneous nonmanufacturing: Contractor, bowling alleys, etc., 1947—32, $896,945, 481, 40; 1948, 33, $961,415, 507, 42.

Institutions: Hospitals and educational units, 1947—25,, $2,240,610, 588, 954; 1948, 26, $2,365,530, 597, 973.

Britain's Socialism and the ECA

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. POULSON. Mr. Speaker, last week at a breakfast meeting I had the opportunity to hear a Mr. Sheffington-Lodge, a member of the British Parliament. This gentleman was defending the Labor Government and telling about the rapid progress it was making, notwithstanding the adverse reports. He gave as an example the fact that he was quite a substantial stockholder in the British Transportation Co., and that the Labor Government, in taking over this company, had made a very substantial payment for the stock, much more than he would have realized out of it had it continued in private ownership. At this point in his talk one of our colleagues questioned him as to whether or not the money which he received was the money which the British Government had received from the United States under the Marshall plan, or ECA. He admitted it was.

So this is a concrete example of how we are financing socialism in the British Isles. This would not have been so significant to me had not I, upon returning to my office that very morning, received a letter from a friend of mine in New York, telling me how some of his friends, and in particular a small chemical manufacturer, were being run out of business by this ECA administration's latest move of shunning private enterprise in this country and setting up a governmental organization to bypass our private industry.

Under leave to extend my remarks in the RECORD, I include the following clipping taken from the Journal of Commerce which very clearly explains this situation:

FOREIGN TRADERS, BANKERS PROTEST NEW ECA MOVE TO SHUN PRIVATE CHANNELS—EXPORTERS EMPHATIC IN OPPOSING PLAN TO SET UP OWN CREDIT MACHINERY AT RESERVE BANK HERE—DETAILS NOW BEING AWAITED

ECA's latest move to bypass private business channels set off strong protests yester-

day from not only the commercial bankers—who are primarily affected—but from leading foreign-trade executives.

Foreign traders—whose opposition to the move caused surprise in some quarters—were more outspoken in their criticism of ECA than were the bankers, who, for the most part, preferred to await further clarification.

AIMED AT ECA ANNOUNCEMENT

The protests were aimed at the ECA announcement which outlined a system of government-to-government financing through the New York Federal Reserve Bank of ECA business whereby the commercial banks would be relegated to the sidelines in some of the transactions in which they now issued letters of credit and performed other services.

Bankers said that they had spent considerable money in legal and financial work to handle ECA shipments.

Foreign traders expressed a preference to continue to handle ECA business through known and established financial channels where they get services which they feel will not be available when financing is handled direct between governments. Furthermore, they felt that since this is the second step to cut out private business in ECA dealings they, themselves, might be the next casualty. (Last November ECA barred private grain exporters from sending grain to Europe.)

ECA MOVE CALLED LOGICAL

Spokesmen for both groups said that the ECA's latest move is perfectly logical, but only if one accepts the philosophy that ECA business should be conducted on a government-to-government basis to the exclusion of private enterprise in this country. They said, however, that they did not feel such was the intent of Congress, which had directed that private trade channels be used to the maximum practicable extent.

The big point in connection with congressional intent, however, it was pointed out, is not so much what the last Congress intended but rather how the whole matter is viewed by the present Congress. President Truman, it was emphasized, was directly responsible for the exclusion of private grain traders from the ECA picture and that after repeated assurances from Administrator Hoffman that the CCC's part in the grain picture would become smaller instead of larger.

Following are banking and foreign-trade viewpoints:

BANKERS' VIEWS

New York bankers, still unable to get any clarifying details on ECA's plan to establish credits at the Federal Reserve bank in the name of recipient European countries, voiced concern yesterday over the implication that the move would divert foreign trade from private to governmental channels.

Opposition to the move ranged from cautious criticism to forthright indignation. Some held it would be well to wait for actions to demonstrate how far ECA wished to go in financing transactions by means of direct drafts on the Federal Reserve. Others were openly critical of the move as backsliding from the intent of Congress in authorizing that European aid be handled through private trade channels as far as possible.

Small part financed

Bankers pointed out that they have financed only a small proportion of total ECA commitments, the rest being direct government-to-government deals. Now this is further whittled down.

It was noted that the banks had made a considerable investment in legal and financial work in order to handle ECA shipments that they had worked over many months with ECA in order to streamline the necessarily complex documentation and procedure, and that they had thought the procedure was now operating successfully.

A day of busy inquiring both here and in Washington produced little clarification. It is recognized that one of the chief questions will be the size of the transactions to be paid for by the drafts of the Reserve bank.

One report suggested that in deals involving more than $500,000 the normal letter of commitment and letter of credit will continue to be used, and that drafts would not be used in offshore purchases.

Another report had it that the ECA will issue a more complete explanation of the plan today, detailing when the American exporter is to receive the draft, who is to provide documents and who is to review and approve them.

It became clear that the Federal Reserve bank is not going to examine documentation, but merely act as paying agent for the foreign and American governments. This problem is considered to be a major one. At present large New York City banks maintain sizable staffs specially trained to examine the numerous authorizations, confirmations, bills of lading, insurance policies, and so on.

Underlying fear

According to the meager details made public in Washington, it would appear that the drafts will be issued and paid before the documentation is examined, presumably by ECA, which has heretofore had little experience with this paper work.

The underlying fear of some bankers is not the immediate loss of business that may follow use of the new draft machinery, but the ultimate effects of diverting their customers to direct dealing with Government agencies.

EXPORTERS' VIEWS

Few advantages and many disadvantages were seen here yesterday by foreign traders in the Economic Cooperation Administration's plan to use the Federal Reserve Bank of New York as a fiscal agent for a large part of the shipments under the foreign-aid program, thereby bypassing commercial banks.

Representative traders not only expressed the opinion that few exporters would avail themselves of the new ECA payments plan but also questioned its necessity and criticized the thinking which they said probably lies behind the proposal.

Favor letters of credit

Under the present set-up in which ECA issues letters of commitments to private commercial banks who in turn issue letters of credit to cover individual transactions, exporters said they know where they stand. They have an instrument with which they are familiar and most appeared to prefer the confirmation of a New York bank to a foreign government's draft on the Federal Reserve bank, although others could see no difference between the two as offering security to the suppliers.

On the other hand, exporters said that they would lose the advantages of dealing through commercial banks with whom they have regular contracts, and who are in a position to give them such confidential information and perform services of great but intangible value.

Generally, exporters interpreted the Washington announcement as implying that they could continue to ask for letters of credit if they so desired and the opinion was that most shippers here would continue to do so. Others felt that they would have no choice but to accept the drafts.

The savings which the plan might offer to foreign governments was held to be so small as to be negligible. Few of the ECA-recipient countries, it was said, are so short of dollar exchange that they cannot afford to finance temporarily their orders under the ECA program while bank charges for letters of credit were also said to be an insignificant item.

Some exporters also questioned whether the Federal Reserve bank is set up to handle the drafts which, under the ECA plan, foreign governments would draw from special accounts at the bank.

Fear bypassing of traders

The chief condemnation of the plan was however based on fears on the part of foreign traders that this latest move by ECA is another step to bypass normal commercial practices which, if continued, might eventually hit private foreign traders in an even tenderer spot.

Some argued that if the role of private banks might be partially eliminated, there was no reason why ECA could not also seek to eliminate foreign freight forwarders, merchant exporters, and other interests who are established in the traditional pattern of foreign trade and are now largely dependent on ECA business for their survival.

They pointed out that ECA had originally pledged itself to use normal trade channels to the greatest extent possible. The present plan is seen as a move directly contrary to this philosophy.

Volume inconsiderable

To the argument that the new plan by making it no longer necessary for foreign governments to provide temporary financing for their ECA purchases would make it easier for them to finance non-ECA purchases, exporters answered that the present volume of such shipments is too inconsiderable to warrant any such drastic alteration of accepted trade practices as is contemplated in the new proposal.

Some traders asserted that the plan had been drafted to meet criticisms of banks outside of the larger cities who are obtaining no share of the ECA letter-of-credit business, 90 percent of which is going to the large New York banks who naturally are better known abroad.

Socialized Medicine in Britain

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond (Ind.) Palladium-Item:

NEVER SOMETHING FOR NOTHING

Further evidence of the trouble Great Britain is having with its program of socialized medicine comes from the British Journal of Medicine.

It carries an appeal to ailing Britishers to leave England's hospitals sooner. Apparently the patients are staying longer than necessary. As a result Britain's hospitals are badly overcrowded.

Britain's difficulties and the warnings of our own medical authorities should be enough to block the Truman administration's socialistic plan for national health insurance.

Dr. A. P. Hauss, of New Albany, president of the Indiana State Medical Association, blasts the Government's proposal as posing the biggest threat of socialization ever to face the country.

Citizens are being fooled, he said, into believing they will be getting something for nothing. The truth, he added, is that such a program will take another chunk out of all incomes in taxes.

An estimate of Dr. Joseph F. Lawrence, of the American Medical Association, is that

a combination of national health insurance and social security, as proposed, would cost workers 10 percent of their pay checks.

Our taxpayers should know by now that nothing they get from the Government ever is free. Sooner of later they themselves foot the bill. And this will be true of national health insurance.

The Government has no business in this field. Britain's muddling around should be evidence enough.

Religious Faith of Our Presidents

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio message by Evangelist Dale Crowley:

THE FAITH OF OUR AMERICAN PRESIDENTS

"He that ruleth over man must be just, ruling in the fear of God" (2 Samuel 23: 3).

Most of our American Presidents have been men of great faith in God, and have believed in the divine authority of the Bible. Chosen by the people to represent them in the administration of government, our Presidents have been aware of our Christian heritage as a Nation, and have also proved themselves aware of the great trusteeship committed to them. Most of them have been loyal to this sacred trust, accepting it as a stewardship from God.

Many of our Presidents have not only issued eloquent tributes concerning the book of books, but have read it, and studied it for themselves, and have sought to walk in the light of its precepts.

Fervently religious long before he became our first President, Gen. George Washington prayed his way through all the obstacles, trusting in the God of America for victory, and was free to acknowledge God's guidance and blessings when finally the cause of freedom had been won. Being one of the true architects of American political foundations, President Washington said, "It is impossible to rightly govern the world without God and the Bible," for, said he, "True religion affords government its surest support."

So ardent in his devotion to Christ was our second President, Mr. John Adams, that he believed it to be the God-ordained mission of our Nation to give the Christian message to the world. Said he, "The destiny of America is to carry the gospel of Jesus Christ to all men, everywhere."

That conviction was echoed more than a century later when President Woodrow Wilson said, "America was born a Christian nation for the purpose of exemplifying to the nations of the world the principles of righteousness found in the word of God."

Early in our American history, when the very life of our Nation was in jeopardy through the vigorous assaults of the British on July 9, 1812, President James Madison recognized the fact that only God could save the cause of the Republic, and therefore issued a national proclamation, calling on the people to repent of their sins, acknowledge their transgressions, and seek God's merciful forgiveness. This was done, and the war was soon won.

President Thomas Jefferson was an earnest student of the Scriptures. During his residence in the White House, he caused portions of the Bible to be translated in three different languages. Concerning the study of the Bible, President Jefferson stated: "I have always said that the studious perusal of the Sacred Volume will make better citizens, better fathers, and better husbands.

Similarly, President Andrew Jackson paid high tribute to the word of God in these words: "The Bible is the rock on which our Republic rests."

President John Quincy Adams followed the Bible as his family guide book. Said he, "So great is my veneration of the Bible that * * * the earlier my children begin to read it, the more confident will be my hopes that they will prove useful citizens of their country, and respectable members of society."

Various utterances of praise for the Bible came from the lips of President Abraham Lincoln. On one occasion he said, "All the good from the Saviour of the world is communicated through this book * * * all the things desirable to man are contained in it."

Earnest words of counsel to his Nation were issued from the lips of President Ulysses S. Grant. He warned, "Hold fast to the Bible as the sheet-rock of our liberties. Write its precepts on your heart and practice them in your lives."

President William McKinley, in describing the relation between Bible study and citizenship, said, "The more profoundly we study this wonderful book, the better citizens will we become, and the higher will be our destiny as a nation."

Eloquent was the challenge issued by President Woodrow Wilson, to prove the inspiration of the Bible by studying it. Great scholar that he was, he said: "You will know the Bible is the word of God when you read it: For in it you will find the key to your own heart, your own happiness, and your success. I beg of you that you read it, and find this out for yourselves."

President Warren G. Harding's faith in the Bible was put in these positive words. He said, "I have always believed in the inspiration of the Holy Scriptures, whereby they have become the expression to man of the word and will of God."

Recognizing the need of God's presence and power in the life of our Nation, President Calvin Coolidge issued this penetrating statement: We do not need more material development; we need more spiritual development. We do not need more physical power, we need more moral power. We do not need more brains; we need more character. We do not need more of the things which are seen; we need more of the things which are not seen."

A significant utterance respecting the power of God's word in our national life was made by President Herbert Hoover. Said Mr. Hoover: "We are indebted to the book of books for our national ideals and institutions. Their preservation rests in adhering to its principles."

President Franklin D. Roosevelt, on the flyleaf of 10,000,000 Gideon Testaments, commended the reading of the Bible to all members of the Nation's armed forces.

President Harry S. Truman, in a White House conference, in the presence of your speaker, exclaimed, "The Bible is the moral code of our Nation and of civilization." And to this group of visitors he proudly displayed a cherished possession—his lamented mother's tear-stained Bible.

Today at Mount Vernon, Va., there stands the famous tomb of the Father of Our Country, on which is inscribed a verse from Holy Writ which speaks so eloquently, not alone of the faith of our first President, but also of the faith of our American Presidents in the saviour of the world, for that inscription is the victorious declaration of our Lord Jesus Christ, in these words, "I am the resurrection, and the life; he that believeth on me, though he were dead, yet shall he live."

Liberalism—There Can Be Such a Thing as American Communism

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable William Curran, former attorney general of Maryland, before the Baltimore chapter of the International Association of Torch Clubs, February 3, 1949, entitled "Liberalism—There Can Be Such a Thing as American Communism":

LIBERALISM—THERE CAN BE SUCH A THING AS AMERICAN COMMUNISM

Liberalism is a tricky word, but an attractive one—made attractive through its association with many noble causes. Occasionally it has been in bad favor, when associated with extremists. In the early years of our history, because of what was happening in France, many Americans cherished neither the name of liberals nor the name of democrats.

On the whole, however, throughout our history, "liberal" has been a good name. People like to be called liberals. Just as a good name helps an individual, so a good name for a party or cause is an advantage. It adds strength. Consequently, there is rivalry over the right to appropriate any particular good name.

We see the opposite in the readiness to tag a bad name to an opposition party or program. Communist is not a good name in current American politics. Opponents of a group or program feel that they weaken it by tagging it as communistic, in the same fashion that a newspaper tags a man a politician.

Instead of quibbling over who is entitled to call himself a liberal, it might serve to see who in the past were liberals and what they stood for. Do the assertive liberals of today agree with those of the past? If they differ, then in what respects?

In the early days of the Republic, Jefferson was a liberal. Washington, too, was a liberal, but not in the sense in which Jefferson was one. Today, Jefferson might not qualify as a liberal. Washington certainly would not. When we think back to our Revolution, the Declaration of Independence, the Constitution, it is important to keep in mind that our revolution was not a revolution. In the main it was but a change of sovereignty, with some added limitations on the power of the new sovereign over the people.

Before our revolution, we had been colonies of England. After it, we became an independent sovereignty. Except that we disposed with an hereditary king, and restricted the power of the government over the citizen, our laws and customs remained much as they had been. Moreover, laws and customs developed in England and America roughly along parallel lines.

Political equality, freedom of speech, the habeas corpus writ, trial by jury, limitation of Government power, the rights of the States and their citizens as opposed to the rights of the National Government, were to the time of the Civil War the issues that concerned the early liberals.

To them the best government was the one that governed least. Laissez faire—leave things uncontrolled and unregulated—was their ideal for industry, trade and commerce. Down to the late 1800's, the liberal called for a minimum of government. Let Government

devote its talents and energies to maintaining peace and quiet among the citizens. Leave the people to themselves to work out their problems. Mistakes, they would make, but they would find a cure for them and be bettered by the experience. In any event, the citizens left to their own devices, can do a better job for themselves than can be done for them through laws and Government officials. These were the beliefs of the early liberals.

In those days there were those who viewed with alarm, honest alarm, the fate of the country. The wisdom of placing Government in the control of the average citizen and leaving the citizen pretty well freed of Government control was not accepted by all as self-evident. Many felt that the experiment could not work; that it would wind up in the chaos and the bloody dictatorship that had come to France in the wake of its liberalism.

Well, the American experiment did work. Time proved its soundness. Popular government did achieve a workable success. The liberals of England and America had proven their case. Political equality and laissez faire were doing a good job. That was the story of our first hundred years.

The second century of American history opened with a different kind of economy than had obtained in the first century. As the years go on, our original economy is becoming even more and more different. An agrarian nation of small unmechanized farms and with relatively few commercial and industrial enterprises has become a highly industrialized Nation. Employed management has taken the place of ownership management. In the place of many competing individualized farms, mines, factories, consolidation of many into one has become the order of our day.

As industrialization waxed strong the gospel of the old liberals began to give way in the face of the manifest injustices becoming more and more the lot of the average man. The citizen was politically free, but he was seen as fast becoming an economic slave. Boom and bust, child-labor, factory disease, undernourishment, the work-day of 12 or more hours, the poorhouse for the crippled and aged, strong-armed repression of labor unions—these characterized a considerable part of our enlarging industrialism.

The people were politically free. Naturally enough, there arose widespread popular demands for relief. What kind of relief? Who could provide the relief? The conviction grew that only the Government was powerful enough to go to the mat with big business and provide the relief. Those who led the fight called themselves liberals and progressives.

Thus began a schism in the liberal doctrine. Individualism may work in the political field, said the then new liberals, but individualism cannot be left unchecked in the economic field. Up to the time of the First World War, among those later-day liberals were Bryan, the first Roosevelt, Wilson. They tackled the problem of concentrated wealth and economic inequality by attacking the abuses that had grown into or out of our economic system. They accepted the private enterprise system as sound, but wanted it to be policed and regulated where it was abusing its power.

Factory-inspection laws, sweatshop laws, child-labor laws, workmen's compensation laws, unreasonable combinations in restraint of trade, Government control of bank credit, were the issues that concerned the liberals of those days.

For centuries back, an interference with free competition was thought to be an evil thing. So if we look at what these predepression liberals were striving for, we find that they were striking at what were the immoralities, the cruelties in our economic system. Competition had to be free in fact is what they argued; health of the citizen was a concern of the Government. So we see that these liberals were conducting a sort of moral crusade against evil doers. The economic system itself was not seriously questioned; only its abuses were to be eradicated. The earlier liberalism, that of Jefferson and the nineteenth century English liberals, was left fairly well intact. Still the citizen and not the Government was to remain the controlling factor. Again, as in the earlier generation there were those who viewed with alarm the radicalism of Bryan, Roosevelt, and Wilson.

Now we come down to our day. What is present day liberalism? As I have pointed out, the word has an appeal to American ears. Advocates of international communism for instance, prefer being called liberals to being called Communists. That's understandable enough. The word "liberal" doesn't conjure up the tyrannies and blood purges of Soviet Russia. These liberals of international connections, I pass over—they may be citizens, but they are not Americans.

I want to confine myself to the present-day, sincerely American liberals. This American group is a very numerous group. They claim, of course, a superior right to call themselves liberals. For the most part, they are well intentioned and sincere in their political judgments. Their doctrine may be sound, but its basic philosophy is completely at variance with liberalism as we have hitherto known it. The new liberal asserts that the Government owes every citizen security from the cradle to the grave—that all citizens must not only be politically free and equal but also economically equal or entitled to be helped by the Government to approximate economic equality. That's the philosophy of those who today insist on calling themselves liberals. It's a new kind of liberalism. It's contrary to the accepted liberalism of former years.

What the new doctrine is called or named is not the important consideration. What should concern us is whether in our everyday world the doctrine of the new liberals is true or false, wise or unwise. And, is it workable, if the citizen is to remain politically free?

The argument of the new liberals is that individual enterprise, if left uncontrolled and uninfluenced must by its nature result in great wealth for the few and poverty for the many. The Government must therefore step into the picture to keep the economic world in balance for the good of the many. The Government must do the job if social justice is to be realized. The task is beyond the power of the church or of men of good will.

Humanitarianism must be legislated into the operation of our capitalistic system. Government not only may, but must interfere with the free play of economic forces by subsidizing the weak and weighing down the strong. The race for economic gain must be a handicap race. The old liberals did not want the Government to interfere except to secure equal opportunity to all with special privileges to none. They were content to let the race go to the swift.

To the old liberals, all men are born free and equal, and therefore a struggle or race for economic position would logically tend to be fair and equal. Yet, they had to admit that the facts did not turn out exactly as logic had indicated. In many respects, the economic struggle had not been a fair race.

The answer may be that though all men are created free and equal, they will progress in proportion to their respective efforts. It may be that the Creator decreed that for men to improve their breed and advance humankind it is best for them to compete and struggle one with another with the prize going to him who wins or earns it.

The new liberal does not question the dictum that all men are born free and equal. He accepts it, but insists that the Government be humanitarian. He concerns himself little with costs and ancient principles. The ideas of the new liberals are taking hold today in America. In the last campaign, both President Truman and Mr. Dewey accepted in very large measure the ideas of the new liberalism.

The stated objectives of the new teaching are certainly in accord with the basic principles of our Christian heritage. The new idea is that the State must make the Christian conception of man's duty to man, a matter of law. The old law had it that a corporation has no soul. Say the new liberals—let the law create a soul for the corporation and for all others in business; compel them to do what they otherwise would freely do, if they did have souls.

This, for us is a new conception of government. I like to believe that no enlightened person would want to find fault with the objectives—a civilized life for every citizen, economic security from want and care for all.

The first question is: Can the abundant life be had for all? Unquestionably, technocracy has given greatly increased volumes of needed material things. Science, through the machine is showing the way, with a lessening of human labor greatly to increase the volume of commodities. With all the criticisms that were leveled against the doctrines of the old liberals, the fact still remains that the standard of living for the masses of our people was relatively high and was on the rise.

President Truman, in his inaugural address, spoke of the American people having reached a position of preeminence among the people of the world in the development of industrial techniques. The old liberal will agree with the President, but he will remind him that it was liberalism as heretofore practiced that brought us to our happy state.

The question for us is, Will accepting the new principles result in reaching the goal of a more abundant life more speedily and with more certainty than adherence to the old principles?

What concrete Government action do the new liberals propose? Broadly, on questions concerning economic values and prices, the judgments of Government boards, responding to the demands of social justice, must prevail in the place and stead of the impersonal judgments of a free market operating under the law of supply and demand. In the field of taxation, a new liberal is not shocked at a proposal to tax away from him who has to give to him who has not; if there be a need for a tax, impose the tax though it destroy the profit motive; the discouragement of thrift and work may result, but this ought not to stand in the way of a tax or a subsidy that is otherwise thought needed.

The next question is, Can private enterprise survive under these new principles? It seems obvious enough to me that capitalism must die if denied the profit motive. That's in the nature of the beast. When Government policy hamstrings private enterprise and stagnation sets in, of necessity, the Government, particularly when following the heart rather than the head, must step in to fill the void. The goods needed for the abundant life must be produced, if not by private enterprise, then by the Government. The Government will be impelled to embark on a progressive control, regulation, and ownership of what was formerly private business. Once on foot, the process will feed on itself, for it lacks any self-arresting apparatus. With each step in the progression the Government becomes more expansive and more inclusive; fewer and fewer citizens remain free of Government influence and domination. None remains to stay the encroachments of Government.

The modern liberal, whether of the right or left, seems to see the problem of providing an abundant life for all as one of distribution.

Production in the needed volume is apparently taken for granted. If private enterprise fails to produce in necessary volume because venturesome capital is taxed to death or to flight, they will urge that the Government take over in place of private enterprise. Goverment to have the needed goods to distribute will be forced into the production field.

That's a march toward communism, though it be conducted peacefully and under the name of liberalism. Communism can come to signify many things, but as an economic theory it means nothing more than State-controlled production and distribution for the use of the people, and not for profit. People may easily be misled in their approach into communism by assuming that because there is no force, no violence, no denial of personal freedom nothing drastic is happening. What is overlooked is that it is only when the economic theory on which communism is based begins to break down that force and restraint and the denial of personal freedom appear.

Right here it's quite important to bear in mind that the new liberals are very much divided among themselves in their thinking. Some want to reform the present system; others to destroy it. The taxing power, if used reasonably, may work desirable reform in our present order. Yet the taxing power under the guise of taxing to reform may be used, wittingly or unwittingly, to destroy the private-enterprise system. Unfortunately, many of those who are loudest in their condemnation of communism are the very ones who clamor for the kind of legislation that is most desired by those liberals who hope for out-and-out socialism or communism. Each of the two groups are one in their methods, but worlds apart in their ultimate objectives. In the course of the world's history, the best intentioned reformers have on occasions wrought the greatest havoc.

Mrs. Roosevelt was here the other day arguing for the principles of the new liberalism. Such principles, she says, will save America from dreaded Russian communism. Infiltration aside, I agree that there need be little genuine fear of Russian communism. There can be, however, such a thing as American communism. If communism comes to America, it will before long have the same full need for a police state that Russia has.

Let me sum up by taking a concrete problem and considering the respective approaches of the new and the old liberals to its solution. The problem: Who is entitled and in what proportion to that increase in the productivity of labor that results from the use of the machine? How, in other words, should the benefits of technocracy be shared? Should all of the added production go to the owner of the machine; to the laborer who operates it; or to the public that purchases the product. If not all to any one, then in what proportion to each?

The problem can be extremely perplexing, that is perplexing to anyone who cares about the killing of the goose that lays the golden egg. The old liberal would say: "Leave the problem to the law of supply and demand operating in a free market." As an example of his thinking he would urge that labor can be served by falling prices as well as by increasing wages. A free market works in his view toward an abundance for all. The advanced new liberal would say: "No, leave the problem to Government agencies with authority to assist or supplant the market in order that the division be in accordance with the dictates of social justice." Oddly enough, many who pant after social justice, see no injustice in meddling with the laws of economics, though the meddling cuts in half the value of a thrifty workman's life's savings invested in a bank account or an insurance policy.

Between the two extremes lies the progressive liberal. He will know that in the field of government experience is a better teacher than logic. Consequently, he will not get panicky if some reasonable experimentation is indulged in. He will, however, want to feel the ground under his feet as he moves along, and he will want a free people and not a bureaucracy to determine the results and extent of the experimentation. He will want to be able to retrace his steps, if the going gets rough.

Notwithstanding appearances to the contrary, as a Democrat I want to believe that President Truman and the present Congress will settle down to the course of the progressively minded liberal. They will want to experiment and they may tend to be idealistic, yet they will be realists enough to come to feel that danger lies in too much experimentation.

The men who wrote into the Declaration of Independence that all men are born free and equal hedged a good bit when they came to write the paper that actually set up the practical machinery of government—the Constitution of the United States.

I leave this thought with you. Citizens in groups like yours have the duty to inform themselves of the meaning of the issues being debated in Washington: May I say: "Equip yourselves to form intelligent opinions and then not hesitate to let your Senators and Congressman know what you are thinking. This is no time for citizens like you to be passive onlookers. Don't leave the public opinion of America to be formed by the wishful thinking of bureaucrats. Ours is a democracy. It won't, it can't, run to your liking unless you do your part in the running of it.

Tennessee Valley Steam Plants

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Denver Post:

NO SALE, MR. SMITH

We are in receipt of a two-page telegram (prepaid) from Purcell L. Smith, lobbyist for the National Association of Electric Companies, urging newspapers to get behind an economy drive in Congress.

The guileless Mr. Smith suggests the way for Congress to begin saving money would be to disapprove an appropriation for a new steam-coal electric generating plant for the Tennessee Valley Authority.

We share Mr. Smith's desire for economy. However, the most economical hydroelectric systems, according to competent engineers, have 25 percent of their power capacity in steam plants, to be used when water supplies are low, and 75 percent in hydro plants. TVA needs nearly twice as much steam capacity as it now has to reach that operating ratio.

We can't agree with Mr. Smith that it would be economy to fail to build the steam plants that TVA must have if it is to sell the bulk of its electric output at "firm" rates.

It would be penny-wise and pound-foolish not to protect the public's $400,000,000 investment in existing TVA power plants.

Mr. Smith says the proposed steam plants would be the first ever constructed by the Federal Government "any time, any place for commercial purposes." "If built, the Federal Government assumes a new function and will be in the electric business outright," his telegram says. "Proposed steam plant no different from proposed Government-constructed steel plant."

For a highly paid propagandist, Mr. Smith is surprisingly weak on his facts. The TVA, under congressional authority, has built and bought steam facilities before and is operating them. For Mr. Smith's information, the Government through the TVA, the Reclamation Bureau, and the Bonneville project already is in the electric business now, with the approval of Congress and the courts.

And an important difference between power business and the steel business is that the former can operate only if it uses public streets and roads for its electric lines and consequently is semipublic in its nature, no matter how you look at it.

There is a great danger to the Rocky Mountain region and the Missouri Valley in the philosophy which Mr. Smith is peddling. Steam plants eventually will be necessary to "firm up" much of the power which the Reclamation Bureau is developing in this region—power for new industries, power for farm machinery, power for more comfortable living in our cities.

The Missouri Valley Development Association, of Omaha, a group formed to fight the MVA idea and promote development by the Pick-Sloan plan, certainly is no socialistic organization. Yet the association, through its manager, John B. Quinn, is on record for TVA steam plants—not because Mr. Quinn has any use for TVA, but he sees that if the Missouri Valley is to have the growth and prosperity to be expected it will have to have electric power, lots of it, and firm power, above all.

Illinois House of Representatives Urges Repeal of Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a resolution adopted by the House of Representatives of the State of Illinois:

(House Resolution 17)

Whereas no segment of the American people has made a greater contribution, in peace and in war, to the welfare of our Nation than have the working men and women of America; and

Whereas this magnificent contribution was made possible through the long struggle of organized labor to secure for the working man recognition of certain fundamental rights; and

Whereas Public Law 101 of the Eightieth Congress, otherwise known as the Taft-Hartley Act, attempts to abridge labor's fundamental rights and to set the cause of the working man back a generation; and

Whereas the Taft-Hartley Act not only adversely affects organized labor but jeopardizes the peace and prosperity of the entire country, because whatever hurts labor hurts the Nation: Therefore be it

Resolved, by the House of Representatives of the Sixty-sixth General Assembly of the State of Illinois, That the Congress of the United States now assembled be urged to take immediate steps to repeal the Taft-Hartley Act and to restore to the working men and women of America the rights to which they are entitled and the respect they so richly deserve; and be it further

Resolved, That copies of this resolution be sent by the secretary of state to the President of the United States, to the President of the United States Senate, to the Speaker of the House of Representatives of the United States, and to each of the Members of the Congress of the United States from the State of Illinois.

Adopted by the house, January 25, 1949.

PAUL POWELL,
Speaker of the House of Representatives.
CHARLES F. KERVIN,
Clerk of the House of Representatives.

Military Courts Martial

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. DURHAM. Mr. Speaker, during the last war and immediately following this conflict the committee then known as the Military Affairs Committee began a study of the problems of military justice.

We were surprised to find the limitations and inadequacies of our military justice system. It was graphically portrayed to the public and Members of Congress during these hearings by many service men and women, lawyers and laymen alike, who had had first-hand experience with the operation of such systems, and found that resemblance between them and the courts which they knew as civilians was largely coincidental. It was very disturbing to find that the same official was empowered to accuse, to draft and direct the charges, to select the prosecutor and defense of the court, to review and alter their decision, and to change any sentence imposed. The public was shocked to learn that an offense committed by an officer was subject to different treatment and punishment than the identical offense committed by an enlisted man. We found that many of the judges, prosecutors, and defense counsel participating in courts martial were neither lawyers nor trained in the law, and that, in the naval services, there was not even the minimum requirement that a single law member be on a court.

The Eightieth Congress made some improvements in the code, but in my opinion further improvements should be carried out in order to protect the rights of those subject to the code without impairing the performance of military functions.

I am enclosing an article which appeared in the Greensboro Daily News, Greensboro, N. C., a few days ago which gives the first instance of an enlisted man sitting on a military court:

ENLISTED MEN SIT ON MILITARY COURT

FORT BRAGG, February 3.—Four veteran sergeants sat on the general court martial of another GI here today, in the first reported airing of the new look in Army justice.

Army authorities believed it was the first time in the United States that an enlisted man has been tried with other enlisted men making up part of the court.

The sergeants and five officers constituted the court hearing testimony against a 19-year-old recruit accused of escaping from confinement. They handed him a stiff 6-month, hard-labor sentence and fined him $50 a month for 6 months.

The new Army system of justice giving enlisted men the right to ask for trial by other enlisted men as well as officers went into effect Tuesday. Recruit Rudy F. Johnson was the first man known to be tried under the new-look court, authorities said.

The board for his trial was picked from some 150 officers and enlisted men who attended a judge-advocate's school here and qualified to sit on courts martial.

The GI's who judged Johnson were Master Sgt. Herbert B. Adams, of Worcester, Mass., a 28-year veteran; Master Sgt. Calvin Jones, of Portland, Oreg., 12 years in service; Master Sgt. Rufus Flanders, of Beddington, Vt., 21 years in service; and Sgt. 1c Earl G. Price, of Seven Springs, N. C., 9 years in service.

The board found Johnson guilty by a two-thirds vote in a secret ballot. Another ballot fixed the sentence and fine. However, the new system provides that the penalty is subject to higher approval before taking effect.

Problems and Pay of State Legislators

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, February 7, 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Richard L. Neuberger, well-known writer and now a member of the Oregon State Legislature, published in This Week magazine of January 30, 1949. Mr. Neuberger tells of the need of reorganization of State legislatures in line with the effort made by the Seventy-ninth Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

My ears still burn from the scolding given me by a prominent constituent who visited the capital of our State on urgent business and could not find the senator from his district at any of the leading hotels. He wondered sarcastically where I had been keeping myself in Salem.

When I told him my wife and I had to live in a small auto court on the edge of town because my pay as a State senator averaged only $5 a day, he was flabbergasted.

Millions of other citizens of the United States, I have concluded, must be similarly uninformed. Otherwise, would they let the people who set policy for their schools, highways, courts, and welfare institutions work for lower pay than a baby sitter or a caddie on a golf course?

I belong to the most neglected lawmaking body on earth—an American State legislature.

Nor is my State, Oregon, out of line with the national pattern. In New England, for example, Connecticut pays its legislators $600 for a 2-year term. The most recent session went on for 145 days, giving the senators and representatives a daily wage of $4.13. Vermont pays the framers of its laws $750 for one term of office. At the last session this meant $6.88 a day. And New Hampshire doles out just $200 to its legislators every 2 years. The 1947 session lasted 182 days, making the salary of New Hampshire senators and representatives $1.09 daily, the lowest in the Nation.

It's pretty much the same everywhere. The most recent Missouri Legislature worked 6 months—which made its daily pay $9.41. West Virginia legislators get $500 a year. Texas pays $10 for the first 120 days, $5 thereafter. Utah musters yearly pay of $300. Tennessee's scale is $4 a day, a wage which vanishes after the seventy-fifth day of a session.

LUCKY HANDFUL

In evaluating these wages, remember that the legislators have to leave their homes and live at the capital. A few States—notably Alabama, Arkansas, Washington, Kansas, and Arizona—add modest maintenance allowances to meet the hotel expenses of legislators. But the majority of States still require their lawmakers to eat and sleep in a distant city on wages that the most unskilled laborer would spurn.

As a friend of mine in the Montana Legislature says, "I appreciate the privilege, but I don't know how long I can afford it."

Only a handful of States pay salaries to their legislators which total more than $100 a month for an entire year. These generally are the States which pay an annual salary. New York leads the list with $5,000 a year. New Jersey and Illinois are next with $3,000. Following them are Massachusetts with $2,750, Michigan with $2,400, and Ohio with $2,600. Pennsylvania and Maryland are the only other States above $1,200.

Over-all, the average annual pay of each legislator in the Nation is about $900.

The other night my wife and I totaled up how much it will nick our savings to have me serve as an Oregon State senator. In addition to losing my normal income as a writer and journalist for nearly 3 months, we are behind at least $5 a day. And we economize by pooling our groceries and cooking with the family of a young senator in an adjacent auto court. We have a car pool, too. (We get 10 cents a mile expense money, but only for one round trip from home to the capital.)

SECRETARIES DO BETTER

There is one economy I have not yet practiced. Almost half our members try to struggle along financially by listing their wives as their secretaries. The wife then goes on the pay roll at $7 a day (a new bill may raise it to $8). This, combined with the members' 5 or 6 dollars (he gets paid less than the secretary) just about enables these senators and representatives to break even.

Wives of most legislators are not trained stenographers and the business of the State is not exactly expedited by their efforts. As I write this, a senator at a nearby desk is attempting to dictate a proposed statute to his wife. The wife cannot take shorthand. The senator must linger several seconds over each phrase; later the wife will diligently hunt for the right keys on the typewriter for an hour or two. A bill which may change educational policy for Oregon's 250,000 school children might wind up with a typographical error that will put the State Supreme Court to work for weeks.

THE CITY GETS A LAUGH

The economies forced upon members of the legislature often give the capital city a chuckle. More than one dignified senator has been sternly reprimanded for preparing breakfast on a hot plate smuggled into his hotel room. And virtually every member picks up a few extra dollars at the end of the session by selling his set of the State's legal code to a bookstore or law library.

"I ought to keep these books," a young businessman in the Senate confided, "so I'll know exactly what laws we passed or amended, but, by golly, I'm so far behind I've got to have that extra $50."

It may all sound slightly comic, but there is an aspect to it which rubs away the

humor. There are 90 members in our legislature, and for every senator and representative a half-dozen lobbyists crowd the capitol cloakrooms and hotel corridors. Armed with liberal expense accounts, they like nothing better than to pick up a legislator's dinner check, provide him with a bottle of liquor or a baked ham, or furnish him with a car and driver. It's gotten to the point where if you're a good lobbyist you can sometimes swing a vote for a steak dinner.

The lower the pay of a senator or representative, the less well he is equipped to resist such blandishments. A man who would never think of accepting a bribe will let a lobbyist take care of some of his meal checks. It all seems perfectly innocent. But when the time comes for the lobbyist to ask a favor, the member is hard put to turn him down.

The lobbyist's request may be trifling and perfectly proper; he may use his friendship with lawmakers merely to hasten passage of a harmless bill. But then again, the request may relate to exploitation of the State's natural resources. A lumber company may hope to cut timber on school lands without competitive bids. A State may suffer a loss in millions because it is unwilling to authorize the few thousands in legislative pay which would make its senators and representatives self-supporting. It's the old story of "penny wise, pound foolish."

I know a man who lobbies at State capitals all along the Pacific coast. He admits frankly that it is "easier and cheaper" to bring his influence to bear in Oregon than in California, where members are paid $1,200 a year plus expenses.

DIME-STORE LOBBYING

"The Oregon legislators are just as honest but less independent," confides this lobbyist. "Their measly pay makes them susceptible to what I call 'dime-store lobbying.' You can get a key committee member indebted to you for the price of eggs and bacon."

In some States reports frequently hint of some senator or representative allowing his hotel bill to be paid by the local utility company. How much independence can be expected of a lawmaker under such circumstances?

In our own legislature I notice an increasing number of members who are openly on retainers from corporations or trade unions. They do not have to live within their pittance from the State. They are company lawyers or labor officials. But how will the interest of the public fare when it conflicts with that of the private organizations on whose pay rolls these men serve at the same time that they enact the State's laws?

Stunted legislative salaries work adversely in another manner. Members are under intense personal pressure to adjourn speedily and go home. They see their bank accounts melting away.

Put yourself in the place of a young electrical contractor I know, for example, who not only has to pay his living costs in the capital and support his household at home, but also hire a skilled man to carry on his business while he's gone.

FAST WORK

Yet the State's business must be transacted. Taxes must be levied and policies decided. When I served in the Oregon House of Representatives before the war, we rushed through bills in the closing days that not more than two or three of us had read. And they affected such vital matters as Columbia River water power and the commitment of insane persons.

What is the solution? The Council of State Governments, a national organization, recommends that legislators in all 48 States be paid an annual salary in keeping with their responsibilities. This would enable them to spend time on State problems all the year around, rather than only while the legislature is in session. As it is now, many men and women go to our State capitals wholly uninformed on the great issues they must settle.

TIMES HAVE CHANGED

In 24 States the pay of legislators is fixed by the State constitutions. Some of these constitutions were written in pioneer times when a hotel room was 50 cents a night and a chicken-liver breakfast cost a quarter. The Council of State Governments believes legislative salaries should be set by statute so they may be varied with economic changes as they occur.

But, basically, the long-range answer is for the average citizen to take a more immediate interest in the government closest to him and his family, the government of his State. Not only the pay of legislators needs correcting. Seven dollars for a secretary fails to compete with the far higher wages she can receive from the Federal Government. I couldn't get a competent stenographer to go to the legislature until a family friend volunteered to do it "for the experience." Like her boss she is losing money living at the capital.

Furthermore, virtually all State legislative districts in America require reapportionment. But the citizen, with his eyes on distant Washington, D. C., has failed to see that this is done. Our legislature has not been reapportioned since 1910. As a result, although the State constitution requires that all senators represent equal numbers of people, I have 78,170 constituents, while a member a few rows away has 7,268.

PREP SCHOOL FOR PRESIDENTS

We neglect our legislatures, yet we expect them to furnish our national leaders of the future. Washington and Jefferson were members of the colonial Legislature of Virginia. Abraham Lincoln served in the Illinois State Legislature for 7 years. Theodore Roosevelt and Franklin D. Roosevelt graduated from the New York Legislature at Albany. Mention a prominent United States Senator and the chances are he began his career as a State legislator.

Lately Congress has been occupied with raising the pay of the President and other National Government officials, in line with the rise in salaries in private business. But there's been little talk about the far more overdue pay raises for State legislators. A notable exception is Michigan, where legislative salaries have been increased from $3 a day to $2,400 a year. Let's hope this is a straw in the wind.

We often speak glibly of "State's rights" when we want to express alarm over the encroachment of the Federal Government on local authority. Too often we forget that "State's responsibilities" are a partner of this slogan.

TVA and the Proposed CVA

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have placed in the Appendix of the RECORD two reports which I recently made to the citizens of my State regarding the Tennessee Valley Authority and the proposed Columbia Valley Authority. I made these studies in as nonpartisan a manner as possible in order to give my constituents as fair a chance as possible, regardless of my opinion, to see both sides of the controversy which surrounds both TVA and a proposed CVA. Because the Congress probably will be called upon this session to take a look at another CVA proposal, I believe some value might be obtained by my colleagues from these reports.

There being no objection, the reports were ordered to be printed in the RECORD, as follows:

THE TVA—AN OBJECTIVE REPORT

One of the most dominant issues—and probably the leading factor in the life and economy of the Pacific Northwest—is electric power, its control and use, its production and the irrigation of land. This irrigation is to be accomplished by using public power to pump the water on to the land that is now arid.

The Columbia River is probably the greatest single source of potential electric power in the world.

The time has come when all the people of the United States, through their Congress, will have to reexamine our Columbia Basin project. I shall do my best in this, the first of two closely related reports, to give you the background and a fair, impartial, disinterested account of this entire power and reclamation problem. This will mean that I must relate to you the background of the Tennessee Valley Authority and its relationship to the Columbia Basin project.

The establishment of a Columbia Valley Authority has been advocated by some people ever since the first days of the Tennessee Valley Authority. Belief in the success of the Tennessee Valley Authority has encouraged some to advocate extension of the so-called valley authority methods to the Columbia River Basin, while others, equally convinced of the failure of the TVA—or, believing other methods to be better solutions—have opposed such an extension.

At the outset, it should be noted with great care, by all sides concerned, that the impartial Library of Congress experts state that the application of "the TVA Act without change to the Columbia Basin would not guarantee comparable results in the Columbia Valley."

Problems to be solved in the two valleys, the Tennessee and Columbia, while basically the result of their relationship to the drainage basin of a great river, may differ markedly in detail and every degree.

For instance, in the Columbia River area, irrigation is of primary importance, while in the Tennessee Valley there is no irrigation.

Whereas in the Tennessee Valley electric power is of fair importance, in the Columbia Valley hydroelectric power is potentially of such great importance as to overshadow most of the other problems.

In general, the question of whether a Columbia Valley Authority is the proper solution hinges largely on whether one believes better results will be attained under the aegis of a single, unified, decentralized control, largely independent of Washington, D. C., or under an extension of present methods, improved, I hope, and enlarged in scope, of development by specialized Federal agencies, each concerned with only one phase of the development problem.

Some persons will agree that there is at present a growing feeling of the need for a more unified approach to the over-all problems of a river basin. This has been recognized in the base of the Missouri River where there has been formed an inter-agency committee on which all agencies of the Federal and State Governments concerned with water resources, and related fields, are represented. This may be one solution. These agencies in the Missouri Basin meet at specified times and discuss their problems and attempt to reach an agreement on a coordinated, cohesive plan.

The Tennessee Valley covers an area of over 40,000 square miles, and includes portions of 7 States—Tennessee, Alabama, North Carolina, Virginia, Georgia, Kentucky, and Mississippi. It is approximately 1,000 miles long, with a maximum width of 150 miles.

The rainfall in the valley is the heaviest in eastern America, and the flow of the river varies greatly from season to season and year to year. Water is the valley's major resource.

In 1933, when the TVA was established, the valley was a very poor region, in which economic pressure and ignorance had led to untold destruction of soil and forest resources. In that year the gross value of the farm production was $154 per capita, compared to $362 for the Nation.

Agriculture was the occupation of 77 percent of the population, compared with 44 percent of the Nation as a whole. Education facilities were almost primitive, the standard of nutrition was extremely low, and incidence of disease was high. In most respects it was a backward area, this Tennessee Valley in the South.

During the First World War the Federal Government had built a nitrate fixation plant at now famous Muscle Shoals, utilizing hydroelectric power generated by the Tennessee River. This plant was not finished in time to be of any assistance in our war effort.

It was during the controversy over disposition of this Muscle Shoals plant that the idea of the Tennessee Valley Authority was evolved.

The act establishing the TVA was approved May 18, 1933. It was described in the title as being an act "to improve the navigability and to provide for the flood control of the Tennessee River; to provide for reforestation and the proper use of marginal lands in the Tennessee Valley; to provide for the agricultural and industrial development of said valley; to provide for the national defense by the creation of a corporation for the operation of Government properties at and near Muscle Shoals in the State of Tennessee, and for other purposes."

The powers allotted to the new agency by terms of the act were enumerated. The Authority was empowered to construct dams and reservoirs to provide for a 9-foot channel in the river, to promote navigation and control destructive floods in the Tennessee and Mississippi Rivers; to provide and operate, consistent with the control and regulation of stream flow primarily for the purposes of promoting navigation and controlling floods, facilities for the generation of electric energy; to sell and distribute electric power; to manufacture fertilizers and demonstrate their uses; and to furnish nitrogen for national defense.

In addition the act grants the power to plan by authorizing the making of surveys and the preparation of plans for the purpose of aiding further "the proper use, conservation, and development of the natural resources of the Tennessee River Drainage Basin" and "providing for the general welfare of the citizens of said area."

In article 23 of the act the six general objectives of TVA are summarized as:

1. The maximum amount of flood control.
2. The maximum development of the river for navigational purposes.
3. The maximum generation of electric power consistent with flood control and navigation.
4. The proper use of marginal lands.
5. The proper method of reforestation of all lands in the drainage basin suitable for reforestation.
6. The economic and social well-being of the people living in the river basin.

The Tennessee Valley Authority is managed by three directors, who are appointed by the President with the consent of the Senate.

It has its offices in the region, with headquarters in Knoxville, Tenn.

The Authority is entirely independent of any existing Federal department or bureau. The act was designed to permit the Authority to make its own decisions, requiring it only to report annually to Congress and to secure congressional approval for its major projects and the necessary funds for their construction.

Although TVA was established 15 years ago there is still no objective comprehensive study of its experience.

It is particularly difficult to determine—even where results of its operations are clearly apparent—just what is due to the type of organization and what is due to other circumstances.

The problems met with in the Tennessee River Valley are most complex, and the legislation dealing with them was, of necessity, very broad.

The real origin of the TVA—and this is important—lies in the inability of the Federal governmental structure to adapt itself to the requirements of river-basin development.

Piecemeal, single-purpose development was getting nowhere, while it was apparent that maximum benefits were attainable only through basin-wide planning and development on a comprehensive, multiple-purpose basis.

The plan adopted, which resulted in the TVA's charter, gave it a number of significant advantages in comparison with the old-line Federal agencies.

Among these were the mandate to develop the entire basin in a manner to provide maximum benefits, all purposes supposedly to be taken into consideration.

There were few restrictions placed upon this direction; no set goals were imposed.

TVA was not obliged to share its responsibilities or leadership.

TVA could initiate and carry out its own plans, either alone or with the cooperation of other agencies.

As the organization's own philosophy developed over the years this cooperation has been emphasized and made somewhat easier by the fact that the administration is physically present in the area itself. Thus it has been able to avoid much of the complication and delay with which old-line agencies of the Federal Government must deal.

TVA maintains it places great emphasis on the grass-roots character of its administration.

The corporate status of TVA and its relative independence of Washington has given the Authority a great measure of flexibility with respect to financing, personnel matters, and accounting not enjoyed by other Government agencies. In many, many matters it accounts only to itself.

There are certain physical results apparent in the TVA which may be mentioned briefly.

The TVA has acquired 10 and built 16 dams and reservoirs since 1933, integrating them into one system providing more than 13,500,000 acre-feet of storage, of which 11,000,000 are available for flood control, as contrasted with none in 1933.

It is claimed by the TVA that this storage space may be operated to reduce floods by as much as 4 feet in the Mississippi River at Cairo, Ill. This has been disputed by some engineers.

These reservoirs are also operated in such a manner as to provide a continuous 9-foot channel for navigation through the lower 630 miles of the Tennessee River. At the same time these dams and reservoirs produced 15,000,000,000 kilowatt-hours of electric energy in the year 1947. It is said that some 400 new industries have located in the region. The power available was of inestimable value to the Nation during the recent war. Vast amounts of aluminum were made available through use of this power and the atomic bomb program was in great part dependent upon the same source of power.

Incidence of disease in the area has been lowered considerably, due in large part to the successful program of malaria and pollution control instituted by the TVA in cooperation with local authorities.

River traffic (exclusive of sand and gravel) in the first 6 months of 1947 amounted to 153,000,000 ton-miles. Much of this traffic originated and terminated in areas outside the valley, whereas in 1933 such commerce was practically impossible and there was little or no through river traffic.

The TVA itself, and in cooperation with local authorities as well as private enterprise, has provided good terminal facilities in addition to recreational facilities throughout.

It is generally agreed that, as an organization for dam construction, power generation and distribution, and fertilizer production, TVA has done an effective job, no matter at what expense.

As to the broader responsibility for improving the economic and social well-being of the people of the valley the Authority can point to some improvements.

Just how much of this improved living standard, increased income, wider use of electricity, and the like is due to the impact of the great construction program of the corporation, what share is due to the effect of the war in increasing industrial development of the region, or what is due to the foresight with which the program was planned, and the excellence of the methods used in carrying out the program, cannot be determined until a detailed objective study and evaluation is available and as yet it has not been made.

This is, briefly and to the point, as reasonable a presentation of the TVA as I can give the people of my State. This report was necessary because of the obvious effect the TVA has had on the Columbia Basin controversy, and because the President has urged the establishment of a Columbia Valley Authority for the land in which you live. In my next report I shall endeavor to define some of the reasons in opposition to, and some of the reasons in support of, the President's proposal. In this way I hope I can be of assistance in an objective way to the citizens of Washington.

THE PROPOSED CVA—A NONPARTISAN STUDY

The first major development in connection with the Columbia Valley was the Bonneville project, which was built by the Army Corps of Engineers to improve navigation, and for the additional purpose of generating electric power on the Columbia.

Sale of this electric power was placed under an administrator appointed by the Secretary of the Interior. The Bonneville Act was followed by the Grand Coulee Dam or Columbia Basin Project Act, authorizing the Bureau of Reclamation, of the Department of the Interior, to construct Grand Coulee Dam.

The sale of Grand Coulee electric power was also placed under the administrator of the Bonneville project.

It was in 1940 that the first of what was to be a steady stream of legislative proposals were introduced in the Congress. At that time, in the second session of the Seventy-sixth Congress, Senator Bone and Congressmen Hill and Leavy, all of Washington State, introduced bills which would have set up a Columbia power administration. In the same Congress, Congressman Smith, of Washington, introduced a similar bill. No action was taken on any of them. In the following year, the same bills were reintroduced.

Senator Bone and Congressmen Hill and Smith then introduced bills which were entitled the Columbia Power Act of 1941. Two years later, thinking on this subject was marked by a broadened basis, and more of the so-called valley authority type bills were introduced for the Columbia River, even one by Congressman RANKIN. His bill was followed by the introduction of the Columbia Valley Authority Act, which would have created the authority, a Columbia Valley advisory council, and a national river

basin development board. Later the same bill was reintroduced but with still a different version. The bills died in committee.

Congressman WALT HORAN, of Wenatchee, after long study and consideration, introduced in the Seventy-ninth Congress a bill called the Columbia Valley Authority Act. It created a cooperative authority headed by a board of five directors and a Columbia Valley advisory council consisting of the regional governors.

The authority was to formulate and present proposals to the President and Congress after submitting them to the advisory council for review. The proposals were to be effective unless affirmatively disapproved by Congress, by joint resolution within four legislative months. The rest of the provisions were, in the main, similar to the Columbia Valley Authority Act, but this bill also died, although more seriously considered than the others. Mr. HORAN presently has another proposal which merits close study as he has lived all his life in the area involved.

The opening days of the last Congress saw the reintroduction by Congressman RANKIN of the Conservation Authorities Act of 1945, providing for the establishment of eight conservation authorities, including one in the Columbia Valley. The bill received no action. This bill was followed further along in the first session by the Columbia Valley Authority Act, and was introduced by Senator GLEN TAYLOR, of Idaho. The Senate Committee on Public Works submitted this bill to various Government departments, such as the Treasury, War, Agriculture, and so forth. Most of the departments suggested amendments; some were critical; the Federal Works Agency made a favorable report.

And now, here are the two sides to the controversy over extending the Valley Authority idea to the Columbia River Basin.

There are 11 general reasons in favor, and 11 reasons against, the establishment of a valley authority in the Columbia Basin.

1. We will take the side of the proponents of a Columbia Valley Authority. They contend, first, that a regional authority, such as a CVA or TVA, has all the flexibility of action of a private corporation, and that such an authority is centralized and less subject to red-tape and bureaucratic delay.

2. Plans for a development of the Columbia Basin under a valley authority possess the virtue of unity and every phase of development can be planned in its proper relation to the whole. Such planning is apt to be more balanced and unencumbered by traditional and possibly hampering procedures. Instead of a dozen agencies concerned with fragments of the problem, one agency, supposedly responsible to the people, can do a better total job.

3. Offices of the authority would be located in the area itself with all of the advantages which flow from that fact. Among these are more familiarity with the immediate circumstances of the problem, ability to render decisions on the spot and fix responsibility and better cooperation with local agencies.

4. Nothing is lost of the valuable assistance available from other Government agencies, as most of the bills to create a Columbia Valley Authority provide that the Authority may call on other Federal agencies for any information they may possess and for technical assistance.

5. The TVA has been successful in accomplishing its original purpose. Why should not other regions have the benefit of experience there?

6. Those in favor of a CVA say that any authority established by Congress is still subject to its control. It is no absolutist, all-powerful agency, but subject to any checks Congress may see fit to impose.

7. In using the corporate form, more businesslike management is possible with a probable actual money savings.

8. Development of the Columbia Valley in the past, by the many different Government agencies, has not been as successful or beneficial as it might have been under a coordinated system such as has been so successful in the TVA region, it is argued by those who favor a CVA.

9. An authority will have the power to engage in activities essential to a full development of the resources of a region which are not now the concern of any agency at all. Among these are soil-erosion control, topsoil rebuilding, provision of terminal facilities, development of new industries, and the like.

10. Someone must decide the present conflict of interests between navigation and irrigation as well as power. An authority such as TVA can make these decisions for the benefit of the region as a whole.

And last: A Columbia Valley Authority might be self-liquidating. Power revenues might be sufficient to finance an entire comprehensive program, and, based on experience in the TVA, there might be no loss of tax revenue. Payments in lieu of taxes, it is claimed, are provided for in all bills thus far introduced.

Those who think that the establishment of a Columbia Valley Authority will hurt our State, the Nation, and its citizens have strong arguments. They argue like this:

1. It is contended that local governments stand to lose a large proportion of tax revenues as a result of any valley authority which withdraws from taxation large areas of land within the subdivision. The land already owned by the Federal Government in the Pacific Northwest, especially in Washington State, is alarming. Thirty-four percent of our State's total land area is presently owned by the Federal Government and controlled in Washington, D. C.

2. Those against a CVA strongly contend that federally controlled river basins, such as the Columbia and its tributaries, would divide the entire Nation into many valley and other regional authorities, and then would render the State of Washington, and other States, as such, nearly obsolete. In other words, the Constitution would be circumvented and the rights of individual States would soon cease to exist and a point be reached where States existed in name only.

3. Benefits to which the State of Washington is entitled, and benefits of other States, might be taken away and water and power transmitted in great quantities to California or elsewhere, while we in the Pacific Northwest, already faced with a shortage of power for years, might be made to suffer because of political power exerted through a valley authority to send the electricity elsewhere.

No. 4, advanced by opponents of a CVA, is that experience with the TVA would seem to justify the accusation such authorities engage in activities which are in direct competition with private business and industry. Government in business is not a constitutional activity of the Federal Government.

5. Accent upon power revenues leads to the suspicion that regional authorities, based upon water resources, are only an excuse for the Federal Government to take over the power industry of the Nation through subterfuge.

6. Long-established Government agencies with fine records of achievement and specialized techniques can do a better job than new and inexperienced special authorities. A prime example of recognized good work is that of the Army Corps of Engineers.

7. Regional authorities constitute a new element in the structure of American Government. The Constitution provides only for a National Government and constituent States. If new elements are to be added it should be done through constitutional amendment. This is such an important consideration that it should not be determined indirectly by creating individual authorities by legislation.

8. Valley authorities' powers are constitutionally limited to the Federal Government's powers, which in turn rest on the constitutional power to regulate commerce and navigation. Any powers beyond these are assumed at the expense of the States, and such assumption is unconstitutional.

9. A Columbia Valley Authority might well become a superagency—above control by anyone. The act creating such an authority would need to be carefully drawn lest the only check on its power be solely that of approval or disapproval of an already accomplished fact. Most of the bills so far introduced to establish valley authorities provide for a minimum of control by Congress.

No. 10 in the list of general reasons against a CVA is that neither the TVA plan nor any existing proposals for valley authorities have provided for fusion of Federal and State powers, nor for the means by which the powers of the State, and certain laws of the Nation, are to be exercised over such an authority.

And last and No. 11: Plans for a Columbia Valley Authority possess the essence of state management and are so extreme that they border on communism.

Right or wrong, these are the arguments, both for and against, used in the controversy over establishment of a Columbia Valley Authority in the State of Washington.

I have presented both sides of this very interesting and absorbing story in an effort to inform you and have refrained from taking a position at this time on the issue. The position of your State congressional delegation will be made clear after legislative proposals are all in and when, and if, debate begins, either in congressional committees or before the House and Senate.

Conditions in China

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the senior Senator from Nevada [Mr. MCCARRAN] regarding conditions in China.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

With regard to China, the United States faces a decision which may determine its position in the world of the future. We cannot defer this decision, for to accept delay is to decide against action. It is time to stop drifting on a sea of rhetoric and good intentions, and examine the facts.

We must decide anew whether our system of free institutions, free enterprise, and the dignity of the individual human being is going to accept the challenge of communism in its announced determination to destroy all that we and our forebears have builded. If we reaffirm our decision to accept that challenge, we cannot stand still; we either go forward or we retreat. We must face the issue squarely.

These issues are not confined by European boundaries; they are world-wide. Make no mistake about it, the fire of communism rages almost unchecked in Asia today. We believe we have stemmed the

tide in Europe. We cannot allow ourselves to be engulfed from the rear.

China is the key to Asia. Japan recognized this and, beginning with the invasion of Manchuria in 1931, attempted the conquest of China by outright military operations. Ultimately, we fought a great war to prevent Japan from dominating the Orient. Today Russia recognizes the importance of China in Asia, and attempts to succeed where Japan failed; and Russia seeks to avoid the mistakes made by Japan, and moves more cautiously, cloaking her movements under the guise of civil war. But her purpose is clear.

Recognizing these facts, I propose that the United States extend to China the aid necessary to insure her independence and administrative integrity.

This aid can and should be given on a realistic basis; a loan basis, properly supervised as to use. In our cold war with communism, we are pouring billions into Europe with no hope of recovering anything except indirect benefits in return. But the Chinese Government, given a period of relative stability, can fully repay us for the aid we may extend under the plan which I advocate.

Specifically, my loan proposal is that we extend to the Government of China a credit of approximately $1,500,000,000 as a sort of revolving fund to be used as follows: $600,000,000 to $700,000,000 for direct military purposes, including arms, ammunition, matériel, and supplies; $200,000,000 to $300,000,000 to buy commodities needed to meet civilian import requirements during the first year of the program; the balance to be used as a stabilization fund and drawn on from time to time to purchase silver from the Treasury of the United States to be used for monetary purposes in stabilizing the currency of China.

This loan authority should be subject to periodic review by the Congress over a period of several years, and the loans should be amortized over a period of approximately 30 years.

One of the conditions of this program should be that the Chinese Nationalist Army accept American military supervision, from the top level down to such lower echelons as our Military Establishment should deem advisable, to insure a coordinated and successful operation. This will involve assignment of 600 to 700 American officers, mostly of field grade and above. But let it be clearly understood this proposal does not contemplate sending an American expeditionary force to China.

As further assurance that our assistance will be effective, the Chinese Government should institute and continue a tax assessment and collection operation guided by a joint commission of Chinese and American tax experts, and all tax collections should be subjected to an annual audit by this commission.

As a final condition, the revenues of the major ports of Central and South China, such as Shanghai, Hangchow, Ningpo, Foochow, Amoy, Swatow, and the ports of Taiwan (Formosa), should be, in effect, pledged as collateral until the entire debt has been paid; and, during this period of pledge, the operation of these ports should be under a joint commission of Chinese and Americans, with customs control and collections administered solely by an American board.

This is a new proposal, different from any plan previously advanced, and it is recognized that such a program as here proposed would be a far-reaching step. Undoubtedly the proposal will be attacked, and if it is adopted, our motives in adopting it will be attacked. But we are already under attack. Read what the Communist press says about us in Europe, in Greece, or anywhere we go advocating the real freedom of mankind.

The important consideration is that such a program as I have outlined can succeed in saving the Government of China from disaster and dissolution, and ultimately in restoring Chinese independence.

Such over-all supervision as this program contemplates is necessary in a country now almost totally disorganized, and only recently emerging from feudalism. No one need fear that we have an imperialistic aim in China. This Nation's past record, particularly in the Philippines, is evidence that our objective is only to preserve the independent right of a people to freely exercise their choice of government. The proposed supervision is only a reasonable step to see that the wealth and production of America which is made available for assistance to China is constructively used, and that the loan we make is adequately secured.

The present budget of the Chinese Government is approximately one billion United States dollars, although its receipts are only about 250 million dollars. But there is ample evidence that less than 25 percent of the tax collections ever reach the coffers of the Chinese national treasury. If reform in tax assessment and collection is provided, so that collections approximate the sums due, and reach the national treasury without depletion, it is obvious that the Chinese Government could finance her own way and, over a period of years, could easily repay us for the loan which I propose we should make.

Now, what are some of the points we must consider in connection with this proposal?

One consideration, and a most practical one, concerns Asia as a future market for the goods produced in this country, and in Europe.

We have embarked on a program for spending approximately $20,000,000,000 to reconstruct and rehabilitate Europe, particularly her industrial machine; but we have given no substantial thought to the question of providing markets for Europe's industrial products. It is a poor businessman who invests his money in plant expansion without also providing for an outlet for his production. With our present and prospective investment in European recovery, common sense dictates that we spend something for insuring future markets. The continent of Asia can, if it is free to trade, provide the market for European production and for much of our own surplus production; but it will not be a market for Europe's goods, or ours, if the Communists control it.

It was the United States that opened the door of Asia by opening the door of China. From that day to this, China has been a friendly nation so far as the United States is concerned, and the Chinese people have been friendly to our people. The Chinese, as a people, are not communistically inclined; they do not even understand Communist doctrine as such. They do not embrace communism except where starvation, unrest, and the tricks of a Communist conqueror force that system upon them.

If the iron curtain goes down on the east coast of Asia, we shall no longer be able to regard China as a friendly nation, and we can then have little hope to aid either China or any other part of Asia for a long time to come, or to take any substantially effective action in Asia against the growth and spread of Communist power. The iron curtain will go down as surely over all Asia as it has in central Europe if the armies of communism finally succeed in engulfing China.

Another factor merits consideration. History teaches us that great Asiatic conquerors, headed west, time after time have been forced to turn back because of trouble in Asia. Until her position in China is secure, Russia will be hampered in her westward movement into Europe.

By shortening its lines, and withdrawing to a tenable defensive position, the Chinese Government will be greatly strengthened from a military standpoint.

In giving attention to military factors, we must not overlook the great importance of "face" in the Orient. We have aided and supported the Nationalist Government in China. We have cast our lot with that Government. If that Government goes under, the United States will lose face. If the Nationalist Government of China is preserved, through our efforts; if we can restore that Government to economic and monetary soundness, even though it withdraws to the port cities and temporarily abandons the offensive, we shall have gained face rather than losing it.

The Communists today have a psychological hold on a large segment of the people of China. The Communist psychological offensive has one main theme. It plays upon the basic desire of the Chinese peasant for peace, for an opportunity to work his farm or go about his business under conditions at least fairly well stabilized. The Communists in China have been preaching that the reason the Chinese peasant does not have peace and prosperity is because the Nationalist Government wills it otherwise, and that the United States is supporting the Nationalist Government, therefore is an enemy to peace and prosperity. If the Nationalist Government withdraws to an area firmly held, and rehabilitates the currency and the economy of that area, this Communist propaganda line becomes immediately ineffective. The Communists must then find some new hold over the minds of the Chinese people; and they have nothing to offer in the way of material advantages.

Russia cannot supply the needs of China. Her production is not great enough and supply lines do not exist which would permit an adequate flow of goods from Russian centers of production to all China, even if the goods were available.

The traditional channels of commerce in China are up and down the great rivers. Commerce will continue to flow in those channels, if the port cities have goods to trade, and a medium of exchange which is not constantly depreciating in value. The Communists dare not attempt to interfere with the flow of commerce on the rivers of China, for to do so would be to take up openly the role of oppressor.

During the recent war, while the Japanese held Shanghai, it was a capital offense to bring rice into that city. Yet rice came into Shanghai by the ton every month, sewed into the clothes of Chinese peasants, 30, 40, 50 pounds at a time. If a Chinese was caught bringing rice into Shanghai, he got no trial; they just stood him up and shot him. But the rice continued to come in.

Today there is no penalty for bringing rice into Shanghai; but the rice is not coming in. The reason is that there are no goods in the city for which the peasant can exchange his rice; and if he takes currency for it, the depreciation is so rapid that when he returns later on, his money is virtually worthless.

In a substantial sense, my proposal is a scheme for buying time. We should not seek to mount a large-scale military offensive in China; the drain on our resources would be too great. What is here proposed is not that we seek sweeping victory in a short space of time, but that we bring about what would amount to a stalemate, which, with time working on our side, can be turned into ultimate victory.

Once establish a stable Chinese Government concentrated in the port cities of China, with a sound money that the Chinese understand, and the Communists will find the problem of pacifying and satisfying the population of the rest of China extremely difficult. Time will then be working for us and not against us.

The Communists want a coalition government in China, which will relieve them from

the necessity of trying to govern the whole country, and which will give them someone to blame for whatever goes wrong. By keeping the Nationalist Government intact, such a coalition can be prevented, and the Communists will be forced to face the consequences of their own acts and the inevitable adverse effects—for them—of their inability to improve conditions in the interior of China. We should then have a sharp contrast between the stability and prosperity of those areas still under the control of the Chinese Government, and the instability and poverty of the areas under Communist domination. Such an object lesson could not fail to speed the disintegration of the Communist hold on China.

It will be said that the present Chinese Government has not brought to China the real democracy, and the full consideration of the wishes and needs of the Chinese people, that we would desire. The Chinese Nationalist Government has been charged with corruption and incompetence. In that regard, I may have more to say later about the record of the Chinese Government in repaying loans previously made by the United States. It is a good record. But even assuming these charges against the present Chinese Government are true, how does that change the picture? What is the alternative to aiding and supporting that Government? The only alternative is to allow the Communists to take over. Where does the record of the Communists indicate more consideration for the people? Are the Communists so incorruptible? Shall we let the godless regimentation of Communist statism win our support on the plea that it is the only possible efficient government?

Let us not delude ourselves into believing that the lot of the Chinese people will be improved by the Communists. For that matter, let us not delude ourselves with the belief that our primary objective in this matter is to aid the people of China. Our primary objective is self-preservation and the defeat of the Communist drive for world domination.

I see but one choice: to aid the present Chinese Government, and to demand of it, as a condition of our aid, reforms which will increase efficiency, decrease corruption, and constitute a move toward true democracy.

We cannot afford to debate and delay this decision. While we bemoan the failures and shortcomings of our former ally across the Pacific, our enemies are taking over China and laughing at our efforts to straddle the fence. The time is here for us to take our position against communism in Asia, as we have in Europe. One world is a fine aspiration, but Russia has decided on two worlds. Let us make ours the largest and most forceful, the most dynamic, and the future will hold no cause for fear.

National Dental Care

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a press release from my office relative to the bill introduced today by me, the Senator from Montana [Mr. MURRAY], and the Senator from Vermont [Mr. AIKEN], to provide Federal assistance to the States in developing and maintaining dental health programs.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

SENATORS PEPPER, MURRAY, AND AIKEN INTRODUCE BILL TO PROVIDE NATIONAL DENTAL-CARE PROGRAM

Senator CLAUDE PEPPER, Democrat, of Florida; Senator JAMES E. MURRAY, Democrat, of Montana; and Senator GEORGE D. AIKEN, Republican, of Vermont, introduced in the Senate today a bill to provide Federal assistance to the States in developing and maintaining dental-health programs. The program under the bill would be administered by the Surgeon General on consultation with a national dental health council. The dental health council, consisting of six members, appointed by the Surgeon General, the majority of whom must be outstanding dental experts, would have authority to review State projects on the treatment and prevention and control of dental diseases. These State programs would include dental-care programs for children, the training of personnel for State and local dental-health work and grants to States, local agencies, and nonprofit institutions to study and investigate methods of diagnosing, treating, and preventing dental diseases.

The Senators emphasized the need for augmenting and extending dental-health services in the United States. Dental diseases are among the most prevalent of human ailments, they said. At the age of 6, more than 9 out of 10 children have 1 or more decayed teeth. By the age of 18, a boy or girl on the average has 9 decayed teeth and several extractions. The results of dental neglect are not only pain, but also the cause or aggravation of many other bodily ailments.

During the early years of selective service, 1 out of every 12 men examined were rejected because of serious dental defects. Because of the need for manpower, our armed forces were required to eliminate practically all dental-health standards. The result was that the armed services had to induct over 20,000 dental officers and undertake a large-scale program of dental rehabilitation for over a million men at a tremendous cost to our people. The stake of the Nation in the dental health of its citizens is demonstrated most forcefully by this experience.

Report on Nitrogenous Fertilizer

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report on the subject of nitrogenous fertilizer, made by John Pillsbury, staff member of the Senate Committee on Appropriations.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NITROGENOUS FERTILIZER—LEGISLATION OF THE EIGHTIETH CONGRESS

The Eightieth Congress adopted the following legislation restricting the distribution of nitrogenous fertilizer materials produced by the Army:

In Public Law 606 (continuing the powers of the Second Decontrol Act of 1947 through June 30, 1949) and Public Law 793 (making appropriation for foreign aid in 1949), it was provided that the Department of the Army should furnish from its production 50 percent of the export requirements of nitrogenous fertilizer materials for nonoccupied areas.

In Public Law 793, it was further provided that 10 percent of the total anhydrous ammonia produced in Army plants should be diverted to domestic use.

(The pertinent sections of each law are appended.)

The intent of the Congress in these laws was to earmark part of the Army production for use outside of the occupied areas of Germany, Japan, Ryukyus, and Korea. At the time these provisions were enacted, a shortage of nitrogenous fertilizer materials existed both in the United States and in the international situation. The Army was applying its entire production to its occupied areas without regard to domestic and world shortages.

The action of the Congress diverted approximately 30,000 tons (nitrogen content) to domestic use in the 10-percent program and approximately 30,000 tons for export in the 50-percent program.

Since the enactment of the law, two major changes have occurred which may make it advisable to discontinue the provisions of Public Laws 606 and 793.

1. The Army has increased its production.

2. The needs of the Army for its occupied areas will be reduced sharply. The decreased demand will result in major part from the change in status of Korea. Korea will cease to be an occupied territory after January 1, 1949, when the appropriation made to Government and Relief in Occupied Areas will be transferred to the Economic Cooperation Administration.

Because of these two factors, Army production will greatly exceed Army demands for the occupied areas. Without Government regulation, the production of the Army plants which is not required for the occupied areas will move into normal commercial channels. No new legislation will be required to release a sizeable portion of Army production to relieve domestic-fertilizer shortages or to meet export requirements for the nonoccupied areas.

ARMY PRODUCTION

Ammonia (NH_3), basic in the production of nitrogenous fertilizers, is produced for the Army at three plants. Operation of a fourth plant will begin July 1, 1949.

Two plants, the Morgantown (Morgantown, W. Va.) and Ohio River (West Henderson, Ky.) ordnance works, are operated directly for the Army.

A third plant, the Cactus ordnance works (Etter, Tex.) is under lease to the Phillips Petroleum Co. with provision that the Army may acquire any or all of its production to meet fertilizer requirements for 4 years.

The fourth plant will operate as the San Jacinto ordnance works. It comes into operation through the removal of two inoperative fertilizer trains removed from the Missouri ordnance works at Louisiana, Mo.

The forecast for production of these plants for 1949, given in terms of NH_3, is 360,400 short tons. An increase to 462,800 short tons in 1950 is predicted on the following production schedule:

	Short tons, NH_3
Cactus	147,700
Morgantown	227,200
Ohio River	65,500
San Jacinto	22,400
Total	462,800

The production and end use of nitrogenous fertilizer material from Army ordnance

plants, given both in terms of NH_3 and contained nitrogen, is estimated for 1949:

	NH_3	Contained nitrogen
Anhydrous ammonia production	360,400	296,609
10 percent of ammonia to domestic fertilizer producers	36,040	29,661
10 percent of exports to nonoccupied areas	40,310	30,644
Production for occupied areas	284,050	233,733

DISTRIBUTION TO THE OCCUPIED AREAS

The distribution of nitrogenous fertilizer, in terms of nitrogen content, for the year 1949 will be:

Germany, 40,491 short tons, nitrogen content.

Japan and Ryukyus, 88,577 short tons, contained nitrogen.

Korea, 89,344 short tons, contained nitrogen.

Total, 218,412 short tons, contained nitrogen.

Confidential estimates (to be released with the 1950 budget message) show a demand next year for nitrogenous fertilizer material in Germany that is approximately half of the 1949 requirement. Requirements for Japan will increase by approximately one-third. Korea, however, ceases to be an occupied territory for planning purposes after January 1, 1949. Accordingly, the total demand for the occupied areas in 1950 will require approximately 150,000 short tons of contained nitrogen out of total Army production of approximately 381,000 tons of contained nitrogen.

After the Army meets the needs of the occupied areas in fiscal 1950, the amount of nitrogen remaining for diversion to domestic use or export will be substantially greater than existed this year. No legislation similar to that found in Public Laws 606 and 793 is required to make this surplus available to United States and foreign agriculture.

THE 10-PERCENT PROGRAM

There exists adequate cause for the immediate elimination of the 10-percent program established in Public Law 793. In accordance with the terms of the law, 10 percent of the Army production, or approximately 30,000 tons of NH_3, has been allocated to relieve domestic shortages which last spring threatened the shut-down of certain key plants in the Northwest which manufactured fertilizer.

The 30,000 tons of ammonia allocated has proved more than adequate to cover the statutory preferences of the law.

The allocation of ammonia in the 10-percent program was entrusted to the Department of Commerce. The Department reports that allocations have been made with difficulty and have not given the over-all relief intended by the Congress to reduce fertilizer shortages throughout the Nation. Officials of the Department recommend the abandonment of the 10-percent program.

The provisions of Public Law 793 restrict the allocation of the 10-percent program to certain plants which were producing ammonium sulfate during the 6 months preceding enactment of the law or which were facing imminent shut-down. In practice, these restrictions may become a deterrent to full fertilizer production. Already, certain sulfate plants to which allocations of ammonia have been made are unable to handle the full amount of their allocation. The result may be that the production of ammonia for the Army at the Cactus ordnance works will be curtailed for lack of storage space unless some means are found to turn the Cactus production to other plants than those named in Commerce Department orders.

THE 50-PERCENT EXPORT PROGRAM

The export program has worked reasonably well but the production and demand relationship is so much improved that abandonment of the 50-percent program would work no harm.

Approximately 30,000 tons of contained nitrogen have been diverted from Army production to meet the requirements of this program. The production in Army-controlled plants in 1950 and 1951 will be so increased, however, that the Army can meet the full demands of the occupied areas and still supply substantial quantities to move in export without requiring direct legislation.

The cooperating nations of the European recovery plan, which are the largest claimants of United States fertilizer exports, have procured nitrogenous fertilizer through normal commercial channels. If such a program of procurement is continued, the Army best can serve the program by releasing to domestic fertilizer plants the production of anhydrous ammonia not required for the occupied areas. The needs of Korea will be met, it is presumed, by commercial procurement subject to International Emergency Food Committee allocation so long as IEFC control of nitrogen continues in world trade.

GENERAL RECOMMENDATIONS

The ammonia required for the 10-percent and the 50-percent programs has been released by the Army from the Cactus ordnance works. This plant, in accordance with congressional directive, was leased by the Army in the spring of 1948. Since then, its production has been increased substantially. The Army holds a 4-year option on Cactus production and has exercised its option in 1949. If the Army can meet its requirements for the occupied areas from the Morgantown and Ohio River ordnance works in 1950, it should permit the production of Cactus to move into normal trade channels to relieve the domestic situation and meet export requirements, in accordance with the terms of the lease. In addition, it is recommended that the fertilizer trains which are in process of transfer to San Jacinto be leased as soon as practicable on terms similar to those made at Cactus.

JOHN PILLSBURY, *Staff Member.*

Edward W. Allen, Fisheries Statesman

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have placed in the Appendix of the RECORD an article which appeared in the Seattle Times of Sunday, January 30, 1949, concerning the work of one of the Nation's outstanding fisheries authorities, Mr. Edward W. Allen. The only compensation a United States member of the International Fisheries Commission receives is the pleasure of the work, the satisfaction from success, and occasionally a kind word. It is my opinion that this fine tribute to Mr. Allen, written by a well-known Seattle newspaperman, Mr. Victor B. Westphal, is also typical of the work of all the Commission members who have given their time and energy so freely.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FISHERIES STATESMAN

(By Victor B. Westphal)

If you come in contact continually with any distinctive phase of your chosen work and like it, you specialize in it and ultimately become an expert in it.

That is how Edward Weber Allen, Seattle attorney and author, has developed during the past generation into the Pacific Northwest's outstanding authority on Pacific fisheries and activities. He is a member of two international commissions which handle these problems and has been called in consultation on similar questions elsewhere. Because of his interest in the North Pacific, he began collecting early publications and maps and, as a result, now has one of the most complete Alaskana collections in this part of the world.

When Allen started out in school and then went to the University of Chicago, he probably had no thought of becoming a fisheries expert. In 1907 he transferred to the University of Washington, was graduated in law in 1909 and admitted to the bar. His first job was as office boy for the law firm of Wright & Kelleher, obtained through the efforts of Dean Herbert Condon, of the university, who substituted for a member of the firm during the latter's absence.

Wright & Kelleher had some Alaskan business, representing Norwegian interests in the Territory. This was Allen's first contact with this phase of his work, which was to develop during his professional career until it reached its present important place.

After he had clerked for some time in the law office, his employers felt he should acquire experience in handling trial cases, so he went to South Bend, in Pacific County, where he later became deputy prosecuting attorney. There he again came in contact with fisheries cases which grew out of the fishing industry in the Columbia River. He took an increasing interest in these and when, in 1914, he became assistant State attorney general, the Fisheries Department was one of his charges. He handled all the fisheries cases in which the State was interested and recalls that he used to cruise around Puget Sound in the State's "navy," a small, cutter-type craft.

Two and a half years later Allen returned to his firm as a junior member, took over all of its fisheries work and expanded it. In connection with this phase of his legal activities, he made his first trip to Alaska in 1919. During the next 22 years he missed going north only one year.

Because of his increasing knowledge of fisheries problems, Allen was appointed a member of the International Fisheries Commission by President Hoover in 1932. This body, consisting of two American and two Canadian members, devotes its attention to regulation and conservation of the halibut fisheries.

In 1937 Allen was elected Chairman of that Commission and in the same year President Roosevelt appointed him to the International Pacific Salmon Fisheries Commission, which consists of three American and three Canadian members and handles salmon problems exclusively.

Tenure of the American members of these Commissions is subject to the pleasure of the President. Their duties require considerable work and responsibility as well as expense, for no salaries are paid. His compensation, says Allen, is in the satisfaction he receives in carrying forth the activities to the best of his ability. Because of his fisheries knowledge, he has been called on for advice and participation in other fisheries activities, both on the east coast and in the Pacific. Among them is the Pacific Fisheries Conference, which includes all elements of

the fishing industries from Alaska to San Diego. He also has been called into consultation by United Nations groups which deal with fisheries problems.

Allen admits to an interest in sport fishing, although his duties do not permit him to participate in it often. He feels that he works for the best interests of the sport fishermen by his membership on the Salmon Fisheries Commission, as its regulation of the commercial industry also has served to assure fish for the sportsmen.

It was in 1921, when Allen visited Lituya Bay in Alaska, that he became interested in Alaskana and North Pacific maps and in writing about the far north. He has shelf upon shelf of books, pamphlets, and newspapers about Alaska and the North Pacific, written in a number of languages. Some of these tell of the voyages of Vitus Bering, the Danish naval officer who discovered Bering Sea and Bering Strait in 1728 and the main body of Alaska in 1741. Others tell of the Russian voyages to the North Pacific in the mideighteenth century, while still others recount Captain Cook's voyages around the world. From later years there are writings by John Burroughs and John Muir, down through Rockwell Kent's gorgeously illustrated volumes.

The oldest map in Allen's collection of more than 300 is dated 1511. It is the first printed map of North America, showing just a part of Labrador. His chronological arrangement then follows the growing knowledge of the features of the North Pacific coast and Alaska. The maps all are originals and many are ornate in design and richly colored. They have been displayed at a number of exhibitions here.

As a writer, Allen has been very prolific for a person who has so many other activities. His first book, North Pacific, was published in 1936 after 18 years of taking notes, 14 trips to Alaska, and 5 years in the writing. In it there is the inherent romance of the sea, the drama of ocean fishing, rich humor, stirring adventure, photographs, and unusual maps.

North Pacific, in recounting how Japanese fishermen first invaded the field of the Russian fisheries, then entered Alaskan waters to threaten the basic fisheries of Canada and the United States, virtually forecast conflict between the United States and Japan, saying: "They (our so-called diplomats) were ignorant of Japan's modern method of declaring war—speaking sweet words of peace while she launches a surprise attack."

Allen's second book was on LaPerouse, who commanded the first French expedition to Alaska and led the first party of any nationality, other than Spanish, to visit Spanish settlements in California in 1786. Allen has made a hobby of collecting a library built around this picturesque early French explorer.

In addition, Allen has written scores of magazine articles on fisheries, trade, and legal matters.

One would think that in carrying on these activities, Allen must have had his time pretty well occupied and he'd not have much left for anything else. But not so. A record of his professional and civic participation reads like a page out of Who's Who. As an attorney he has held offices and headed committees in the State and national bar associations, has served as secretary of the State board of park commissioners, has been a member of the Seattle Public Library Board, for which he drafted a 10-year program, and the municipal league, Seattle Art Museum, and the chamber of commerce.

Allen also has been prominent in University of Washington alumni activities and in 1947 received the Alumnus Summa Laude award presented annually to an outstanding university graduate by the alumni association. This award had an amusing sidelight for Allen, as he was expelled from the university in his junior year for being mixed up, innocently, in the publication of the Siwash Chief, a comic magazine which ridiculed the faculty. When the fall quarter rolled around, however, everything was smoothed over and Allen completed his course.

Allen is married and has a grown son and daughter. There is a touch of the military in his family tree. He is the son of a Civil War hero, he spent 8 years in intelligence work during the Second World War, and his son was a naval officer. His brother, Henry, a well-known engineer, holds the rank of colonel.

Allen is senior member of the law firm of Allen, Froude, Hilen & DeGarmo. Among his club activities is membership in the famous Explorers Club of New York.

Despite his many and diverse interests, Allen enjoys them all and finds his reward in the personal satisfaction of a job well done.

School-Lunch Program

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a press release from my office today relative to an amendment submitted by me and my colleague [Mr. HOLLAND] to the National School Lunch Act appropriation.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

Senator CLAUDE PEPPER (Democrat of Florida) and Senator SPESSARD L. HOLLAND (Democrat of Florida) introduced in the Senate today an amendment to the National School Lunch Act appropriation which would provide a direct appropriation from the Treasury of $150,000,000 to carry out the provisions of the act during the year ending June 30, 1950. In addition to providing more funds for the school lunch program, the proposed amendment would change the form of the appropriation as passed by the Republican-dominated Eightieth Congress in two respects: (1) It provides for a direct appropriation from the Treasury instead of taking the money out of section 32 funds, thus releasing section 32 funds for authorized programs to assist distressed agricultural commodities in surplus, and (2) it makes available about $10,000,000 for nonfood assistance, such as kitchen equipment and the like, under the school lunch program.

Senator PEPPER and Senator HOLLAND said that they are trying to make it possible for every school child in America to get at least one good meal a day. If the Congress approves our amendment, it will mean that not only will our children be provided with at least one nutritious meal a day, but it will also be possible for the Federal Government to purchase more of our Florida citrus products for distribution under the program. Under the present school lunch program we are reaching only 22 percent of our schools and we know that we could easily use at least $5,000,000 more in citrus purchases under the school lunch program in addition to the $2,000,000 in citrus purchases already made during the current fiscal year. We will be promoting good health for our children and at the same time, providing a means to assist Florida's citrus industry."

Amendment intended to be proposed by Mr. PEPPER (for himself and Mr. HOLLAND) to the bill (H. R. ——) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1950, and for other purposes, viz:

On page —, lines —, strike out the words "To enable the Secretary to carry out the provisions of the National School Lunch Act (42 U. S. C. 1751–1760), there is hereby made available of the funds appropriated for the current fiscal year 1950 by section 32 of the act approved August 24, 1935 (7 U. S. C. 612 (c)), such amount to be without regard to the 25 percent limitation contained in said section 32, and to be exclusive of funds expended in accordance wtih the last sentence of section 9 of the National School Lunch Act: *Provided*, That no part of such funds shall be used for nonfood assistance under section 5 of said act." And substitute therefore the words "To enable the Secretary to carry out the provisions of the National School Lunch Act of June 4, 1946 (42 U. S. C. 1751–1760), $150,000,000.

Josef Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. O'CONOR. Mr. President, in his usual scholarly fashion the reverend Chaplain of the Senate, the Reverend Dr. Frederick Brown Harris, discussed with his congregation of the Foundry Methodist Chuch yesterday, according to reports in the press, the recent trial of Josef Cardinal Mindszenty.

Dr. Harris went directly to the point of the whole controversy, I am sure, when he said:

The cardinal is really on trial for defending the things which every Christian steadfastly believes.

Because the report of Dr. Harris' address in today's Washington Post is one that will have a profound impression on all who read it, I ask unanmious consent that it be inserted in the Appendix of the RECORD.

With further reference to the same much-publicized matter, the New York Times of Sunday, February 6, in an editorial depicts the implications of the trial which has just been completed.

I ask unanimous consent that this editorial also be printed in the Appendix of the RECORD.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Post of February 7, 1949]

HARRIS SEES SOVIET AT WAR WITH CHRIST

The Reverend Dr. Frederick Brown Harris, Chaplain of the Senate, declared yesterday that the so-called trial of Josef Cardinal Mindszenty is the signal for a war to the hilt between communism and Catholicism.

He told the congregation of Foundry Methodist Church, of which he is pastor, that the trial is also the signal for war between an anti-Christian colossus and any church which refuses to submit to its supremacy and regimentation.

"This trial," he continued, "is only the first in a series of onslaughts that may be expected. In this fear-haunted world the

battle is drawn between Christ and anti-Christ."

TRIAL OF CHRISTIANITY

"The cardinal is really on trial for defending the things which every Christian steadfastly believes. The plain fact is that he is simply anti-Communistic and that is the unpardonable sin with the present masters of the Kremlin and the puppet police states which they control," Dr. Harris declared.

Dr. Harris said the trial has been "following the usual Soviet pattern," in which the victim confesses, "at least partial guilt."

"One shudders to think of what diabolical torture rings such false admissions from human lips which before have spoken so uncompromisingly," he continued.

NEW DAY OF TERROR

"So-called Christian churches who will agree to let politics alone," he continued, "will not be molested. Silence and acquiescence may buy temporary safety. But to defy communism and its godless implications is to court martyrdom in the new days of terror," Dr. Harris declared.

"Every Christian minister who has eyes to see the sinister significance of the cardinal's trial stands with him and for him as he sits in the prisoner's dock before the modern Pilates. With him in the dock is Christendom.

"This fight is not just between Roman Catholicism and communism. It is between a godless communism and any type of Christianity worthy of the name," he concluded.

[From the New York Times of February 6, 1949]

JUSTICE EAST OF THE ELBE

Two significant remarks were made in a Budapest courtroom yesterday as the trial of Cardinal Mindszenty and his fellow-defendants dragged toward its expected close. Judge Vilmos Olthys, who rose to his present position from former membership in the Hungarian Nazi party, took note of both of them. The cardinal's attorney in a weak and apologetic defense of his client said: "I remind you that all of you in this courtroom will likely be mentioned in world history and your deeds will be judged through the next century." We do not dispute this sentiment. The prosecutor, asking for a hard sentence, charged that the newspapers of the Western World want to prove that justice in the people's democracies is in the hands of the police and is not really justice. This second statement is inaccurate. Most of us would be glad if communism showed a change of heart by returning to the ancient tradition of fair trial for all persons charged with crimes.

The difficulty is that the Budapest trial follows exactly the familiar script of all such trials under Communist regimes. The best judgment of those whose business it is to study such things is that arrests and trials are completely political. Cardinal Mindszenty admitted in court that he was guilty in principle and in detail of most of the accusations made. Yet some of the charges were palpably false. We have to fall back on the belief that as in former and similar trials the accused persons were subjected to physical or mental torture or were otherwise induced to confess crimes they never committed. Yet Cardinal Mindszenty was basically guilty of one crime against the kind of people's democracy that has subjugated Hungary. He believed in the ethics of the Sermon on the Mount, and in the dignity and value of the individual human life. And these beliefs are treason now in eastern Europe.

As the Budapest tragedy was drawing to its close, news came from Warsaw and from Prague. In Warsaw leaders of the Home Army, who rose in insurrection against the Nazis in 1944 and who came out of hiding 3 years ago on promise of amnesty by the present Polish Government, have been arrested on charges of conspiring against the lives of government officials. Security Minister Stanislaw Radkiewicz went so far as to say that reaction in Poland has been reduced to an intelligence service agency in the pay of the most aggressive and imperialistic power—the United States. We can guess what will happen to these Polish patriots. No doubt they will confess. In Prague the Czechoslovak Army has been purged without mercy, and trials of the arrested men will soon be held. One could almost write the story of those trials without any further news from Prague.

In this country a group of Communists are on trial on charges of conspiring to do illegal things. The outstanding news of that trial has been the manner in which the defense attorneys have used their privileges. We cannot predict the outcome. Indeed, in this country outcomes of trials are not predictable until the jury brings in the verdict. But we can say that the defendants are enjoying and will enjoy every right mentioned in our fundamental law and that they will not be treated as guilty until and unless they are proved guilty. The difference between justice in the people's democracies of eastern Europe and justice as it has developed over the centuries with the broadening down of freedom in the free countries does not need to be enlarged upon.

Bootlegging Menace Spreads

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Christian Science Monitor of Friday, February 4, 1949, written by Roscoe Drummond, chief of its Washington bureau, entitled "Bootlegging Menace Spreads."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOOTLEGGING MENACE SPREADS

(By Roscoe Drummond, chief, Washington bureau, the Christian Science Monitor)

A recent newspaper headline reads: "T-men crack down on stepped-up bootlegging."

Bootlegging? Stepped-up bootlegging? Arrests going up? Federal revenue agents busier? Gangsterism?

Yes; these are the facts as objectively and grimly reported by the Treasury Department of the United States Government. They are facts which will be startling to all who remain taken in by the soporific apologists of the liquor industry. It was they who blacked out the thinking of many people with the propaganda that the repeal of the eighteenth amendment automatically would repeal all the serious crime which they, the liquor spokesmen, attributed to it.

Neither throughout the country, where I have traveled a good deal, nor here in Washington do I see a disposition to do anything practical to deal with the social and criminal consequences of the licensed liquor traffic. One reason for this political indifference is that the public has not yet freed itself from the propaganda of the liquor industry, that it is uninformed on how bad conditions have become under repeal, and is unaware that these crime conditions are continuing to get worse, not better.

The basic fact which stands out from the Treasury's unemotional statistics is that today we not only have unlimited legal liquor but also a mounting volume of illegal liquor, bootlegging, crime, and tax evasion. Some of the supporting evidence for this statement is as follows:

Treasury agents are capturing more stills, with great capacity, and more bootleg liquor and mash than at any time since 1942.

The Treasury's alcohol tax unit from July 1 to November 1, 1948, seized illegal stills with a daily producing capacity of 70,466 gallons—50 percent greater than in the same period the preceding year.

The Treasury estimates that if the full daily capacity of these newly discovered stills had been sold illicitly, it meant revenue losses of $635,000 a day.

Although, primarily because of the shortage of sugar, bootlegging fell off during the war, it is now steadily on the upgrade. During the 1947–48 fiscal year 6,757 illicit stills were seized, compared to the 6,053 captured the previous year. Much of the postwar increase in bootlegging has taken place in the South, but recently Federal agents have broken up new rings in northern metropolitan cities. Just as examples: A 750-gallon still was captured on Long Island, with 2,750 gallons of mash ready to run; near Philadelphia, agents uncovered a still with a 2,000-gallon capacity and brought in four trucks, two trailers, two passenger cars, and nine prisoners.

During the first 4 months of the last fiscal year Treasury agents made 2,824 arrests for bootlegging, against 2,349 arrests during the same period the previous year.

All this adds up to the conservative but disturbing conclusion that no one really knows how much the Government is losing from postwar bootlegging; that the presence of unlimited legal liquor does not mean the absence of illegal liquor; that more of the one is bringing more of the other in its wake; that effective Treasury enforcement is discovering more and more bootlegging, and that it is begetting more crime and gangsterism which, contrary to the beguiling propaganda of the 1930's, do not at all seem to be the special attributes of prohibition.

Obviously the public will not be ready to cope with these problems until it is more fully aware of them. Even then, any political action dealing with the liquor traffic will have to gain widespread public acceptance and prove its workability. I am inclined to believe that the best approach is to try to begin modestly.

Can there be a valid argument advanced by any detached person why all liquor advertising in all media, magazines, newspapers, radio, should not be banned by Federal action? It may be fairly argued that the liquor industry has been licensed to meet an admitted demand for drink. But it has not been licensed in order to increase that demand.

Shouldn't the liquor industry be prevented from trying to increase the demand and from trying to plant the desire for alcohol with young people, as it now does by the most lavish, subtle, bland, and alluring advertising? To ban liquor advertising would be a good place to begin to check, to some degree, the crime now getting worse under repeal.

Portrait of Benito Juarez

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. CHAVEZ. Mr. President, the Pan-American Round Table of El Paso had

a good good-neighbor idea. It is discussed in an article in the Albuquerque Tribune for February 2, and I ask unanimous consent that the article, together with a biography of Benito (Pablo) Juarez, be printed in the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

PORTRAIT OF BENITO JUAREZ

The Pan-American Round Table of El Paso had a good good-neighbor idea.

They discovered there was no adequate portrait in Washington of the almost legendary Mexican hero, Benito Juarez, the man who gave his name to the Mexican city just across the Rio Grande from El Paso.

So, they raised the money and commissioned Tom Lea, the famous Texas artist to paint a portrait of the "Liberator." Lea studied every available picture and daguerrotype of Juarez, went to Mexico City, read biographies.

His striking portrait this week was presented to the Government and accepted by it for permanent placement in Blair-Lee House, where distinguished foreign visitors are lodged.

Juarez was to the Republic of Mexico much what Abraham Lincoln was to our country.

It is fitting that his portrait should hang in one of our most famous public buildings.

The fact that it will, by virtue of the El Paso Round Table's efforts, underscores our good neighborliness.

BENITO (PABLO) JUAREZ

Juarez, Benito (Pablo) (1806–72), was born at Gelatao, near the city of Oaxaca, Mexico, March 21, 1806, of full-blooded Zapotec parents. He was educated for the church by a charitable merchant of Oaxaca, but in 1827 entered the Institute of Arts and Sciences to study law. In 1832 he received his degree of bachelor of law, and 2 years later was appointed advocate of the supreme court of the republic. He was governor of Oaxaca, 1847–52, and in this post showed himself so ardent a partisan of liberal ideas that, when Santa Anna seized the Government in 1853 he was imprisoned. Escaping to New Orleans, he returned to Mexico in 1855 to assist in a successful revolt against Santa Anna led by Alvarez and Comonfort, and held the portfolio of justice in Comonfort's government. In this capacity he issued the first of his great reform measures restricting the privileges of the military and the clergy (1855, 1856, 1857), which, culminating in the famous anticlerical constitution of 1857, caused a nation-wide rebellion and precipitated the War of the Reform. In January 1858 Comonfort fled the country, and Zuloaga, supported by the clericals and the army, declared himself de facto president and seized the capital. Juarez, as constitutional successor to Comonfort, declared himself the de jure head of the nation and was recognized by the United States (in April 1859), and in July he felt himself strong enough to issue the reform laws of 1859, which completely nationalized and secularized the church. By the beginning of 1861 the clericals had been everywhere defeated, and on January 11, 1861, Juarez entered Mexico City, and was constitutionally elected president. But his government was without funds, foreign creditors were clamoring for satisfaction, and the country, after 5 years of civil war, was in a state of economic chaos; so that in July 1861 he issued a decree suspending for 2 years payment on the national debt. This embroiled him immediately in a new conflict. Napoleon III, who had for some time been contemplating intervention in Mexico, promptly seized upon Juarez's decree as a pretext, and induced England and Spain (Convention of London, October 1861) to join him in the ostensible purpose of enforcing the payment of foreign creditors. Armed forces appeared at Veracruz in December 1861. Juarez showed himself conciliatory, and in February 1862 commissioners of the four Governments ratified the Peace Treaty of La Soledad. In March, General Lorencez landed with large French reinforcements; the English and Spanish commissioners withdrew their cooperation, and on April 12, 1862, Juarez declared war upon France. In June 1863 General Bazaine entered Mexico City, and on July 8 declared a monarchy. Maximilian arrived on May 28, 1864, and was crowned in the capital in July. By the spring of 1865 there were 30,000 French soldiers in the country, Juarez had been driven northward to the Paso del Norte, almost to the United States border, his armies were shattered, his government almost penniless. But he refused to relinquish his stand as constitutional president. The end of the year saw a great change. Maximilian was bankrupt; Napoleon saw the futility of his imperial project, and the United States, now that the Civil War was over, insistently demanded the withdrawal of the French troops. In February 1867 the last French troops sailed from Veracruz. Maximilian was captured at Queretaro on May 15 and executed on June 19, and on July 15 Juarez returned to Mexico City. He was reelected president in August. But his genius was not equal to the appalling problem of reconstruction which confronted him. Insurrections and revolts harassed his entire term. In the election of 1870 Porfirio Diaz and Lerdo de Tejada appeared as rival candidates, and Diaz, when Congress announced that Juarez had been again reelected, immediately headed a revolt. The movement failed, but in the midst of it, on July 18, 1872, Juarez died of apoplexy in Mexico City. With his death ends one stage of Mexican history. He did not, as Diaz was to do, wholly dominate his epoch, but during the most momentous period of Mexico's history he was the guiding genius, and is by many called Mexico's national hero.

Federal Assistance for Rural Roads

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement relative to Senate bill 244, which was introduced by the junior Senator from North Dakota [Mr. YOUNG] and myself. I ask that the statement be printed in the Appendix of the RECORD, together with a table and a copy of Senate bill 244.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

The United States Government has been engaged in an extensive program of assistance to the States in highway construction. The Federal-aid program has provided the funds for a major portion of our great roads of today, and has provided the incentive for additional construction on the part of our States and local political subdivisions.

In 1948 Congress authorized the continuance of this program at the annual rate of $450,000,000, for the next 3 years. The funds thus provided on a matching basis, will be used to build primary, secondary, and urban road projects. There is a great need for the program that has been accentuated by the recent expansion of motor-vehicle traffic all over the Nation.

When provisions for assistance to secondary-road projects were first incorporated into the Federal-highway program, there was much talk of farm-to-market roads that would provide long-needed services for the farmers of the country. The roads that have been built under the secondary program have all been extremely useful, but they are actually secondary highways instead of rural roads.

NEW PROGRAM NEEDED

Too many of our rural people in every part of the Nation are still in the mud and dust. This condition is likely to remain until an active rural-road program is instituted by the Federal Government. To meet this need, S. 244 has been introduced.

Senator YOUNG and myself ask that $100,000,000 be added annually to our highway assistance program, to provide assistance to local governmental subdivisions in the construction and maintenance of rural roads. S. 244 is not intended as a substitute for rural-road programs within the individual States. The funds it would provide on a matching basis would supplement local programs, and provide an incentive for more active local programs.

The sum of $100,000,000 was agreed upon because that figure is approximately the difference in the amount of gasoline and motor-oil taxes collected by the Federal Government and the sum expended for highway aid. During the 1949 fiscal year, collections in this field totaled approximately $559,000,000.

The road-using public which pays the Federal gas and oil tax assumes that the money is returned to the States in highway aid. The money should be returned in as practicable a manner as possible, and its use for rural roads seems the most-needed solution. The farmers have been paying the gas tax for many years, yet the greatest portion of them are still without all-weather roads to get to town, to church, to school, to visit their neighbors.

The records of the Bureau of Internal Revenue make it clear that income from the gas and motor-oil tax is likely to continue to increase during the next few years. The following table lists the revenue for the postwar period:

Fiscal year:	*Lubricating oils*	*Gasoline*
1946__	$74,601,712.78	$405,694,550.72
1947__	82,014,668.57	433,675,867.82
1948__	80,886,921.61	478,637,625.15

The rural-road bill which has been submitted to the Congress eliminates the necessity for most of the very detailed specifications which are a part of all construction under the regular Federal-aid program. These specifications may be necessary for primary and secondary highways, but they produce a building cost per mile far beyond the practical purposes of normal rural roads. The rural roads which would receive assistance under this bill could be adequately surfaced at a cost of perhaps one-fifth of the present cost per mile of primary highways.

The Rural Roads Division in the Public Roads Administration that would be established under S. 244 would exist primarily to coordinate the activities of the various local programs and provide the proper technical information and assistance. Nothing is envisioned that would give this Administration the power to establish specifications which would price out of all possibility any adequate rural-road action.

The terms of S. 244 are not offered as being the ultimate perfection in this program. The sponsors are willing to accept any revision that would better achieve the purpose of establishing the road program.

PRESENT CONDITIONS

More than half of our rural roads are not of an all-weather variety. More than one-third are ungraded, undrained paths that should be called trails instead of roads.

Farmers own 30 percent of the trucks and 20 percent of the passenger cars in the Nation. They are entitled to a fair share of the roads, and a Federal rural-road program should be established and continued until every farm in the Nation has access to an all-weather road outlet.

Roads mean more than just convenience in the production and marketing of our food and fiber. They mean better mail service, better medical care, better educational opportunity, a chance to develop the social and cultural potentiality of our rural communities.

APPENDIX I

Apportionment of annual authorization for rural roads under S. 244

[Prepared by Legislative Reference Service, Library of Congress]

Alabama	$2,512,139
Arizona	1,496,522
Arkansas	2,075,424
California	3,448,008
Colorado	1,809,686
Connnecticut	511,014
Delaware	487,500
Florida	1,454,787
Georgia	2,877,404
Idaho	1,300,526
Illinois	3,150,588
Indiana	2,396,214
Iowa	2,638,472
Kansas	2,621,265
Kentucky	2,285,515
Louisiana	1,703,389
Maine	930,851
Maryland	783,353
Massachusetts	524,370
Michigan	2,749,273
Minnesota	21,769,198
Mississippi	2,251,932
Missouri	3,037,580
Montana	2,075,587
Nebraska	2,095,004
Nevada	1,289,649
New Hampshire	487,500
New Jersey	695,623
New Mexico	1,679,940
New York	2,842,807
North Carolina	2,989,042
North Dakota	1,596,648
Ohio	3,077,285
Oklahoma	2,472,312
Oregon	1,705,111
Pennsylvania	3,511,528
Rhode Island	487,500
South Carolina	1,685,623
South Dakota	1,664,064
Tennessee	2,460,220
Texas	6,701,390
Utah	1,128,966
Vermont	487,500
Virginia	2,128,671
Washington	1,597,981
West Virginia	1,393,551
Wisconsin	2,441,130
Wyoming	1,259,905
Hawaii	487,500
District of Columbia	487,500
Puerto Rico	755,355
Total	[1] 97,500,000

[1] This figure excludes the administrative allowance (2½ percent) from the annual authorization. It is not the exact total of all the State items due to rounding.

APPENDIX II

[S. 244, 81st Cong., 1st sess.]

A bill to supplement the Federal-Aid Road Act, approved July 11, 1916, as amended and supplemented, to authorize regular appropriations for the construction of rural local roads, and for other purposes

Be it enacted, etc., That, notwithstanding any other provision of law, the Commissioner of Public Roads is authorized to cooperate with the States and their various local political subdivisions in the construction of rural local roads. The Commissioner and the constituent local governmental agencies shall agree as hereinafter provided upon the roads to be constructed within the various local political subdivisions: *Provided*, That all determinations with respect to specifications and standards of construction shall be made in each of the several States by joint agreement between the State highway department and the local political subdivisions of such State: *Provided further*, That all roads constructed under this act shall be of all-weather type of construction: *And provided further*, That such roads shall be free from tolls of all kinds.

SEC. 2. As used in this act—

(a) The term "rural local roads" means all roads (except roads located on Federal-aid highway systems or within incorporated municipalities) which are and normally have been the jurisdictional responsibility of county or local governments, including rural-free-delivery mail routes, public-school bus routes, farm-to-market and mine-to-market roads, and all other local roads that serve as feeder and connecting roads for service to agriculture, forestry, mining, and the general uses of rural occupation and habitation.

(b) The term "Commissioner" means the Commissioner of Public Roads.

(c) The term "State highway department" means the official department, commission, or board of any State, created and empowered to act in accordance with the provisions of the Federal-Aid Road Act of July 11, 1916, as amended and supplemented.

(d) The terms "local political authority" or "local board" mean the constitutional and duly authorized taxing district, agency, board, commission, court, municipality, or police jury of any political subdivision of a State, having adequate powers to administer the highway system within its jurisdiction, and suitably equipped and organized to discharge to the satisfaction of the Administrator of the Federal Works Agency the duties herein required.

(e) The terms "road" or "highway" shall include rights-of-way, bridges, drainage structures, signs, guardrails, and protective structures in connection with highways.

(f) The term "construction" shall mean the supervising, inspection, actual building, and all expenses incidental to the construction or reconstruction of a highway, including locating, surveying and mapping, costs of rights-of-way, and the elimination of hazards at railway grade crossings.

(g) The term "maintenance" shall mean the constant making of needed repairs to preserve a smooth-surfaced highway and to insure the continuing economy of its service.

SEC. 3. (a) There is hereby created within the Public Roads Administration a division to be known as the Rural Roads Division. Such Division shall be organized immediately upon the enactment of this act. Such Division shall be in the charge of a Deputy Commissioner of Public Roads, who shall be a member of a recognized national engineering society, shall have had at least 5 years' experience in an administrative or engineering capacity in one or more county highway agencies, and shall be familiar with agricultural problems and economic conditions in rural areas. The Commissioner is authorized to delegate any of his functions under this act to the Deputy Commissioner. The Commissioner shall have authority to deal with State highway agencies and, through such agencies, with county highway agencies, town highway agencies, township highway agencies, or any other local governmental highway agency within a State in administering the provisions of this act.

(b) In the selection of personnel for the Rural Roads Division, technical and policy-forming members of its staff shall be chosen from men experienced in rural-road problems, needs, and construction. For the better administration of the provisions of this act the Rural Roads Division shall maintain a representative or representatives in each of the several States participating in this road program.

SEC. 4. (a) There is hereby authorized to be appropriated for each fiscal year, beginning with the fiscal year ending June 30, 1950, the sum of $100,000,000 to carry out the provisions of this act.

(b) Funds appropriated to carry out the provisions of this act shall be in addition to those appropriated for secondary roads under the Federal-aid highway system.

SEC. 5. That so much, not to exceed 2½ percent, of the appropriation for any fiscal year made under this act as the Commissioner may estimate to be necessary for administering the provisions of this act and for carrying on necessary research and investigational studies independently or in cooperation with the State highway departments and other research agencies, and for publishing the results thereof, shall be deducted for that purpose, and shall remain available until expended, except that within 60 days after the close of each fiscal year the Federal Works Administrator shall determine what part, if any, of the sums theretofore deducted for administering the provisions of this act will not be needed for that purpose and apportion such part, if any, for the fiscal year then current and certify it to the Secretary of the Treasury, the State highway departments, and the local boards, to be apportioned among all the States for the current fiscal year in the same manner as other amounts authorized by this act.

SEC. 6. (a) The appropriations provided under this act shall be apportioned among the States in the following manner: One-third in the ratio which the area of each State bears to the total area of all the States; one-third in the ratio which the rural population of each State bears to the total rural population of all the States, as shown by the most recent Federal census; and one-third in the ratio which the mileage of rural delivery and star routes in each State bears to the total mileage of rural delivery and star routes in all the States.

(b) The sum allotted to each State under the above apportionment shall be apportioned among the several counties, or other local political subdivisions within such State in such manner as the legislature of such State shall provide: *Provided*, That in any case in which the legislature of a State shall not have made provision for such apportionment the Governor thereof, acting in consultation with the highway department of the State, is authorized to provide for such apportionment until the legislature makes such provision.

SEC. 7. The Federal share payable on account of any project provided for by funds made available under this act shall not exceed 50 percent of the cost thereof plus a percentage of the remaining 50 percent of such cost in any State containing unappropriated and unreserved public lands, other Federal lands, and nontaxable Indian lands, individual and tribal, exceeding 5 percent of the total area of all lands therein, equal to the percentage that the area of such lands in such State is of its total area.

SEC. 8. The funds appropriated pursuant to this act shall be expended on systems of rural local roads selected, after consultation with the Commissioner by agreement between the State highway departments and the local boards: *Provided*, That specific projects may be undertaken prior to such selection if it may reasonably be anticipated that such projects will become a part of such system when finally adopted.

SEC. 9. The State highway departments in consultation with local boards and the Commissioner shall formulate policies governing design, plans, and construction standards which will be consistent with the service

expectancy, cost, and requirements of economical maintenance for the character of roads contemplated in this Act.

SEC. 10. All construction projects exceeding $10,000 in amount for which Federal aid is allocated under the terms of this act shall be subject to competitive bidding and each such contract shall be awarded to the lowest responsible bidder: *Provided*, That any local political authority as defined herein may submit a competitive bid for any of its own road projects provided for in this act.

Extension of Federal Activities

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, February 7, 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Camel's Nose," dealing with the extension of Federal activities, published in the February 1949 issue of the Bulletin of Hanover College, Hanover, Ind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CAMEL'S NOSE

Another crossroads is before America. A bill or several bills will be introduced in the Eighty-first Congress for the Federal Government to enter new fields in the support of education. Education in America, supported by the local and State governments and by voluntary agencies, has grown to a greater extent than in any other country. There is still a greater development needed, but that does not mean the Federal Government must be asked to extend its activities in this field.

The extension of Federal activities in fields which can be handled by the States and private citizens is dangerous to our independence and liberty. In America we should seek to keep government with the people where they live. We should question carefully every suggested extension of control by the Federal Government over the affairs of life. What we have seen in recent years of totalitarian government and centralized power should make us resist every move in this direction.

Such proposals are also dangerous to the ultimate financial stability of our country. Too many of those who want to improve the educational or other phases of general welfare think it is easier to secure funds from the Federal Government than to get action in all the States. This growing tendency to look to the Federal Government for financial aid in matters that should be the responsibility of government at the State level is in danger of taking such a large percentage of the national income that our economic system will eventually break under the load. The Federal Government was not meant to be an agency for appropriating money for all sorts of things. It was meant to regulate where regulation is necessary at the national level.

Trying to advance human welfare by seeking action and financial support from the Federal Government in matters that properly are of local and State concern is the method of impatient people with an inclination toward arbitrary force where education and persuasion should prevail. Genuine improvement in human welfare, and in education especially, will come only as the people are led to desire it and are willing to pay the cost in money and in personal effort. This is the way of a free people and it requires no Federal action or appropriation. It requires persistent effort on the local and State level.

Since serious talk of Federal aid to education started some years ago most of the States have taken action to improve their educational systems. There has also come a widespread prosperity in our country with more employed workers than ever before. Without undue sacrifice every State can take care of its own education in an adequate way. Those institutions of higher education which depend on voluntary gifts to a large extent will be able to live if the Federal Government enacts tax laws which make voluntary giving possible; whereas every added burden on the Federal budget requires higher taxes which lessen the possibility of voluntary support of education and other causes and tends to throw the work of these agencies back on the Government.

Everyone has heard dozens of stories of Federal waste. The closer to home we handle our affairs the less waste we will have. Everything that the Federal Government undertakes will cost more than it would cost if done directly by those who have to put up the money. The public attitude toward Federal funds is unfortunately different than toward their personal funds. Too many people look at public funds as they look at a grab bag or goods spilled from a wreck. If only they can get something out for themselves they are willing to ignore the cost and the waste. This irresponsible attitude holds extreme danger for the financial stability of our country.

Our freedom is threatened by every extension of Federal activity. With the camel's nose of Federal-aid-to-education in the tent, there may at first be little or no interference with the freedom of the schools, but there can be no doubt that in the end control will rest with the source of support.

In higher education now we have 1,700 institutions. Each is free to experiment and develop in its own way. Altogether they have produced the best educational system in the world. If Federal aid in the field of general education is once started, there can be no doubt that control will grow, and ultimately will come the loss of freedom and initiative in our school system. Central government control of education in Germany as practiced to the *n*th degree under Hitler made possible the education of a generation of fanatical youth that all but brought destruction to our civilization. Let us not think it cannot happen here.

The Christian religion has always emphasized the worth of the individual. The great eternal values are to be developed in individuals, not in states. They are attributes of individuals, not of states. States will be secure only as they provide for the development of strong, responsible, enterprising individuals; they will not be secure by taking unto themselves the control of life that should be left with individuals. We do not want a big Federal Government and little men—men who are born, educated, and die as wards of the Federal Government.

Education has had a steady growth in America and the end is not here yet. We are going to have to spend more money than ever before for education. For a given amount of money we will get better results if we raise it at home and leave the Federal Government out. Our State tax-supported colleges and universities should be supplied with the funds they need to do a first-class job. Our private institutions need the voluntary gifts of individuals and corporations so that they can continue to carry their load of nearly one-half of higher education.

Privately supported colleges and universities are happy to go on under the present methods of support. The fact must be faced, however, that the demand for education is rising and it must be met. Likewise the cost per student is rising. If those who should support the private institutions do not, this load of higher education must fall back on the taxpayers, doubling the cost. If our citizens do not assume their load, both as taxpayers for State-supported schools and as contributors to privately supported schools, the public will call upon the Federal Government to assume it. Our present method of handling education is the best for us as free individuals and for the good of our country. There is a great deal that is right about the traditional American way of handling things. The way we have built up for handling education is good. Now as the needs increase, voluntary giving, on the one hand, and State aid for tax-supported schools on the other will have to measure up to the need. Let us keep the Federal Government out of the field of general education.

Those of us who believe in private enterprise and the development of individual initiative as it exists under our system of government, should actively oppose bills introduced in the Federal Congress providing for Federal aid to general education. The education of its youth is the duty of the individual States and no State has yet exhausted its own ability to provide the full cost. Keep in mind that if the proposed bills to provide Federal aid to general education in this country become law, the money to cover the cost of this Federal aid will come from the taxpayers of the States and in nearly every instance the Federal Government will take out of each State more money in support of Federal aid than it will return to the State.

CHARLES J. LYNN,
President, the Trustees of Hanover College.

Inaugural Address by Gov. Adlai E. Stevenson, of Illinois

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, February 7, 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting and instructive inaugural address delivered by Gov. Adlai E. Stevenson, of Illinois, before a joint session of the General Assembly of Illinois at Springfield, on January 10, 1949.

I have had made an estimate of cost of printing this address. The cost is estimated to be $195.25.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Speaker, Members of the Sixty-sixth General Assembly, Governor and Mrs. Green and fellow citizens: Every Governor of Illinois has tried, I suppose, to make his inaugural address brief. Few have succeeded. I, too, have tried, and failed, even though I have reserved for future comment many subjects deserving discussion.

I cannot fail, however, to note the significance and perhaps the historical opportunity for you and me in this hour when Illinois is passing from one epoch to another exactly as it did 100 years ago.

Historians say that 1848 was a transition year in the history of Illinois. A steel plow to cut the tough sod had, at last, been invented. The reaper had come to our prairies.

Plank roads had begun to lift Illinois out of the mud. The Germans and the Irish were coming. With 25,000 souls, Chicago was struggling out of the swamps. A railroad was creeping westward. Illinois was emerging from the log cabin frontier era and was taking its place in the new industrial day that was breaking upon the Union.

Illinois was to meet the test of a century ago. It was to become a pillar of strength and a progressive leader in the sisterhood of States. Behind vast barriers of sea and land, Illinois grew to maturity relatively remote and aloof from world affairs.

Today, Illinois stands at the threshold of another era—an era in which almost any event in any part of the world can have immediate and profound impact upon us. Barriers of time and space no longer isolate or protect us. And to a degree hitherto undreamed, events in America have prompt repercussions around the globe. Many watch us intently. Our mistakes, our failures, all are quickly exploited by those who watch with malice. But more watch with prayers.

Two convulsive conflicts have made our revolutionary generation the bloodiest in the history of man. And now with the post war period of gay optimism ending, the world settles down to a long trial of strength between individualism and collectivism—a trial of strength not limited to military and economic potentials but to moral and spiritual actualities.

Will Illinois in this new era take the leadership that it took in the materialistic era of the past hundred years? We can if we will it. We who meet here in Springfield today can take a long step toward making our Government a model, a precept in the best tradition of self-government. The forces of progress are at hand. In the century that stretches back to the log cabin door, nature, agriculture, industry, learning, and an energetic, diverse population have combined to bless us, enrich us, enlighten us. Nothing can stop us unless it be our own moral inadequacy, greed, selfishness, prejudice, excessive partisanship.

We are here, chosen by the people, not as party agents but as the peoples' agents. A common concern for the future unites us. A common desire to serve the State unites us. Political parties and party principles are essential to our system of government, but economic and social principles upon which a healthy electorate divides, diminish in importance as government descends from the national to the local level. Basic divisions between Democrats and Republicans on national issues have little bearing upon State or municipal problems. Mere partisan struggle for advantage will serve neither party nor State, because where you, as legislators of Illinois, and I as Governor of Illinois, now stand, it is only performance that will count.

I would not be misunderstood as to the role that Illinois can take in this titanic struggle for the future that plagues the world. What Illinois can and must do is to make itself the strongest link in that mighty chain which we call the United States.

We can set our own house in order. We can hearten our countrymen; we can demonstrate for all to see that representative government is healthy, vigorous, enterprising; that representative government is the best government. We can show the world what a government consecrated to plain talk, hard work and prairie horse-sense can do.

In accordance with the Constitution and tradition I shall today make a few suggestions calculated, I think, to put our house in order.

STATE AND LOCAL FINANCES

Let's assess first our basic problem. With the many new services which modern civilization demands of Government, revenue is the basic problem, because the amount of money available to do a given job determines how the job is done.

We must bear in mind that the period of manpower and material shortage of the war years when many services and expenditures of Government were necessarily curtailed is now over. Instead of an opportunity to accumulate excess revenues we now have an accumulation of imperative demands for capital improvements and services at greatly increased cost.

The State's taxing system is today producing revenue at the unprecedented rate of approximately $450,000,000 a year. But some of the major taxes are earmarked for special expenditure programs. Federal grants add about $75,000,000 a year, but these grants are also earmarked. As my predecessor, Governor Green, said to you last week, we have an unencumbered balance of about $100,000,000 in the State Treasury after allowing for anticipated deficiency appropriations and all legal or moral commitments.

On the other side of the ledger our bonded debt is $466,000,000, the second largest of any State in the Union. Moreover, to operate those State functions which are not financed from earmarked sources, we are now spending at a rate in excess of our income. Recent estimates show that expenditures of non-reserved funds in this fiscal year will exceed revenues by some $40,000,000.

This is the background against which we must assess the obligations of our State to its citizens. Many school units are hard-pressed despite increased property taxes. Many face increasing enrollments with inadequate buildings. Low salaries make it difficult to recruit and retain the best teachers. Likewise municipalities quite generally face grave difficulties in maintaining their essential services.

The people are impatient with bickering between the State and local governments over the division of duties and revenues. They look only for efficient and responsible government by whatever agency is best fitted. As taxpayers, they are entitled to a governmental structure both State and local which will insure the most economical administration of all government services. There is no justification for preserving the frills and extravagances of one government when the functions of other governments within the boundaries of the same State have been reduced beyond the minimums of common welfare. The citizens of the towns and school districts of this State are also the citizens of the State. We want no feast within our borders when there is also famine.

The problems of all governments in Illinois are the concern, indeed the major concern, of the State. Consistent with maintaining the State's credit and discharging its own prior responsibilities for the general welfare, our greatest single challenge lies in finding the means for better financing of schools, roads, and local services. To shoulder this heavier responsibility certainly is our obligation to squeeze the water and the waste out of governments at every level. Before imposing additional State taxes, certainly it is our obligation to enforce completely and effectively those we already have.

A greater participation in the financing of local government requires that the State demand economical and efficient local government. I do not think that State funds should be used to perpetuate structures that cannot do an economical and effective job of administration. But for well-organized local units the State should relax restrictions for its aid so as to insure the maximum of local initiative and responsibility in the management of local affairs.

The able revenue commission appointed by the sixty-fifth general assembly, of which Senator Merritt J. Little is chairman, will shortly make detailed recommendations to you concerning these basic problems of revenue and State aid. I anticipate that its conclusions will reflect its concern for our best interests and will be made with a vision which transcends fleeting political considerations.

CONSTITUTIONAL CONVENTION

Directly related to the problem of revenue, and to other road blocks to better government is, of course, the constitution of 1870.

I cannot now describe in detail all of its impediments. But everyone knows that uniformity of taxation of property, commanded in 1870 when land was the principal form of wealth, is impossible today. We avoid compliance by individual and official evasion and subterfuge. The price we pay is an inequitable taxing system with real estate carrying a disproportionate share of the burden, and a serious break-down in respect for law. Irreverence for constitutions threatens the foundations of constitutional government itself.

The flat constitutional command of legislative reapportionment every 10 years has not been complied with since 1901. Realistically, I apprehend that it is not going to be complied with so long as reapportionment would give control of both houses of the general assembly to Cook County, as it would under the present constitution. And in the meantime there is practical disenfranchisement of a very large number of citizens.

The present constitutional limitation on municipal indebtedness has resulted in a proliferation of local governments which increases costs, diffuses responsibility, and hampers effective control of government by the people.

The rigid constitutional pattern for the administration of the State's justice has resulted in a complex, unbusinesslike judicial establishment.

The hands of the legislature are tied in many respects by detailed unnecessary constitutional legislation. To use Governor Lowden's words of 32 years ago: "To withhold necessary power from a public official because he may abuse it, is to confess the failure of our form of government."

Experience has demonstrated virtual impossibility of revising the constitution by the process of piecemeal amendment. The need, therefore, is to assemble a constitutional convention to deal with the problems, promptly and comprehensively.

Accordingly, I request the general assembly to adopt a joint resolution submitting to a referendum the question whether a constitutional convention shall be called. I am confident that the general assembly will afford our people the opportunity to express themselves on this important question.

But legislative action alone is not enough. We must overcome those obstacles which have combined to defeat so many past efforts to revise our constitution.

The fear so frequently expressed that a new constitution will permit a graduated income tax or turn over to Cook County domination of the legislature is probably the best assurance that the convention will refrain from doing so.

I know of no large number of our people who favor a State income tax. I know a great many who oppose it. Rather than risk the rejection of a new constitution because of this apprehension I would urge the convention to leave the income tax problem precisely where it stands at present.

I do not believe that Cook County wants legislative dominance in both houses. Even if Cook County wanted that domination it could not get it in a constitutional convention, for there the distribution of voting strength as between Cook County and downstate would be precisely the same as in the General Assembly. The problem of achieving a balance of legislative power is neither novel nor complex. It was solved in our Federal system and it has been solved in the constitutions of other States.

Other objections will be raised to a constitutional convention. Some will oppose it

because of the ensuing uncertainties of interpretation, or because of the fear that hard-won gains and advantages will be lost. At best this is going far afield to borrow trouble; at worst it is according the convenience of the few precedence over the welfare of the many.

In the past political parties in Illinois have laid aside partisan differences in the consideration of basic constitutional issues. A vigorous nonpartisan effort is again imperative. The support of interested groups must be enlisted. And I hope you will change our election laws and restore to political parties the responsibility for constitutional issues which the men who wrote the Constitution of 1870 contemplated they should have.

I firmly believe that if we approach the task of revising our constitution in the manner I have outlined, our people will not fear or mistrust a constitutional convention and that such a convention, when assembled, will approach its responsibilities in the solemn spirit of retaining all that is of proven value while adapting our fundamental law to the needs of the present day.

PERSONNEL

Government, however good the laws, will not rise above the quality of the men that comprise it. Administration will be no better than the administrators. Revitalizing public service can't be achieved with good intentions and elocution about good government. The conditions of good morale are a sense of mission, self-respect and dignity.

The problem of personnel administration in a business spending half a billion dollars a year merits the closest attention of you, the board of directors, and of us, your executive officers. It will have mine, I assure you.

Meanwhile let me comment on three aspects of the personnel problem. In the first place, responsibilities of this magnitude demand highly competent and scrupulous men at the top. It is obvious to all that many of the senior positions in the state's service do not pay enough to support, let alone attract the quality of management and leadership these positions demand and the people deserve, except upon a basis of unselfish sacrifice. And too often, as many have noted, the reward for sacrifice in public service is not gratitude in lieu of dollars, but abuse, criticism, and ingratitude. Government cannot, will not, and should not attempt to match the salary scales of private business. But government can and must, if it is to be good government, pay salaries which are not an invitation to carelessness, indolence or even worse—corruption. And in good government, good men will find their supplementary reward in personal satisfaction, public esteem, and respect.

I will propose, therefore, while you are considering general salary levels, substantial increases in the salaries of key positions.

In the second place, competent and incorruptible men at the top are not enough. It is the men and women in the ranks who translate legislation and executive policy into action, who give government its meaning and character. In a real sense they are the government. And its quality depends not on the majestic buildings symbolic of the power and dignity of government but upon the spirit and competence of these people who are the government.

These employees of the State are not employees of a political party. They must not be so considered.

Today the major emphasis in civil-service administration is on recruiting, training, and promoting the best possible body of men and women to administer the public business. I have carefully considered whether, in view of our lack of progress in this most important field, I should urge you to consider the adoption of a more modern system of personnel administration to secure the necessary emphasis upon recruitment and training aspects of a genuine merit system.

I have concluded, however, that a sincere effort must first be made to achieve progress under our present machinery. One significant legislative change is essential, however. The function of position classification is an integral part of personnel administration, and I urge the general assembly to restore that function to the civil service commission, where it belongs.

In the third place, the modern goal of government is career service. Too large a segment of our employees are political transients rather than career servants. Ideally a change of administration should mean a change in policy-making personnel only. Hard, practical considerations point to the same goal. Current appropriations for personnel service are some $100,000,000 a year. The prudent expenditure of such a sum for the best possible public service imposes a grave responsibility upon the general assembly and the governor.

I have no illusions that progress in this field will be easy. But I know that the patronage system of the past is inefficient because effective administration is impossible when employees owe their allegiance and responsibility not to their supervisors but to their political sponsors. And I know that the system is even of diminishing political value as the electorate finds it more and more distasteful. Witness the last election in Illinois.

I believe sincerely that we are sufficiently mature to encourage the policy of career service and an expanding merit system in Illinois.

Incidentally the phrase "the government of Illinois belongs to the people of Illinois" has too often been abused by empty lip service. A healthy antidote to pay-roll padding and familiar political practices would be to invite constant public scrutiny of pay-roll facts and figures. The policy of my administration will be to require as complete and current pay-roll information as is feasible and looking to the future I urge the adoption of legislation expressing that policy.

PUBLIC WELFARE AND ASSISTANCE

Public welfare is perhaps our most moving and urgent problem. During the early stages when we were setting up assistance programs for dependent children, the aged, and the handicapped, we developed a two-headed organization to provide welfare services and assistance, frequently at the same time to the same people. It duplicates procedures and costs, and provide a double standard which affects salaries and methods of operation.

We have now had a broad experience in this field. I believe that by integrating the related services of the Illinois Public Aid Commission and the department of public welfare into a single unit, we shall achieve not only economies and increased efficiency but better service to the citizen who does not want two, three, or four agencies visiting his home. I urge that legislation effecting this integration be adopted.

I also recommend for the director of this much-enlarged department a strong advisory and policy-approving board.

Our dependent children, our old people, our handicapped and mentally ill whose welfare would be entrusted to this single department will in the future, as in the past, merit our first attention on humane grounds and also because such a large segment of the State's dollar will be allocated to their care.

I assume the general assembly will wish to proceed promptly by emergency legislation to increase aid to those for whom the last Congress made additional provision. The old-age pensioners, and the blind are in need of this additional aid which will increase maximum payments under old-age assistance to at least $55 a month.

In this connection I believe the legislature should also give consideration to providing pension payments for the aged and blind solely on basis of need and without arbitrary maximum. Ceilings other than the need of the recipients have been eliminated for old age pensions in one-fourth of the States and made subject to administrative change in an equal number of jurisdictions.

The population of our mental institutions is growing at an alarming rate. The deficiencies in their accommodations, care and treatment are well known. So is the appalling cost of new building on a scale to meet the demand. So also is the dearth of competent trained personnel to properly staff existing facilities, let alone large additional facilities.

Humanity, prudence and good sense compel us to attack this problem all along the line. Fire hazards, structural and sanitary deficiencies endanger the well-being and even the lives of too many of our wards and must be eliminated. The building program to enlarge our capacity and reduce pitiful overcrowding in some of our hospitals and to replace obsolete units cannot be deferred. Moreover the population of our mental institutions which now exceeds 40,000 can and should, I think, be reduced. Many of these patients are merely aged and infirm or senile. They do not need elaborate psychiatric and nursing care. Segregation with proper custodial facilities and care should both cost less and provide more humane care. Others could be discharged and maintained in their own or foster homes with the aid of old-age pensions. Still other patients could be discharged and maintained at home, treated and cared for through local agencies under the supervision of the State.

And to arrest the rapid increase in the mental hospital population we must also find ways and means of providing that treatment before hospitalization is necessary. With proper early treatment in their own communities many tragic souls could have remained in their homes and lived useful lives.

Too often the easiest way has been to commit people to institutions. Added to the human tragedy of hurrying merely distressing cases off to institutions is the ever-mounting long-term cost of institutional care, whereas these same people would get along better in their own communities and with proper treatment many would recover.

So I am suggesting a shift of emphasis from State hospitalization to home care. This will require time and the assistance of the ablest authorities in the fields of health and welfare. It will require the mobilization of all our public and private resources. It will involve a change in our philosophy and attitude toward these victims of troubled minds in a troubled world, with less emphasis on institutional care and more on prevention and clinical treatment.

This is but the pattern of a beginning, but a beginning must be made to conserve useful human life and control the cost of institutional care.

In the service of helpless people we have a special responsibility for the careful selection of personnel. To attract doctors, nurses, social workers, and skilled attendants we will have to give unmistakable proof of our determination to establish an attractive career service in public welfare in Illinois for those who have a sincere urge to help the less fortunate.

LABOR

Our position as one of the leading industrial regions of the world underscores our responsibility for enlightened leadership in protecting the welfare of labor. That the role of a State in labor legislation is less dramatic than the role of the National Government, makes it no less important. In fact the foundation of the safety and welfare of the worker rests on State legislation. The gains already made must not be impaired, and the foundation requires constant reexamination to insure its adequacy.

Accordingly, it is necessary that you review again the adequacy of workmen's com-

pensation awards in the light of the increased living costs of the injured workman. And it is imperative that I insure scrupulous and disinterested administration of a law which is of such critical importance to the workman and his employer.

The maximum benefits payable under our unemployment compensation act were last adjusted in 1944. The purpose of this legislation is to enable the unemployed worker to continue to purchase the necessities of life. Increases in wage scales and living costs since 1944 have obliterated the correlation between earnings and unemployment benefits which are now insufficient to cover nonpostponable necessities.

Our statute extends the benefits of unemployment compensation only to workers in establishments which employ more than six employees. Twenty-seven States, employing more than 60 percent of all the workers covered by unemployment compensation have extended their coverage to establishments employing less than six, without, apparently, encountering serious administrative difficulties. I urge you to consider this matter with other legislative adjustments in the field of unemployment compensation.

Here too, there are problems for the executive as well as for the legislature. The importance of security to workers, the heavy cost to employers, the volume of claims presented—all combine to demand the utmost administrative care to protect our unemployment compensation system against abuse by officials as well as undeserving claimants.

When the employment service was restored to the State at the end of the war, Illinois separated the related functions of unemployment compensation and the free employment service. Experience has shown that this separation impedes efficient service and I recommend corrective legislation to permit close coordination of these functions.

While I think weekly benefits payable to unemployed workers should be raised, consideration should also be given to a reduction of employer contribution rates taking into account the present size of the fund and the potential need for funds in the foreseeable future.

I trust that when the legislature is considering unemployment compensation it will also explore the related question of temporary disability insurance.

I also ask you to consider the advisability of enacting legislation to enable the State to take an affirmative role in the settlement of labor disputes. The Federal Government has, of course, its Mediation and Conciliation Service which participates in most labor disputes. Many States have such agencies, some successful and some unsuccessful. While I do not expect spectacular achievements from a State agency operating in this field, there may be a useful place for a State agency, operating on a modest budget with the cooperation of industry and labor, to render useful public service. I believe the possibility should be explored.

I should like to urge your consideration of a subject which, while it is connected with labor, has even broader implications. I refer to fair employment practices legislation. The ideals we so proudly proclaim cannot be reconciled with economic discrimination upon racial or religious grounds. To fall short of our professed ideals today, and in this field, has implications of hypocrisy and insincerity we dare not disregard. The eyes of the world are riveted upon our democracy. Prejudices can no longer find safe refuge in rationalizations. How we deal with this subject is intimately related to the world-wide conflict of ideologies which is the battle for tomorrow.

Moreover it is obvious that only as new opportunities for employment are opened will those now at a disadvantage be able to help themselves. I earnestly bespeak your thoughtful consideration of legislation to that end and toward the solution of one of our most difficult problems.

HIGHWAYS

I have mentioned the formidable needs of our schools, of the distressed local governments and of our welfare institutions. Governor Green said to you last week: "One of the principal functions of modern State government is the maintenance and improvement of highways." And I might add that it is also one of the most expensive. But good highways, country roads, and city streets are no longer a luxury or a convenience—they have become essential to our agricultural and industrial economy.

We already have an enormous investment in our highway system. We face an even larger investment to conserve what we have already invested and to improve and reconstruct our highways. Consistent with other urgent demands for capital improvements, and with an eye to the timing of public construction work in prosperity and depression, we must have the courage to adopt and initiate a long-range program suitable to our needs.

The sixty-fifth general assembly created a commission to study the whole problem of highway traffic, construction, and financing with a view to recommending a long-range highway program. Its report will be submitted to you by March 1.

If it is based, as I think it will be, on truth rather than conjecture, on demonstrable need rather than expediency; if it meets conflicts between political practice and public interest with courage and realism, I confidently believe that we will unite on its adoption. And I assure you that this administration will strive to execute it with honesty, nonpartisanship, and relentless determination to accomplish the maximum improvement of our highway system within the desire and ability of the people to finance.

AGRICULTURE

It must be the vigilant duty of the general assembly and the executive, working hand in hand, to foster the agricultural eminence of our prairie State, to cooperate with the Federal Government in control of floods and erosion, and in kindred problems. We must support the University of Illinois in its extension to the farmer of improved agricultural methods, but over and beyond all else we must think of the farm in terms of a living—a way of living and a place to live. Life on the farm in this age can and should be as attractive as urban life. I think we can well afford to give more thought to the amenities of life on the farm if we are to maintain the proud position of our basic industry, agriculture.

HOUSING AND RENT CONTROL

The outstanding paradox of our advanced age is the persistence of an acute shortage of one of the most elemental requirements of mankind—shelter—in the Nation which beyond all others is the wealthiest, most productive, and most resourceful.

It is not necessary to present statistics depicting the cope of the problem. It affects almost every community in the State, large or small. We know now that rural areas have their slums as well as do our larger urban centers. And we know the major part of the price we pay for our acute housing shortage is measured in the intangible but cruelly real terms of broken homes, moral deterioration, juvenile delinquency, cynicism, and despair.

I have no magic formula to offer. I wish I did. It is clear that the problem is inherently one for private enterprise. And it is also clear that it cannot do the job at rentals or costs within the reach of those most in need. The combined resources of National, State, and local governments are necessary for the solution of this problem. Presumably this Congress will enact legislation along the lines of the Wagner-Ellender-Taft bill which will provide the basis for an enlarged attack upon the problem. We must be receptive to new ideas and prepared to support the Federal program with such legislation as is necessary.

However, there is one specific legislative change I would suggest. It is not a panacea, but legislation permitting more rapid acquisition of land for slum clearance and housing purposes should accelerate solution of the problem. Other States have had such legislation for many years. Ample provision can be made for the protection of property owners, and I urge you to consider legislation to this end.

One phase of the problem—the acute shortage of rental housing—requires a further word. Not only in Chicago, but throughout the State abnormal conditions prevail in the rental housing market. The continued existence of Federal rent control has substantially alleviated the potential hardships. One important deficiency in Federal rent control is its failure to provide for control of accommodations for nontransient occupants of hotels. The result has been that thousands of permanent residents of hotels have suffered rapid and often unwarranted rent increases.

The legislation enacted by the Sixty-fifth General Assembly did not meet this problem. By its language no local controls can become effective until all Federal control ceases. Hence local action to control this situation is impossible. But as the existing Federal control terminates March 31, 1949, and an extension is probable, I presume you will wish to defer any action to remedy this situation pending determination of the Federal course.

MINES AND MINERALS

The time has come, I believe, for you to give attention to the State's agency for discharging its responsibilities to those engaged in the mining and petroleum industries. The elements of good government are power and strict accountability for its exercise. I believe that in this light the organization of the Department of Mines and Minerals requires reexamination. In due course I will submit to you concrete proposals for its reorganization.

As there seems to be some ambiguity at present, I will also urge you to extend the civil service to include most of the employees of this department. Moreover, our mining laws contain much that is obsolete, and I strongly urge that they be rewritten in their entirety. Agencies are at hand to assist in this work and I shall have more to say to you in this connection at a later date.

CONSERVATION

Our natural resources of forest and wildlife are presently administered by an executive department headed by a director appointed by the Governor. Some 27 States have adopted the nonpolitical commission form of administration of their comparable services. None of them has reverted to the method which we retain. I think Illinois in its quest for more efficient and economical public administration could well take the same progressive step.

STATE POLICE

Another highly specialized field of the State service which should be removed from political control is the highway maintenance police. A public service charged not only with fearless and equal enforcement of the law but with the protection of human life itself demands character, discipline, and undiluted loyalty. The men who undertake this responsible and exacting work are entitled to a merit system which insures them protection and recognition for their service

without fear or favor. It has been done in other States and it can and should be done in Illinois if our first interest is the quality of our Government.

PUBLIC-UTILITY REGULATION

I invite your attention to the Illinois Commerce Commission. It is regulating public utilities whose rates and charges now exceed $2,000,000,000 a year. The five men who comprise the Commission have vast power, authority, and responsibility. Because of the enormous volume of its work, the technical character of its proceedings, and the tremendous importance of its decisions, the qualifications of the men who serve as commissioners are not alone the concern of a Governor but of the public and the utility companies alike.

Under existing legislation the men who are charged with these responsibilities are appointed by the Governor to serve for a 2-year term. Their annual compensation is $7,500. In earlier years under the administrations of Governors Dunne and Lowden the approach toward this important agency was somewhat different. In those days members of what was then more aptly called the public-utility commission received $10,000 a year and served for a term of 6 years. The terms of the commissioners were staggered to insure continuity and independence.

The importance of the work of the Commission has not declined in the intervening years; rather it has increased. Yet the system in Illinois is hardly conducive to indifference to the caprices of political fortune, nor is the compensation compatible with the responsibilities of the office.

I believe that the public will be better served by a commission whose independence and continuity is increased by lengthened and staggered terms of office. And I further believe that to attract to this vital public service the character of men it deserves, the compensation must more adequately reflect its responsibility.

CONCLUSION

In an effort to limit my remarks severely I have omitted any reference to many other matters of grave concern—the veteran, higher education, public health. I will have something more to say to you later about these and other subjects, and doubtless you will have still more to say to me.

In conclusion, I hope I have made it clear that the State of Illinois appears to me to be well off financially at present, but that with just demands increasing rapidly, and with matching revenue at best doubtful, in the next biennium if not this one, we may well face acute difficulties.

I hope I have made it clear that we should anticipate the future now, that I will have no reluctance to break boldly with the complacent, quiet past; that to match the relentless demands of these searching times for thrifty, efficient, honest government is the only desire of my colleagues and myself who have been so signally honored by our fellow citizens.

I hope I have made it clear that with sincere purpose, if limited talents, I want to execute your will, and serve my only ambition—to help to make of Illinois an example of the best in our democratic tradition, a leader in a noble future as it was in a noble past.

We Americans are proud that we were born of revolutionaries with a passionate faith in freedom and human worth.

We Illinoisans are proud that our State was born of simple folk who believed in an ever-better future.

This is our inheritance. To preserve it, to enrich it in the great age that lies ahead we ask that God, in His infinite power for good, help us make of Illinois a land where justice, honesty, and progress abound.

Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of telegrams which I have received in protest to the shameful trial of Cardinal Mindszenty by the Hungarian Communist Government. I also ask to include the text of the sermon of Cardinal Spellman, delivered Sunday, February 6, 1949, at St. Patrick's Cathedral, New York, N. Y.

There being no objection, the telegrams and sermon were ordered to be printed in the Record, as follows:

DULUTH, MINN., *February, 7, 1949.*
Senator HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.:

Request that you immediately ask the President to lodge a vigorous protest with Hungary in respect to their treatment of Cardinal Mindszenty.

John Moriarity, Ernest Brassard, Gerald Heaney, Patrick Burke, Earl Bester, Mrs. Walter Dacey, E. L. Slaughter, Clara Sarvela, Merle McKeown, Joseph Daoust, Casper Visnia, Delbert Poppenberg, Dan Sullivan, Willard Beaudin, Paul Miller.

DULUTH, MINN., *February 7, 1949.*
Hon. HUBERT HUMPHREY,
United States Senate,
Washington, D. C.:

Won't you please encourage the taking of some drastic steps to check Stalin and his brutal work of destruction, in the name of God and Cardinal Mindszenty?

Mrs. R. S. SHEPARD.

DULUTH, MINN., *February 6, 1949.*
Hon. HUBERT H. HUMPHREY,
United States Senate,
Washington, D. C.:

Please consider positive statement protesting action of foreign country persecuting Cardinal Mindszenty, Prince of the Catholic Church.

HOWARD F. HOENE.

MINNEAPOLIS, MINN., *February 3, 1949.*
Senator HUBERT HUMPHREY, Jr.,
Washington, D. C.:

In the name of justice do whatever you can to bring strong protest against the Hungarian Communist Government for carrying on the shameful trial of Cardinal Mindszenty.

CHARLES A. BIRD.

DULUTH, MINN., *February 6, 1949.*
Hon. HUBERT H. HUMPHREY,
United States Senate, Washington, D. C.:

We feel that our country is not taking sufficient forceful measures to free Cardinal Mindszenty. Please bring pressure on our Government to take drastic action immediately to prevent this terrible torture.

DILLON FLAHERTY AND FAMILY.

DULUTH, MINN., *February 7, 1949.*
HUBERT HUMPHREY,
Senate, Washington, D. C.:

Please try to do something effective in Mindszenty case. If the defenders of freedom are killed in all parts of the world how long will our freedom last. Catholics will be very grateful to you for this.

Rev. JOSEPH A. CASHIN.

DULUTH, MINN., *February 6, 1949.*
Hon. HUBERT H. HUMPHREY,
United States Senate, Washington, D. C.:

We feel that our country is not taking sufficient forceful measures to free Cardinal Mindszenty. Please bring pressure on our Government to take drastic action immediately to prevent this terrible torture.

Mr. and Mrs. J. J. WILLE.

DULUTH, MINN., *February 6, 1949.*
Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D. C.:

The Catholic citizens of this district are looking to you for leadership and initiative in the protest to Communist Hungary over the unfair trial and imprisonment of Cardinal Mindszenty. What are you gentlemen of the United States Senate doing about this matter?

Mr. and Mrs. R. J. RECKTENWALD.

TEXT OF SPELLMAN PLEA ON MINDSZENTY

(The text of the sermon of Cardinal Spellman delivered yesterday at St. Patrick's Cathedral follows:)

"A new god has come to you, my people. His fiery eyes do not flash through clouds of incense or from altar candles. They do not gleam from gold-framed darkened pictures of saints. This new god is not a stone statue worn smooth by the kisses of the faithful—he was not born in heaven. He is not far away, nor is he hidden from us. The new god is born from earth and blood—he strides ahead, and under the thunder of his steps the globe trembles from east to west. This is the red god. The Seine shudders at his impact and tries to break its banks. Westminster trembles before him like Jericho, and across the green ocean his red shadow falls on the walls of the White House. Hosanna! New god!"

My dear friends, you know these words are not mine. They are words of a Hungarian Communist, words that echo the thoughts of men depraved and deranged—men who do not know truth, love, justice, or faith; men who as their gods know only Satan and Stalin. Yes, these lines come from the pen of a Satan-bred man and are taught to the youth of red-enshackled lands—lands where everybody is afraid of everybody else, where even a son fears his father and fathers fear their own blood-sons, as all become serfs and victims of the relentless god of Baal.

Yes, the blasphemous lines I have just quoted to you are wild words, but they are wild words of warning and, unless we listen well and realize that we must counteract them by concerted, constant prayer and action, then these words but foretell America's and the whole world's doom.

CHARGE TORTURE OF CARDINAL

May 8, 1945—VE-day: On that day I delivered from this pulpit a prayer of thanksgiving for the victory of the hour, begging peace with justice, beseeching that as victors we do not offend God by sinning against His mercy. The peace that came was not God's peace, and because in the ensuing postwar years men's hearts have not been won back to God, I must this day as a protest against the crucifixion of humanity entreat your prayers for persecuted, tortured, victimized Cardinal Mindszenty.

This is Cardinal Mindszenty Day—a day of prayer and of protest. Prayer for what? Protest against what? There is no use to try to save Cardinal Mindszenty's life, for from the very hour he was taken away in the black

of night from his home, his flock, his aged mother, Cardinal Mindszenty became the victim of torturings and druggings that put him beyond the reach or realm of human help. It was he himself who said to me when he was the honored guest here less than 2 years ago, "My enemies can take from me no more than my life and that has already been given to God."

No; the physical Cardinal Mindszenty can no longer be saved. It is the spiritual Cardinal Mindszenty in his martyrdom of mind and body that we can fortify by our prayers, that in his soul he may know that in another part of the world other men are holding high God's torch of justice for Hungary's anguished peoples and the enslaved peoples of every land. And in our own dear land each free man and woman must protect and fight to keep his own integrity of conscience, his own God-given freedoms, and exert every effort to save America and the rest of the democratic, God-loving world from trickery, torturings, disasters, and defeat. For if we fail to learn a lesson from Cardinal Mindszenty's martyrdom, we shall fail ourselves, and ourselves face Communist conquest and annihilation!

MINDSZENTY'S CAREER PRAISED

When first Cardinal Mindszenty answered the call of Christ, "Come, follow Me," to that day when only 2 years ago, with 30 other priests and myself, he was received into the Sacred College of Cardinals, he has lived a life full and priestly. Then we rededicated our hearts, our souls, our lives to God, the propagation of the blessings of our faith and the perpetuation of Christ's church. And only 2 days ago Cardinal Mindszenty, priest of a people who love, honor, trust, and revere him, was brought to mock trial for his life, even though his life had already been signed away by the lords of communism—men among whom there is no honor, love, nor trust, either for one another, for their neighbor, or their God. Thus has the symbolic red of his cardinal's robes literally become the blood red of martyrdom!

Had I a hundred tongues, a hundred mouths, a voice of iron, I could not compass all the crimes of the "men of sin" as they wage war against the "Man of Sorrows"; neither can I recount the miseries perpetrated by these slave-men, crimes which it is neither in my personal power to relieve or prevent. Nevertheless, so long as my heart beats and breath lingers in my body, I shall never cease to pray and labor to protect America, and warn and work against communism and all the evils growing from out its rotted roots, for I believe that "rebellion to tyrants is obedience to God."

While a whole world waged war and tragically talked of peace, I witnessed the sufferings of men in a world trapped by fear, famine, and madness called communism. It was then that I resolved to try to pour into the minds of every American a sense of great gratitude to God for our freedom, our liberties, our opportunities, and instill within those minds the realization of the imminent dangers of atheistic communism to America.

And I avow that unless the whole American people, without further ostrich-like actions and pretenses, unite to stop the Communist floodings of our own land, our sons, for the third and last time, shall be summoned from the comforts, tranquillity, and love of their own homes and families to bear arms against those who would desecrate and destroy them. Yea, it is full time that a strong and vigilant America unite in prayer and protest against wasting the youth of her own Nation, and try to help save civilization from the world's most fiendish, ghoulish men of slaughter, lest the anguished spending of a million lives will end again in war's beginning!

Therefore, I beg you, my beloved people, let us not confuse prudence with lack of vision, unity, courage, and strength, as we watch nation after nation fall victim to communism, for prudence is often but an excuse for silence, procrastination, and compromise. Even today as we read newspaper releases from the Communist-controlled press of Budapest that tells us contradictory stories about a cardinal-priest who, so little time ago, we took unto our own hearts and homes, millions of Americans refuse to recognize that we ourselves are faced with these same merciless dangers.

You have all seen pictures of Cardinal Mindszenty in the newspapers at his mock-trial in his own country. And all of you saw pictures of Cardinal Mindszenty when, a free man, he sat kindly, willingly for his picture here in America. Can you fail to see here a man tortured and drugged—even though the Communist press dares to print that he "denies duress"? The Communists believe the American public is still easy to fool, willing to be "drugged" into believing whatever leaves them their own comforts, their own freedoms.

But are we, the American people, the tools and the fools for which the Communists take us? Are we always to endure the insults and wounds they inflict upon our American honor and decency as they enslave countries and persecute peoples, as they inflict wounds and beatings upon decent, God-loving men and patriots like Cardinal Mindszenty; for when the cardinal confessed to treason against the present Communist Government in Hungary he but professed his loyalty to his country. If this be treason to deny allegiance to an atheistic Communist government—then thank God Cardinal Mindszenty confessed to treason, as would I, if this free land of America were ever conquered by the demoniac people now using every foul means to overthrow our republic.

How long are we, free-minded, fair-minded, freedom-loving Americans, going to allow these same fiendish Communists to drug us with their propaganda and our own apathy? When will the American Government, the American public, the leaders in all phases of American life, religious, educational, political, labor, industrial, communications, yes, and entertainment, when will all free men raise their voices as one and cry out against and work against Satan-inspired Communist crimes? How long—O my God—shall we stand by and see Thy peoples who love Thee reviled, persecuted, and murdered by atheistic Communists who deny Thee and hate Thee even as again and again they crucify Thee upon Thy cross?

Cardinal Mindszenty's jailers gave him drugs—perhaps without his knowledge. They did not want another hero like Archbishop Stepinac. No, not another martyr would they have in Cardinal Mindszenty. They would break his will and show him to his people broken, weak, and faithless. That is why they took Cardinal Mindszenty away in the night because the first time he was arrested by the Nazis he walked through the streets with his captors, daring to bless his peoples with the sign of the Cross as they lined the streets to pray for him and beg his prayers for themselves who would, they knew, also be persecuted, abused, and slain.

PRAYS FOR CARDINAL'S MOTHER

Yet we should not grieve at the death of Cardinal Mindszenty, for man is not completely born until he dies to live in God. No, let us not be sorrowful nor tearful for him, but rather for one whom I pray God to take unto Himself ere her heart be more deeply pierced by anguish for her saintly son. I speak of Cardinal Mindszenty's 85-year-old mother. Like unto Mary, our own Blessed Mother, who was witness to the passion of her only Son, this mother's cross is far heavier than her son's. I pray that God shall raise this gentle mother into the arms of her own Mother Mary, there to be pressed close to the Sacred Heart of Christ, her Son, there at last to find peace.

In closing my plea for your prayers and protests on behalf of Cardinal Mindszenty, let me tell you a story that will, I believe, touch your hearts just as it touched a spark within my own when first I heard it. It is a story that I heard told by an American of another faith, a Jewish gentleman whose parents emigrated from a country which was then, as now it is again, held in bondage.

"My parents came to these shores about 70 years ago," this gentleman said. "They left behind them an old world filled with bitter hatreds and ruled by despotism. Here they found a new world filled with wondrous things—freedom, justice, opportunity, kindliness. Not things you could touch or eat, but, when you've never had them before, things that are more real than a pair of shoes or even a loaf of bread. As long as they lived they never stopped wondering at the glory of America. They were two of the best Americans I've ever known.

"Seventy years ago they came here with nothing but the clothes on their backs and great courage. Today their boy," this gentleman continued, "is speaking before a gathering of the leaders of America. In one generation our family moved from steerage to distinction. That's not one man's story," he added, "it is the American story. Multiply it a million times or more for every race, creed, and color and you begin to sense the miracle of America."

And this, my friends, is the America I beg Americans to save.

The Two Voices of Soviet Russian Policy

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. MUNDT. Mr. President, I take this opportunity of calling to the attention of the Congress and the country an analysis of the various and diverse views expressed by Premier Stalin with relationship to the motives and designs of the Soviet empire.

The analysis was prepared by Dr. Julius Epstein, of New York City, and appeared in the New York Daily Sun. It is my hope that it may prove helpful to Americans endeavoring to assay and evaluate the statements emanating from Russia with regard to Soviet foreign policy and peace proposals.

I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE TWO VOICES OF SOVIET RUSSIAN POLICY—COMPARISON OF PREMIER STALIN'S VIEWS EMPHASIZES THE FACT THAT COMMUNISTS' AIMS ARE PLAINLY ON RECORD

To the EDITOR OF THE SUN:

SIR: In his speech before the United Nations General Assembly's Political Committee last November Mr. Vishinsky referred to the interview Stalin granted the American correspondent Roy Howard on March 4, 1936 (not, as Mr. Vishinsky said, on March 1, 1935), with the following words:

"I should, however, like to remind you of a talk that occurred between Generalissimo Stalin and Mr. Howard * * * when Mr. Howard asked this direct question: 'Does this plan of yours mean that the Soviet Union to

any extent has given up its intention of carrying out the world revolution?'

"Stalin replied: 'We never had any such intention.'

"Howard went on to remark: 'It seems to me, Mr. Stalin, that the whole world has a much different impression.'

"Mr. Stalin answered: 'It is the result of a misunderstanding—a tragic misunderstanding.'"

What is astonishing is not the fact that Messrs. Stalin and Vishinsky are still trying to convince a world which already knows better of the peaceful aims of Soviet policy, but the fact that they still pretend to believe that they can do it by quoting those utterances Stalin made during the last years to innocent Britons and Americans.

I have especially in mind those interviews Stalin granted to: Roy Howard (March 4, 1936); Eddy Gilmore (March 22, 1946; Alexander Werth (September 24, 1946); Hugh Baillie (October 28, 1946); Elliott Roosevelt (December 21, 1946); Harold Stassen (April 9, 1947).

All those interviewers, without any exception, asked Stalin whether he believes that the Soviet Union can live in peace with the capitalist world or whether the Soviet Union wants to incite world revolution.

YES AND NO

As stereotyped as these questions were, so were Stalin's answers. When he was asked if he believed in the possibility of a lasting peace between the U. S. S. R. and the outer world, he said "Yes," and to the question whether the Soviet Union would incite revolutionary struggles abroad, he answered "No."

Unfortunately not one of those six interviewers was willing or able to confront Stalin with his own writings, or with appropriate quotations from the works of Lenin.

Since Stalin and his agents do not get sick and tired of repeating ad nauseam the same lies, it seems to be our duty not to get sick and tired of repeating the truth.

Let us deal only with the statement Stalin made to Mr. Howard, as quoted by Vishinsky in his recent speech, according to which it is a "misunderstanding, a tragic misunderstanding," to think that the Soviet leaders ever had the slightest intention to bring about world revolution.

The truth is, of course, the exact opposite. Since the day the Soviet Government came into being it has never ceased to try to bring about civil strife in foreign countries with the aim of world revolution. It has time and again forced the Communists in foreign countries to start civil wars, even when the native Communists did not consider the situation ripe for revolution. After the inevitable defeat the Soviets always put the blame on the leaders of the foreign Communist Parties.

REVOLUTION IN VIEW

If we study the Bolshevist literature from 1915 on we cannot discover a single sentence by Lenin or Stalin indicating restraint concerning the bringing about of world revolution, referred to by Stalin in his various interviews with rather innocent Americans and others, as quoted by Vishinsky in his speech of November 13, 1948.

But there are hundreds of passages which prove the opposite, namely, the deep conviction that: (1) The Soviet Union can never be safe as long as it is surrounded by capitalist countries, and that, therefore, bourgeois rule in all those countries must be broken, if need be, by pure violence and with any help the Soviet Union can render. (2) A series of terrible wars between the Soviet Union and the capitalist world is inevitable.

No Soviet writer, certainly neither Lenin nor Stalin, ever earnestly suggested to the world that the wars prerequisite to a universal victory of communism could be averted, or that it would not be the most sacred duty of the Soviet people to further any revolutionary struggle, and even to incite struggle whenever Moscow deems it appropriate.

On August 23, 1915, Lenin published an article entitled "The United States of Europe Slogan" in his Swiss periodical Social Democrat. In this article, quoted by Stalin in his Problems of Leninism (American edition, 1934, p. 69), Lenin says:

"Uneven economic and political development is an absolute law of capitalism. Hence the victory of socialism is possible, first in a few or even in one single capitalist country taken separately. The victorious proletariat of that country, having expropriated the capitalists and organized its own Socialist production, would rise against the rest of the capitalist world, attract to itself the oppressed classes of other countries, raise revolts among them against the capitalists, and in the event of necessity come out even with armed force against the exploiting classes and their states."

On January 26, 1924, 5 days after Lenin's death, Stalin delivered a speech at the second congress of Soviets of the U. S. S. R. This appears in Stalin's work under the title "The Lenin Heritage." He said:

"Lenin never regarded the republic of Soviets as an end in itself. He always regarded it as a necessary link for strengthening the revolutionary movements in the lands of the West and the East, as a necessary link for facilitating the victory of the toilers of the whole world over capital. Lenin knew that only such an interpretation is the correct one, not only from the international point of view, but also from the point of view of preserving the republic of Soviets itself. Lenin knew that only in this way is it possible to inflame the hearts of the toilers of all countries for the decisive battles for emancipation. That is why this genius among the great leaders of the proletarian dictatorship laid the foundation of the workers' international. That is why he never tired of expanding and consolidating the union of the toilers of the whole world, the Communist International."

THIRD STAGE

During April 1924, Stalin delivered a series of lectures at the Sverdlov University in Moscow. These have been published as a book under the title "Foundations of Leninism." The American edition appeared in 1939. I quote from page 91 of this edition:

"The third stage of our revolution commenced after the October revolution. Objective: to consolidate the dictatorship of the proletariat in one country, using it as a base for the overthrow of imperialism in all countries. The revolution is spreading beyond the confines of one country; the period of world revolution has commenced. The main forces of the revolution: the dictatorship of the proletariat in one country, the revolutionary movement of the proletariat in all countries. Main reserves: the semiproletarian and small-peasant masses in the developed countries, the liberation movement in the colonies and dependent countries. Direction of the main blow: isolation of the petty-bourgeois democrats, isolation of the parties of the Second International, which constitute the main support of the policy of compromise with imperialism. Plan for the disposition of forces: alliance of the proletarian revolution with the liberation movement in the colonies and the dependent countries."

When Roy Howard asked Stalin whether "this plan of yours means that the Soviet Union to any extent has given up its intention of carrying out the world revolution?" Stalin replied: "We never had any such intention." And when Mr. Howard pointed out that the whole world "has a much different impression" Stalin called it "the result of a misunderstanding—a tragic misunderstanding."

We have seen what kind of misunderstanding it is.

I venture to suggest that the next time an American statesman or journalist interviews Mr. Stalin he had better have some of the pertaining quotations in his pocket.

JULIUS EPSTEIN.

NEW YORK.

E Pluribus Unum

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the February 1946 issue of the Reminder of Our National Heritage. The article was written by a distinguished scholar, Mr. Jesse B. Hornung, of Portland, Oreg. It is a thesis on the motto of the United States of America, E Pluribus Unum, and I feel will be of interest to many who will have access to it through the columns of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MANY ARE ONE—MULTAE SUNT UNA—POLLAI EISI MIA—VIELE SIND EINS

(By Jesse B. Hornung)

The motto of the United States of America is E pluribus unum. As we are about to discuss this motto, let us have a formal definition. Webster says, "e pluribus unum. (L.) One out of many; one composed of many—the motto of the United States, as being one government formed by uniting many States." Webster further says, "Also motto of Michigan." It is the purpose of this writing to discuss this motto as the motto of the United States, and any reference to its being the motto of Michigan, though pertinent, to the case, will be incidental.

It is needless to say that the Latin motto most certainly does mean one out of many and that the accepted interpretation of the phrase is one composed of many, and that what the Latin phrase actually means, though used as the motto of the United States, is what it actually means used as the motto of Michigan. All this having been said, one might think that there is little or nothing left to discuss; but let us proceed.

It seems to be a sensible idea that what a phrase means when it is used as a motto should be the same as when it is not used as a motto. There does not seem to be any sufficiently good reason for a phrase having a meaning because it is a motto that it would not have if not a motto.

There is the word "egregious." It means exceptional. The "e" with which egregious begins is exactly the same as the "e" with which E pluribus unum begins. It means out of. The rest of the word "egregious" is derived from a Latin word meaning flock. One, or even some more, picked out of a flock on any basis of selection would be exceptional. If, in reading Latin, there occurs the phrase, "e pluribus unum," without anything to alter its natural meaning, the phrase would mean one out of many and the meaning of the phrase would be of the one being an exception.

In Latin, unus is masculine, unia is feminine, and unum is neuter. If Ovid, or any other, wrote "e pluribus una" and without anything to alter the natural meaning, the

meaning would be that she of whom he wrote was designated as exceptional. To many who have written or who have not written there is one who was exceptional; and una can be used as and is used as a proper name; not merely proper in the formal grammatical sense, but exceedingly appropriate as a designation for her who is to him who writes the exceptional one: to him she is one out of many, e pluribus una. Una is the name of a lovely lady in Spenser's Faerie Queene. Unum being neuter, e pluribus unum is one thing out of or selected from many things. The fact is that many by union became one. To interpret the motto as meaning one composed of many is unnatural, very artificial, and can be considered to be really erroneous. There is, however, a wonderful solution.

The one valuable feature of E pluribus unum as being the motto for the United States is that it is composed of 13 letters. The 13 letters uniting to form one motto is a perfect symbol of 13 States uniting to form one nation. From the moment of the union, it has continuously been that the many are one. There is beauty in symbols, especially when they are perfect. Nevertheless, they are less than useless when what they symbolize no longer in any wise remains; for, at best, symbols are only symbols and can become sources of error when realities are no longer visible; but, as long as realities are seen, symbols have their proper place, and they are better when they are perfect. Repeated coincidence that far exceeds probability can suggest origination from some higher power.

Michigan became a State in 1837. Florida became a State in 1845. Both States are very much surrounded by water. Besides what islands she has, Michigan is thought of as made up of the Upper Peninsula and the Lower Peninsula. Michigan had quite a time of it in becoming a State. Historically speaking, let us say it was the Lower Peninsula and the Upper Peninsula. The idea of peninsula is very prominent in Michigan. At the time the Great Seal of Michigan was made, the State may have been thinking only of the Lower Peninsula and that she was the only peninsular State. From 1837 to 1845 is 8 years. If in 1837 Michigan, in any respect, thought of herself as being the only one, she had a right to take E pluribus unum as her motto and the Latin phrase would mean for her exactly what it means in Latin—one out of or selected from many. As e pluribus una, the motto would have been perfect.

A city, a State, or a nation, or an ideal or an aspiration, when personified should be in the feminine. The large statue at New York should not be named as the statue of it, and is not so named; nor is it the statue of Apollo or of Hercules.

Territorially and to a certain extent administratively, the counties of a State have a relationship to the State similar to the relationship of the States to the Nation; but the counties of Michigan did not, by uniting with each other, form the State of Michigan as did the Thirteen Original States unite to form the Nation. Thirteen is of very great significance as to the forming of the Nation, but 13 is of no significance whatever as to the forming of the State of Michigan; nor has 13 any significance to Michigan as one selected from many, for then there were more than 13 as the many. It, therefore, follows that "e pluribus una" is a proper motto for Michigan, although it has only 12 letters. It also follows that though unum, being neuter, is not the proper designation for the Nation; yet, because of the symbolism, a total of 13 letters in the motto for the United States should be preserved, which symbolism, as here discussed, has no relationship whatever to any notion of bad luck or good luck nor is it related to any system of mystic numbers either as of one number or as of computation. The symbolism here discussed is the intentional symbolism that 13 symbolizes the Thirteen Original States. If any other symbolism for 13 as pertaining to the United States be proposed, let that also be founded on fact.

It is customary for a nation to have a flag. The United States flag of June 14, 1777, had 13 stars and 13 stripes. Vermont became a State in 1791. Kentucky became a State in 1792. The flag of 1795 had 15 stars and 15 stripes. Reducing the stripes back to 13 and increasing the stars according to the number of States, the flag, in time, became one of 13 stripes and 48 stars. It is obvious that the 13 stars and 13 stripes in the flag of 1777 was symbolism for the Thirteen Original States, and was intentional. Nothing mysterious about it. Fifteen stars and 15 stripes was a temporary solution for the problem caused by the admission of two new States. That such a temporary solution was employed when there was the possibility of more States than 15 indicates that, at the time, there was little or no idea of how great the United States was to become. The next change was a great improvement. It went back to the valid symbolism of 13 stripes for the Thirteen Original States, and permitted additional stars to represent additional States. If space for stars holds out, this looks like the final answer. This, concerning the flag, shows the persistence of the symbolism of 13 in our national affairs. There may be other examples of which the reader may know or can discover, but the emphasis given by the flag to 13 is very evident. Not only is it evident, but, in memory of the heroism of the Thirteen Original States, the symbolism of 13 should be forever preserved.

At the beginning, 13 was many. It was more than two or three. To begin a new nation was a heroic thing to attempt, a wonderful thing to accomplish. The basic idea was that they being many as States were to be one as a nation. States have individuality. A nation has individuality. Though uniting and forming a nation, the individuality of States was to be preserved. In uniting, they could then say as we can say now: The many are one.

After some time, the many was a much larger number than 13. It may be that at first each and every State thought that, as she had joined the Union of her own free will, she could leave the Union of her own free will. This emphasis of individualism at the expense of unity is contrary to "the many are one"; for, if they are one, the Union is indissoluble. There came a time when the attempt was made; but, though assisted, the attempt failed of success. The separation never was made. Through it all and continuously to the present, it has been that the many are one.

On the basis of the theme here discussed, there have been in the history of the United States only two events: the formation of the many are one and the preservation of the many are one. Because of these two events, two great personalities, secure possessors of enduring fame, continue in memory—glorious and heroic, not only in themselves, but, also, worthy as representative of those who were with them and who in spirit were the same as they. It is appreciated that this concerning them makes its first public appearance in an issue that is of the month of their nativity.

At the present time, 13 can seem to be a rather small number, as much as 3 less than one-third; but individualism should still be preserved: both of the States as composing the Nation and of the Nation as remaining true to her own ideals: the many should not lose their individuality because of the power of the one, nor should the one lose her individuality among the many nations of all the earth. On the basis of high and higher ideals, it should continue to be that the many are one and such a one as can refuse to be the same as any other. There is no good reason to change our national ideals for those ideas the others have to offer.

The phrase, "the many are one," contains 13 letters. In English, many can be masculine, feminine, or neuter. Latin has different forms of a word for masculine, feminine, and neuter. Latin has no the. Many in Latin feminine nominative plural is multae. Are in Latin is sunt. One in Latin feminine nominative singular (of course) is una. "The many are one" in English is "multae sunt una" in Latin, with multae (the States) feminine nominative plural and una (the Nation) feminine nominative singular. Multae sunt una contains 13 letters and is perfect both in itself and as for a motto. Greek has different forms of a word for masculine, feminine, and neuter. Putting the Latin phrase word for word into Greek, "multae sunt una" becomes "pollai eisi mia," using our letters for Greek letters as does Webster. Pollai is feminine nominative plural for multae. Eisi is sunt. Mia is feminine nominative singular (of course) for una. Pollai eisi mia contains 13 letters. Putting the Latin phrase word for word into German, "multae sunt una" becomes "viele sind eins," using our letters for German letters as does Webster. Viele is multae. Sind is sunt. Eins is una. Viele sind eins contains 13 letters.

The four languages used are English, Latin, Greek, German.

Instead of saying more that could be said, it is enough to say that English is the language of the United States.

Latin was the language of organization and still is.

Greek was the language of a supreme culture and still is to those who share in it.

To those whose knowledge may touch the surface of but does not penetrate into the past and who are surprised at the mention of German, the advice is extended to consult Webster; and, under Indo-European languages, discover that English is an item of the Teutonic or Germanic subfamily of the western division. The language of Luther, Kant, Schiller, and Goethe, and a host of others was and still is—and, there was Victoria, queen of glorious reign, of the royal house of Hanover, by natural descent succeeded by the royal line of Saxe-Coburg which was—and in reality still is—for war and policy do not really change the royal line when succession by natural descent remains the same.

It, therefore, can again be said that the four languages used are English, Latin, Greek, and German.

The last 4 months of the year have names derived from the names of numbers, the names of the months being derived from the names of numbers two less than the numbers of these months in the year. December is the last month in the year. It is No. 12 in the months of the year. The name "December" is derived from a name or word for 10. Ten is 2 less than 12. Similarly, with the other 3 of the last 4 months of the year. There is no intention or desire to suggest a change in the calendar, but with December being No. 10, February would be No. 12, and the end of February the end of the year. March would begin the year and September, October, November, and December would be Nos. 7, 8, 9, and 10 according to the Latin of the words. This is not desired. Ten is a good place to stop. The words for 11 and 12 are not so good. It can be said, however, that March is the

natural month and the logical month to begin the year, being the first month of spring; and that spring is the natural season for beginning. With March the first, February would be the last. Commencing the distribution of the days with March, February, being last in line, got the days that were left and not as many as the others. Getting what was left also gave February the extra day that shows up a little less than once every 4 years. Getting what was left including the extra day is evidence that February was last in line.

February, being the shortest month, the mathematical probability that a specified nativity will occur in February is less than 1 in 12. The probability that the only two specified nativities occur in February is something less than 1 in 144. In the matter we are discussing the two nativities are the two nativities to which reference has already been made. Anything further and of the future can wait until in the future it is disclosed. We now have too many days of celebration. Let Memorial Day continue and include and so reduce the excess of special and distinctly minor days. February's 2 days are very important.

February was the month of the feast of purification. Before going into what was really the natural new year with its beginning of the seasons, there was the feast of purification. It may be that the ancient Romans did not have as much of the smugness of self-righteousness as is in the world today. Before going on into the new, getting rid of the foulness of the old was a right thing to do. They were under no compulsion to say or to believe that all that had been done was absolutely right. Very likely, there had been war. They were frank about it. His gates or doors of the preceding month were seldom closed. Reasons for war have stayed about the same. As a matter of fact, and he who knows the facts knows full well that this is a world of contest. The reason for contest is greater now than ever before. The two great Americans to whom I have referred had their careers in times of contest. The result of the first contest was that "the many are one" came into existence. The result of the second contest was that "the many are one" continued in existence. They knew why they were fighting. It did not have to be tediously and subsequently explained. It has been through contest that we move on to other and to greater things; and, also, it is through contest that we keep the goals to which we have attained. War for ideals can be glorious, though unattended by success. War, without ideals, can be ignominious even in success. War for worthy ideals with success is glorious and triumphant.

The feast of purification in the last month of the natural year did not mean that it was the end of all things. It was appropriate for a new beginning. The succession of witnesses for righteousness from Abel to Zacharias and then to him than whom there had been no greater and who also was slain did not mean that John was at the end of all things; but, as last of the previous, his was the voice to announce the coming age. Farewell seems like the end; but, in an address of farewell, there can be calm, discreet advice for the future; and, in an address distinctly related to the past, there can be the thought of rededication for the future.

It seems that in almost any condition that can be imagined individual heroism is possible; but war itself, however great the exhibition of power, when devoid of ideals is not heroic. A worthy purpose is required for it to be truly great, something more than material consideration. It is still true that it is the altar that sanctifies the gift rather than the gift that sanctifies the altar; but, where there is no altar, for there is no sacrifice, and where there is no gift, for it is a loan to be repaid with increase, there it is altogether different. Of all the forms of power this world has ever known where heroism is possible, wealth—be it in the large or be it in the small—wealth is the least heroic of them all.

The celebration of Independence Day has become altogether too feeble. It is not a good sign. Of the days of celebration that should be retained, Christmas is not known as the 25th and New Year's Day is not known as the 1st. Hearing and seeing the word, independence in the phrase, Independence Day, might help some to realize why and how this Nation came into existence. Being amenable to authority is part of life as we know it. A definition of Americanism is in order. Americanism is that doctrine which does not permit any citizen of the United States to acknowledge any political authority arising outside the American people.

The Thirteen Original States had had enough of the colonial. They united to become national, and did become national. Their political ideal was a free and independent Nation. They did not unite to be colonial either then or later. Their heroic success in devotion to a political ideal has never been excelled.

It seems that at the beginning and for some time later the Nation had no idea of the material greatness to which she was destined to attain. Naturally and properly enough, the thought at first was on the manner of origination. Thirteen seemed like many, and was; but is not now; but, both then and now—the many are one. There is ample literary precedent for saying the many are one, and to the effect that individuality of participants is preserved when union is made, as when of a certain relationship it is said that the two are one; or of another relationship when it is said that the three are one; or of an indefinite number as that they all may be one. In all these cases, individuality of participants is preserved. On the other hand, a cake is made out of several ingredients, one of them being flour. What was flour has become cake. It is no longer flour. Its individuality as flour has been lost. Every State is just as much a State as it ever was. Every State is just as much a State as is any other State. Individuality has been preserved. In the case of one, an original State, when there no longer was only one individuality—the result was two States. Greater population in large areas of present small population may result in more States.

The individuality of the Nation among the nations of the world should also be preserved. To acknowledge any political authority arising outside the American people is not Americanism. This means that we should not enter into any agreement by which anything or any one of the outside can direct our action or influence our ideals. We are not here to acquire ideals from those whose ideals are less than ours. It is appreciated that this writing makes its first public appearance in a publication that customarily carries the caption: Jesus Christ is a national question today. The United States is a Christian Nation. Whatever else may be tolerated, it still remains that the United States of America in her ideals is a Christian Nation. Before the Nation was formed, Christianity was the prevailing ideal, and is the prevailing ideal today.

Christianity is the prevailing ideal of the various States, original or however and whenever later acquired. Greater than any union of material consideration, there is a union of the highest significance in which it was and now is and may it continue to be that the many are one—multae sunt una.

Preservation of Woodlawn Estate as Historical Shrine

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 7, 1949

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by me and other matter relative to the preservation as a historical shrine of the Woodlawn estate on the Potomac River.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. ALEXANDER WILEY, OF WISCONSIN

PUBLIC SHOULD CONTRIBUTE TO SAVING OF WOODLAWN ESTATE AS HISTORICAL SHRINE

I would like to say just a few words regarding a very important project being undertaken by civic and partiotic groups in the Old Dominion State of Virginia for the preservation of a great historical shrine. These groups have banded together to solicit public support of the Woodlawn estate along the Potomac River, which was built by our first President, George Washington, for his adopted daughter, Nellie Custis. The estate, which is adjacent to Mount Vernon, was given to Nellie Custis and her husband by Washington as a wedding present. It is essential that public support be quickly mobilized lest this historic estate be lost forever for all succeeding generations.

There is a Woodlawn Public Foundation at 511 Tenth Street NW., here in Washington, which is securing funds which will be matched by $2 for every $1 collected by the Old Dominion Foundation.

We Americans have been negligent in preserving many shrines which could well have been utilized to inculcate true patriotism and devotion among our school children and among all succeeding generations. I am hopeful that through the wide support which this splendid project is receiving and will receive we will make sure that Woodlawn will be carried on for all future generations to cherish and behold.

[From the Richmond (Va.) News Leader of December 18, 1948]

CHIEF ADORNMENT OF ROUTE 1

"Woodlawn?" the gentleman will ask frigidly when asked to contribute to the preservation of that old mansion almost opposite the side road from Route 1 to Mount Vernon, "why acquire Woodlawn?" He may elaborate: "Nothing of importance ever happened there; it was not the home of any eminent American. I can understand why you want Mount Vernon and Monticello and Stratford preserved and hope some day that Montpelier will pass to the public, but Woodlawn—why save that?"

Here is the reason: The average educated American who motors up and down U. S. Route 1 is aware that he is traveling over one of the most historic highways of the United States. As that road now runs from Falmouth on the Rappahannock, opposite Fredericksburg, to Alexandria on the Potomac, it follows substantially the line of travel used by George Washington, by George Mason, and by all the Southerners who contributed to the creation of this Nation from

the time of the First Continental Congress of 1774 to the Philadelphia convention of 1787 that drafted the Constitution of the United States.

During the years that highway was the only link by land of North and South, it was adorned with many splendid homes. On almost every point where tidal estuaries join the Potomac, there stood houses from which there went out men of ability and station to build a new republic. It was a unique society that contributed immensely to the wisdom of our basic law. That society probably was decaying economically by the time the American Revolution began, but its houses stood and its plantations flourished in 1775.

In the century and three-quarters that have passed since then, nearly all those memorials of a great social order have vanished. Fire, war, land exhaustion, and the neglect of hungry years have destroyed about four-fifths of the distinguished buildings. One may turn off the highway to the old house lanes, may follow the cedar-lined drive and come at length to some noble house-site where there remains scarcely a stone to indicate that a man who was an architect of American life labored there. South of the Potomac, on the main highway or close to it, three only of the estates of the first magnitude retain their old houses—Gunston Hall, Woodlawn, and Mount Vernon. All the others have yielded to time. If that is the dark harvest of less than 200 years, what may be expected for the future? How long will these three escape destruction, demolition, or, in the case of Woodlawn, restoration that might be as bad as ruin? We look forward in America to a long, long national life, during which every relic of the cradle days will be increasingly precious. How can we afford to let one-third of the surviving inheritance of that historic highway pass to private hands? Woodlawn must be acquired, not as a memorial of a family, but as a monument of a glorious era.

URGENT—TO SAVE WOODLAWN FOR THE AMERICAN NATION

OUR HERITAGE

"A good man leaveth an inheritance to his children's children." (Proverbs 13: 22.)

George Washington, Nellie Custis, Lawrence Lewis, William Thornton, Mount Vernon, Woodlawn. These are part of the heritage of all of us, the American people. They are the heritage of our children's children. We must preserve them. Woodlawn is a monument and symbol of that heritage. This property was once a part of Mount Vernon plantation.

George Washington himself sketched the rough plans for the historic dwelling shown on these pages. He selected the site; he arranged for the landscaping. Nellie Custis was his beloved adopted daughter. She married his favored nephew, Maj. Lawrence Lewis. The general gave them the property for a wedding present.

Dr. William Thornton, architect of the National Capitol, inspired by the site for the Woodlawn mansion and its exciting views of the Potomac, finished the general's plans. The result of Washington's vision and Thornton's genius was Woodlawn, one of the Nation's fine specimens of Georgian architecture.

THE OPPORTUNITY

Recently Woodlawn was about to be sold through the Circuit Court of Fairfax County, Va., for uses which would preclude its dedication to the public. A rare opportunity would be lost. The sale was on the verge of completion when Woodlawn Public Foundation, Inc., a nonprofit corporation, was formed to raise funds, buy the property, and devote it to the interest of the American Nation. The Woodlawn Foundation petitioned the court for time within which to buy the property.

Through the gracious cooperation of the Immaculate Heart of Mary Mission Society, Inc.—the scheduled buyer—and the guardians of the Underwood estate—selling the property—the petition was granted. In consideration of the Woodlawn Foundation's deposit of $5,000 in cash, the Foundation will have until February 22, 1949, to raise the funds and complete the purchase for public use.

The purchase price is $170,000. We hope to raise that sum by popular patriotic subscription. If we fail, the sale to the Mission will go through. This is the opportunity presented to all of us.

It is now or never.

THE STORY OF WOODLAWN

On February 22, 1799, Nellie Custis married Maj. Lawrence Lewis at Mount Vernon. The bride was the famous beauty. (See her portraits by Gilbert Stuart and John Trumbull.) She was the daughter of John Parke Custis (son of Martha Custis Washington) and Eleanor Calvert, of Mount Airy, Md. The groom, an officer in the United States Army, was the son of Fielding and Betty Washington Lewis, of Kenmore, and was George Washington's nephew and aide.

The wedding was on the last birthday Washington was ever to see. Although urged by Nellie to dress in a new and resplendent uniform, he appeared at the candlelight ceremony in the worn buff and blue of his campaigns. Thus garbed, he gave the bride away. This gift, however, did not mean her departure from the Mount Vernon scene—there was Woodlawn.

In his historic letter of September 20, 1799, to Lawrence Lewis, the general confirmed his intention to give the acreage on which Woodlawn stands to Nellie and Lawrence jointly. He told the young man that the property would be devised to them in the general's will. He urged the major and his bride to start building their home at once. Washington described the lands which he himself had surveyed that very day, in these terms: "Few better sites for a house than Gray's Hill, and that range, are to be found in this country or elsewhere."

It is recorded that Washington "had made some rough plans and had shown them to Dr. William Thornton." On one of Thornton's frequent visits to Mount Vernon, the general suggested that they all inspect the site on which the Lewises were to build. "The famous architect was delighted with the wooded hill with its magnificent view of the Potomac and the country round about. Back in his office in Washington he made plans for the house and sent them to Mount Vernon.[1]

Nellie and Lawrence Lewis lived in Woodlawn 35 happy years.[2] With Woodlawn's nearness to Mount Vernon, Arlington (the Custis home), Gunston Hall (George Mason's home), and Belvoir (the Fairfax seat), and its charming mistress and attractive master, the new home became the center of a brilliant social life. Early guests included the Marquis de Lafayette and other European notables.[3] Woodlawn has been the home of many men and women prominent in the Nation's life. It has been a hospitable home, symbolic of American culture and living at their best.

THE IMPORTANCE

Dedication of Woodlawn as an active patriotic shrine is a timely project. The place, so charming in itself, is physical evidence of a great tradition. In a sense it is a part of George Washington. He saw it in his mind's eye. He thought of it as a home where two people whom he most deeply loved would carry on his traditions, his ideals, his standards. The stature of no individual in the founding of this Nation exceeds that of George Washington. Truly, he was the Father of his Country, our national ancestor.

American civilization, as we have inherited it and wish to pass it on, will not perpetuate itself automatically. We go forward more wisely and confidently when we are continuingly kept aware of our past. An informed America is a strong America. Woodlawn is an instrument for education and inspiration.

The time limitation on the purchase, for the people, of this symbolic estate will not permit of the usual processes of solicitation; hence, this direct appeal.

This is a project which has caught the imagination, warmed the hearts, and is opening the purses of men and women who would cherish, protect, and pass on to future generations a part of America's heritage. We pray that you are one of us.

You—firm in the belief of maintaining American tradition—can preserve an old landmark for your children and their children's children.

Unlike Mr. Truman

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in last Saturday's Washington Evening Star:

UNLIKE MR. TRUMAN

The more one reflects on the extraordinary claim of power which has been made by the President, the more desirable it seems to meet the challenge implicit in his statement, and to meet it now.

It would be ridiculous to discuss this matter on the basis of an assumption that Mr. Truman has dictatorial aspirations. He is not that kind of a President. But there will be other days and other Presidents, and it is because of this that vague claims to vague powers, inherent or implied, are not to be lightly passed over.

The President cannot be directly quoted in his press-conference remarks. But he said in substance that the inherent and implied powers of the President are sufficient to enable him to break paralyzing strikes without any statutory authority to seek court injunctions. And he added that in time of emergency he felt that the President had immense power to do what was right for the country.

When a President uses language like this there is no room for complacency. Who is to determine what is right for the country? If that is a privilege of the President, one need only recall that this country might have had Henry Wallace as its President. Would Mr. Truman have been willing, as a Senator, to let Mr. Wallace decide what was right for the country, and use that immense power of which Mr. Truman speaks to impose the Wallace concept of right on the Nation? It is in a setting like this that one ought to appraise Senator TAFT'S assertion that "the very suggestion that such a power exists is a threat to the people of the United States." Most certainly, it is a suggestion which ought not to go unchallenged.

The Star believes that the President ought to have power to act, through the courts, to protect the Nation against strikes or any situation which would bring the country to its knees. But it also believes that such power should be conferred by act of Congress through a statute which would define the power with care and incorporate safeguards against its abuse.

Mr. Truman seems to oppose this, and certainly it is opposed by those who have been representing him before the Senate Labor Committee. But in case of need the President probably intends to seek injunctions, in the absence of statutory authority, by invoking what he regards as his implied powers. At any rate, in vetoing a labor bill in June 1946, he had this to say: "Injunctions requested by the Government itself, and designed to restrain strikes against the Government in cases where refusal to work for the Government has produced a condition of national emergency, are, to my mind, an essential element of Government authority."

If that power was essential in 1946, it is essential now. But there is this difference: In 1946, under the Smith-Connally Act, the Government had authority to seize struck plants. It has no such authority today, unless it may be that the President thinks he can seize under the inherent and implied powers to which he refers. It is significant that in the 1946 veto message the President declared: "Men cannot be forced in a peacetime democracy to work for a private employer under compulsion." If that is true, as it certainly is, then it follows that when a strike threatens the life of the Nation there must be some way for the Government to step in and take over the function of a private employer. The question is whether this should be done by authority of statute or under the undefined, unknown and probably inadequate implied powers of the President.

There are other interesting passages in the 1946 veto message. For instance, Mr. Truman, on that occasion, said: "Where excesses have developed on the part of labor leaders or management, such excesses should be corrected—not in order to injure either party—but to bring about as great an equality as possible between the bargaining positions of labor and management. Neither should be permitted to become too powerful as against the public interest as a whole."

That was wise and temperate counsel. Watching the current anything-but-admirable administration effort to discredit the Taft-Hartley Act, which tried to bring about an equality between labor and management, and to revive the one-sided Wagner Act, it is easy to wish that President Truman felt now as he felt in 1946.

Things Could Happen To Upset Impressive List of Bills Facing Congress

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following article by Frank R. Kent, which appeared in the Washington Evening Star, February 5, 1949:

ODDS FAVOR PASSAGE OF TRUMAN PROGRAM, BUT RIFT IS POSSIBLE—THINGS COULD HAPPEN TO UPSET IMPRESSIVE LIST OF BILLS FACING CONGRESS

(By Frank R. Kent)

Apparently the literary artists who wrote Mr. Truman's state of the Union message for him put in everything they could think of. Certainly it bulged bigger with recommendations and proposals than any that can be recalled. But that was natural enough, for Mr. Truman, in his campaign, promised more things to more people than any presidential candidate ever heard of.

The question now is: How many of these pledges is he really going to try to redeem and how fully? Perhaps they are wrong, but the belief is strong among those close to him that most of his so-called program will be adopted about as he wants it. It will not be, informed men say, 100 percent. No President ever achieves 100 percent, but it will not be too far off. They also think it is going to be done swiftly.

They base these convictions upon the following: (1) His unexpected victory plus the fact that he will be President in his own right, for 4 years, gives him a political prestige and power in Congress he utterly lacked before; (2) the Democrats have the votes in both House and Senate; (3) the committee chairmen are nearly all administration men eager to aid; (4) the Democratic leaders are far more closely in tune with the White House than before; (5) Vice President BARKLEY, as the presiding officer of the Senate, and the President's close and able friend, Leslie Biffle, its secretary, are an extraordinarily effective and potent pair; (6) the Republicans are not entirely united; (7) resistance to the spending, involved in most of the Truman proposals, has weakened; (8) on nearly everything, the labor and farm lobbies will cooperate and support.

LIST IS IMPRESSIVE

Undoubtedly this is an impressive list. It would seem to mean that in a fairly short time the Taft-Hartley Act will be replaced by an utterly inadequate substitute which gives no protection to the national interests and removes all curbs to labor abuses; the civil rights program jammed through, despite the furiously protesting South; the Social Security System vastly expanded; the first steps taken in the socialization of medicine; Federal housing and Federal education bills enacted. That is the prospect, but, as the late Lew Dockstader used to say, "It just ain't necessarily so." There are a good many things that can happen to make this array of reasons less formidable. Calculations in regard to legislation, such as are above presented, often have a way of falling apart.

For example, already there appears a slight rift in the harmony between the President and the CIO bosses, who though they violently opposed his nomination and bitterly disparaged him personally, now assume all the credit for his election. There is reason to believe they have been demanding a little too much of Mr. Truman, pressing him a little too hard. And it is encouraging to note that Mr. Truman is showing some slight signs of resentment. There is a possibility here of a break in the administration phalanx that would affect results on more than one issue. And, human nature being what it is, there are other possibilities.

ODDS FAVOR PROGRAM

However, it must be admitted the odds favor the program and among the Presidential strategists confidence in their ability to drive it through is firm. In this connection it is interesting to note that no plan exists for giving reality to the two most sensational suggestions in the Truman message: First, that the Government put itself in position to engage in the steel business "in event of emergency"; second, the so-called bold new plan for developing the "backward areas" of the world. The first of these emanated from Leon Keyserling, left-wing member of the President's Council of Economic Advisers. It does not have the endorsement of Dr. Edward Nourse, president of the council, but was startling in that it seemed a sudden move in the direction of the nationalization of industry. It now seems that there was no force behind this suggestion; that it was intended, perhaps, to frighten the United States Steel Co. and please the CIO's Mr. Murray, but otherwise is to be allowed to lapse.

As for the bold new plan, full credit for that noble notion is given Clark Clifford, close Missouri friend of Mr. Truman and counsel to the President. According to sympathetic "liberal columnists, the bold new plan just seemed a good thing to propose at the time and it did reap considerable favorable publicity. But, it is said, nothing will come of it—and nothing was meant to. Even the elegant and eloquent explanations of Secretary of State Acheson leave the idea in an extremely nebulous state. It is not unusual for Presidents to throw out in messages and addresses grandiose and impractical ideas about which they have no serious intention or convictions. However, it is somewhat unique to have two such ideas in the same document.

We Could Slip Into Socialism While Hating It

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. PHILLIPS of California. Mr. Speaker, there is a question before the people of the United States. This is the question of what the people voted for on November 2. Observe I did not say whom the people voted for. I said what. There is a growing feeling, and many signs to support the feeling, that the United States, like other nations, is moving toward national socialism.

Our constituents at home say that they did not vote for national socialism. President Truman says that he does not want national socialism. The people of the United States could be compared

with the crowd which lined Pennsylvania Avenue on the afternoon of January 20. They saw a very distinguished gentleman, complete with top hat and a friendly smile, headed west toward the White House. Suppose this same gentleman had insisted that under no circumstances was he going to the White House, but that he intended to keep driving east, just as he had been driving 2 hours before, and would shortly cross the Anacostia Bridge into Maryland. What would the people be inclined to believe; what he said or what they saw?

Is not this the situation in the United States at this moment in its history? We say we do not want national socialism. Yet the direction in which the country is moving is toward policies of government under which the dignity of the individual, together with the rights and freedoms which are his under the American Constitution, are exchanged for mass benefits and planned controls and the tempting shibboleth of security. The end is weakness and eventual dissolution.

The situation has been ably discussed in a recent editorial in the Saturday Evening Post, in the issue of February 5. It makes provocative reading. I have asked unanimous consent today that this editorial, together with my comments, may be reprinted in the Appendix of the CONGRESSIONAL RECORD. The editorial follows:

WE COULD SLIP INTO SOCIALISM WHILE HATING IT

After the election returns were in the Post raised the question, "Did we buy socialism with Truman?" Some readers are still bending our ear with complaints that we were unfair, not only to President Truman but to the American people. Of course, these optimists assert, neither Mr. Truman nor the American people want socialism, and we were practically indecent to say such a thing. What we said was that, although neither the President nor those who voted for him want socialism, the essence of socialism is what we are very likely to get. Now we have the President's state of the Union message, the so-called Economic Report, and the inaugural address. The defense rests.

According to Mr. Truman, Americans have "abandoned the 'trickle-down' concept of national prosperity * * * (and) believe that wealth should be created for the benefit of all." What this seems to mean is that, instead of the benefits of a dynamic, imaginative free-enterprise system "trickling down" to all classes, including the laziest man on the street, the ordinary man is now to get his trickle from the Government, which, according to the President, "must see that every American has a chance to obtain his fair share of our increasing abundance." Since the only way the Government can see that one man gets his "fair share" is to take something away from another man, it is obvious that $6,000,000,000 in new taxes will be cheap in comparison with what will have to be taken from Peter if Paul is to get what he thinks is his fair share.

Apparently foreseeing that, when the Truman New Deal gets to rolling, there won't be much to trickle down from American industry, the President is ready with a recommendation that whenever the steel industry doesn't produce enough to satisfy the bureaucrats' ideas of ample production, the Government shall finance or actually build competing plants. Having all but crippled the industry's sources of new capital needed for improvements and expansion, the Government, under the whip of the CIO "economists," threatens to mow down free enterprise with subsidized competition.

The costs of medical care and social security are to be raised to new heights, on the theory that American medical care, the best in the world, can be improved if it is made as much as possible like medical care in France and England, where it is terrible. "Building costs must be lowered," but apparently by charging them up to Uncle Sam rather than by insisting on modifications of the make-work, slow-down and stand-in practices of the building-trade unions, which have raised wages enormously and reduced production per man to new lows. The proportion of rental housing must be increased, and to tempt private enterprise into this field, rent control must be extended and strengthened. To keep everybody in line, the Government must exercise control over the allocation of materials.

Despite all the lip service to private enterprise, the President's program leads straight to socialism as must any program which rests on the assumption that the Government is responsible for the economic welfare of every citizen, that the Government must give him federalized medical care and subsidized housing, underwrite farm prices and dictate the minimum which people may accept as wages and how much they shall be permitted to retain as profit, in the unlikely event that the concept of profit can survive such a hodgepodge of mothering. The people didn't vote for socialism; they voted for Mr. Truman. Mr. Truman probably doesn't want socialism, but he has allowed a lot of CIO planners to talk him into a scheme of things which, if permitted to run its course, adds up to socialism, however the poor misbegotten thing is christened.

Detroit Common Council Urges Restoration of RFC as a Secondary Mortgage Market

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the Detroit Common Council, requesting legislation to provide for establishment by the Government of a permanent secondary mortgage market. The action by the Republicans in the last Congress in abolishing the RFC as a secondary market has practically destroyed the whole building program. I strongly opposed that action in the last Congress and at that time I pointed out what the results would be. The building program in the city of Detroit is at a complete standstill because construction money and mortgage money is not available. You cannot build houses without financing, and private lending agencies and the big banks of the country have deliberately sabotaged the building program. There is only one way out, and that is to reinstate the RFC as a permanent secondary mortgage market.

The resolution follows:

Whereas builders and citizens are experiencing considerable difficulty in the financing of mortgages on homes; and

Whereas the construction and financing of homes, at a price the ordinary citizen can afford to pay is of vital importance to the city of Detroit as well as to the country generally; and

Whereas it is reported to this common council that the establishment by the Government of a permanent secondary mortgage market would make immediately available home financing, and would enable private builders to plan their home-building programs for the coming year, thereby producing a great many much-needed homes: Therefore be it

Resolved, That the Congress of the United States be and it is hereby requested and urged to enact legislation to provide for a permanent secondary market for the purchase of real-estate mortgages, which organization will insure to investors that mortgages insured or guaranteed by the Federal Housing Administration and/or the Veterans' Administration will be purchased at par, with a further request that the legislation provide for a reduced rate of interest on Government-insured mortgages; and further

Resolved, That copies of this resolution be sent to the Senators and Representatives from the State of Michigan.

Adopted as follows: Yeas: Councilmen Comstock, Connor, Edgecomb, Garlick, Miriani, Oakman, Smith, and the president, eight. Nays: None.

Central Arizona Project

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. POULSON. Mr. Speaker, a communication has come from the Executive Department of our Nation which is of vital importance not only to California, but to all of the other States in the Colorado River Basin. I refer to a letter dated February 4, 1949, written by the Honorable Frank Pace, Jr., Director of the Bureau of the Budget, to the Secretary of the Interior.

The letter reports the Executive attitude on the Central Arizona project, which is estimated to cost three-fourths of a billion dollars with large governmental subsidies, and which was designed to use waters of the Colorado River claimed by California under Federal contracts made in the early thirties in reliance upon which California has expended a vast sum of money to provide a water supply for its citizens. The letter is as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., February 4, 1949.

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: In Director Webb's letter of September 16, 1948, concerning your report on the central Arizona project, he pointed out that the Bureau of the Budget had not completed its review and analysis but agreed with your suggestion that the report should be forwarded to the Congress. I am now able to advise you that the Bureau of the Budget has completed its study of the report and a determination has been made of the relationship of the proposed project to the program of the President.

The report proposes the construction of the Bridge Canyon Dam and power plant, a pumping plant at Lake Havasu, and an aqueduct from there to Granite Reef Dam in

central Arizona, together with other appurtenant works for the purpose of providing supplemental water to irrigation areas in central Arizona and hydroelectric power in the Arizona-southern California area. The total estimated cost of the project as of January 1948 is $738,408,000, of which (based on existing law) $420,000,000 would be allocated to irrigation, $291,000,000 to electric power, $18,000,000 to municipal water supply, $6,000,000 to flood control, and about $3,000,000 to fish and wildlife. It is proposed to install 750,000 kilowatt capacity of power generation at Bridge Canyon Dam, with about 2 percent additional generation at smaller dams on the project.

The report calls for an ultimate annual diversion of 1,200,000 acre-feet of water from the Colorado River at Lake Havasu (Parker Dam) with a pump lift of 985 feet to the Granite Reef aqueduct through which it would be conveyed for a distance of 241 miles to the Phoenix area of Arizona as a supplemental supply of irrigation water. The use of such supplemental water would be (1) to replace the overdraft on the groundwater basins, (2) to permit the drainage of excess salts out of the area and maintain a salt balance, (3) to provide a supplemental supply to lands now in production but not adequately irrigated, (4) to increase the water supply for the city of Tucson, and (5) to maintain irrigation of 73,500 acres of land formerly irrigated but now idle for lack of water. It is proposed to charge the district $4.50 per acre-foot of water. The duty of water varies between projects and between surface and pumped water. However, diversion demand of surface water at district headgate is given as an average of something about 5 acre-feet per acre. The rate for power would be (under existing law) 6.22 mills.

It is the opinion of the regional director of the Bureau of Reclamation that the "project has engineering feasibility in the sense that there are no physical obstacles * * * that could not be overcome." He states, however, that "financial feasibility of the project is more difficult to determine," and further in his report to the Commissioner of Reclamation he raises the question of adequacy of the water supply for this project.

It is pointed out in the report that the project as proposed is economically infeasible under existing reclamation laws, and that it is essentially a "rescue" project designed to eliminate the threat of a serious disruption of the area's economy. Modifications in these laws are therefore proposed in the report to extend the repayment period for the entire project, including power, to 78 years, and to use one-fifth of the interest component on the commercial power investment to aid in the repayment of irrigation features.

The State of Arizona says that under the Colorado River compact, other agreements, and California's self-limitation act, Arizona has allocated to its use 3,670,000 acre-feet of water per year. It states that it is now using from the main stream of the Colorado and its tributaries in Arizona a grand total of 1,408,000 acre-feet of water per year, thus leaving 2,262,000 acre-feet for additional consumption which cannot be lawfully used elsewhere than in Arizona. It estimates the (consumptive) use for the central Arizona project at 1,077,000 acre-feet, which, together with the other planned uses, will still leave in the main stream, according to the State's estimate, a balance of 619,000 acre-feet apportioned to Arizona for future use and for reservoir losses. Arizona bases its case for diversion of water from the Colorado River upon these figures, and proposes to use such water as a supplemental supply for lands now inadequately irrigated. It states further that the irrigation of lands in central Arizona has been expanded beyond the water supply of central Arizona, and that this is resulting in an exhaustion of their underground supply with insufficient surface stream flow to maintain production in the lands now irrigated. To avoid the danger to the entire economy of the State, it considers it essential that the central Arizona project be expedited.

The Commissioner of Reclamation states that assurance of a water supply is an extremely important element of the plan yet to be resolved; that the showing in the report of there being a substantial quantity of Colorado River water for diversion to central Arizona for irrigation and other purposes is based upon the assumption that claims of the State of Arizona to this water are valid. He states that the State of California challenges the validity of Arizona's claim and that if the contentions of the State of California are correct, there will be no dependable water supply from the Colorado River for this diversion. He further states that the Bureau of Reclamation and the Department of the Interior cannot authoritatively resolve this conflict between States and that it can be resolved only by agreement among the States, by court action, or by an agency having proper jurisdiction.

The comments of the several affected State governments and interested Federal agencies with respect to his report contain a number of objections and reservations with respect to the proposed project. Specifically, the Department of Agriculture questions whether the benefits actually exceed costs. It questions, as it has on numerous other occasions in commenting on proposed reclamation projects, the use of the gross rather than the net crop return method of computing benefits. The Department further says, "The actual relation of benefits to costs is still further obscured by what appears to be a failure to use the market value of power in estimating for evaluation purposes, the cost of pumping the water supply. Market value must be used in economic evaluation because the power has alternative uses." Commenting further on benefits, the Secretary of Agriculture states "while it is necessary that benefits exceed costs of a project is to be considered economically justified, this alone is not sufficient. Sound economics and common sense required: First, the consideration of possible alternatives; and, second, the choice of that alternative yielding the largest return on the investment." The comments of the Department of Agriculture go even further and state, "At least in the respects mentioned above, the benefits used in testing the economic soundness of the project are in error. We would recommend, therefore, that further and more careful consideration be given to the economic evaluation of the proposed project."

The Federal Power Commission points out that there is no essential physical relationship between the Bridge Canyon power project and the central Arizona diversion project but that the two are linked together in the report because of the need for subsidies from electric power income to help finance the irrigation improvement. It also indicates that the burden of the irrigation costs are considerable and that the proposed charges for electric power consequently approach a level where such power cannot be classed as low-cost in this region. The Federal Power Commission also suggests that further studies are required before the proper installed capacity at Bridge Canyon power plant can be finally determined and that it could probably be considerably more than the 750,000 kilowatts proposed.

The State of Nevada says, "There is a grave question regarding the availability of water to Arizona to supply the project. * * * Studies have been made by California and Nevada engineers which show there will be little or no water for the central Arizona project. * * * Investigations and reports should be held up or be only preliminary in character where there is a question as to availability of water." The State of Nevada further says that some engineers have expressed an opinion that the Bridge Canyon Dam and Reservoir cannot be utilized properly and to its full extent as a power project because of the limited storage behind the dam which in a few years would fill with silt and power service would depend on natural fluctuating river flow. They raise questions as to whether it would not be desirable to construct Glen Canyon, which would provide much additional storage capacity, at the same time as Bridge Canyon.

The State of Nevada, in commenting on the economic justification of the project, computes the net irrigation construction costs on the acreage which will be salvaged by the project at $1,469 per acre and questions the justification of such costs in the face of an estimated farm land value with irrigation of $300 per acre.

The State of California says that a controversy has existed between California and Arizona for many years as to their respective claims to Colorado River water and that conferences held on this subject throughout have not brought a solution. The State further says that until there is a final settlement of the water rights, the aggregate of Arizona and California claims to Colorado River water will exceed the amount of water available to the lower basin States under the Colorado River Compact and relevant statutes and decisions. It states that as long as the present unsettled situation exists, each State in the lower basin must, of necessity, interest itself in the others' projects which would overlap its claims. Accordingly, the State of California submits the following conclusions: (a) The plan for construction, operation, and maintenance of the proposed project is not financially feasible under existing Federal reclamation law and the modifications thereof considered in the report; (b) consideration of an authorization for the central Arizona project should be withheld until a determination has been made of the respective rights of the lower basin States to the waters of the Colorado River system; and (c) extensive and detailed studies and investigations should be made by the Bureau of Reclamation of local water supply and use in order to determine accurately the amount of supplemental water needed for existing irrigated lands in the Salt River and Middle Gila River Valleys and to formulate plans for additional conservation of local water supplies.

With reference to the controversy that exists between the claims of the States of the lower basin, it is concluded that the situation has not changed since your interim report of July 14, 1947, on the status of your investigations of potential water resource developments in the Colorado River Basin. In the report of the Commissioner of Reclamation, approved by you, it is stated "that further development of the water resources of the Colorado River Basin, particularly large-scale development, is seriously handicapped, if not barred, by lack of a determination of the rights of the individual States to utilize the waters of the Colorado River system."

On July 23, 1947, Director Webb replied to your letter of July 19, 1947, as follows:

"Acting under authority of the President's directive of July 2, 1946, I am able to advise you that there would be no objection to submission of the proposed interim report to the Congress, but that the authorization of any of the projects inventoried in your report should not be considered to be in accord with the program of the President until a determination is made of the rights of the individual States to utilize the waters of the Colorado River system."

From an examination of the report, of the comments of the affected States, and of the remarks of other interested Federal agencies, it is apparent that there are a number of important questions and unresolved issues connected with the proposed central Arizona project. The provision of adequate water supply, if found to be available, is admittedly

a high-cost venture which is justified in the report essentially on the basis of an urgent need to eliminate the threat of a serious disruption of the area's economy. Even so, the life of certain major parts of the project is appreciably less than the recommended 78-year pay-out period. The work could be authorized only with a modification of existing law or as an exception thereto. Furthermore, there is no assurance that there will exist the "extremely important element" of a substantial quantity of Colorado River water available for diversion to central Arizona for irrigation and other purposes.

The foregoing summary and the project report have been reviewed by the President. He has instructed me to advise you that authorization of the improvement is not in accord with his program at this time and that he again recommends that measures be taken to bring about prompt settlement of the water rights controversy.

Sincerely yours,

FRANK PACE, JR., *Director.*

Especial attention is invited to the closing lines in the above-quoted letter:

That measures be taken to bring about a prompt settlement of the water-rights controversy.

Here is the President's expression not only that the central Arizona project, the authorization of which is sought by H. R. 934, introduced by the gentleman from Arizona [Mr. MURDOCK] is not feasible and should not be constructed at this time, but also by his plain statement the controversy over the use of the waters of the lower Colorado River which has extended for so many years should now be settled.

I have authored House Joint Resolution 73, which is designed to grant the consent of Congress to the joinder of the United States in a suit to be brought in the United States Supreme Court to settle this matter of vital importance to the entire Southwest. I cannot refrain from now inviting my colleagues in the House to support that resolution and speed the way—the American way—to a settlement of this grave interstate controversy by the Supreme Court of the United States, the highest court in our land.

Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. WILLIAM A. BARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, may I take this opportunity to add a few brief statements to join in the protests of millions of others in denouncing the despotic rulers of Hungary in the arrest, imprisonment, and trial of Cardinal Mindszenty, primate of Hungary, who is loved, honored, and trusted by his own people and has always been held in the highest esteem by the rest of the world.

I wish to speak not only for myself, but also for the few thousands of my constituents in the First Congressional District of Pennsylvania who have sent me letters and telegrams protesting the unjust treatment of Cardinal Mindszenty. The Reverend John W. Keogh, pastor of St. Gabriel's Church, Twenty-ninth and Dickinson Streets, Philadelphia, Pa., has also vigorously protested the persecution and prosecution of Cardinal Mindszenty. Even before these events reached their present heights of concern to the public, Father Keogh was not only calling his own congregation to prayer but was also pleading for intervention on high levels.

Our words and prayers may not save the life of Cardinal Mindszenty, but we hope that they will arouse the United Nations into taking action to prevent the sacrifice of additional martyrs to the cause of liberty and justice. The world must know that the freedom-loving peoples of the United States and the rest of the world will not tolerate such demoniac actions.

These actions against Cardinal Mindszenty have not, as his accusers state, exposed his crimes, but rather have served to awaken the world to the existing threat to religious freedom. The tortures inflicted upon Cardinal Mindszenty are the greatest travesty of justice since the martyrdom of St. Joan of Arc. The millions of politically and economically enslaved people of eastern Europe undoubtedly have many tales of similar injustices imposed by their unscrupulous leaders who dominate them, but we are unable to hear their cries for mercy and help because of the barriers which encompass them. As citizens of the mightiest Nation of the world we should join forces, regardless of sect, and raise our voices in protest so thunderous that no barrier will prevent these anguished peoples from hearing us. We must let them know that the humiliation of Cardinal Mindszenty, and consequently the belittling of the Catholic Church and the nations permitting freedom of worship, will not go unheeded and is not without our sympathy. We must also declare our intention to exert every effort to relieve them from their suffering.

In this tragic hour we must rededicate ourselves to taking every precaution against the penetration of such unbelievers into our country lest they deprive our citizens of their cherished liberties of worship, education, expression and occupation.

The fact that the various other nations throughout the world have also recognized this latest crime as a declaration of war on the Christian world should make us realize that we can no longer afford to be apathetic toward similar threats in the United States to the security of the freedoms enjoyed by our citizens. The time has certainly arrived when democracy, in the true, American sense of the word, must become as universal as the Catholic Church so that there will be no possibility of recurring instances such as the mock trial of Cardinal Mindszenty and the imprisonment of Archbishop Stepinac.

I wish to reiterate my plea that this entire matter be taken up by the United Nations without delay and to further request that the United States issue a formal note of protest to the Hungarian Government on diplomatic levels.

Amend the Displaced-Persons Law

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. JAVITS. Mr. Speaker, appended is an editorial from the New York Times of today showing the complete breakdown of the displaced-persons law of 1948. In the first 3 months of the operation of the act only 2,499 DP's actually were admitted out of an expected 50,000. The people have spoken through the Congress to the effect that they want to help the displaced persons. They thought they were doing this when Congress passed the displaced-persons law of 1948. Those of us who opposed that law knew that it would not do the job. The facts are now plain for all to read. Congress should immediately amend this law so that it will carry out the people's intention.

REPORT ON THE DP'S

It has long been known that the "emergency" DP legislation of 1948 would meet no DP emergency at all—that, on the contrary, as President Truman warned when he reluctantly signed the bill, it would prove impractical and in general "form a pattern of discrimination and intolerance wholly inconsistent with the American sense of justice."

Now evidence of the full and shocking extent of how this law keeps the DP's out rather than admits them is before Congress. The Displaced Persons Commission, created to make the law operate, has just declared in its first semi-annual report that the act is "all but unworkable." Of 50,000 DP's expected to be admitted during the first quarter—the act would admit 205,000 in a 2-year period—only 2,499 persons have actually entered the country, the Commission points out. Because of legalisms and preferences which unrealistically set the worth of one DP group above another, the present law is a virtual betrayal of honest plans to move DP's out to new homes and new lives.

To put the law on a democratic basis, the Commission has recommended nine major changes. The country is clearly eager to have Congress make amends for this clumsy, eleventh-hour legislation that has hampered the DP program. Governors' commissions, civic groups, labor groups have shown that their communities want and need the contributions of the DP's. And good men in both houses of the present Congress, of both parties, are striving to overcome the defection of the last Congress with bills that will throw out the injustices spotlighted by the Displaced Persons Commission. The will exists. The time to act is now.

"Bald-Faced" Move Seen by Truman on Labor Bill

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following article by Gould Lincoln, which

appeared in the Washington Star, Saturday, February 5, 1949:

"BALD-FACED" MOVE SEEN BY TRUMAN ON LABOR BILL—PUBLIC ALARMED AT IDEA OF ENDING LEGAL POWERS TO MEET STRIKE

(By Gould Lincoln)

When is an injunction not an injunction?

Answer: Apparently when it is asked by the Attorney General on order of President Truman. The bald-face attempt of the administration to placate and satisfy the public, alarmed at the idea of doing away with legal powers to meet a strike that might paralyze the country, and at the same time to satisfy the labor leaders who are demanding the elimination from the proposed new labor law of all reference to injunction, looks like an act of political desperation.

Further, the claim by the Attorney General that the President has inherent powers—seemingly acquiesced in by Mr. Truman himself—has a strange sound in American ears. Almost it is like the sound of those powers which were claimed by kings under so-called divine right. These inherent powers to halt a devastating strike which Attorney General Clark is now claiming for his chief must have been sadly lacking a couple of years ago—when Mr. Truman rushed to the Capitol and asked a joint session of Congress to put through a law empowering him to draft railroad workers into the armed forces when a Nation-wide tie-up of the roads was threatened.

EMBARRASSING POSITION

The administration has been in an embarrassing position ever since it tackled the repeal of the Taft-Hartley Labor Act—its major promise during the recent Presidential campaign. Bringing to the Senate Labor Committee a bill which repeals the Taft-Hartley Act and reenacts the Wagner Act with certain minor amendments favored by the President, Secretary of Labor Tobin has had a tough time. Under the probing questions of Senator TAFT, of Ohio, and other members of the committee, it has been difficult for him to sustain objection to certain provisions of the law he seeks to repeal. And as for the elimination of that provision of the law which enables the Government to act in national emergencies (caused by strikes or threat of strikes), Mr. Tobin has had to rely on the dictum of the Attorney General—a pretty poor reliance.

The opponents of the Taft-Hartley law have charged that "the era of government by injunction" is being revived in labor disputes, as a result of the Taft-Hartley Act. A glance at the record of the operation of the law for the first 16 months of its operation gives this charge the lie direct. The statute authorizes the use of the injunctive process under three provisions. First, the National Labor Relations Board may seek a temporary restraining order (an injunction) on its issuance of a complaint charging that any person has committed an unfair labor practice. Second, the board is required to seek injunctive relief in secondary-boycott cases when there is reasonable cause to believe that the charge is true and that a complaint will issue. Third, the act authorizes such relief on petition of the Attorney General when a strike or lockout is one which affects an entire industry or a substantial part thereof, and if continued will imperil the national health or safety.

WRIT RECORD RECALLED

Under the first provision mentioned, injunctions were sought in only 6 cases; under the second provision, in 29 cases, and under the last, in 6 cases. It is interesting to note, too, that injunctions were granted in 3 cases only under the first provision; in 15 under the second, and in 6 cases under the last. It is the last category of cases and injunctions which is involved in the controversy between the Attorney General and the President on the one hand, and Mr. TAFT and other members on the committee on the other. Those actions involved serious situations and problems for the country, among them a coal strike and a longshoremen's strike.

The Taft-Hartley Act is direct. It gives the necessary authority by law, to move in strikes or lockouts which may affect public safety; it specifies that the Government act to halt such strikes by injunction, but only for a period of 80 days during which every avenue for settlement may be explored.

Mr. Clark, on the other hand, would leave out of the law this specific power—and yet make use of the injunctive process under so-called inherent powers of the President. Mr. Truman, pressed at a press conference, said he had no particular objection to including in the new law the injunctive power, but insisted such action was not necessary. He, too, apparently, is relying on these inherent powers.

Two world wars, during which the President, by law, was given great powers, have tended to magnify the Presidential power—even though war is over. It's a dangerous trend.

Housing Problems in Milwaukee, Wis.

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a resolution passed by the Common Council of Milwaukee relative to mass tenant eviction and rental inequities and an editorial from the Milwaukee Journal of January 29 entitled "If Property Owners Are Wise":

Resolution opposing mass eviction move of Milwaukee Property Owners' Association

Whereas there is a tremendous housing shortage, not only in Milwaukee but throughout the Nation; and

Whereas in a recent survey conducted locally, it was shown that housing was considered number one on Milwaukee's list of needs; and

Whereas governmental agencies and others are spending much time, money and effort in seeking more housing; and

Whereas in all these efforts the greater emphasis is being put on rental housing as against housing for sale; and

Whereas a movement has started on the part of landlords elsewhere in the United States to begin serving eviction notices wholesale in defiance of Federal controls; and

Whereas this movement for mass evictions is being taken up in this area by an organization known as the Milwaukee Property Owners' Association: Therefore be it

Resolved, That the Milwaukee Common Council go on record as being unalterably opposed to this move or to any other program designed to take housing out of the rental market at this critical time; and be it further

Resolved, That the Milwaukee Common Council take immediate steps to inform the proper rent control authorities of the Federal Government of the inequalities of present rental controls both to tenants and to owners and the immediate necessity for correction thereof; and be it further

Resolved, That a copy of this resolution be sent to the officers and directors of the Milwaukee Property Owners' Association, and members of the United States Senate and House of Representatives from the State of Wisconsin.

[From the Milwaukee Journal of January 29, 1949]

IF PROPERTY OWNERS ARE WISE—

Owners of rental property who are now toying with the foolish idea of withdrawing their units from the market through mass evictions have a case if they are wise enough to use it.

The total economic picture can be assembled to show clearly that these property owners in general are entitled to an increase. Taxes have gone up, operating expenses have advanced, everything that goes into the owner's costs are higher. He has been held down unduly while others were free to adjust themselves to the inflation that took place.

There had to be rent controls, and there still have to be. The rental market is too limited to allow a free flow of bargaining. But that control should be held strictly to the prevention of abuses and practices that would force an intolerable situation.

If all this were made crystal clear through the presentation of convincing facts, we believe that Congress would be forced to take notice. But the property owners will never achieve relief by trying to throw people, en masse, into the street. The property owners would lose their case right there.

Federal Tort Claims Act

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. JAVITS. Mr. Speaker, appended are excerpts from an address made by Irving Payson Zinbarg, Esq., a member of the New York bar and one of my constituents, on the subject of the Federal Tort Claims Act. Without expressing my agreement or disagreement with the views expressed in this address they involve the point of view of the practicing lawyer in cases affected by this act and should prove of interest to the Members on how this type of legislation is working out in practice:

FEDERAL TORT CLAIMS ACT

I have been asked to talk tonight about negligence cases and more particularly about the Federal Tort Claims Act which is fairly new, yet is old enough for us to have formed some opinion as to whether or not we like it.

You know, as I do, that none of us may, for a wrong done us by it, sue a government, be it municipal, State, or Federal, without the consent of that government.

Our city of New York has given blanket consent for such lawsuits and during my work at the trial bar, I have also brought many actions against the city for injuries or wrongful death resulting from negligence. There is no limitation on how much one may sue for, nor does the city say how large the attorneys' fees shall be.

The State of New York consents to the bringing of suits against it for its negligence and it has set up the court of claims for decision by a judge, without a jury, of such cases. No restriction is placed on the size of the attorneys' fees.

On August 2, 1946, the Congress of the United States made into law the Federal Tort Claims Act which provides that the United States like the city or State of New York, now is treated as any other tort feasor, and is liable for damages resulting from the negligence of any employee of the Government, while acting within the scope of his

employment, in accordance with the law of the place where the tort occurred.

The act, among other things, gives the Federal court jurisdiction in such cases, and provides that the district judge take testimony and determine the issues without a jury.

Although it is now more than 2 years since the Federal Tort Claims Act became law, and although I am admitted to practice in the United States district courts, the United States circuit court of appeals, and the United States Supreme Court, I have been consistently declining retainers in tort actions brought under the Federal Tort Claims Act.

Why? Because in enacting this law the Congress on the one hand seemingly helped injured persons, or the widows and orphans of men killed, to speak up for payment for the wrongs done them, but the Congress on the other hand, or rather with the same helping hand, gagged the mouths of these maimed, or widows, or orphans, by providing no adequate means for these citizens obtaining experienced counsel to present their claims. They fixed the attorneys' fees at 10 percent under some circumstances, and at not exceeding 20 percent under any circumstances. Since the net fees of trial lawyers like myself are usually about 25 percent of the recovery, after remitting the share of the attorneys who forwarded the claims to us, neither we, nor the general law practitioner, nor legal specialist in other fields can afford to accept retainers under the Federal Tort Claims Act for the niggardly payments provided therein. Remember, I invest my work, my staff's work, my overhead and all of our energies on the assumption that I will obtain a judgment, settlement, or verdict for the claimant. I take the risk that if I do not succeed in getting the client any money, I've lost all.

But, you ask, why should good, capable, experienced, well-equipped attorneys like yourselves refer tort actions at all? Why should a tort action differ from an action for breach of contract? After all, in either action the plaintiff has the burden of proving what he claims, and in either action the plaintiff bears the burden of proving his damages. In either action the defendant must, by cross-examination or by his own witnesses either attempt to defeat the claim or, at least, mitigate the extent of the damages. Why should attorneys' fees in tort actions be measured by a different yardstick than fees in contract actions? Why is the provision for payment of attorneys' fees as contained in the Federal Tort Claims Act so inadequate—so unjust?

In tort actions, the parties are usually strangers to each other, and since one party knows nothing about the other party to the lawsuit, or about his background, or his employees who may have committed the tort, neither can furnish his attorney with any information wherewith to attack the other party. Therein lies your first difference between tort and contract. In the contract action there has been some dealing with, some research into background of, the other party, either before or during the business venture. You know some weak or vulnerable spot in the other side.

In the tort action, it is for you to dig up motor vehicle reports, driving records, autopsies, hospital records, medical records, police records, military records, Workmen's Compensation reports, weather reports and any number and type of reports or records which may be used for or against your client. Such items of personal history are usually irrelevant in contract actions.

In tort, as contrasted with contract, actions, the exhibits and photographs are for you to obtain and the witness is usually for you to find and interview. The witness may be a businessman, professional man, policeman, laborer, mechanic or tramp—all strangers to you, to your client, to the opposition. Immediately, this involves going yourself, sending an assistant, or having available an honest, reliable, ethical investigator to go to the scene, to find the witnesses, if any, and bring back their statements to you. If, as many necessary witnesses, the principal eyewitness is unwilling to give statements of what he saw, or unwilling to go to court, the investigator must be clever, educated, experienced or persuasive enough, to be able to point out that the last kernel of hope for justice for your client will be shattered unless the witness treats your client as he would like to be treated were he in the same predicament.

While you, your assistant, or the investigator, as your wallet may dictate, is busy at the scene, interviewing witnesses and having appropriate photographs taken, you, or an assistant, must be writing for, or obtaining, the records to which I previously referred. In addition to these, you or an assistant, must talk with the doctors, scientists, chemists, technicians, experts to get their views. You must know how, and prepare to meet these experts on their own battlefields. This may not seem to differ greatly from getting the views of the expert, and knowing how to examine, in a contract action involving, let us say, the manufacture of a scaffold, but it is really different. Let me illustrate that! Assume you are retained in a personal injury and death action in the Supreme Court of the State of New York, against not the employer, but a third party, who is alleged to have negligently hung a scaffold on a building. You must know the mechanics of a scaffold, its manufacture or composition, as well as the proper manner of rigging it and, possibly, the nature, durability or composition of a parapet wall, masonry, a smoke stack, black iron, sheet metal, a block and tackle, whether wire cable or sisal, hemp, flax or jute rope is proper, State and municipal safety rules, labor laws, penal law, ordinances, etc. All this goes far beyond your contract action concerning the scaffold manufacture.

You must be far more expert in a tort action than in a contract action, to examine the expert. In addition to that you must be versed, somewhat, in medicine, to examine the medical technicians and experts in your negligence case.

In a motor-vehicle case, should some witness say he was driving the vehicle at a rate of 10 miles an hour, you must know that arithmetically he covered 14.666 feet in 1 second, thereby proving, by his lips, that the pedestrian or other vehicle was either hit or not as is claimed.

These, then, are only some of the essential materials and tools which go into the crucible wherein your tort action is prepared for trial.

But, how in the world can claimants and their attorneys afford to retain experienced tort-trial counsel under the Federal Tort Claims Act? Who will pay for all the necessary work and expenses connected with properly presenting the claim if the Congress has said to the district trial judge, "Pay the attorneys 10 to 20 percent for their services, and those of any help they may require"? How can the average Federal Tort Claims Act claimant ever succeed in obtaining experienced tort-trial counsel to get him as good results as he would likely get if he were not a Federal claimant, but instead were fortunate enough to be a litigant in a State court. Write or ask your Congressman for the answer. Maybe he can show you the justice of it.

Sour Fruits of Yalta

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include a radio address recently delivered by Mr. William Henry Chamberlin. This speech, entitled "Sour Fruits of Yalta," was made as part of the Justice for Poland radio program emanating from Station WSPR, Springfield, Mass., and sponsored by the western Massachusetts branch of the Polish-American Congress.

Mr. Chamberlin was a foreign correspondent for the Christian Science Monitor for 18 years, is a well-known author, and is presently associate editor of the New Leader.

His radio address follows:

Yalta, the Crimean resort where the so-called Big Three, Stalin, Roosevelt, and Churchill, met to remake the map of the postwar world, is famous in normal times for its grapes, apples, and other fruits. But the diplomatic fruits of this conference were sour and bitter for the American people. Yalta represented the highwater mark in a policy of trying to appease the Soviet dictatorship which was both morally wrong and politically stupid.

This policy was morally wrong because it involved the sacrifice of faithful allies, Poland and China, and the abandonment of the just war aims which were set forth in the Atlantic Charter and the "four freedoms." It was politically stupid because an aggressive dictator like Stalin cannot be appeased, any more than Hitler could be appeased. We did not win Stalin's friendship by our tactics at Yalta. We only won his contempt, his assurance that he could commit any act of lawless violence with impunity.

The parallel between the Munich conference of September 1938 and the Yalta meeting in February 1945 is appallingly close. Any differences between the two are to the disadvantage of Yalta.

Stalin at Yalta was the complete equivalent of Hitler at Munich. Roosevelt and Churchill played the ignoble roles of Daladier and Chamberlain at the earlier conference. Poland was the victim of Yalta, as Czechoslovakia was the victim of Munich. There were two factors that made the Yalta betrayal less excusable than the yielding to Hitler's demands at Munich.

First, there had been the previous experience which should have proved the futility of appeasement. Second, there was a bond of common suffering and sacrifice between Poland and the western powers which did not exist between Czechoslovakia, France, and Britain.

The war had been started on the issue of Poland's independence and territorial integrity. Britain had given a solemn guaranty of both. One wonders what the world reaction and the Polish reaction would have been if the British Government, in March 1939, had specified that, while guaranteeing Poland against German aggression, it was offering no assurance that Russia would not seize eastern provinces of Poland, amounting to almost one-half of the national territory.

The United States was morally bound to uphold Poland's territorial integrity because of its repeated expression of devotion to the

principles of the Atlantic Charter. These principles had been written into several international statements, and both the Soviet and the British Government had subscribed to them several times. The first three clauses of the Atlantic Charter are worth recalling. They read as follows:

First, their countries seek no aggrandizement, territorial or other.

Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned.

Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them.

The procedure at Yalta was a cynical negation of these sound principles of international law and morals from beginning to end. Poland was treated not as an ally but as a conquered power, without the right to be consulted about its own fate. The conferees at Yalta discussed the most vital questions of Poland's national existence, the composition of its government and the location of its frontiers, without the participation of a single person qualified to speak for the Polish people.

The upshot of these deliberations was to tear away from Poland almost half of its territory, including vital sources of oil and foodstuffs and such historic Polish cities as Wilno and Lwow without any pretense of a fair plebiscite. When the Soviet Union occupied eastern Poland, in criminal agreement with Hitler, in the autumn of 1939, a completely farcical so-called vote was taken without any safeguards for secrecy of the ballot or freedom of speech and press. It took place in an atmposhere of error and mass deportations of Poles to slave labor in Russia. No fair-minded observer could regard this as a serious consultation of the will of the people in eastern Poland. Yet without any further ceremony eastern Poland was handed over to the Soviet Union.

The legitimate representative government of Poland which existed in London, and which was recognized by the Polish troops fighting on many fronts and by the underground patriots in Poland was thrown over without a word of explanation. The made-in-Moscow Communist-dominated provisional government, set up in Poland by the bayonets of the Red army, was granted preliminary international recognition, with the face-saving provision, which proved worthless in practice, that it should be enlarged by the inclusion of Poles abroad and in Poland.

The treatment of Poland at Yalta was one of the most cynical deals recorded in the history of power politics. It was truly brazen hypocrisy to assert, as the participants in the conference did assert, that they were acting according to the principles of the Atlantic Charter.

Poland was not the only ally wronged at Yalta. Serious, although not such mortal injury was inflicted upon the territorial integrity and national interests of China. Roosevelt asked Stalin, at China's expense and without China's knowledge, to do something which was against America's best interests: To take part in the Far Eastern war. Japan was already on its last legs militarily. Even without the invention of the atomic bomb Japan could have been blockaded and bombed into surrender.

By entering the war a few days before Japan's surrender the Soviet Union staked out footholds in Manchuria and Korea which are profoundly detrimental to the American interest in maintaining the open door and self-determination for the peoples of China and Korea. Under the terms of the Yalta secret deal the Soviet Government was to receive, as the price of its entrance into the war against Japan, a joint share in the operation of the Manchurian railway system, a naval base at Port Arthur, at the southern tip of the Manchurian peninsula and a preferential position in the chief Manchurian port, Dairen.

The Soviet Government, on its side, was supposed to recognize and support only the legal Chinese Government. But, as always, when it was given an inch it took a yard. It kept the Chinese nationalist forces out of Dairen. It used its control of the Manchurian railways to enable large Communist forces to move into that strategic province. It only withdrew its own troops (apart from those still maintained in Port Arthur and Dairen) after it had supplied the incoming Chinese Communists with vast quantities of Japanese arms and after it had looted all the more valuable Manchurian factory equipment.

During recent weeks the visible threat of a China ruled by Communists who are themselves completely subordinate to Moscow has shocked and alarmed American public opinion. This threat would probably never have arisen if it had not been for the fatally mistaken decision at Yalta to induce the Soviet Union to move into Manchuria and thereby lay the foundation for Communist rule in that province.

In the same way the crisis in Berlin, with its threat of war, would never have arisen if a government friendly to America and to the West had been maintained in Poland, if there had been no surrender to Stalin at Yalta. As usually happens what was wrong and indefensible morally has proved highly inexpedient politically.

No defense of Yalta on moral grounds is possible. There is sometimes an attempt to defend this ill-fated agreement on grounds of military necessity. We were so dependent on Stalin, so this argument runs, that we had to sign on the dotted line as the Soviet dictator prescribed. These last ditch defenders of Yalta sometimes ask what critics of the agreement would have done had the responsibility for action been theirs.

The answer to this question is not so difficult as is sometimes presumed. For it is a false reading of the wartime military and political situation to consider that America and Britain needed Russia more than Russia needed the western powers. The Soviet armies rolled westward with the aid of American trucks, American telephone lines, with a substantial part of their rations provided from this country.

The fear that Stalin might make a separate peace with Hitler could have been safely ruled out. The Soviet dictator would not have been likely to make a second deal with Hitler which might have ended in a new Nazi attack on war-ravaged Russia.

The United States could and should have stood firmly for the Atlantic charter, which Stalin had repeatedly pledged himself to observe. It could and should have rejected deals that were in flagrant violation of the principles of the Charter. Even after America and Great Britain had recognized the Soviet stooge government in Warsaw there was a long period of guerrilla warfare, carried on by Polish underground patriots.

Had the United States and British Governments, before Yalta and at Yalta, pursued an inflexible policy of refusing to admit any change in the legitimate Polish eastern frontier or the validity of any government not freely chosen by the Polish people, Stalin would probably have yielded. It is easy to imagine what a tremendous advantage a friendly Polish government would have created for the United States in the present European crisis.

Suppose Stalin had not yielded, had occupied Poland by the military force of the Red Army and installed his Red quislings in power. Without the acquiescence of the western nations the naked lawlessness of such action would have been clear to the Polish people and to the public opinion of the entire civilized world. Resistance in Poland would have been fiercer and more prolonged. The inevitable showdown between eastern totalitarian barbarism and western Christian civilization would have taken place on an issue so plain that there could be no question as to which side right was on.

Yalta was a moral crime and a grave political blunder. There is only one way to atone for the crime, to repair the blunder. This is to declare Yalta invalid, so far as the United States is concerned. The Soviet Government has broken its Yalta engagements a score of times and more. A contract violated by one partner is not binding on another. Let us formally denounce Yalta and announce that we will accept nothing short of the Atlantic Charter, which means full restoration of Poland within its legitimate frontiers, as a basis of European peace settlement.

The Hall Survey Reveals That People Still Want Good Government

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, if our country is worth anything, it is certainly worth the opinions of the rank and file of our citizens. Our form of Government is based on the theory of being of the people, by the people, and for the people.

This always having been my conviction, I recently sent a direct letter to every voter of my district, regardless of party, creed, or race, and asked six questions, which have to do with leading important issues before the Nation today.

The overwhelming response I received indicates to me that people are more interested in their Government than some of our so-called leaders want to admit. They do have minds of their own and they are thinking about the welfare of America.

They have expressed themselves to me without fear and without hesitation. As the result, I feel myself on firmer ground than at any time in the past 10 years. I have been given the benefit of views from a tremendous number of people I represent. Such knowledge arms me with new strength, new confidence.

Yes, the folks back home dared the displeasure of the few stuffed shirts who frown on all communication between the common man and his elected representative. To commune with the people is below their dignity.

It will be easy for me to vote on the issues which come before this Congress because I have a good idea of what the people want after the survey I conducted.

A few branded my scheme a dangerous thing. They say it is unwise to consult the rank and file. They must think we are living behind the iron curtain where only the handful in control do any thinking and never allow the masses to do anything but suffer.

I suppose there are some even here who set themselves so high above the common herd they consider their own judgment infallible. My idea would not, of course,

appeal to them, because they believe the final word is for them alone to give.

However, the letters I received from voters in my district assure me they are well pleased at being asked for their opinions by the person they elect to high office. "We are glad to have a man as Representative," someone wrote me, "who thinks enough of us to ask what we want done in Washington."

This is the only policy I would ever use and it is about as near what the Constitution prescribes as anything I know of. We in Congress are supposed to represent all the people, not just a favored few who happen to be on the inside.

Knowing the results of the Hall survey will be of interest to the entire House, I am making them a matter of public record.

While I realize the questions may be answered differently by a majority in some sections, I am pretty certain the picture I am presenting is accurate for the Thirty-seventh Congressional District. Everybody was given the same chance to participate and the response has been amazing.

The questions I listed may differ, also, from what various other Members would prefer. I took only six fundamental subjects, those which haunted me in the last campaign and some which are of particular local interest. They are widely diversified and suggest still more which could be asked if there were space and time.

However, by the time my staff and I had counted and tabulated for nearly a month the many thousands of ballots, we thought I had listed enough questions as well as lined up enough extra correspondence to last the rest of the year. But I have been well repaid for the extra work. I feel so much better equipped than I could possibly have been without the survey.

The six questions were asked in a straightforward manner, with no desire on my part to confuse the issues or to cloak an answer to my own liking. I wanted a simple, clear, direct response, so I asked a simple, direct question. Anything more involved would have defeated my purpose, as I value the truth more than deception.

By the same token, I took the tabulations as they came. A doctored poll, the kind which the overzealous, overly confident candidate likes to see flashed in headlines the week before election with which he hopes to tip the scales in his favor, would be of no value to me. In order to know what the folks at home want me to do, it is absolutely necessary for me to gage my district accurately. I assume in this I am no different from almost every other Member of this House.

Those who examine the tabulations which I will submit during the next few days will observe that I am telling the story in percentages, not numbers. I have a good reason for doing so.

If I were to give numbers, the soreheads, who resent my consulting with the people, would challenge the accuracy of my survey, no matter how many answered. Even though I showed returns amounting to 99 percent of the total number of questionnaires mailed out, they would shout to high heaven that my poll is inaccurate because I didn't hear from 100 percent.

No; I am wise to that trick, and so I give only percentages of the actual ballots received in their relationship to the questions, not the over-all totals. But I heard from enough to make me certain the results are accurate and in line with how the people in my district feel. Let us say I heard from the majority, and that's as it should be.

Let us get back to the questions. You will be interested in the form likewise, so here they are, just as they were mailed to every family in the Thirty-seventh Congressional District at the beginning of this session, early in January.

The questionnaire reads as follows:

DEAR FRIEND: For the past 10 years some Triple Cities newspapers have criticized my votes in Congress. Because I don't see eye to eye with them they ridicule and malign me every time I vote for you.

I don't care what they want. I'm interested in what you want. Therefore, I ask you to tell me how you want me to vote.

1. Do you want me to vote for or against the Taft-Hartley Act? ------
2. Do you want me to vote for or against price control? ------
3. Do you want me to vote for or against price supports for the farmers? ------
4. Do you want me to vote for or against the tax on oleomargarine? ------
5. Do you want me to vote for or against a Federal sales tax? ------
6. Do you want me to vote for or against a national bonus for World War II veterans? ------

Mark your answers after each one of these questions.

You will be helping me do a better job for you here in Washington. Let me hear from you.

Your Congressman,

EDWIN ARTHUR HALL.

Mr. Speaker, on future occasions I will take each one of these subjects, submit the result in percentages, and comment on the issue in question. If the stand I took has been vindicated by the way the people I represent voted on these questions, I expect to point it out. I am glad to inform you that I was in step with almost all these expressions of opinion.

Disabled American Veterans Protest Cancellation of Hospital Building Program in Michigan

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks I wish to include a resolution that was adopted and passed by the Joseph D. Rankin Chapter 5, Disabled American Veterans of Detroit. The hospital situation in Michigan, particularly as it affects the tuberculosis and mental patients, is very desperate. There is no tuberculosis hospital in Michigan for veterans, and the Mental Hospital at Fort Custer is filled to capacity with a long waiting list. The same situation prevails at the Veterans' Administration hospital at Dearborn. These facts certainly are well known to the Veterans' Administration, and the abandonment of the hospital building program for the State of Michigan is disgraceful and inhuman. I have been flooded with protests from sick veterans and veterans' organizations.

I herewith submit the resolution passed by the Disabled American Veterans:

RESOLUTION CONDEMNING RECOMMENDATION TO CONGRESS OF A ONE-AND-ONE-THIRD-BILLION-DOLLAR CUT IN VETERANS' BUDGET

Whereas President Harry Truman, in his budget message to Congress of January 10, 1949, recommended a decrease in Government spending on veterans for next year in the amount of $1,300,000,000; and further proposed that Congress wipe out more than one-fourth of the veterans' 90-hospital building program, blueprinted during and just after the war ended; and

Whereas this proposal not only affects veterans all over the United States, but particularly in Michigan, because of the cancellation of the proposed 500-bed tuberculosis hospital for veterans at Detroit and a 200-bed general hospital at Grand Rapids and a 1,000-bed neuropsychiatric hospital at Toledo, Ohio, where it was felt about one-fourth of the beds would be allotted to Michigan mental and nervous cases. Michigan has no Veterans' Administration tuberculosis hospital, and there are long waiting lists at general medical, surgical, and mental hospitals; and

Whereas it is believed that the Government should make economies wherever possible, but not at the expense of sick and disabled veterans in need of hospitalization; and

Whereas this has all the earmarks of a beginning new "economy act" at the expense of those who made great sacrifices for their country, while expenditures of untold millions are going forward for the relief of people in foreign countries: Now, therefore, be it

Resolved, That President Truman be immediately contacted condemning his proposed reduction of much-needed hospitals and other vital services to veterans; and further

That each Congressman in the State of Michigan as well as President Truman also be sent a copy of this resolution and copies also be released to all metropolitan daily newspapers in Detroit.

Approved by Joseph D. Rankin Chapter, No. 5, Disabled American Veterans.

Gen. Jonathan Wainwright, Distinguished American, Speaks for the Disabled American Veterans

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a statement recently made by Gen. Jonathan Wainwright, national commander of the Disabled American Veterans, before the House Committee on Veterans' Affairs. General Wainwright is a distinguished American who has served our country with great honor, and as a disabled veteran himself and national commander of this splendid veterans' organization, has presented a thoughtful program on behalf

of the disabled veterans which is deserving of sympathetic consideration by the Members of the Congress.

The statement is as follows:

Mr. Chairman, ladies, and gentlemen, I am appearing here today on behalf of the Disabled American Veterans to present our legislative program to your committee. Since its inception, your committee has compiled an enviable record in protecting and extending aid to the wartime service-connected disabled veteran and to the survivors of deceased veterans. The DAV is grateful for the attentive, intelligent approach your committee has taken regarding problems of the disabled, their widows and orphans, and problems brought on them as the result of service to their country in time of national emergency.

It is my purpose to bring to the Committee on Veterans' Affairs a résumé of the mandates adopted at our twenty-seventh national convention held in New York City in August of last year. The DAV, like other veterans' organizations, operates in a democratic fashion. Our local chapters and departments in business sessions adopt and forward to the national convention each year recommendations for measures essential to the well-being of the service-connected disabled veteran, his wife, children, widow, or dependent parents. These resolutions are screened by the appropriate committee at the national convention and then either adopted or rejected by majority vote of the delegates there assembled. It then becomes the task of our legislative department to bring to the attention of the Congress for its consideration the resolutions which comprise our legislative program.

When I accepted the position of national commander of the Disabled American Veterans, I told the delegates who elected me that my program for the coming year would consist of these four points:

1. To bring about as nearly as possible a complete reconstruction for those veterans who can possibly recover with proper hospital and medical care;

2. To continue the care of those who can never recover from war wounds and illness;

3. To provide ample compensation for those veterans, wholly or partially disabled, in order that they may support themselves and their families under present high-cost-of-living conditions; and

4. To improve the housing conditions of all veterans, especially the disabled.

Our first objective will be to do all we can to urge the Congress to make possible a cost-of-living increase of at least 25 percent in all compensation awarded to disabled veterans and in pensions payable to the survivors of deceased veterans. We will also seek an amendment to the Dependency Allowance Act which now grants additional compensation for dependents of veterans rated 60-percent disabled or higher. Our proposed amendment would grant an allowance to all veterans with dependents, regardless of the degree of their disability. We are hopeful that consideration will be given to raising the income limitations affecting eligibility for part III benefits. In keeping with our proposed objectives during the coming year, we will ask Congress to stimulate the construction of low-cost rental units for compensated service-connected disabled veterans.

The DAV is vitally interested in the recent proposed reduction of the hospital construction program. At all times we have urged that the Veterans' Administration provide sufficient beds for the hospitalization of service-connected disabled veterans. We have studied the President's proposals in this respect as set forth in his message to the Congress, as well as the press release of General Gray. Immediately following the publication of the reduction of the hospital construction program we initiated a nation-wide survey to determine the true factual status of bed requirements presently prevailing and the situation which may reasonably be expected to prevail in the future. At this time we do not have sufficient facts to take a position on the proposed reduction in the hospital construction program; however, as soon as the results of this survey have been assembled and digested we expect to discuss these matters with the members of this committee as well as with the Administrator of Veterans' Affairs.

In conclusion, I want to state that the DAV is primarily a single-purpose organization dedicated to serving the service-connected disabled veteran. As such, our organization has never taken a position on the subject of general pensions. However, our legislative program does include such matters as housing, the protection of benefits accruing under the Veterans' Preference Act, adequate national defense, and other matters over which this committee does not exercise jurisdiction.

It is my hope that the new Congress will give the highest priority to this much-needed legislation for the welfare of the disabled and their dependents.

Labor-Management Problems

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two editorials from the Christian Science Monitor for February 4, 1949:

THE PARTNERS

On Capitol Hill, down in Washington, a Senate committee is busy hammering out legislation to replace or revise the Taft-Hartley Act. This is important work. All social relationships need some framework of law within which to operate, and this legislation has to do with a social relationship of considerable scope.

But it is useful to remember that to provide the framework is about all law can do. The rest of the relationship—by far the greater part—consists, as in other human institutions, of an agglomeration of understandings and ways of doing things, some informal, some pretty definitely set up by custom. Without this dynamic portion, the thou-shalts and shalt-nots of law would be no more than an empty shell.

For this reason we are presenting in an adjoining column excerpts from the report of the Twentieth Century Fund's labor committee, "Partners in production." The purpose of this committee's broadly representative membership has been to discover objectives already shared by management and labor and, where objectives are divergent, to find how both may be guided toward common ground.

More of this sort of thing goes on than the public is aware of. Strikes and battles over laws preempt the headlines. But it is the total of unspectacular cooperative projects such as this one, and of the thousands of problems quietly settled in thousands of plants day by day, that is the chief builder of labor peace.

PARTNERS IN PRODUCTION

(Excerpts from a report adopted unanimously by the Labor Committee of the Twentieth Century Fund: Chairman, William H. Davis, former chairman War Labor Board; James A. Brownlaw, secretary-treasurer Metal Trades Department, A. F. of L.; William L. Chenery, publisher Collier's Weekly; Howard Coonly, past president National Association of Manufacturers; Herbert W. Payne, vice president Textile Workers Union, CIO; Prof. Sumner H. Slichter, Harvard University; Herman W. Steinkraus, president Bridgeport Brass Co.; Prof. Edwin E. Witte, University of Wisconsin, former member NWLB.)

The evidence points to a growing sense of responsibility toward the mutual problems which confront labor and management. * * * A will to learn how to work together is building up. It may not be long before it breaks through into solid achievement.

The organization of labor is here to stay; the unions' fivefold growth since 1932 to more than 15,000,000 members appears to be real and lasting. Collective bargaining is not only the law of the land, it has become something more permanent: the customary way of doing things. Seven out of 10 production workers in manufacturing, and nearly one-half of all workers in all industries in which unions normally seek contracts, are now working under collective bargaining agreements.

Responsibility toward the collective bargaining contract is a mutual goal of labor and management, despite surface evidence to the contrary. The surface evidences are mainly the growing pains of the relationship in the case of relatively young unions.

The conflict does not arise because labor wants to take over the job of management. Overwhelming evidence shows that it has no such desire. Workers want an efficient management because they want a prosperous company.

Those unions that feel the employer is out to destroy or weaken them are going to try their best to discredit the management and win the strong support of the worker. Those employers who are convinced that the union is reaching for things that will wreck the enterprise are bound to try to weaken the union. A struggle over loyalty is no more than a symptom of unsuccessful labor-management relations. The conflict disappears wherever labor and management have learned to live together.

The basic conflict over labor's demand for human treatment is this: Management interest and thinking in the past have been centered on the machine, which it looked upon as the chief source of production, efficiency and profits and its most effective weapon in the war of competition; the worker's attention is necessarily focused on himself, his human needs, aspirations, and dislikes. * * * A possible compromise which protects the principal interest of each party is an agreement which permits the employer to use as few men as may be needed on the machine, but contains an agreement that no one will be laid off as a result of the introduction of the machine or that persons laid off will be paid a dismissal wage.

There is no conflict between management and labor over the question of giving some dignity to the worker and his job; there is only ignorance about how to do it. * * * Every industrial enterprise by nature must be a cooperative enterprise. That its members—particularly the workers—do not act as if they understood this is because the shops in which they do their daily stint have not been organized to give them a sense of participation or responsibility.

Management's chief goal—a profitable and efficient enterprise—is no more completely satisfying to labor than the worker's goal of security is to his employer. At best, both leave the other somewhat apathetic. The profit system is not primarily a system for personal gain of the management and the workers, as so many workers have learned to believe from interpreting their own experience. It is a highly effective system for producing and distributing goods. The social value of profit lies, not in its use as a reward for individuals, but in its objective

yardstick. This yardstick measures (not always perfectly, it is true) whether the goods and services produced are what people want, and also whether the work of producing them is being done efficiently.

The drive for job security is a protective and therefore an essentially negative one. This is why it often runs afoul of corporate purpose. There are many ways, however, in which the drive can be satisfied without adding to the cost of running the business. High among the protections demanded by workers, for instance, is that of an accepted union. This not only may cost nothing, it is an objective with which progressive management is in agreement. Another is a seniority system that eliminates favoritism and protects the worker with a long service record. Management would accept this, provided unions were willing to make reasonable exceptions in the interests of efficiency, particularly in regard to promotions.

[The committee recommends:] That the leaders of American industry and labor now jointly direct their attention, through the processes of intelligent self-government, to an agreed statement of economic principles which will afford a basis for a constructive advance in understanding the wage-price-profit relationship in a democratic system of competitive private enterprise.

That in all plants in which there is union representation management and organized labor assume responsibility for the integration of the union into the plant organization as an effective channel of two-way communication from managers to workers and from workers to managers.

Montana Needs Yellowtail Dam

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD memorials from the Montana Legislature urging that sufficient appropriations be allowed for the immediate construction of the Yellowtail Dam in Big Horn County, Mont. I want to join with my colleagues in Montana and urge the Appropriations Committee to appropriate the necessary funds to start this project which means so much to the economic development of southeastern Montana.

The memorials follow:

House Memorial 1

House memorial to the President of the United States, Harry S. Truman; Senator James E. Murray, Senator Zales N. Ecton, Congressmen Mike Mansfield and Wesley D'Ewart; Senator Joseph C. O'Mahoney, Chairman of the Senate Committee on Public Lands; Julius Krug, Secretary of the Interior; and Michael Straus, commissioner of Reclamation; Requesting the introduction and enactment into law of the necessary and proper legislation authorizing that sufficient appropriations be provided the Bureau of Reclamation for the immediate construction of Yellowtail Dam located in Big Horn County in southern Montana.

Whereas Yellowtail Dam site is located in Big Horn County, in southeastern Montana, and Yellowtail Dam will be constructed across the Big Horn River, about three-fourths of a mile above the mouth of Big Horn Canyon—35 miles southwest of Hardin, Mont.; and

Whereas Big Horn Canyon is the passageway of the Big Horn River between the northern end of the Big Horn Mountains and the Pryor Mountains. For more than 50 miles Yellowtail Reservoir will lie within the rugged, inaccessible canyon, the steep walls of which tower hundreds of feet above the narrow and winding river bed, forming a natural dam site of unique splendor that will in future years provide Montana and Wyoming with one of the greatest lake recreation areas in the Western Hemisphere; and

Whereas the United States Bureau of Reclamation was authorized by section 9 of the Flood Control Act of 1944, as a part of the Missouri River Basin project to prepare preliminary surveys and construction of Yellowtail Dam; and

Whereas the Bureau of Reclamation has practically completed preconstruction work at the site of Yellowtail Dam. Design specifications for the dam and power plant have been started. Surveys have been made of the irrigable area, and transmission-line location, and plans are ready or completed for construction of access roads, construction camp and other essential base work necessary before actual construction is undertaken; and

Whereas Yellowtail Dam is being designed to provide for irrigation, hydroelectric power production, flow control, silt retention, conservation of fish and wildlife, recreational development, and other related beneficial uses of value to all mankind; and

Whereas construction of Yellowtail Dam will make possible the irrigation of 45,000 acres of new land along the Big Horn River from the Big Horn Canyon to approximately 10 miles north of the city of Hardin, and supplemental irrigation water for large areas now inadequately served will be also provided. Because irrigation of lands along the Big Horn, Powder, and Yellowstone Rivers is dependent upon pumping, a source of low-cost power is prerequisite. Construction of Yellowtail power plant will make possible the irrigation of many proposed and desirable projects along these three valuable but presently little utilized rivers; and

Whereas construction of Yellowtail Dam offers a priceless solution for the equitable interstate use of the waters of the Big Horn by the creation of the Yellowtail Reservoir on the Montana-Wyoming State line; and

Whereas power generating facilities to be constructed at the dam will have an installed capacity of at least 120,000 kilowatts, and will produce about 712,200,000 kilowatt-hours of electrical energy annually. The said power produced at Yellowtail Dam will be used for irrigation pumping, and will serve as a part of the Bureau of Reclamation's power system constructed to provide power for construction of other developments and to supply surplus power to principal load centers to permit its use by new and old industries and residents of the area; and

Whereas the Big Horn River is the greatest silt offender in the entire Yellowstone River system. Retention of silt behind Yellowtail Dam will be of material benefit; and

Whereas fish and wildlife resources will gain by the dam, fishing and hunting, as well as the many allied recreational opportunities that will follow, will be of immense value to Montana and Wyoming; and

Whereas Yellowtail Dam as planned will be a concrete arch-type structure towering some 499 feet above the river bed, and will have a crest length of 1,480 feet, and will have a storage capacity of 1,366,000 acre-feet; and

Whereas the construction of said Yellowtail Dam will attract new industries into southern Montana, and thereby be of great benefit to the entire State of Montana, as well as the entire Nation, by supplying cheap electricity for industrial and home use, and this postwar period is the time to develop such industries: Now, therefore, be it

Resolved by the House of Representatives of the State of Montana, That the Congress of the United States of America be respectfully urged and requested to make sufficient funds available immediately for the construction of Yellowtail Dam in Big Horn County in southern Montana; be it further

Resolved, That a copy of this memorial be submitted by the Secretary of State of the State of Montana to the presiding officers of both Houses of the National Congress—ALBEN BARKLEY and SAM RAYBURN—to the chairman of the Appropriations Committee of the House of Representatives in Washington, D. C., to the Commissioner of the Bureau of Reclamation, the Commissioner of the Bureau of Indian Affairs, the Secretary of the Interior, the Governor of the State of Wyoming, and the presiding officers of both Houses of the Wyoming State Legislature; and to each of the Senators and Representatives in the Congress of the United States from the States of Montana and Wyoming.

LEO C. GRAYBILL,
Speaker of the House.

Senate Memorial 2

Whereas Yellowtail Dam site is located in Big Horn County, in southeastern Montana, and Yellowtail Dam will be constructed across the Big Horn River, about three-fourths of a mile above the mouth of Big Horn Canyon—35 miles southwest of Hardin, Mont.; and

Whereas Big Horn Canyon is the passageway of the Big Horn River between the northern end of the Big Horn Mountains and the Pryor Mountains. For more than 50 miles Yellowtail Reservoir will lie within the rugged, inaccessible canyon, the steep walls of which tower hundreds of feet above the narrow and winding river bed, forming a natural damsite of unique splendor that will in future years provide Montana and Wyoming with one of the greatest lake-recreation areas in the Western Hemisphere; and

Whereas the United States Bureau of Reclamation was authorized by section 9 of the Flood Control Act of 1944, as a part of the Missouri River Basin project to prepare preliminary surveys and construction of Yellowtail Dam; and

Whereas the Bureau of Reclamation has practically completed preconstruction work at the site of Yellowtail Dam. Design specifications for the dam and power plant have been started. Surveys have been made of the irrigable area, and transmission line location, and plans are ready or completed for construction of access roads, construction camp, and other essential base work necessary before actual construction is undertaken; and

Whereas Yellowtail Dam is being designed to provide for irrigation, hydroelectric power production, flood control, silt retention, conservation of fish and wildlife, recreational development, and other related beneficial uses of value to all mankind; and

Whereas construction of Yellowtail Dam will make possible the irrigation of 45,000 acres of new land along the Big Horn River from the Big Horn Canyon to approximately 10 miles north of the city of Hardin, and supplemental irrigation water for large areas now inadequately served will be also provided. Because irrigation of lands along the Big Horn, Powder, and Yellowstone Rivers is dependent upon pumping, a source of low cost power is a prerequisite. Construction of Yellowtail Power Plant will make possible the irrigation of many proposed and desirable projects along these three valuable but presently little utilized rivers; and

Whereas construction of Yellowtail Dam offers a priceless solution for the equitable interstate use of the waters of the Big Horn by the creation of the Yellowtail Reservoir on the Montana-Wyoming State line; and

Whereas power-generating facilities to be constructed at the dam will have an installed capacity of at least 120,000 kilowatts, and will produce about 712,200,000 kilowatt-hours of electrical energy annually, the said power produced at Yellowtail Dam will be used for irrigation pumping, and will serve as a part of the Bureau of Reclamation's power system

constructed to provide power for construction of other developments and to supply surplus power to principal load centers to permit its use by new and old industries and residences of the area; and

Whereas the Big Horn River is the greatest silt offender in the entire Yellowstone River system, retention of silt behind Yellowtail Dam will be of material benefit; and

Whereas fish and wildlife resources will gain by the dam, fishing and hunting, as well as the many allied recreational opportunities that will follow will be of immense value to Montana and Wyoming; and

Whereas Yellowtail Dam as planned will be a concrete arch-type structure towering some 499 feet above the river bed, and will have a crest length of 1,480 feet, and will have a storage capacity of 1,366,000 acre-feet; and

Whereas the construction of said Yellowtail Dam will attract new industries into southern Montana, and thereby be of great benefit to the entire State of Montana, as well as the entire Nation, by supplying cheap electricity for industrial and home use and this postwar period is the time to develop such industries: Now, therefore, be it

Resolved by the Senate of the State of Montana, That the Congress of the United States of America be respectfully urged and requested to make sufficient funds available immediately for the construction of Yellowtail Dam in Big Horn County in southern Montana; be it further

Resolved, That a copy of this memorial be submitted by the secretary of state of the State of Montana to the Presiding Officers of both Houses of the National Congress, ALBEN BARKLEY and SAM RAYBURN, to the Chairman of the Appropriations Committee of the House of Representatives in Washington, D. C., to the Commissioner of the Bureau of Houses of the Wyoming State Legislature; and to each of the Senators and Representatives in the Congress of the United States from the States of Montana and Wyoming.

Attest:

PAUL CONNOR,
President of the Senate.
LOU E. BRETZKE,
Acting Secretary of the Senate.

Rural Telephones

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. POAGE. Mr. Speaker, last week it was my pleasure to address some 3,500 delegates to the National Rural Electric Cooperative Association in New York on the subject of rural telephones. Believing that the problem is one of general interest, I insert that speech in the RECORD.

The speech follows:

Mr. Chairman, the REA was established to help in our efforts to bring a higher standard of living to rural people. Measured by this yardstick, it has been an outstanding success. Its loans have directly financed more than 2,500,000 connections. The effect of the competition which the REA-financed electric cooperatives have provided in the field of rural service has made it possible for at least another 1,500,000 rural customers to get service from private power companies who could not have otherwise secured it. On July 24, 1935, the spokesman of the private power companies told the Congress that "there are very few farms requiring electricity for major farm operations that are not now served."

In 1935 the relatively few farms who actually had electricity paid such exorbitant rates and charges that it was beyond the reach of thousands of average farmers even though the power lines were in front of their doors.

REA has shown that it is possible to take electricity to rural homes and to provide it at a fair price if the sincere desire exists to get it there. Today not less than 4,000,000 rural customers enjoy the blessings of electric lights and power either directly over REA-financed lines or over lines built by private interests because of competition, where less than 15 years ago the private power companies said it was economically impossible.

Many years before REA was established, this country was fairly well covered with rural telephone lines. When I was a boy out in west Texas, I lived 30 miles from the nearest railroad. We got our mail on a star route 7 miles from the house, but we had a telephone. Our lines, like most rural lines of the period were constructed and owned by the subscribers themselves. There was very little capital invested. The census shows that as early as 1912 there were 32,233 telephone systems or lines in this country. Actually only about 1 system in 20 operated a switchboard. In the main, these figures simply show farmer groups that had built a few miles of line. By 1922 there were 57,253 such lines, but shortly after World War I, the Bell Companies began to take over the more profitable territories, and by 1932 there were only 55,378 such lines. From that time on the number of separate lines or systems dropped very rapidly, but of even more significance is the fact that the actual number of rural phones dropped from 2,498,493 in 1920 to 1,526,959, 20 years later.

I would not be so bold as to say that this entire drop was due to the destruction of competition, but it is true that during this period the Bell companies took over most of the larger independent operations and established almost complete control over city switchboard as well as long-distance service. The smaller rural operations were left with their antiquated lines and instruments but with no opportunity to talk even to the county site, much less long distance, except on Bell's terms. Many of the small operators could not exist under these conditions. In 1920 independent companies served about 40 percent of the telephones in use. By 1940 they served less than 20 percent.

The tremendous loss in the number of rural telephones from 1920 to 1940, amounting to approximately a million connections, or around 40 percent of all the rural phones in operation in 1920, can in large part be accounted for by the rate policy of the Bell System which was exactly that of the private power companies of the same period. In a public speech delivered in 1922 Mr. E. K. Hall, then vice president of the A. T. & T., stated:

"There is only one mistake that the public service commissions can make about rates, only one—and that is by keeping these rates too low. They never can make a mistake by making them too high."

I don't know what Mr. Hall would say about that principle if he were here today, but I do know that it forced a million farm homes in these United States to disconnect their telephones, and it has probably made it impossible for another million farm homes to enjoy telephones since that time. The Bell system not only believed in high rates for themselves, but they believed in high rates for all the little companies, and they actively undertook to get the independents to raise their rates. In fact, Mr. Hall's remarks, which I have quoted, were made before the United States Independent Telephone Association.

At first the independents, and especially the rural-telephone cooperatives, resisted the push for higher rates, but the Bell system guided the independents into the high-rate psychology in diverse ways. In the preparation of rate cases, Bell companies assisted the connecting companies without charge. It was probably not too hard to convince most of the commercial or stock companies to raise rates. Only the very small, completely farmer-owned, cooperatives or mutuals tried to keep rates down, but it is at least open to grave doubt whether this program benefited anyone. This much is clear: With the progressive decline in farm income from 1924 to 1937, it became more and more impossible for a large number of farmers to continue the use of telephones under the prevailing high rates. Under a low-rate policy commensurate with the decline in farm income, the use of farm telephones would doubtless have increased just as the use of electricity in rural areas did increase during the same period.

I recite this history not for the purpose of condemning the Bell system, but rather for the purpose of warning them against a repetition of the policy. I fear that we are today facing a period of reduced farm income. In fact, we all know we have entered such a period, and we can only hope that our farm program of support prices under farm commodities and our export program will be able to prevent a disastrous drop in farm income. At the same time I think that I perceive a disposition on the part of the Bell companies who now so completely monopolize the more-profitable segments of the telephone business to repeat its high-price policy. If they do, I fear that it will kill the goose that is about to lay the golden egg.

The high-rate policy of the Bell system (or possibly I should say of all semimonopolies) not only resulted in a loss of probably 2,000,000 rural telephone connections, it left another great group of rural lines or systems with no feasible switchboard connections and therefore with no ability to provide anything like reasonable service. The farmer-owned mutual systems that had previously enjoyed a switching arrangement with an independent system in the local trading center found that independent either taken over directly by the Bell systems or completely accepting the Bell-sponsored program of high rates. In any event, the farmers found that they could no longer pay for the needed connections and maintain their low-rate program. Most of the farmers' mutual owned lines and exchanges tried to hold their subscribers by holding down rates, but they could not give the needed exchange or long-distance service. They lost the more profitable business. They were left with only the least lucrative areas. Naturally, their service, which was never too good, suffered.

For a quarter of a century there has been practically no replacement or improvement on these smaller systems, and very little maintenance. Today most of the small mutual and privately owned rural telephone systems need a complete rehabilitation. Practically none of them have any funds with which to make the needed improvements.

Nor would I want to leave the impression that all of the inadequate service is on the lines of small local concerns. Where the Bell System has no competition, its rural service has often fallen to inexcusably low levels. This is particularly true in the South, where less than 10 percent of the farm homes had telephones in 1940. In Georgia and South Carolina not 1 farm in 25 had a telephone. In my own district the rural service offered over the Bell lines was so bad, before I first introduced telephone legislation, that it was often quicker to get in a car and go talk with a farmer than to try to reach him by phone, even though he was paying for telephone service. Maybe it has had nothing to do with it, but since I introduced my first bill on the subject there has not only been a marked improvement of the rural service in our area, but the Bell people have been most active in extending their lines to new subscribers. They have connected hundreds of rural sub-

scribers while at the same time they have refused to accept new city connections. Their present attitude in central Texas should result in a vast improvement in the rural situation if they don't take away the opportunity by an arbitrary increase in rates just at a time when farmers will be unable to pay them.

The rate situation is certainly not hopeless. There has never been a time when we have enjoyed greater opportunity to effect real and substantial economies in the field of rural telephone service than we do today. It is a time that the whole price level is high, but we can surely assume that as farm prices settle down to the floors supported by the Government, there will be a gradual decline in the cost of telephone construction and equipment. Notice I said "cost—not price" I realize that as long as there remains a monopoly in the manufacture of telephone equipment, there will be little, if any, reduction in price until we provide competition. Only then will we get the benefit of any decline in cost.

I am thinking of the fact that roughly one-half—ofttimes a good deal more—of the cost of any rural telephone system must be allocated to lines, and a substantial part of the operating costs must go to maintenance of those lines. Today a great part of the country is covered with rural electric lines which are owned either by local cooperatives or by private utilities. In either event, they can be used to take telephone service to rural areas. In many instances a very substantial saving can be effected by simply placing closed metallic telephone circuits on the existing poles. In other cases, particularly where the density of subscribers is less it will be cheaper to use the well known and fully proven carrier system and transmit telephone conversation over hot wires. In either event, there is a very significant saving in the capital investment necessary to connect the farm home with the switchboard. A similar saving is effected in maintenance of the lines. Surely any electric cooperative or private utility could profitably maintain telephone wires on their electric lines at far less than the cost to the telephone company would be if the telephone company were doing it separately. The rural people of America are paying for the electric systems which own the existing lines whether they are the lines of cooperatives or the lines of private power companies. The rural people will inevitably pay for any telephone service that is provided for them. I think it is reasonable for them to demand that there be a maximum of coordination between the two programs in order that the sum total of the bill that the rural people must ultimately pay may be as small as possible. I think that our farm people have a right to expect their Congress to set up the machinery needed to secure this coordination. I think they have a right to ask their Government to provide the credit needed—especially in view of their splendid record of meeting similar obligations through their local electric cooperatives. That is what the pending telephone bill (H. R. 113) does—it makes Government loans available through the REA for the purpose of financing the improvement, expansion, construction, acquisition, and operation of rural telephone facilities.

I would not contend that all of the problems of rural telephones can be solved by the coordination of the facilities which provide electricity with those which are needed to provide phones. I recognize that the trading centers to which farmers want telephone connections are not necessarily the centers of their rural electric systems. I realize that the existing electric lines are not laid out so as to give maximum efficiency for a telephone system. I realize that there are many miles of existing telephone lines in the same areas with rural power lines and ofttimes it will be more practical to keep these telephone lines in use, and surely it will be necessary to build a great many outright telephone lines to secure proper connections for all the homes in an area with the desired switchboard. At the same time the outstanding fact remains: a tremendous expense and unnecessary duplication of lines can be avoided by proper coordination of facilities.

The Bell system will protest that they have offered such coordination. Let it be pointed out that in addition to the question of a fair division of the savings as between the power system and the telephone system, there have been repeated differences between the Bell systems and the local cooperatives over Bell's refusal to give full coverage even within a limited area. I recognize that almost every electric cooperative will serve patrons who will want service from more than one switchboard. I realize that a telephone company (Bell or independent) will often be in a position to contract only relative to that portion of the area served by one switchboard, but within that area I feel that it is the duty of the REA-financed cooperatives to insist that if a telephone company is to use the coop facilities that it (the telephone company) should agree to give complete area coverage—that is to give service to every member of the cooperative in the area who wants it.

When a local cooperative allows a telephone company to use a part of its facilities and does not require it to give service to all of its members within the area, the cooperative becomes a party to a practice which will in the long run condemn some of its own members to go without phone service. We all know what happened to the hard-to-reach homes when the power companies (and some cooperatives) ran their lines down the highways and skimmed the cream of the business. Many of these homes are still without lights. Let us not make the same mistake with telephones. Let us insist that when a territory is opened to telephones that everybody be served.

There are many areas where the electric co-ops will not be called upon to play a part in supplying telephones. There are hundreds of farmer-owned mutual systems over the country that simply need a source of credit at reasonable rates to enable them to enlarge and improve their facilities to give adequate service at reasonable rates. These mutual exchanges are particularly numerous and well organized in the Middle Western States. Some of them will want to merge their facilities, both to reduce overhead and to render a greater service. Most of them need new capital to make these mergers practicable.

The most effective argument the Bell companies are able to present to public-utility commissions in States where they exist, or to the public itself where the companies are trying to secure public or official approval of rate increases, is evidence that their revenues do not meet their expenses. One of the major items of expense is interest on capital funds. Most, if not all, of the Bell companies finance their expansion not by the sale of stock to the public or by the sale of bonds on the open market, but through stock sales and borrowings from the American Telephone & Telegraph Co. These borrowings are not at a uniform rate, but they are all well above the rates charged by the REA. Surely if 2-percent money were available through REA loans the companies could hardly use loans or self-enriching stock transactions as a justification for imposing exorbitant rates on the farmer.

H. R. 113, therefore, provides that the REA shall give preference in making telephone loans "to public bodies, cooperatives, nonprofit, limited dividend, mutual associations, and persons operating existing telephone lines, facilities, or systems through which telephone service is furnished in rural areas." Thus, every rural telephone system, whether owned by a farmers' mutual, a local operator, or a Bell company can borrow at the same low rate, and at the same time the door is open to electric cooperatives who may want to provide some telephone service or to newly organized telephone cooperatives.

As I see the picture, we will actually want to use a number of different instrumentalities and combinations of different operations. In some areas the existing telephone operators, whether Bell or independent, will want to extend and improve their service. In some areas, especially in the South, there will be new systems established—probably cooperatives but possibly privately owned. In some cases existing local electric cooperatives will want to borrow money and equip their lines either with metallic telephone circuits or with carrier equipment. More often I expect a part of the members of an existing electric cooperative will want to establish a completely separate telephone cooperative and contract with the electric cooperatives for the use and maintenance of its lines. In most cases, except in those which involve only the expansion and improvement of existing facilities, it will be desirable to contract not only with existing electric systems for the use of poles, but also with the operators of existing switchboards for switching facilities and connections with town or city subscribers. I feel there will be relatively few cases where it will be desirable to install new switchboards, but by all means I think the authority should exist, for if there is one thing I have learned in our dealings with the private power companies, it is that the people can get consideration only in both rates and service in exact proportion to their ability to provide for their needs from other sources.

Assuming that we have legislation which convinces the Bell companies that it will be possible for the farmers to get switchboard service for themselves if necessary, then I can see where it would be to the decided advantage both of the Bell and of the independent operators to provide that service. Let me give an example. Suppose we have an REA-financed electric co-op with 2,500 members. Possibly the headquarters of this co-op are in X county. Some 500 of its members trade at Yville. These people want a telephone service that will enable them to talk to the doctor, the grocer, and the repairshop at Yville, and for that matter to the 500 citizens of that town who are now served by a local telephone exchange.

The Yville telephone system does not have the capital to build lines to the rural people who want connections, and if it did, the maintenance overhead would be too great. In many cases it will develop that the Yville operator can just about keep up his city lines and his switchboard, but he could give switchboard service to 500 new customers without any material increase in his expenses. Would it not make sense for those rural people to organize a telephone cooperative, borrow their capital from REA at 2 percent. Contract with the X County electric cooperative to furnish and maintain lines that can be used for telephone purposes, and probably to erect and maintain such new telephone connection lines as would be needed; install telephone instruments and then contract with the Yville telephone company to connect them with its switchboard thus enabling them to talk not only to their neighbors, but also to friends and businessmen in town? It would add to the value of the service the Yville exchange had to sell in town. It would keep the capital investment to a minimum. It would give the X County electric cooperative some income. It would substantially increase the income, and even more greatly increase the profits, of the Yville telephone exchange. It would create new long-distance calls on which the Bell systems would inevitably take their profit. Frankly, I can't see who could possibly be hurt unless we accept the Bell-system psychology of 1923 that rates should be kept

high, and if we accept this, we might as well forget about any expansion of rural telephones.

Of course, there could be any number of variations of the example I have given. The Yville telephone exchange might contract direct with the X County electric cooperative and eliminate the necessity of a new telephone cooperative. In rare cases the Yville exchange might be sold to the new telephone cooperative, and in very unusual cases the cooperative might find it necessary to erect its own switchboard. H. R. 113 confers powers on REA broad enough to care for any of these contingencies, but there is no doubt that everyone would profit most by complete cooperation between the farmers who want telephones, the switchboard operators who need more customers, and the electric distributors who have an investment in lines.

Many of the savings I have suggested would be impossible should the Bell System use its monopolistic position to deny them. The A. T. & T. could refuse to make modern equipment from its Western Electric subsidiary available to telephone cooperatives. Of course, the Attorney General is even now trying to break that monopoly, but I have more confidence in competition. Most of you have heard me repeat my belief that competition is always more effective than regulations when dealing with monopoly. So I would prefer to look to the technical staff of REA for aid in this instance. In the early days of the development of your great rural electric program the utilities very nearly controlled the sources of supply of transformers, meters, switches, etc. You will recall that REA engineers designed even better adapted equipment and interested dozens of smaller manufacturers in its fabrication. I would hope for cooperation, but I have no doubt that should Western Electric assume a hostile attitude, it would be entirely possible to follow a similar course with telephonic equipment. REA has a fine staff of technicians. If your local electric distributing systems are able to get the needed material, and if we in Congress are able to get the needed funds for three more years, the new construction work on REA-financed electric lines will begin to fall off. The job will not have been completed but it will definitely require progressively less in the way of material, money, and men. It seems to me that this is an auspicious time to direct the talents of the REA organization toward an expanding program.

I first introduced a telephone bill 4 years ago. Senator LISTER HILL and I have each introduced similar bills each session of Congress since. In the past we have had no direct success. However, I think that the very pendency of such legislation has caused the telephone companies to connect hundreds of thousands of rural families who would never have otherwise received phones, but neither the Senate nor the House has ever passed any bill on the telephone subject. I believe that we have at last reached a point where we can expect serious consideration, and I hope, favorable action by the Congress. The chairman of the House Committee on Agriculture, to which committee my bill has been referred, Hon. HAROLD D. COOLEY, on yesterday, assigned the bill to the subcommittee of which I am chairman. I am here and now announcing hearings on the measure beginning on February 14. My bill is not identical with the bill sponsored in the Senate by Senator HILL (naturally I think it is a better bill than the Senate bill), but in event of the passage of either bill by either House, the subject matter would go to the other House so both measures are sure to be considered in any measure that might become law, and Senator HILL and I are working in full cooperation.

The American farmer is now in a position to listen to everyone else. He now has or soon will have lights by which to read his daily paper. He can listen to every commentator over his radio, but he cannot express himself to the rest of the world except through a written message over RFD. I want him to have a chance to talk back. I want every farm home to have a chance at every convenience that is available to a city home. A telephone may not materially increase the earning capacity of every farm, but I know from experience that it make a farm a more pleasant place to live, and I know of no comparable convenience that can be had so cheaply if we will but use the proven methods that are available to us.

Rent Control

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles Abrams, A Violent and Mistaken Challenge to Rent Control, which appeared in the New York Post, January 31, 1949:

A VIOLENT AND MISTAKEN CHALLENGE TO RENT CONTROL

(By Charles Abrams)

I have been barraged with pamphlets and reprints of an article on rent control in France called No Vacancies, by a Monsieur Bertrand de Jouvenel. The article, issued in pamphlet form by the Foundation for Economic Education, has received the praise of News Week economist Henry Hazlitt, and in condensed form now appears in the February Reader's Digest, which has undertaken a mass distribution of reprints.

Since release of the article has been timed with the bill to extend rent controls in the United States, its facts and conclusions may be expected to play an important part in the forthcoming congressional debate.

In brief, says de Jouvenel, rent for a Paris worker is only a dollar or two a month, equivalent to 6 to 11 packages of cheap cigarettes and about 2 percent of a worker's income. Owners therefore neglect their houses, and as a result 19 percent of Paris' dwellings are slums.

Confusing cause and effect, he blames the dearth of building on rent control instead of ascribing rent control to the dearth of building. The builders, he says, would have to charge $166 to $200 a year for a worker's apartment now costing $13 to $16. It therefore makes it psychologically impossible to find customers, says he, hence construction will not be undertaken.

M. de Jouvenel deplores the fear of a sudden return to liberty, by which he means release of rent control, and he cautions his friends across the sea against the dire things that have happened to France.

I am no believer in rent control as a cure for housing shortage. It invites administrative headaches, might retard some building, and is unfair to owners. But I won't go along with a reckless abolition of controls which would not only spiral building costs but invite social havoc. If controls are to be abolished, and I believe they can be, every means must first be employed to build as much housing as possible and this must include a public-building program comprehensive enough to eliminate the shortage.

What puzzles me, however, is that the very groups who oppose rent control also oppose public building. This includes our real-estate lobby, our anti-Government-intervention-of-any-kind economists, and some of our press and periodicals.

What stops private building is not rent control—with rent controls in effect we built housing last year almost equaling the record year 1925. Nor did rent control destroy the building boom in New York City in the 1920's or materially affect building activities elsewhere. The main cause of building stoppage is its high cost in relation to the rent-paying capacity of people; since building labor both on site and in materials manufacture represents 72 percent of home cost, release of controls must inevitably spiral building costs and zoom rents of new dwellings even further.

High building costs in France are due to the inflationary price spiral and the backwardness of the building industry. If an automobile in America now costing $1,714 were put up like a house with 1910 tools, its estimated cost would be $60,000.

The inability of workers to pay current building costs, as well as slums and overcrowding, are not solely a peculiarity of France, but are world phenomena, true of countries with rent control and without it.

The negligible nature of France's public building program has had more to do with protracting the housing shortage and rent controls than any other factor. Mortgage funds for construction are at a premium in France, amortization periods are short, and only about 50 percent of building cost is offered the private builder. These terms are hardly conducive to private building.

De Jouvenel says that 82 percent of Parisians lack bathtubs or showers, 20 percent have no running water, 54 percent no private toilets. I have seen new buildings put up in Europe without bathtubs and no one blames it on rent control. Even in 1940, before rent control in this country, 11.2 of our own nonfarm houses lacked running water and plumbing, 13 percent lacked private baths and private flush toilets. This, too, has nothing to do with rent control.

M. de Jouvenel, who the Reader's Digest describes as "a distinguished Frenchman," would have rendered a more distinguished service had he given us the correct and complete story on which to base a solution. As it stands his article is just another addition to the welter of worthless propaganda which does nothing to guide and much to confuse.

The Power of Freedom

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. JAVITS. Mr. Speaker, there is appended the review from the New York Herald-Tribune, of a provocative book with the title of this insertion written by a distinguished contemporary teacher and scholar, Prof. Max Ascoli.

Professor Ascoli, says the reviewer, believes the ultimate sanction of all political rights to be that they place within the reach of living men the possibility of recreating the freedom won through historical experience. This is the very job every legislator is elected to perform, and this book is a real contribution to the art of political thought and action.

Professor Ascoli is an Italian exile from the tyranny of Mussolini. He was jailed in his student days in 1928, as anti-Fascist. In 1931, through the intermediation of the Rockefeller Foundation, he was released, came to the United States, and engaged in a distinguished career of writing and research especially in the field of American democracy.

In 1933 he joined the graduate faculty of the New School for Social Research—the "university in exile—where he has been dean since 1939, the same year in which he became a United States citizen. During the war he proselytized Latin America for the State Department in the cause of democracy and against nazism and fascism. There he became convinced that Communism can be decisively defeated if people have not only enough to eat but a chance to work.

He is now engaged in launching a new magazine, the Reporter, cosponsored with his wife, Marian Rosenwald, which he will edit and publish, its goal being to strengthen the institutions of freedom in every country of the world.

[From the New York Herald Tribune Weekly Book Review of January 30, 1949]

OUR LIBERTY IS STRENGTH IN WORLD CRISIS

(The Power of Freedom, by Max Ascoli, 173 pp., New York: Farrar, Straus & Co., $2.75.)

(Reviewed by August Heckscher, author of A Pattern of Politics.)

The concept of freedom for which America stands, says Mr. Max Ascoli, "must be restated in all its aggressiveness as the necessary weapon for the political struggle in which we are now engaged." The United States cannot divest itself of this primary responsibility either by withdrawing from the world or by hiding its light under the bushel of an international organization. It stands preeminently as a partisan leader in the world civil war. Having kept competition as an ideal, it must now recognize that in Russia it has at last the one thing that is big enough to compete with America itself.

Mr. Ascoli's attempt to restate this concept of freedom takes the form of a relatively short book, free of scholarly encumbrances or historical digressions. In style it is gnomic, didactic, sometimes repetitious and obscure, yet lit by keen insights and haunting phrases. I am not sure, for example, that I understand precisely what Mr. Ascoli means when he says that "Civilization has been made by people who wormed their way through the resistance of physical or human nature and who of the secrets they conquered made the experience of the race." Yet in proportion as I do understand such a sentence I have the feeling that I get to the heart of Mr. Ascoli's thought and into the deep places of life itself. This is perhaps the way of the best and wisest teachers: they cast out generous hints, the full meaning of which become clear only in the course of experience or at some crisis of our journey.

The author's intellectual affinities, he tells us in a foreword, are with Aristotle rather than Plato, with Burke rather than Rousseau; above all with his own countrymen, Vico and Croce. He sees freedom, not as an abstract state achieved apart from society, but as the product of man's fruitful relations with his work, with the institutions that surround him, and with his fellow beings. Everywhere in the book there is a feeling for roots, for solid attachments and enlarging loyalties. The aim of politics, Mr. Ascoli says, is "not to build a house in which all men would feel lost;" he speaks in another place of "measurable institutions and circumscribed ideas, related to the peculiarities and limitations" of individuals. The most fearful fate that can overcome modern man is to be lost in "the undifferentiated vagueness of the search for a job." Property is defended as something "limited and physical to which the citizen can hold and which gives him a measure of himself."

On the basis of these insights and predilections Mr. Ascoli builds a theory of political rights. Without going into detail, it may be said that these rights are not abstract and logical, but are the result of the specific experience of a nation in its search for freedom; they are achieved by long exertions toward particular goals, and can be maintained only at the cost of constant renewal and multiplication of that exertion. Their ultimate sanction is that they place within the reach of living men the possibility of recreating the freedom won through historical experience.

This philosophy, stated in a contemporary idiom and applied to modern conditions, is certainly seductive, but it can scarcely be said to express the characteristic American idea. Our traditional democratic theory has exalted precisely the kind of freedom that Mr. Ascoli abhors—boundless, shapeless, and disembodied. The typical Yankee, instead of finding fulfillment in work has found it in leisure; like Thoreau, he wanted to work only as much as was necessary to satisfy his economic wants. Yet if Mr. Ascoli has cultivated a minority tradition it is one, it seems to me, which needs to be rediscovered and affirmed at this time. In the kind of political thinking which he expresses there are the seeds of a really intelligent and enlightened conservatism for this country. Indeed if the more philosophic of our Republican leaders could digest this little book, could unravel all its insights and master its suggestiveness, they would have the beginnings of a program which would be positive, popular, and constructive without being a mere imitation of Mr. Roosevelt's New Deal.

Dr. James Lewald

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I would like to call attention of the Members of the House of Representatives to a distinct loss in the death last Friday of Dr. James Lewald; the District of Columbia and the Nation suffered a real loss.

There are those who pass our way and humbly and quietly serve their fellowmen. Dr. Lewald, head of the School for the Feeble Minded in the District of Columbia, was such a man. He served and brightened the lives of the feeble-minded. Too seldom we realize the high percentage of our society who, through no fault of their own, are ushered into this human realm with intellects under par. Christianity denies that we ignore them. It is our duty to help them if we can. Dr. Lewald did that well. From the time that he graduated from medical school, his heart was in that work. Within the small circle of those who understood the problem of the feeble-minded, Dr. Lewald was a national figure. His life was dedicated to the purposes of assisting those intellectually subnormal to rise to places of usefulness and often of importance in this society. The record of his accomplishments, of course, lies behind the screen of anonymity. Yet it exists. It is a proud record. In the decade or two that he served the District of Columbia as head of its school for the feeble-minded, there are actual cases where men have been so far rehabilitated that they were able to accept and assume positions of management. That is remarkable.

Dr. Lewald's death is a definite loss to society and I take this time to point out the great importance of humble men who are lost to the headlines because they must function where publicity must not be. And today, as the headlines continue to publicize the differences, the friction, the violence, the hate, the distrust, that make our society so sensitive to the differences in people, it is indeed time that we pause to recognize those who try to make people equal to each other.

I met and became acquainted with Dr. Lewald's work while in a position of responsibility connected with the business of the Nation's Capital. I am happy that I had a part in persuading this House of Representatives of the Congress to provide, 2 years ago, an assistant to Dr. Lewald—one who could take over the routine matters of business connected with the training school so that he could apply himself to the specific work of serving those who were intellectually underprivileged. That was where his heart was.

The District and the Nation is the loser but his work will be carried on by those who have benefited by his acquaintance, his studies, his contributions, and his life.

Letter From Cortlandt W. Schepeler, of Brooklyn, Mich.

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. MICHENER. Mr. Speaker, Members of Congress receive literally thousands of letters. This morning's mail brings me a letter from Mr. Cortlandt W. Schepeler, a constituent of Brooklyn, Mich., which is logical and understandable, and I believe the readers of the CONGRESSIONAL RECORD will be interested in this letter, which reads as follows:

Please accept this letter as a means for me to weight that portion of your enormous correspondence with which I agree. As your constituent I am proud of your congressional record in wrestling the unrelenting problems at home and abroad. I do not doubt your integrity to analyze any specific condition, I am writing solely to amplify what I hope are two mutual concerns:

1. I espouse capitalism and distrust the current trend of lawmakers to overemphasize security. I do not like to see poverty or be a part of it, but too much security (and Federal controls) is not a worthy price for individual and corporate freedom. In other

words, I fear this trend to be a forerunner to socialism which must undermine our capitalistic free enterprise system.

2. I oppose the political patronage about to be bestowed upon the trade unions by the Democratic majority of the Eighty-first Congress. The mandate of the people on November 2, I am sure, was not to disrupt the near balance between labor and management by pulling teeth from the Taft-Hartley Act. Trade labor unions are now girding for an expansion movement at the expense of corporate management by such inexpedient tactics as slow-down, secondary boycotts, sympathy strikes, mass demonstrations which are Government-sponsored indecencies against the liberty of corporate management. I agree that labor's antagonistic practices are a byproduct of corporation cupidity of a decade ago, or before. But the time for hostility is past.

Management has been brought to heel to—and respect—collective unionism. These two factions by natural process would necessarily unify their objectives. If Federal legislation must intercede between these factions, let it regulate both with an impartial desire to foster the free-enterprise system. Not to give unionism the bigger club to impede the competitive productivity essential to both. The union as a protector and agent of employees must have the same objective as management—high production and competitive vitality.

The union as a political leviathan seeking national power and prestige has objectives which smack of socialism at the eventual exploitation of the beguiled union member. Socialism as the antithesis of capitalism should have few sincere adherents in this country.

Thanks for lending an ear to this philosophical concern.

Stalin's Invitation

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. JAVITS. Mr. Speaker, appended is an editorial from the New York Times today on the subject of the Soviet's intentions. All of us fervently desire peace, yet the arts of conference and negotiation to be successful must be based on mutual confidence. The Soviet Union has a great opportunity to reinspire the confidence of the democracies by consummating an Austrian peace treaty which will secure the national integrity of Austria and carry out the three-power declaration of Moscow proclaimed November 1, 1943.

The editorial follows:

A TEST OF SOVIET INTENT

The first test as to whether the latest Soviet peace offensive that was climaxed by Mr. Stalin's bid for a meeting with President Truman behind the iron curtain is a genuine bid for peace or merely another international political maneuver will come this week, when the Big Four Powers meet in London in another attempt to reach agreement on a peace treaty for Austria. This meeting—the seventh of its kind—has been convoked at the request of the Austrian Government, which joins the Austrian people in what has become a national prayer for liberation from the liberators. But it is also in keeping with the stand of all the Western Powers that if Russia really desires to end the cold war and engage in genuine peace negotiations it must do so, not through propaganda, but through the constituted bodies and official channels, and that it must prove its good faith, not by words which in Mr. Stalin's lexicon are merely a diplomatic mask, but by deeds.

On both these counts, the meeting of the deputies of the Foreign Ministers Council on Austria should prove especially revealing because, of all the outstanding postwar problems, that of Austria is most easily solved. According to the Three Power Declaration of Moscow, proclaimed November 1, 1943, Austria was to be treated, not as an enemy, but as a liberated country, and was to be reestablished as a free and independent nation. Yet, while such former enemy countries as Italy, Hungary, Rumania, and Bulgaria have long since been living under formal peace treaties, Austria, which the Moscow Declaration held to be the first free country to fall victim to Hitlerite aggression, is still being treated on a par with, and in some respects even worse than, Germany.

It has the advantage of having its own government, but that government is subject to the orders of the four occupying powers. For the rest, like Germany, it is still divided into four occupation zones. The western zones participate in the European recovery program and are recovering, but the Soviet zone, which is the most important part of Austria, is subject to Russian oppression and exploitation equal to that of Soviet Germany. According to Austrian figures, Russia has kidnaped some 135,000 Austrian men and women who have disappeared, and has seized 20 percent of Austrian agricultural land and the same percentage of Austrian industrial production. Yet, in contrast to our policy in Germany, there has been scarcely a western protest against this Soviet spoliation.

What the Western Powers have been trying to do is to speed an Austrian peace treaty which would get the Russians out of the country. The Austrian Government is willing to pay almost any price for this boon. But all previous efforts have been wrecked on the rock of Russian obstruction, attributed primarily to two reasons. One is that Russia quite obviously has been in no hurry to conclude a treaty because, while milking Austria, it was also entitled to maintain Soviet troops in Hungary and Rumania to guard its communication lines, which enabled it to rivet Communist regimes on these countries. Another is that, having failed to foist a Communist regime on Austria, Russia has been holding out for a treaty which would perpetuate its economic domination and exploitation of that country.

For this purpose Russia has been using two main pretexts which the Western Powers have rejected. The first was a demand for a cession of Austrian Carinthia to Yugoslavia—a demand already precluded by the Moscow Declaration. The second, based on a typically Russian interpretation of the Potsdam reparation agreement, was a demand for all "German assets" in Austria, in which Russia includes all Austrian property seized by the Nazis. It is possible that in view of Marshal Tito's defection from the Cominform, Russia is now willing to drop the first demand. But the second, advanced in lieu of a demand for Austrian reparations which Mr. Stalin personally renounced, is crucial. For while Russia has declared itself willing to settle some of its claims for $150,000,000, it also demands permanent economic concessions in Austria under a virtually extraterritorial status which would put all Austrian economy at its mercy and might pave the way for the incorporation of Austria into the Communist eastern bloc.

It goes without saying that the Western Powers cannot agree to the later conditions without participating in a super-Yalta which would sell out Austria and further imperil their own position. Any further Russian insistence on them would not only demonstrate a continuing policy of Soviet expansion but would also make a mockery of the Russian peace professions to which Mr. Stalin has now lent his voice.

Do We Deserve Democracy?

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. BLAND. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a sermon delivered on January 23, 1949, entitled "Do We Deserve Democracy?" The sermon was preached on the Sunday following the inauguration of Harry S. Truman as President of the United States of America, in the National Presbyterian Church, Washington, D. C.

This sermon deserves our most careful and prayerful perusal.

It follows:

DO WE DESERVE DEMOCRACY?

(By the Reverend Edward L. R. Elson, D. D.)

"Blessed is the nation whose God is the Lord." (Psalm 33: 12.)

I

Last Thursday, in one of the most colorful episodes in modern times, the President of the United States of America assumed the duties of his office. The eyes and ears of the world were attentive as he took the oath of office in this era of profound soul-sickness and and universal longing for real peace and a better life. Appropriately the President noted the anxiety about the uneasy armistice, the "cold war," the conflicting ideologies, the hopelessness and nihilism in vast areas.

In the promotion of a better world President Truman wisely said the initiative is ours. If that is true we must have something worthy of exportation to the rest of the world. The President took occasion to enumerate some time-honored American principles. He drew apt contrasts between our kind of democracy and secular Communism. He saw Communism sprawling across the world, spawning on despair and frustration, with many devotees of its philosophy deceived but powerless. With its militant atheism, Communism subordinates the individual to serve the ends of the state. Democracy, rooted in personal religion, elevates the individual and proclaims the supreme worth of man, whose interests the state itself must serve. It is at this point that our Christian faith must be clearly recognized as the determining factor in the present crisis of the world. For Protestants this should be a time of evangelical zeal. Here the truths of our faith become vitally relevant. In the last analysis the world's responsibility is the responsibility of individuals. Like a wall made of bricks, where the single brick gives way, the wall collapses; if men decay, the Nation crumbles. Yet individual man has given way to mass man.

The whole trend of modern life has been to relieve the individual of responsibility. Secular psychologists assure us we were "conditioned" in childhood to be what we are. We are comforted with the assurance we are not sinners but victims. The economist tells us our misfortunes are not due to lack of individual responsibility but to the economic system. The sociologist contends we are

victims of environment and redemption will come by programs of social amelioration. Meanwhile, the Church has been the one institution insisting upon individual responsibility. Perhaps this accounts for the unpopularity of the Church among some people. The Church insists upon proclaiming the sinfulness of man and his need of redemption. There can be no sustained improvement and no hope of avoiding tragedy unless individuals are willing to accept responsibility for their own lives and a stewardship concern for the society to which they belong. Because so-called individualism sometimes has meant defending the status quo or pure selfishness, we need not be blinded to the fact that life in a democracy for good or ill turns on the character of its people. It is the crisis in the character of people that is the concern of our age.

II

The issues of our times turn not so much on economic forces or social philosophies as on the quality of the people. Good philosophies cannot be effective with defective people. Reputable statesmen point out that one obstacle to making peace is the untrustworthiness of some who are commissioned to make it. The collapse of character is the concern of the age.

The events in recent years suggest that France collapsed early in the late war, not as some suppose because she had a liberal program—but because it was a godless program, because France had lost her mooring in God. France had a good army but not good enough motivation. It was because it was materialistic or secular and not spiritual that France gave way. There were about 2,000,000 Protestants and about 5,000,000 practicing Roman Catholics in a total population of 40,000,000—the rest of the population was pagan or secular. Dr. John Mackay declared, "France is the culminating proof that a democracy is done without Christianity." And France is still groping.

Democracy will die where Christianity is stultified or is dead. Democracy is possible only where a large part of the people believe in and act under responsibility to God. For to be successful, democracy depends upon men who can be trusted with their own destinies.

Over the portals of true democracy is written, "Blessed is the nation whose God is the Lord." We need then to look to our sources. While there were some other forces at work at the beginning the primary source of our democracy is the Hebrew-Christian tradition. It got its chief impetus from the Reformation movement within the church.

I have read again recently some sections of The Institutes of John Calvin. What he envisioned, as St. Augustine before him, was a theocracy not precisely like that of the ancient Hebrews, but a theocracy by the spirit of the Lord in the common man. Such an order presupposed a society wherein a high percentage of the people lived in faith in God, as the sovereign ruler of a moral universe, to whom both men and nations are responsible. Ranke, the German historian, says, "John Calvin is the practical founder of America." In 1927, Andre Siegfried, French student of American life, said that America is "not only Protestant but essentially Calvinistic in her religion and social development." At the time of the War for Independence there were only 22,000 Roman Catholics in a total Colonial population of 4,000,000. The Reformed Faith was the dominating religious and social force at the founding of our Nation.

It is therefore a fearful responsibility we have. For if ever democracy is eclipsed in the United States, it will be because Protestant Christians have not lived up to the highest expressions and worthiest concepts of their faith. Of the 77,376,000 (November 1948) church members in the United States, 25,268,000 are Roman Catholics, including all baptized persons. Adding to this 4,641,000 Jews and the remaining smaller groups, there is a total non-Protestant population of 31,185,000. The Protestant population of 46,191,000 includes only confirmed members according to the reporting practices of most Protestant Churches. Since the Protestant Churches represent ecclesiastical democracy in contrast with ecclesiastical totalitarianism, Protestants bear a terrific responsibility for contributing to the democratic structure of our Nation. Let us note again some of the salient features of our democracy.

1. Democracy is a high faith in the capacity of the common man, which means most of us; in his spiritual capacity to discern truth; to see and accept and live by ideals. Where does that come from?—Out of the Hebrew-Christian tradition. Specifically from the Reformation.

2. Democracy is belief in freedom of speech and assembly and of press, recognizing that perhaps many untrue and foolish things may be said—and it is quite possible we may say some of them.

Where does that come from?—Emphatically, that privilege emerged from the Reformation. Under neither political nor ecclesiastical totalitarianism is such possible. Under political totalitarianism the State defines what you read and hear. Under ecclesiastical totalitarianism you are forbidden to worship with others or to read unapproved literature.

3. Democracy is belief that individuals have a high moral dignity because of their relation to their Creator, and as His sons their personalities are of highest value. What hurts personality is wrong. What enriches is good. What is the source of that? Emphatically, the Christian religion.

4. Democracy believes that man with such splendid spiritual origins and capacities can be inspired and led to put the general good above his own selfish interests and ambition—and that he finds his true happiness in service. Where do we get that? Out of the Christian faith and primarily out of the Reformation.

Democracy, as we know it, is so much a child of the Christian religion that there is no reason to suppose that where Christ has ceased to grip and inspire men the foundation of democracy can be maintained.

How much we need to realize the importance of personal loyalty to our faith. Is it not true that the man who neglects his faith, who absents himself from his Church, who fails to read his Bible, to maintain his personal devotions, who does not pray, who does not seek to discover the will of God for his life—is it not true that every such person who is becoming a cultured and refined and respected and well-educated pagan—is he not, even though unaware of it, a menace to democracy? On the other hand, is not every citizen who cultivates his inner life, who worships God Almighty, who is disciplined by prayer and Christian fellowship, who is taught and who teaches Christian morality, and maintains a Christian home, and takes seriously his responsibility to society—is he not, however humbly, building the foundation on which our democracy is built?

Let us be forthright. Democracy depends upon religion. Our kind depends upon the Christian religion. Its ideas are religious ideas, its standards are religious standards, its goals are religious goals. Allow religion to languish and democracy begins to disintegrate.

If democracy should ever vanish, it will be because we are not sufficiently Christian. We cannot play at religion and trifle with our inheritance and keep the American way. We deserve it only in proportion as we cultivate the qualities of character worthy of it.

President Monroe in his inaugural address emphasized the importance of an intelligent appreciation of our magnificent social ideal which we call true Americanism when he said, "It is only when the people become ignorant and greedy, when they degenerate into a populace, that they are incapable of exercising their sovereignty." We must not thus degenerate.

Dr. Daniel L. Marsh, president of Boston University, has studiously indicated what he calls the American canon—comparable in secular literature to the Canon of the Bible. He says the American canon is composed of seven documents:

1. The Genesis is the Mayflower Compact, which began "In the name of God, Amen."

2. The Exodus is the Declaration of Independence—the going out into the promised land of liberty and self-government.

3. The Book of Law is the Constitution and Bill of Rights. "Thou shalt not" is spoken not to individuals but to their government.

4. There are many Major and Minor Prophecies, but the best of these is Washington's Farewell Address.

5. Our national Psalm—The Star-Spangled Banner.

6. The Gospel was spoken by the Savior of the Nation, Abraham Lincoln, in his second inaugural address. It was and is still "good news."

7. The Epistles are many, but the best is Woodrow Wilson's last article, The Road Away From Revolution. That memorable address concludes:

"The sum of the whole matter is this, that our civilization cannot survive materially unless it be redeemed spiritually. It can be saved only by becoming permeated with the spirit of Christ and being made free and happy by the practices which spring out of that spirit. Only thus can discontent be driven out and all the shadows lifted from the road ahead.

"Here is the final challenge to our churches, to our political organizations, and to our capitalists—to everyone who fears God or loves his country. Shall we not all earnestly cooperate to bring in the new day?"

All of these documents begin, continue, and end in God. Do we deserve democracy? That nation deserves democracy "whose God is the Lord." Democracy is only possible where the people are committed to its principles of belief in the value of human personality, mutual trust, and have an invincible faith in the presiding providence of God. Only where a large section of the people are dedicated to Christ and His church can our kind of democracy succeed.

III

Do we deserve democracy? If we take seriously our responsibility to pray, to think, to work for the Kingdom of God; if we can really have faith in individuals as did our fathers; if we are the kind of characters to be trusted with our own destiny; if we have the courage to establish economic well-being and social justice; if we contribute to the making of a moral peace between nations; if we cultivate day by day those interior resources which make us Christians indeed; if the church is really the church—the redeemed of the Lord—"the salt of the earth," "a colony of heaven." One of the most patriotic things a man can do is to join a church and work at his religion.

I shall never forget an experience which I had one summer day before the war in a well-known city in southern Russia. Early in the morning I left my modest hotel at daybreak and wandered unescorted through the streets of the ancient city—past the scaffolding of partially completed buildings and shops yet unvisited, intermittently meeting only a forlorn dog or a solitary peasant, until I came to a great church. Approaching the massive structure I was confronted at the main entrance by two guards with rifles and fixed bayonets. Since I was obviously not a thief and promptly produced

my "Intourist" identification book, I was permitted within. Inside the altar and ornamented screen were gone. Tapestry and tinsel were no longer visible. The gaudy accouterments of worship familiar in the Eastern Church had been desecrated and a musty smell had displaced the aroma of incense and candlewax. Only the shell of a house of worship remained.

Instead of functioning as a church the entire building had become a granary. A pile of threshed wheat was heaped in the form of an inverted cone, its base covering the entire cathedral floor and its point reaching far up into the dome. The early morning sun poured through the stained-glass windows and the multicolored lights played weirdly on the grains of wheat. Figures of saints and martyrs flashed in the remnants of the windows. Around the interior of the dome was a dim but beautiful mural of our Lord breaking bread with his disciples on the night which was the night of the institution and also of betrayal.

Alone with my thoughts, I could understand how often our Lord must have looked down upon that church—remote from the people, aloof from man's common need, unresponsive to the forces about it—that church's identity with an insensitive and inept monarchy giving tacit consent to its tyranny. That church had lost its spiritual vitality; its compassion and its mercy had gone and the judgment of God was upon it. Although it had forsaken its Lord, it was still being judged by the Lord.

What a warning? A church no longer relevant to life is crushed. But the church which is faithful in its witness and relevant to the life about it will live and lift the culture in which it is set. Every crucifixion will be followed by a resurrection. When true to its Lord, neither secularism, nor materialism, nor the gates of hell itself can prevail against it.

Today, I implore you—look to the sources of your life! Stand by the church and the church's Lord will stand by you. "Blessed is the nation whose God is the Lord"—Lord of our churches, Lord of our homes, Lord of our schools, Lord of our colleges, Lord of our ballot boxes, Lord of our Government. Let us affirm, by our lives that we are "a Nation whose God is the Lord."

GI's On Courts-Martial

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Washington Times-Herald, which appeared February 5, 1949.

This editorial reflects the best thinking on the future course and conduct of courts-martial. The inclusion of enlisted men on the boards will provide justice and fair dealing. It is a forward step in equity of military law.

GI's ON COURTS MARTIAL

It took a long time to break the officer monopoly on court martial for enlisted men in the Army, but at last the reform was accomplished by an Executive order from President Truman, effective Tuesday of this week.

From now on till further notice, an enlisted man facing a court-martial trial may request in writing that some of his fellow GI's sit on the court. When such a request is made, at least one-third of the tribunal's membership must be enlisted men. Verdicts are by secret ballot.

SO FAR SO GOOD

The first three trials under the new system ended on Thursday—on Governors Island, N. Y.; at Heidelberg, Germany; and at Fort Bragg, N. C. The New York case concerned a private charged with petty thefts and going a. w. o. l. In Heidelberg, it was a matter of two privates first class charged with killing a German in a New Year's Eve brawl. At Bragg, the GI defendant had snuck out of the guardhouse.

In all three cases, the boys were convicted. No obstructions of justice were observed as results of GI's serving on the military bench. The cases seem to have been open-and-shut, and the convicted soldiers apparently drew exactly the same sentences that would have been dealt out to them by all-officer courts.

These are only the first cases under the new arrangement. True, they are not enough to prove conclusively that the change will be 100 percent to the good.

But they do indicate that no grave consequences need be feared; that Army justice will probably proceed from here on as it has in the past, but perhaps with fewer mistakes or overharsh sentences.

And certainly the effect of the new rule on soldier morale should be excellent. As long as this system prevails, the enlisted man will have the satisfaction of knowing that he can demand the court-martial services of some of his military equals if he ever comes up for trial. It's hard to see how any soldier in his right mind can gripe about that.

Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. PRICE. Mr. Speaker, it was my intention today to insert in the RECORD the text of the sermon of His Eminence Francis Cardinal Spellman, delivered yesterday in St. Patrick's Cathedral, New York City, on the trial and persecution of Josef Cardinal Mindszenty, primate of Hungary. However, in deference to my friend and colleague the Honorable JOHN ROONEY, of New York, I am withholding the extension of this historical document so that he may have the honor and privilege of making it a part of public record.

Cardinal Spellman has denounced the trial of Cardinal Mindszenty in Budapest, behind the iron curtain, as the crucifixion of humanity, and free men in every part of the world agree with the American cardinal.

Cardinal Mindszenty is doomed for defending the things which every Christian steadfastly believes. His unpardonable sin is that he is anti-Communistic, and for that the Kremlin has called for his destruction. His trial has followed the usual Soviet pattern.

Definance of Communism and its godless implications may bring martyrdom to Cardinal Mindszenty, but his sacrifice may lead the world to greater resistance of this terrible atheistic doctrine.

Some weeks ago I forwarded to our Department of State a telegram which I received from Rev. Louis F. Ell, spiritual director of the Holy Name Societies of the diocese of Belleville, Ill., dispatched in the name of the most reverend bishop of the diocese of Belleville, the reverend clergy, as well as 10,000 Catholic men of the Holy Name chapters, protesting the criminal arrest of Cardinal Mindszenty. I joined in these protests and urged the Department to officially protest to the Hungarian regime.

Our State Department in the meantime had taken cognizance of the Cardinal's case through a statement issued at a press conference on December 29, 1948, by the then Acting Secretary, when he denounced "as a sickening sham the arrest by Hungarian authorities of Cardinal Mindszenty."

At that time the Acting Secretary declared that the arrest was based on patently false charges and was the culmination of a long series of oppressive acts by the Hungarian Government against personal and religious freedom. Pointing out that the behavior of the Hungarian Government was typical of what was going on in countries behind the iron curtain, he remarked further that such action continued to make the achievement of peace an aspiration rather than a reality. He concluded that it was all that was needed to complete the unhappy chain of events in Hungary and to indicate what the attitude of the present Hungarian Government was toward the liberties to which the rest of the world attached the greatest importance.

The persecution of Cardinal Mindszenty calls to mind that since the beginning of Christianity no martyr died because he was a Christian—officially. Even the ancient persecutors of the church found other official reasons to persecute and condemn those who spread the doctrine of Christianity. Officially, Cardinal Mindszenty may not be condemned by the Soviet-dominated Hungarian regime because of his stand against atheistic communism, but the whole world will know that he made a martyr's sacrifice because of his religious belief and teachings.

The Meaning of Mindszenty—How To Jail a Cardinal

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following two articles from the national Catholic weekly, America, entitled "The Meaning of Mindszenty," the first of which appeared in the December 11, 1948, issue, and the second in the January 8, 1949, issue; and a third article entitled "How To Jail a Cardinal," which appeared in the January 22, 1949, issue. These arti-

cles describe the usual Soviet pattern of persecution of religion. The so-called trial of Cardinal Mindszenty has followed the pattern.

[From America of December 11, 1948]

THE MEANING OF MINDSZENTY

The General Assembly of UN is authorized to "make recommendations" for the purpose of "assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." Religious persecution clearly falls within its scope. There is persecution of religion going on behind the iron curtain which merits the immediate attention of UN.

Take the case of Cardinal Mindszenty. Some weeks ago America protested the imprisonment of the head of the Lutheran Church in Hungary, Bishop Louis Ordass, on a trumped-up currency charge. We then observed that the sentence was obviously an ominous warning given Joseph Cardinal Mindszenty, archbishop of Budapest. Undaunted by threats from the Communist-dominated Cabinet, the heroic primate has watched the storm gather about him. His arrest as an agent of "foreign imperialism" or his expulsion as "a traitor to his country" may be expected any day.

Both of the above-mentioned accusations, it should be remembered, were made in telegrams dispatched to the Communist-controlled government by Communist-promoted "protest meetings" held recently in nine Hungarian cities. The arrest of the cardinal's secretary, Dr. Louis Zacker, will probably produce a "confession," extorted under torture, implicating the cardinal. It is a successful technique. The arrest of the secretary of Premier Ferenc Nàgy was similarly used as an excuse to overthrow the democratically elected majority party and install the present Communist regime.

The cardinal cannot complain that he has not been given ample notice; Erno Geroe, generally believed to be the "strong man" of the party, gave the signal. "The liquidation of clerical reaction is now the order of the day," he declared in a speech that termed the cardinal "the head of reaction." The Budapest Communist daily, Szabad Nep, called the statement of solidarity of the Catholic hierarchy most inopportune, coming "at the very moment when the Government, a few days ago, declared irrevocably that the glass was going to run over. * * * This answer will be given soon." Matyras Rakosi, who returned from Moscow to become Deputy Premier and general secretary of the party, assured the central committee of the Communist Workers Party in a broadcast: "We have come to the end of our policy of toleration. We must settle once and for all with this band, and above all with their chiefs."

Six hundred Catholic and Protestant clerygymen are now in Hungarian prisons. The cardinal primate seems destined to follow soon. Protests from the World Council of Churches against the imprisonment of Bishop Ordass won scarcely the attention of an acknowledgment from the Hungarian Government.

The persecution in Hungary is exceeded in violence by the persecution in Bulgaria and Rumania, where the Holy See has granted the extraordinary privilege of allowing Mass to be offered by a priest in street clothes, using a common drinking-glass for a chalice. It anticipates the persecution getting under way in Czechoslovakia in accordance with the lines laid down in secret official instructions sent to district action committees last July, published in the Episcopal weekly, the Living Church, for November 21.

Religion is persecuted everywhere behind the iron curtain because religion engenders resistance to tyranny. Persecution is directed chiefly against Catholicism in Hungary and is currently centered on the figure of Cardinal Mindszenty, because defense of the sanctity of the things that are not Caesar's must be crushed if tyranny is to prevail.

Returning from the Nuremberg trials, Justice Robert H. Jackson declared that the "disruptive effect on the international order" of the persecution of minorities "is so direct that tyranny on a sizable scale anywhere is a matter of international concern."

The persecution of religion in Hungary—to name one country—is on a larger than sizable scale. The UN was created to cope with matters of international concern. Well, isn't this such?

[From America of January 8, 1949]

THE MEANING OF MINDSZENTY

(By Edward Duff)

("There are two things the people of Hungary can do. They may escape from their country, or they can lie flat in the moors and give up entirely," said the exiled Hungarian leader Pfeiffer. A heroic Hungarian priest thought there was a third and a mandatory choice.)

The politician should always possess prudence. In November 1947, at the same time that Deputy Premier Stanislaw Mikolajszyk was spirited to safety out of Poland, Zoltan Pfeiffer, leader of the Hungarian Independence Party, secretly fled from Budapest with a broken head. He had been set upon by a crowd of Communist storm troopers who broke up a meeting of his party in the town of Csongrad, belaboring him with bicycle pumps and shovels. Arriving in New York, the fourth leader of a political party to make his escape from Hungary, Mr. Pfeiffer declared: "There are two things the people of Hungary can do. One, they may escape from their country; or, two, they can lie flat in the moors and give up entirely. That is the choice."

An intense, austere, middle-aged Hungarian priest thought there was a third and a mandatory choice. You could defy tyranny and trumpet the truth. Until—if and when it pleased God—you would be killed.

The priest—whose name is Josef Mindszenty—happens to be primate of that unhappy land and a prince of the church. Mindszenty means, significantly enough, all saints. The cardinal is a striking symbol of the 600 Hungarian Catholic and Protestant clergymen imprisoned as victims of a systematic and implacable persecution of religion.

As America predicted last month (December 11, 1948, p. 255), the agents of the political police arrived at the primate's residence in Esztergom and hurried him off to their dread examination headquarters at 60 Andrassy Utca, Budapest, where confessions are extorted. The charge is suspicion of plotting against the government, spying, treason, and black-market dealings. It was 8 o'clock on the night of December 26, the Feast of St. Stephen, the first martyr, murdered because his enemies were no match for his wisdom and for the spirit which gave him utterance. Throughout the world, journalists were writing copy on the Christmas Eve message of the Holy Father and finding a new context for his assertion:

"In all those countries where to profess the Catholic faith really means to suffer persecution there have been, and there are still, thousands of valiant men and women who, undismayed by sacrifices, proscriptions, and torture, and fearless in the face of prison and death, do not bow the knee before the Baal of might and power."

Arrest is no new experience for Cardinal Mindszenty. Under the Nazi occupation he was a center and symbol of resistance, and when they marched him off to prison he went dressed in his episcopal robes, attended by his clergy, whom he blessed with his manacled hands at the gates of the jail. Those were the days—have they been forgotten now?—when the Hungarian hierarchy saved some 200,000 Jews.

They were followed by the days when the Red Army liberated eastern Hungary and set up a provisional government at Debrecen. The Hungarian department of the supposedly "dissolved" Comintern arrived with the Russian tanks and, in hypocritical obeisance to Yalta's expectation of broadly based governments, summoned the politicians of other parties. Zoltan Tildy, a Presbyterian minister; Bela Varga, a Catholic priest; Bela Kovacs and Ferenc Nágy, peasant leaders, joined the coalition. To the astonishment of the Russians, the Smallholders Party won 57 percent of the vote in the election of November 4, 1945, just 50 percent more than the Communists polled. It was the last free election for that part of the world. With Matyas Rakosi, a Russian citizen and a brigadier general of the Soviet Army, as Deputy Premier, the Communists proceed to undermine the results of the elections and place the country completely under Soviet control. It took almost 2 years and the direct intervention of the Red army to remove by death or threats Tildy, Kovacs, Varga, and Nágy, and purge the Smallholders Party into obsequious docility. False accusations, the weak compromising of Tildy and Nágy, who surrendered their friends to be garrotted, and the menacing presence of the Red occupation troops all contributed to the shock official Washington got May 30, 1947. By a coup, later to be repeated in Czechoslovakia, the Communists had taken over. The Kremlin had given its answer to the announcement of the Truman Doctrine.

Cardinal Mindszenty in a New Year's message for 1946 revealed that in Budapest during the month of November there were 2,188 still-born babies as against 822 born alive. That was the trouble with the prelate: He insisted on speaking out, and his voice carried. The force of religion, the Communist masters determined, must be smothered.

Catholic youth groups were banned in July 1946; Catholic priests were arrested; Bishop Stephen Zadavecz, who had opposed the Bela Kun uprising in 1919, was deported; processions were prohibited and publications refused permission to operate. Catholics were defranchised in the 1947 elections for reasons which the United States State Department found to "border on the grotesque." "Insanity" was a frequent reason for canceling the suffrage: indeed, anyone brave enough to vote against the Communists might well be considered insane. Against the names of nuns was written in one electoral register: "She, or the husband with whom she cohabits, has been under police surveillance for immoral occupation."

Undaunted by the Soviet steamroller, Cardinal Mindszenty was appealing to world opinion. He protested the brutal deportation of Hungarian families from Slovakia and was censured by the Government for his interference. In July 1946 the Review of World Affairs acknowledged: "He is accepted as resistance leader by both Catholics and Protestants," and described him as "living on almost nothing, rising three times every night for prayer, working 18 hours every day, devoid of oratorical gifts but of immense character." His oratorical gifts cannot be negligible, for the same reporter—Kenneth De Courcy—records that 240,000 men gathered at Maria Remete, a 2½-hour walk from Budapest, to hear him speak on the problem of education. When he invited the women to come the next Sunday, 400,000 were there.

Efforts to divide the hierarchy by spreading reports that Archbishop Czapik, of Eger, and Bishop Banas, of Veszprem, were devoted to democracy and approved the regime failed. On September 12, 1946, an official statement was issued by the episcopacy declaring that "every individual member of the bench of bishops wholeheartedly supports the courageous attitude of the cardinal primate in defense of the church."

The squat, bald, ex-clothing-store clerk, Rakosi, known in Budapest as "Potato Head," decided that religion was superfluous in education, that Hungary's schools should be nationalized.

Moscow-trained, he had found the means of smothering religion. And he had found the issue that would force the cardinal into irretrievable opposition to the regime. He would break the organization of the church by forcing out its national leader. He would undermine the loyalty Hungarians feel for their clergy by centering all attacks on ecclesiastical leaders. He would not attack religions openly but would make "enemies of the people's democracy" of the clergy. On January 10, 1948, he declared: "The task of democracy this year is to settle the relationship between the church and the republic. It cannot continue that a majority of the enemies of the people should hide behind the cloak of the churches, especially the Catholic Church."

In the spring the Government announced that education would become a state monopoly. In a series of pastoral letters—since the radio and the press were denied him—the cardinal asserted the inalienable right of parents to decide the education of their children, a right recognized last month in the international declaration of human rights adopted by the Social Committee of the United Nations General Assembly. "It is in the exercise of this fundamental right that German parents felt themselves injured when the Hitlerian state seized their schools by force," the cardinal declared in his pastoral of May 16. The world was reminded of the ringing defense of human liberties by August von Galen, "the Lion of Muenster," raised to the cardinalate with Mindszenty in February 1946.

It was no academic debate of priority of rights, no idle insistence on protocol. Mindszenty foresaw the de-Christianization of youth, the sovietization of Hungary. In June church schools were sequestered and the docile parliament, refusing an appeal to the people on the issue, peremptorily nationalized 4,813 Catholic schools, about half the schools in the country. The results were soon manifest. The cardinal had warned: "After the introduction of a state monopoly in the field of education there would be nothing to prevent the schools from sinking to a level of hotbeds of party policy and materialism."

"There are no nonpolitical educationists," announced the Secretary of State in the Ministry of Public Information:

"Teachers must find in all questions, even in those which are apparently nonpolitical, the point of view under which they can deal with them as aspects of the great problem of the people's democracy advancing toward socialism."

Such "an aspect of the great problem" will be revealed in the answer to question No. 21, posed to those hoping to join the staff of the "people's colleges" springing up all over Hungary: "Why did the Pope support the capitalists and not the poor workers at the time of the Italian elections?"

Unfortunately the non-Catholic groups bowed to the pressure. The Reformed Church, urged by the Swiss theologian Karl Barth to cooperate, rid itself of the leaders the Communist regime found objectionable. The Unitarians insist they have nothing to complain about. The Lutherans, after the arrest of Bishop Louis Ordass (America, October 30, 1948, p. 88), decided to sign an agreement with the Government—as did the Jewish community. Undismayed by Rakosi's angry cry that he was "losing patience"—Hitler's menacing phrase—with the Catholic Church, that "democracy's fist" would immediately strike anyone violating its will, the Hungarian hierarchy resolutely supported the cardinal in his defiance.

The persecution of the church increases in intensity. Twenty-one thousand nuns and priests who had been teaching in the schools have resigned. All articles must be submitted for censorship before printing in the two little weeklies allowed for 7,000,000 Catholics. Bishops are forbidden even to mimeograph letters for correspondence with their clergy. The radio and press are filled with antireligious propaganda with no facilities for denial. Bribes are held out to induce apostasy. Believers have been removed from teaching posts, the army, the police. Processions are broken up by the police; pilgrimages thwarted by refusing railroad tickets; quarantining villages; closing roads. Concentration camps are filling with priests and laymen. Worst of all, perhaps, a half million Christian children are having a Stalinist education forced on them. All of these charges have been submitted to the United Nations.

As the center of resistance to this monstrous program, Cardinal Mindszenty has borne the abuse and calumnies of the illegal Government. The attacks upon him grew to a crescendo of violence last month (America, December 11, 1948, p. 255), with the Court of Summary Jurisdiction requesting the Budapest People's Court to try him for subversive activities and the new Premier using the occasion of his first address to Parliament as the opportunity of an attack. The correspondent of the London Times found the speech evidence that: "The only surviving center of opposition is the Catholic Church under the leadership of the Primate of Hungary, Cardinal Mindszenty."

The cardinal chose not to answer the attacks. In preparation for the Feast of Christ the King he ordered a triduum held in all the churches and was gratified to learn that more than 1,500,000 of the faithful of Budapest received Holy Communion. Night adoration in all the parishes on November 1 was followed by a pilgrimage of 30,000 that he led in person to the shrine of Our Lady at Palosszentut, where the pilgrims fasted for 2 days on bread and water to demonstrate that "here in southeast Europe the Hungarians are a praying people who confess their faith."

Soon after, his secretary was arrested and questioned to obtain the inevitable confession involving the primate. But Joseph Cardinal Mindszenty kept to his home, like Thomas à Becket at Canterbury, awaiting the agents of the tyrant.

They came for him last week, providing their cynical reply to the indictment of the Pope's Christmas Eve message. In their arrogance they did something the reckless Hitler never dared: they arrested a prince of the church. And in their limitless insolence they published to a dumfounded world monstrous fables of intrigue, climaxed by a fatuous account of exchange dealings with NCWC-War Relief Services whose food they had seized.

It is a familiar story: Caesar proclaiming himself master of all areas of human life, determined to destroy all who would question his total dominion. Speaking to the celebrated St. Stephen Society in Budapest on November 15, 1946, Cardinal Mindszenty stated:

"The rights of men and of the church are generally violated simultaneously. The church has her own aims which are not part of the aims of the state. Neither the church nor the state is directly subordinate to each other. The church defends the rights and the liberties of the state because the name of God and the moral order are the chief guaranty of the state."

Caesar's answer was expressed last year by Rakosi's comrade in the Comintern, Rumanian Premier Groza: "The [Orthodox] church is a part of the state itself, keeping pace with the spirit of the times."

But the ultimate meaning of Mindszenty transcends even the everlasting struggle for human liberty. In his final pastoral, suppressed by the Communists but broadcast by the Voice of America to helpless Hungary, the priest-prelate who was to be arrested on St. Stephen's day declared: "I stand for God, church, and my country. * * * I pray for the world of justice and brotherly love; I pray for those who, in the words of my Master, know not what they are doing. I forgive them with all my heart."

[From America of January 22, 1949]

HOW TO JAIL A CARDINAL

(By John O'Connor)

(The following is a series of excerpts from broadcasts made by the various commentators on radio stations behind the iron curtain. How the statements arrived in this country must remain undisclosed at this time for reasons of security.—John O'Connor.)

The arrest of Cardinal Mindszenty was indirectly forecast months ago on the various radio stations controlled by the Communist quislings throughout eastern Europe. On October 12, 1948, the Prague radio station carried a digest of an article from the New Times (Moscow). Written by a Soviet commentator, Minyaev, it stated in part:

"United States diplomats * * * organized subversive activities in the countries of southeastern Europe * * *. A certain United States consular employee in Czechoslovakia, when dissatisfied with the work of his agents, undertook himself to photograph military objectives in the border region. Similar instances were reported from Hungary."

Four or five days later another mild dose of preparation was administered. Radio Budapest quoted the then Premier of Hungary as saying to the Red-controlled trade unions: "* * * The Hungarian trade unions are proud of being in the vanguard of the great internal struggle, in the course of which was eliminated from Hungary's political life the enemies of the people's democracy, of the workers and of the country."

On October 14 the Hungarian regime received the guaranty of its incumbency when Rudé Pravo, organ of the Czechoslovak Communist Party, was quoted at length over the Prague radio as saying in part: "We shall assure political, cultural, and citizens' rights to Hungarians. * * * The people of Czechoslovakia may rest assured that chauvinism will never be revived in Hungary. In Hungary the progressive forces have come to power."

That evening Moscow's European service, broadcasting in Serbo-Croat, defended the Hungarian regime against the chauvinism exhibited by Marshal Tito in Yugoslavia.

In Budapest on October 15, Eric Geroe, Hungarian Minister of Communications, said: "We strive to adapt the economic science of Marx, Engels, and Stalin and Lenin to specific Hungarian conditions." Later in the month, theory disappeared and the smear began. On the Budapest radio there was a summary of the Hungarian Trade Union Council's convention. Mihaly Horvath, organizational secretary, told a prepared union group:

"The Congress declared in the name of 1,600,000 organized workers that it is for complete freedom of worship and freedom for the churches, but it urges the Government, and indeed demands of it, that it put an end to the anti-democratic machinations of Joszef Mindszenty, the present cardinal."

On October 26, the Democratic Women's World Federation, representing 100,000,000 women, came to Budapest. Among the fragrant flowers who represented the women of their countries were Nina Porkov, a member of the Supreme Soviet; La Pasionaria, the great Spanish republican leader; Ana Pauker, Rumanian Foreign Minister. It is

not hard to guess what these representative women from 35 nations were told about the cardinal for home consumption.

Two days later, Premier Dinnyes, addressing the Smallholders Conference, stated:

"We take particularly into account the relationship of the dependency between certain Hungarian Catholic circles and big American capital, but we cannot tolerate the forcing into the same dependency of the Hungarian masses, desirous of following their religious convictions and not the agents of imperialism. * * * We shall remain unflinchingly alined with our powerful Soviet friend."

The attack shifts. Now the radio stations in Budapest strike from another angle: the example of the cooperation of Protestant churches as contrasted with the intransigence of the Catholic Church. (By this time one Lutheran bishop had been jailed.)

Broadcasting in English to the world, radio Budapest stated:

"In the course of the Protestant Week in Hungary, a meeting took place in the great hall of the Academy of Music in Budapest to celebrate the Reformation. The leaders of the Protestant churches were there to hear Bishop Albert Bereczky make a speech. Speaking in general terms of Cardinal Mindszenty, the bishop said there were people today who tried, some by abuse, some by ingratiation, to draw the Protestant churches into a political struggle."

Bishop Bereczky is then quoted as follows:

"We Protestants want to serve our people by the healing and constructive power of the gospel, but if anyone were to thwart us in this constructive work and in serving the gospel for worldly ends, we will, despite their abuse, lies, and accusations, say: 'Hands off the teachings of the gospel, even if those hands have a cardinal's ring on them.'"

The forces were being lined up. On November 13 the Hungarian domestic radio reported: "The fifth national Army conference of the Hungarian Workers' Party began today in the Honved House." Mihaly Farkas, Minister of Defense, touched upon the reactionary clandestine activities of Cardinal Mindszenty and his associates. He pointed out that the broad strata of the Hungarian population have had enough of the political incitement hiding behind the cloak of the church. "I am convinced," said Farkas, "that the Government, to satisfy the protests which come from all strata of Hungarian workers, will not wait long to grant these just demands."

On November 15 the same station reported that "the trade-union leaders at the meeting took a stand against the antinationalist activities of Cardinal Mindszenty, demanding the Government to forbid the activities of clerical reaction. At a meeting of the administrative committee of the Budapest municipality, on behalf of the Peasant Party, János Keri condemned the antidemocratic attitude of Mindszenty." He stated that "Mindszenty is not a bishop any more but the arch-politician of reaction, the sole commander in chief of every reactionary, antirevolutionary, and Fascist force. Mindszenty wants war because he hopes for political and economic restoration from it."

The pace and the pitch are increasing. On November 20 the Budapest radio quoted from an article in Haladas, entitled "The Clergy's Declaration of War":

"It could have been predicted without any prophetic foresight that there would come within a short time a decisive battle between the Hungarian Catholic hierarchy and the Hungarian state. In the irresponsible cultural struggle initiated by the clergy, it is the duty of the state to protect the new order against any disturbing attempts. According to indications, the Government will soon abandon its restraint and avert the attack with effective defenses."

That same day another periodical, Igaz Szo (Fighters for Freedom), stated:

"In letters and telegrams, resolutions, and proposals, the whole country is protesting against the incitement, the focal point of which is the residence of the Cardinal of Estergom, and whose hedgehog position can be found duplicated in the see of every bishop. The working people will not tolerate that their work should be undermined by others.

"Each Sunday Cardinal Mindszenty has lowered the pulpit to the level of a soap box and incited and instigated against everything which is in the interest of the people and, not in the last place, of the Catholics themselves. This soap box, however, is distasteful to the Hungarian people. Let everybody be sure that we will have the strength to force the present chief agent of American imperialism in Hungary down from the soap box."

The following day (November 21) Sandor Barcs, vice president of the Smallholders Party, told his listeners that the opposition (Barankovics Party) have members who "are mostly covertly, but often openly, visiting one village after another as the agents of Cardinal Mindszenty. We cannot tolerate that civil rights should be granted to such people, who are attempting, not as an opposition but as a raging Mindszentyite enemy, to mislead, to incite the Hungarian peasants, and to hoodwink them against their own interests."

The Hungarian Workers Party was the next to hear about the "iniquities" of the cardinal. Matyas Rakosi, Deputy Premier, real leader of the Communist tyranny and long a friend of Joseph Stalin, told the group during a long speech a day later:

"The comrades know that we have succeeded in reaching an agreement with the Protestant churches."

"Through mutual concessions and understanding we regulated these church relations to the state. To our greatest regret, we have hitherto been unable to reach a similar agreement with the Roman Catholic Church, but not because Hungarian democracy did not try to."

"On the contrary, reproach is being leveled against us by the Protestant Church for excessive patience, and the enemies of democracy in the church have exploited this patience, which they have interpreted as a sign of weakness. * * * Now we are hearing similar voices from the Catholic side, too. The movement, which from thousands of villages and organizations now spontaneously demands a change in our policy toward the Catholic Church reactionaries, is a warning which must be heeded. * * * The religious-minded workers, and above all the peasants, begin to realize that reaction was exploiting their religious feelings."

Rakosi next repeated the old charges of the "cassock or the cardinal's cloak" hiding Fascists. Then, holding up a Government agreement with the small Protestant groups, he said:

"It is thus incompatible that an organized troop of reaction like that lining up behind Mindszenty should disturb our reconstruction and stabilization. * * * The fact that we were able to come to an agreement with the Protestant churches and that with Mindszenty we were not makes all well-meaning people realize that the question here is not one of persecuting religion but a justified and inevitable self-defense of democracy. This change of policy will be even better understood by those many thousands of Catholic democrats who demanded that they should be protected against the excesses of reaction in an ecclesiastical cloak."

The same day the Bratislava radio in Czechoslovakia threw its piece of silver upon the scale with a searing attack upon all the bishops of Central Europe. On Nov. 28 Fueggetelen Magyarorszag announced that the young Catholics in the county of Czanad have asked the bishop of the county not to have Mindszenty's political letter read in the churches.

On December 6, the Budapest radio carried another attack. In this, the Cardinal ceased to be an individual and became a symbol. The protests eliminated the man and dwelt on Mindszentism. The same broadcast praised the National Federation of Landowners for demanding the liquidation of Mindszentism and the elimination of Mindszenty from public life.

Eight days later the new Hungarian Premier, addressing the legislature, reviewed the charges of the previous weeks, and at great length. Concluding, he said:

"The Government is receiving by the thousands telegrams and letters, many of them from Catholic priests, Catholic congregations, and Catholic professors and students in universities, in which the demand is not forward to take strong action against Mindszenty. In this respect, the will of the people cannot be disregarded."

The clamor grew. On December 17 it was reported that nine leading Catholics had written to Cardinal Mindszenty and said, in part:

"As a result of your attitude, the Hungarian Catholic Church has in the past years become an illegal political party under the cover of which the forces of counter revolution are gathering. Your Eminence has split the spiritual unity of the working Catholic masses who remain loyal to their faith."

On December 19, Deputy Laszlo Orban, of the Central Committee of the Hungarian Workers Party, told 1,500 lawyers in Budapest:

"It is indispensable that Marxism-Leninism should permeate our legal practice. The legislature and the jurisdiction of the U. S. S. R. must be studied more thoroughly than hitherto because the U. S. S. R. is juridically the most advanced state in the world."

On December 27, the press department of the Ministry of the Interior reported that the police authorities "have taken into custody Josef Mindszenty, archbishop of Estergom, under suspicion of high treason, crimes aimed at the overthrow of the Republic, espionage, and illegal dealings in foreign exchange."

The broadcast was in Hungarian. Later it was repeated in Serbo-Croat. Then broadcasting in English to all the world, the Budapest radio cited the Archbishop Laud case in 1640 in England and stated that Mindszenty, like Laud, had worked with "Jesuits and papists, bishops and that corrupt part of the clergy." It continued: "Every word that stands against Laud stands in triple measure against Mindszenty in Hungary today. The English people beheaded Archbishop Laud. Why do their rulers now protest at the arrest of a man who did much worse?"

That same day the Czech radio in Prague supported the stand of a group, citing letters from Catholic priests demanding "the speedy expulsion of the Roman Catholic priests who * * * are * * * undermining our regime and causing unrest. * * * We are awaiting a reply from the bishops."

The pattern was complete. On December 29, 2 days after the arrest of the cardinal had been announced, "telegrams" from small towns began "to pour in," praising the Government's "energetic measure" in putting an end to the "criminal activities of Josef Mindszenty." The next day it was announced on the radio that delegations of workers and peasants came "in long lines" to praise the Premier for acting against the cardinal.

On New Year's Day, with the cardinal somewhere in a cell, President Szakasits announced: "The Hungarian Government and the Hungarian people have no other object * * * than to return the Roman

Catholic Church to its original vocation." Two hours later, in an English broadcast, United States Under Secretary of State Robert Lovett was attacked. The following afternoon it was announced in both Hungarian and English that "more and more" priests are "taking a stand against Mindszenty." On January 4, usual news programs were dropped to make place for long, detailed statements against the cardinal. And on January 5 he was called "the greatest enemy the Hungarian people have ever had."

Meanwhile, the frame is being set for the next picture. Perhaps a "rising tide of public resentment" will take place. Perhaps the Government will have to "save" the church from its betrayers.

Twenty easy lessons in how to jail a cardinal. Twenty easy lessons in the lexicon of hell.

Navajo Indians

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. POULSON. Mr. Speaker, I want to pay tribute to a former Member of Congress, Will Rogers, Jr., for the wonderful work he is doing in behalf of the Indians of the United States, as head of the National Congress of American Indians.

This group is composed of public-spirited Americans throughout the country who are trying to present a program covering the real needs of the Indians on a long-range basis. In the past we have heard startling stories of the suffering of the Indians and various groups of American people have made spasmodic, philanthropic gestures, but they are only temporary and short-lived. In other words, they are like the desert flower that blooms in beautiful colors and in a few days fades away and dies.

President Truman in his inaugural speech talked of attempting to raise the standards of living throughout the world and I for one believe that it should be started right here at home, and the Indians should be the No. 1 beneficiaries.

I commend Mr. Rogers for this work and want to assure him that I am not only supporting the program but feel that we should not discuss limitations, especially since we are not doing that in our foreign-aid program.

Herewith I submit a memorandum prepared by Mr. Rogers on the Navajo situation, in which he has brought out some very pertinent questions which must be answered by this new Congress:

MEMO ON THE NAVAJO

I think that one of the first tasks of the Secretary of the Interior's new Advisory Committee on Indian Affairs should be to start still another report and investigation on the Navajo.

To be sure, making reports on the Navajo is rather like doodling. It is a harmless pastime that gives practically no result. But these reports are of academic interest to whites, they furnish employment to white printers, and I think another could well be added to the pile.

All these other reports, the Sanchez, the Charles Collier, the Navajo Service, all quite properly stress the need for schools, roads, and water. But in addition to this (mostly a matter of getting Federal appropriations), there is an accompanying need for an overall review of basic policy—a review that would consider the following questions:

We have an area of 25,000 square miles, and 60,000 people, a miniature State; what is the future of this State?

What do we hope the Navajo Reservation and its people will be like 50 years from now?

1. WHAT IS TO BE THE EVENTUAL POLITICAL DISPOSITION OF THIS STATE?

The forty-ninth? Either the Navajo is to be the forty-ninth State or it is not. If not, is the northern tip of the reservation going to eventually become a part of San Juan County, Utah, with its schools to be handled the same way as other Utah State schools; its roads to be handled like other roads of San Juan County; the land eventually to go to individual ownership, and taxes on it to be paid to San Juan County? If crimes are committed, are we to look forward to the day when the San Juan sheriff will come in to make the arrests? Years in the future, when the Glen Canyon Dam goes through, when roads will be paved to Rainbow Bridge, and the possibility of a little town develops—is that town to be treated like any other town in Utah?

City government: The west is growing rapidly. The reservation population is already denser than the surrounding area—which does have towns. It is not improbable that settlements will grow up on the reservation. Are they to be treated politically as other American towns, with mayors, councilmen, judges, city ordinances? Are they to be subject to the jurisdiction of State and county? Or is all this to be done in a very special fashion, and if so, what are these special political regulations which are to apply to the Navajo, but nowhere else in the United States? Or should the present policy be continued so there will never be at any time any towns developed on the reservation?

Transition of power: Is the power of the Federal Government to wither away, and be supplanted by the Tribal Council, which will, in turn, wither away and be replaced by the States? Is the Navajo capital to remain at Window Rock, where the whites are, or is it to be moved to Shiprock, where the Indians are, or should there be any Navajo capital at all? Unfortunately, government power does not "wither away." Unless there is some program with timetables, Navajo political assimilation will continue to lag in the future as it has in the past.

The vote: The Navajo now has the vote. They will soon be voting for county officers of the county in which they live. But these officers will have nothing to do with them. The Navajos might vote for a crook for county sheriff, secure in the knowledge he can only steal from the whites. The sheriff they have elected will be unable to come on to their reservation. In some counties it is quite possible the Navajos outnumber the whites. No county can allow the largest block of its voters to name their officers and judges, and not have to serve under the officers and judges they have named. The full effect of the Navajo having the vote has not yet been studied. It has greatly increased the need for some statement of permanent policy as to what is going to be the political disposition of this State.

2. WHAT IS TO BE THE EVENTUAL ECONOMIC DISPOSITION OF THIS STATE?

The land: Is the reservation ever to be split up, divided, and sold? If so, by whom, and who gets the money for what part? If not, how are we going to keep intact the largest Indian land mass in the United States? Are we going to keep it intact under tribal ownership? Who are the tribe? Is my son, Clem Rogers, full-blooded Navajo, a part owner of the land of the reservation? Is ownership of this land to follow racial blood lines? If his children are of mixed blood, do they have a full share, or a mixed share? Is share in the Navajo tribal land to be infinitely divisible, so that 50 years from now we shall have several hundred thousand fractional owners of this State scattered all over the world?

Can any part of this land ever be fairly allotted? If so, what is the method? On the other hand, can this vast tract of land be kept as one block legally? Already other, more educated, Indians have sued the Federal Government and received allotments. Can we expect the Navajo educational program to continue as much a failure over the next 50 years as it has over the last 50, and that no Navajo will, in the visible future, be sufficiently educated to go to a court of law and sue for an allotment?

Today the Navajo is a cohesive group, a vast illiterate lump, with only 1 lawyer for 61,000 people. The median age of the tribe is 17, the youngest of almost any group in the world. Should, by some miracle, adequate health facilities ever be installed on the reservation, the population would rapidly increase. Fifty years from now, there may well be over 150,000 Navajos, scattered all over the world. And some of them may become lawyers. Should not some land policy be set up now to avoid one of the greatest legal land-tangles of history?

The economy: On the Navajo there are 24,000 square miles, practically untouched by human hand. Surrounding it, there are towns and farms and factories and ranches producing a rapidly expanding standard of living. Are those 24,000 square miles to be left forever undeveloped? If not, where is the capital for development coming from?

From the Government?—which in the last 80 years has not even spent enough money to give the schooling it solemnly promised to give. From the Navajos?—who have no capital nor any prospects of any. From the tribal fund?—whose income of a few hundred thousand a year would be unnoticeable in a land that needs 20 times that amount. From private capital?—if so, how is it going to be attracted? And how are the Navajos to be protected?

The future economic life of the reservation has never been imagined. Therefore, no two sources have worked together. The Federal Government (only capital source in the past) has spent its money with aimless relation to other developments. Thus Window Rock was built miles away from Fort Defiance, so that the two negate each other as far as developing any community services, and Shiprock school is being built miles from town, making two awkwardly distant outposts instead of creating one unified settlement.

As for the tribal-council fund, it is not being spent as a pump primer but as the total capital resource of each development planned. Thus in building housing, the fund cannot be used as a normal political subdivision would use it—to build the sewers, the water mains, the roads, sidewalks, etc., and let Government or private capital do the rest. The tribal fund must finance everything—and pay cash.

Is this to be the pattern of economic development forever? Because the land is tribally owned, is there to be no effort made somehow to use the credit and business techniques we have found so essential in building up the rest of the country? By the device of long-term leases is there not some way of protecting the Navajo, and at the same time make it possible for the FHA to build homes for him? Is the Navajo always to be limited to Indian Bureau facilities? Is

he never to get the advantage of the sweeping bills which, we hope, will continue to be passed so as to build up the white population of this country?

Granted tribal ownership of the land, is it still not possible to sign 5-, 10-, or 20-year leases—leases that would attract to the larger centers, like Tuba City, Kayenta, Shiprock, essential community enterprises?

The clauses of these leases would assure that the construction is to be done by Navajo labor and the employment of these enterprises is to be Navajo.

Granted that it would be ideal for the Navajos to own, as well as work at, these new community enterprises, how are they going to get the capital? Is the development of the reservation to be kept in a state of stagnation, awaiting the time when the Navajos have the necessary education and finances to operate reservation business? By the use of carefully drawn leases is it not possible to both attract venture capital and protect the Navajo?

Already several large Los Angeles clothing concerns have written concerning the possibility of needlework-trade factories on the reservation. Is all this to be dismissed as utopian? Admittedly, a factory involves housing, leases, schooling, water, etc. Should not some study be given as to just what these Los Angeles requests involve, and how they could, or could not, fit into the pattern of economic development on the Navajo?

WILL ROGERS, Jr.

Don't Tamper With Engineers

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I submit splendid editorials from two leading newspapers of north Louisiana. They both deal with the work of the Corps of Army Engineers and I hope these editorials are read by everyone:

[From the Shreveport Times of January 28, 1949]

DON'T TAMPER WITH ENGINEERS

The Red River Valley Association and various organizations of the area of the lower Mississippi River and its tributaries, have protested vigorously to Congress against plans to place the flood control and other waterway work of the United States Army engineers under a civilian—which means a political—Federal agency as yet to be named.

This would come about through passage of the Truman administration's proposed Government reorganization bill, which is meant to be the instrument of putting into effect, chiefly by the President, of various recommendations of the Hoover reports on streamlining Government operation toward greater efficiency and greater economy.

The Times already has endorsed the principles of several of the Hoover commission reports thus far made public. At that time, however, we specifically stated that we could not and would not agree with any plan for congressional or Presidential tampering with present duties, activities, and prerogatives of the United States Army engineers in connection with flood-control and inland-waterway development. The particular committee of the Hoover commission working on this angle of Government organization is known, however, to have decided already to recommend consolidation of the Army's civil functions, its inland engineering work, and a group of various other governmental activities—such as the Reclamation Agency in the Department of Interior—into a single unit.

That the Times definitely opposes. We join with the Red River Valley Association, the Delta Council, the levee and drainage district boards making up the Mississippi Valley Flood Control Association, the Ohio Valley Improvement Association, the Memphis Chamber of Commerce, and various other organizations up and down the Mississippi, the Ohio, the Red, and their tributaries in opposition to any such step.

If there is any consolidation of agencies, bureaus, etc., involving work in which the United States Army engineers are now a part, we suggest it would be far more logical to place other agencies under the engineers than to place the engineers under civilian-political authority. The engineers have been active in Mississippi Valley flood control (and understand, the Mississippi Valley includes the lower Red River Valley) for more than 100 years and they have been in complete charge of all flood control in the lower Mississippi Valley for 70 years. They have never been concerned with political log rolling, with political trades, with what this politician or that politician would like for his district.

Just two basic factors have entered into all decisions by the engineers during these decades: Whether a project was needed, desirable, beneficial to the general area from the standpoint of public good; whether it was feasible, both from the engineering and the economical angles.

Under such operation by the engineers came such projects in this area as the Denison, Wallace Lake, and Bodcau Dams (the latter now nearing completion) and various other activities on tributaries of the Red to harness the ravages of this stream and add tens of millions of dollars in assets to the territory it traverses. Also, there came the bank revetment work above and below Shreveport giving permanent protection to the local municipal airport, authorization for the Overton canal, and various other projects. New Orleans is a city safe from floods today because of work of the engineers.

These projects were recommended by the engineers because they had genuine value to large and small areas. They were authorized by Congress, and money appropriated for them, because everyone accepted the word of the engineers—accepted their integrity, their knowledge, their independence of political factors.

No one knows what would have been the result had civilian-political agencies had the top authority in these and thousands of other similar projects around the Nation.

There must be quick action if disintegration of the authority and responsibility of the United States Army engineers is to be prevented. There must be protests to Congress—from every civic organization, from every prominent business and civic leader to amend the reorganization bill to exempt the engineers. That was done in a similar bill in 1945. It should be done again now.

[From the Shreveport Journal of February 1, 1949]

ARMY ENGINEERS EARN PRAISE

Reports from Washington convey the impression that the retention of flood control, inland waterway improvement, and kindred projects and service as the privilege and responsibility of the United States Army engineers is being threatened. The threat, which appears dangerous, is contained in the Government reorganization plan of the national administration. The proposed divorcement of authority now held by the Army engineers would be unwise especially because it would place the work under a civilian agency, which obviously would have political handicap. Such handicap now is not in existence. The Army engineers do their work without regard to politics but with the idea of planning and accomplishing bank protection, flood control, and other such tasks from which the people will gain the largest measure of benefits. These engineers, as shown by their long period of successful performance of duty, meet their responsibilities as soldiers in combat against military foes. They accept their assignments, and loyally strive to fulfill them.

Recently we had the privilege of hearing an informal talk by one of the Army engineers of this district, during which he mentioned various projects developed, under way, and planned for the territory, including all of Louisiana. Millions have been expended on these projects, resulting in untold benefits to the public. The engineers have met their responsibility satisfactorily. There has been nothing political involved. Every citizen having the facts given in that talk would oppose plans to put others in charge.

Among the many groups protesting against the national administration's plan to transfer this service from the Army engineers to a civilian authority is the Red River Valley Improvement Association, through which much of the waterway improvements hereabouts have come about and been promised. Members of this organization, many of them Shreveport citizens, realize the potential hazards resulting from political authority in determining projects, how they are to be built, and other operations now having the capable, unhampered attention of Army engineers, men of proved ability and reputation, who do their duty as they see it, regardless of what this or that political representative may say or wish to say.

Had the plan now being urged at Washington been in effect some of the projects serving this territory would probably not have been authorized. The proposed transfer from the Army group to those under civilian direction would offer abundant reason for speculation and doubt. By all means, the existing set-up, with the Army engineers continuing inland waterways service they have been in charge of for many decades, should go unchanged.

The Red River Valley Improvement Association and other protestants are doing a thoughtful service to this section and others in the great river valleys in trying to prevent the materialization of the national administration's plan to order cessation of the Army engineers' control.

Reciprocal Trade Act

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by my colleague from Pennsylvania, Hon. FRANKLIN H. LICHTENWALTER:

My reason for opposing the bill to revive the Reciprocal Trade Agreements Act to its status prior to changes made in 1948 is due to several observations and study of this subject.

1. I feel that the hearings were inadequate to allow everyone to be heard on this subject and present fully all views either for or against this bill. I approve of the removal of trade barriers to the extent that such action is possible without imperiling the existence of present efficiently managed industries, the expansion of such industries,

and the development of new enterprises, and particularly without imperiling the jobs of our working people and the preservation of the American standard of living. It seems to me that the whole issue here is whether reasonable protection of American labor, industry, and agriculture is to be or not to be one of the basic principles in our future tariff. If this bill is passed as it now reads the inescapable conclusion must be that such reasonable protection is deliberately abandoned. Over the years during which the Tariff Commission has been in existence under both Democratic and Republican administrations it has accumulated at considerable expense to the taxpayers a vast store of information on which to base judgment of tariff rates.

2. As I see it, section 3 of the 1948 act does not limit the President in any way. He now has authority to reduce rates below the peril point if he wishes. Testimony reveals that many of our industries which employ thousands of workers have been adversely affected through unfair competition brought about by agreements made under the act which we are asked to restore in the bill before the House.

3. As stated before, I am not against foreign trade and a reciprocal trade act; in fact, it should be encouraged and developed wherever possible, but not at the expense of the American working man and woman and business. I feel that the legislation passed in 1948 is fair and gives adequate power to the President to deal satisfactorily with this problem.

Stalin's Poor Health

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Newark Star-Ledger on Thursday, February 3, 1949.

It is a rather enlightening editorial. I believe the editor has drawn a very apt comparison between the characteristics of a leader of democracy and a leader of a totalitarian state. The leaders of democracy have been willing to make personal sacrifices for the sake of peace. It is enough to point out that our late President Franklin D. Roosevelt, sacrificed his health to insure a healthy and peaceful world. It seems to me that Mr. Stalin is concerned more with his own state of health than the state of health of the world. Is this not characteristic?

The editorial follows:

STALIN'S POOR HEALTH

The International News Service (of which this newspaper is a client) seems to be in the unique position of a super-UN conducting diplomatic relations between the world's two great estranged powers, Soviet Russia and the United States. Associated Press and United Press (of which this newspaper is also in the position of a member-client) had their turns at this super-diplomatic role, but Uncle Joe Stalin seems to prefer INS at the moment.

While we continue to maintain embassies in each other's capital, Stalin obviously prefers the good offices of INS reporter Kingsbury Smith, to whom he has just explained why he is unwilling to come to Washington for a meeting with President Truman, much as he would love to see the sights and shake the hand of the man who got quite a few more votes than Henry Wallace.

WHY NOT IN UNITED STATES?

It is, it seems, a matter of health. The doctors have told Stalin that there are five cities where he could confer with our President without endangering his health, all five being on the Soviet side of the Iron Curtain. A trip to Washington would, on the other hand, strain his health dangerously.

Since the State Department and the Russian foreign minister have been superseded in these negotiations in favor of newspapermen, we may be entitled to get our own 2 cents' worth into the discussion. It seems to us that if Stalin's health is too delicate to withstand a trip to Washington via extremely comfortable accommodations, he ought to resign his job as dictator and give a younger comrade a chance.

We had a President who had delicate health, having been a victim of infantile paralysis. Throughout his incumbency in the White House, his health was the subject of anxious discussion, and was an open issue in his campaign for a fourth term. Our President never permitted considerations of health to stand in the way of urgent business. He traveled abroad again and again, on a number of occasions to convenience Stalin. These trips no doubt hastened his death, but he understood that he had no moral right to hold on to his position without meeting its enormous obligations.

Does Stalin want to live forever?

Problems Facing the President

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remaks, I am quoting copy of the letter written to the President of the United States by the editor of one of the outstanding rural papers of my district. This letter is written by Mr. F. J. Neely, owner and publisher of the Johnstown Independent, Johnstown, Ohio.

Mr. Speaker, I think Mr. Neely's letter to the President sets forth clear thinking and views which I hope the President will give definite consideration.

The letter is as follows:

A LETTER TO THE PRESIDENT

PRESIDENT TRUMAN,
Washington, D. C.

DEAR MR. PRESIDENT: The great inaugural festivities are over and the din of the shouting is silenced by the oncoming days and nights.
